The farmers will favor an emergency program to place a floor under farm prices, but they are against Government dumping to hold prices down below parity. I want to again mention increased costs of the things which farmers have to buy as complete justification for their demand to receive parity prices.

National Industrial Conference Board statistics show that the average worker in manufacturing industry has enjoyed a 13-percent rise in his weekly pay check since February 1940. I am not criticizing justifiable increase paid to labor. I maintain, however, that farmers are entitled to receive equality of consideration and not be compelled to accept a freezing of prices below parity.

During the past 8 years American farmers have been called upon to make many sacrifices for the common welfare. They bore the brunt of the burden under the reciprocal trade program which gave a material part of our home market to cheap foreign production, in addition to low prices and general distress.

In the present critical emergency American farmers will be called upon to make further sacrifices in order to aid foreign farmers living in the Western Hemisphere who are engaged in competitive production. I just read a report in the press where it stated that our Government had placed an order for 22,000,000 pounds of beef in Argentina. Scores of other competitive products are also being purchased from our southern neighbors in the name of good will and good neighbor, and when the present war ends, unless we change our present policy, this country will be used as a dumping ground for all types of foreign production to the detriment of domestic agriculture, industry, and labor.

The new farm policy urges our farmers to produce greater supplies of hogs, dairy products, poultry and eggs, and encourages farmers in the Corn Belt to plant more corn for feed. But, in the same breath, the Secretary of Agriculture states that if farmers plant corn in excess of the allotted corn acreage no corn payments will be made and there will be no loans for those who follow the Secretary's advice. Such a policy seems inconsistent to me, and I have therefore requested Secretary Wickard to remove this penalty when farmers plant additional corn for silage and fodder purposes in order to

increase the production of dairy and pork products

If the Secretary fails to comply with this request, I will immediately introduce the necessary legislation in Congress to remove the penalty against farmers who plant corn for silage and fodder to be fed on the farm in excess of the soil-depleting acreage allotment.

American farmers are willing to make sacrifices for their country in time of need. All that they now seek is a square deal. They will not go on a strike. They will cooperate wholeheartedly to make America strong and impregnable. They will fight to defend America from all enemies, as they love their country and its way of life. Those of us who represent them in Congress will join with them in fighting for an honest deal and a united Nation in this critical hour.

The Labor Situation

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 18, 1941

Mr. SABATH. Mr. Speaker, today and every day several gentlemen arise to criticize, as is their habit and custom, the President, the administration, and Madam Secretary of Labor Perkins, and to ask what is being done on the part of the administration to prevent strikes. I am more than satisfied that their action was prompted and their voices raised solely for political reasons and in order to create prejudice against the administration and labor organizations.

The gentleman from Michigan [Mr. HOFFMAN] wanted to know whether I condoned activities that he cited from a police court in Detroit, Mich., where one policeman had been attacked, and further cited the violence allegedly used by C. I. O. strikers and the unjustifiable high initiation fees charged by a few of the affiliated A. F. of L. unions. I answered him then and I say to him now, to the House, and to the country that I do not condone such activities as described, but I also do not condone the attacks upon the two great labor organizations, the American Federation of Labor and the Congress of Industrial Organizations. Not only that, I do not approve or condone such activities, but I have criticized them and am definitely opposed to them. On the other hand, I do not condone industry hiring exprize fighters, professional strike breakers, and gunmen as sluggers to slug and kill peaceful strikers, as happened in the Republic Steel plant and other plants. Conveniently these labor baiters do not call attention to those abuses and they are blind to such unfair and brutal methods employed by many of the industries.

Mr. Speaker, the question raised today, especially by the gentleman from Georgia [Mr. COX] and the gentleman from Pennsylvania [Mr. RICH], as to why we have not passed legislation to eliminate strikes, has been answered by the gentleman from Michigan [Mr. MICHENER], who stated, in effect, that such action would actually deter the defense program. However, he did fail to mention that the United States Chamber of Commerce went on record 2 or 3 weeks ago against such proposed legislation, and yet despite the opinions of men high in the business world and that of Members of this House who have soberly studied the situation that legislation is not warranted at this time, still we find a few Members day in and day out urging the enactment of such legislation.

Mr. Speaker, the gentleman from Michigan [Mr. HOFFMAN] has insinuated that I am trying to defend the actions of the C. I. O. Well, he and all of you know that it is very seldom that I rise to protect or excuse those who have viciously assailed the President. They should know that John L. Lewis, Harry Bridges, and Mr. Browder violently assailed and opposed the reelection of the President and have cooperated with his arch enemies, Tom Girdler, Weir, and others, who have charged for years that the President was destroying the industrial structure; yet the financial reports of their companies show that they have doubled and trebled their profits. Therefore I hope that in the interest of unity these gentlemen will desist in their unfair charges and criticisms and in placing me in the category of those so strongly opposed to the President's policies. I know there are very few of you here who would give credence to such ridiculous charges.

Mr. Speaker, time and again I have appealed from this floor to the leaders of both of these labor organizations to urge some of their local unions to desist and stop improper practices and abuses, else it would be bound to be detrimental to the cause of organized labor. I have done so because all my life I have pleaded that labor has the same right and the same privilege to organize as industry. I remember the antagonism and attacks against the railroad labor organizations in years gone by. I recall the Pullman strike in Chicago in 1884, the Big Four, and many other railroad strikes. And later the same opposition was leveled at lower-paid railroad employees when they endeavored to organize. The same criticism and attacks on the part of railroad officials and the press were made then just as they are being made today. I recall the strenuous opposition of the railroads and industry to every bill proposed to safeguard not only the lives of the employees but of the public. So, Mr. Speaker, these attacks against labor organizations are nothing new.

Mr. Speaker, no one will dare say that I am not heart and soul for the expeditious carrying out of the national-defense program, but labor as well as industry has its rights and, I say, when the profits of all industry are doubling and trebling and running into the millions, I feel that labor is entitled to a fair share of these tremendous gains and profits. The laboring man should not be forced to work at a wage which makes it impossible for him and his family to live decently, especially in view of the increased cost of living. A few days ago the gentleman from Mississippi [Mr. RANKIN] read the message of Thomas Jefferson to the House, and while I feel that most of the Members are familiar with it, I believe that many fail to give consideration and thought to his urgent appeal when he said:

> We should not take from labor bread that it has earned.

Furthermore, he advocated, as we know—

> Equal rights to all and special privileges to none.

So over 140 years ago it became necessary for the President of the United States to call attention to the fact that labor was being exploited; and please remember it was at a time when our country was not the great industrial Nation of the world, when we had no foreign-born in our midst, and when the population was only a little over 5,000,000, less than 5 percent of the present population. Yes; my own State of Illinois alone has 50 percent greater population than the entire United States had at that time.

Mr. Speaker, in the interest of our country and its defense, I hope that any and all strife between labor and industry will be eliminated. That great progress has been made in that direction in the past 2 weeks should be recognized and acknowledged by the labor baiters. I feel that it is manifestly unfair that some Members should charge that the President and the administration have not done anything in the matter of the adjustment and settlement of these strikes. The facts are that under the leadership of our President we have provided laws to eliminate strikes and strife. We have passed the Fair Labor Standards Act, providing for collective bargaining and agreements. Can it be justly charged that labor has not lived up to the law? Is it not a fact that the large industrial czars feel that they are above the law? Have they not refused to comply with the laws of the land? Did we not pass an act creating a Mediation Board, and did not the President only 3 weeks ago appoint a super National Defense Mediation Board composed of 12 members, 4 representing industry, 4 representing labor, and 4 members thereof acting for the consumers? This Board within a short space of time has rendered splendid service by bringing to an end 4 of the most annoying labor disputes. And still there are some Members who refuse to take cognizance of this great move and act of the President to bring about closer cooperation for the best interest of all concerned. Oh, I appreciate that the remarks of some of the Members are made for home consumption, but I feel we have reached the time when general baiting should cease and to realize that it is our duty to cooperate with the President, who has done and is doing all humanly possible to strengthen our defenses so as to preclude any danger from attack. If some of these gentlemen would read what the Nazis, Fascists, and Communists are doing to undermine and destroy our form of government, I feel in my heart that instead of attacking, assailing, criticizing, and harassing the administration they

would join hands as real Americans and aid in the unity that is essential and needed and prove that the interest of our country is just as near and dear to them as it is to all of us, and, above all, that we are a united Nation.

The State of the Nation

EXTENSION OF REMARKS

OF

HON. CLIFF CLEVENGER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1941

ADDRESS OF HON. NOAH M. MASON, OF ILLINOIS

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Hon. NOAH M. MASON, of Illinois, at the annual meeting of Ohio Federation of Women's Clubs, at Dayton, Ohio, Thursday evening, April 17, 1941:

Madam President, ladies, and gentlemen, I want to paint for you people tonight two word pictures: First, the state of the Nation concerning the possible or probable danger to the Nation from without; second, the state of the Nation concerning the real danger to the Nation from enemies within as uncovered by the Dies committee. As an introduction to these two word pictures on the state of the Nation, I want to quote for you the words of Lincoln, taken from a speech he made in the Illinois Legislature at Springfield, Ill., on January 27, 1837, in a discussion on the probable dangers to our free institutions:

"At what point shall we expect the approach of danger? By what means shall we fortify against it? Shall we expect some trans-Atlantic military giant to step across the ocean and crush us at a blow?

"Never. All the armies of Europe, Asia, and Africa combined, with all the treasure of the earth in their military chest, with a Bonaparte for a commander, could not by force take a drink from the Ohio or make a track on the Blue Ridge in a trial of a thousand years.

"At what point, then, is the approach of danger to be expected? I answer, if it ever reaches us, it must spring up among us. It cannot come from abroad. If destruction be our lot, we must ourselves be its author and finisher. As a nation of free men, we must live through all time or die by suicide."

With Lincoln's words as a background, let us paint, first, the situation this Nation faces today, more than 100 years later, as to the possible dangers to our Nation and to our free institutions from without:

POSSIBLE DANGER FROM WITHOUT

We are living in troublesome, trying, heart-searching, soul-stirring days. The words best fitted to describe the critical period through which we are passing today are the words of Thomas Paine, uttered during the dark days of the Revolutionary War: "These are the times that try men's souls. The summer soldier and the sunshine patriot will in this crisis shrink from his duty. But he that stands it now deserves the love and praise of men and women." Fitting words for Paine to utter then; fitting words for us to repeat today.

This Nation has already passed through three great national crises. The first, of course, was the Revolutionary War period and the period immediately following the Revolutionary War, when the foundations of this Nation were laid—foundations upon which has been built the greatest Nation on earth. The second great national crisis occurred during the dark and trying days of the Civil War, when brother fought against brother, when the North and the South had to endure all the horrors and heart rendings that seemed necessary before we could amputate, or cure for all time, that inward cancer, slavery, that threatened our very national existence. The third great crisis was the World War period, a war which up until a year ago we called the greatest war ever fought—greatest in number of countries involved; greatest in number of men used; greatest in number, kind, and destructiveness of war machinery used; greatest in the loss of life and destruction of property; greatest in the issues that were supposed to be at stake, "making the world safe for democracy," a "war to end all wars"; and greatest in the world-wide economic and social dislocations that resulted from that war, dislocations that this Nation hasn't recovered from as yet.

Now we are facing our fourth great national crisis, another World War. We are entering upon this crisis saddled with a debt of $50,000,000,000, on top of which we have already authorized $35,000,000,000 more for defense. This fourth great national crisis finds us again unprepared, woefully unprepared. Not only do we lack essential war materials such as manganese, rubber, tin, etc., but we lack war planes; we lack pilots to operate such war planes; we lack an adequate armed force trained in modern warfare; and we lack practically all the equipment necessary for such an armed force. Not only that, but the moral fiber of millions of our people has been weakened, if not destroyed. Our people have been taught to look to the Government for support rather than that the Government should look to the people for support. In other words, we are rapidly becoming a Nation afflicted with the modern disease commonly known as "the gimmies," a Nation of people expecting hand-outs. Not only that, but in the name of social experiments we have placed upon the statute books laws that handicap, shackle, cripple industry, so that industry cannot do the job that now confronts industry and that only industry can do.

Ford hit the nail on the head when he said, "In 6 months, if left alone, I can revamp my factory so that I can turn out 1,000 fighting planes per day." "If left alone"—those are significant words. They could form the text for many sermons or speeches by industrial leaders. What did Ford mean when he said: "If left alone"? Did he mean that he wants to reduce wages and thus violate the wage-and-hour law? No; because Ford has always paid high wages and has taken the lead in setting high wage standards. Did he mean that he wants to increase the working hours per day and thus violate the wage-and-hour law? No; because Ford had instituted in his factories an 8-hour day long before it became the law, and he has always insisted that a short working day meant greater efficiency in the factory. What then did Ford mean when he used those significant words, "If left alone"? I believe Ford wanted to serve notice upon the country, and upon the administration, that American industry was not only ready but it was fully able to take care of every defense need; that American industry could and would rectify the shortsightedness of our Army leaders, our Navy leaders, and our administration leaders in connection with America's preparedness program; that American industry could and would speed up the production of necessary war materials in order to make up for the almost criminal negligence on the part of those responsible for our present unpreparedness predicament; that American industry can and will remove all "bottlenecks" now hampering production of necessary war materials; "If left alone."

All that I have said so far has to do with a preparedness program against possible dangers from without—danger from external enemies. It has to do with the obstacles to that preparedness program and the removal of those obstacles. It has to do with the materials needed for that preparedness program, and the part that industry must play in the days ahead. But what about our danger from within—danger from the enemies within our gates? Having served on the Dies committee for a little over 2 years, I know something about the danger that threatens from within, and I believe that, great as the danger from without might be, we face greater dangers from within. I want briefly to sketch those dangers for you tonight, also, so that you will have as complete a picture as possible of "the state of the Nation."

REAL DANGERS FROM ENEMIES WITHIN OUR GATES

The totalitarian nations of Europe, personified in Hitler, Stalin, and Mussolini, have plunged that continent into a war that threatens to black out not only all democracy in Europe but all civilization in Europe as well. All American people are interested in the European mess; we have our deep-seated sympathies; but a great majority of our people have wisely decided that the European mess is not our particular kettle of fish, it is not our direct affair.

However, these same totalitarian governments of Europe have had their agents, their Fritz Kuhns, their Earl Browders, their Pelleys, and others, going up and down this broad land of ours sowing the totalitarian seed of discord, seed that has sprung up into crops of race hatred and religious hatred, crops that have no business on American soil. These agents of foreign governments have cultivated, fertilized, and watered these un-American crops with money that was sent here for that purpose direct from Moscow and from Berlin. That, my friend, is our affair; that is our kettle of fish; too long we have ignored the situation and have done nothing about it.

Nearly 3 years ago the so-called Dies committee was set up. It was authorized to investigate these subversive and un-American activities, to throw the spotlight of publicity upon them, and to point out to the American people the subversive activities that are being carried on in our midst, practically unnoticed.

In spite of obstacles deliberately placed in the way of the committee, in spite of ridicule heaped upon the committee by high Government officials, in spite of the fact that the committee was denied the help and cooperation of the Department of Justice that had been promised the committee, help in the shape of legal counsel and trained experienced investigators, the committee has done a fairly good job of uncovering and exposing these foreign agents and the various subversive groups that have been at work trying to undermine and destroy our Government. I propose to tell you about that work.

The average American, when told about the dangers of communism, invariably shrugs his shoulders and says: "It can't happen here." Leaders of the American Legion and leaders of the Catholic Church of America have been very much concerned over the rapid spread of communism in this country during recent years, but they have met with the inevitable shrug of the shoulders and the statement: "It can't happen here." That was my attitude and that was my answer until 3 years ago, when the sworn testimony presented and the written evidence filed with the Dies committee changed my opinion on the situation confronting this Nation, and I say now just as emphatically as I can, "It is happening here," and I propose to present evidence to substantiate that fact.

One of the chief witnesses before our committee made the statement: "Communism

has made more progress in the United States during the last 5 years than it had made in the 50-year period previous to that time." When asked how he accounted for this rapid progress he gave four reasons. I offer them for your consideration.

"First," he said, "this so-called depression has lasted so long that it has brought about mass discontent, and mass discontent makes fertile soil for communistic crops." That statement is easily understood; it does not need explanation. Our job is to put men back to work in private industry at decent wages and do away with this mass discontent.

The second reason the witness gave for the rapid spread of communism was: "High Government officials, through speeches, radio addresses, and written statements, have deliberately created or engendered class hatred in this country of ours, and class hatred makes an excellent seed bed for communistic seed."

If you will review the speeches made during the past year or two by Ickes, by Jackson, by Hopkins, mouthpieces of the President, and the name callings that they have been spreading over this country of ours, such as economic royalists, princes of privileges, Tories, Bourbons, etc., deliberately creating class hatred, indicting a whole group or class of people, our industrialists, by the phrase "economic royalists," when it only applies to about 1 percent of the group, you will know what that witness meant when he said high Government officials have been creating class hatred in this land of ours. These same men decry race hatred and religious hatred, but they deliberately set about creating class hatred. Class hatred is a twin brother to race hatred and religious hatred, and there is no place in this land of ours for any of these hatreds. Where one is created it inevitably engenders the other. Our investigators all over this country report that there is a surge, or upsweep, not only of class hatred, but of religious hatred and race hatred in this country of ours, plenty of evidence of it. And so those who sow the wind must expect to reap the whirlwind.

The third reason that the witness advanced for this rapid spread of communism was, "High Government officials have not only sympathized with but they have actually encouraged Communist leaders in their activities in this Nation of ours." When asked for evidence upon which he based that statement, he smiled, and said, "What about this man Bridges on the west coast? He is an alien, a guest, as it were, in this country of ours. He is a Communist and your committee has his Communist membership card in your files. He has preached the overthrow of this Government by force from public platforms, and you have sworn statements to that effect; and preaching the overthrow of this Government by force under our present law by an alien is a deportable offense. He has been picked up twice to face deportation proceedings. The first time the proceedings were canceled by the Secretary of Labor, and the second time they were indefinitely postponed awaiting a decision of the Supreme Court in the so-called Strecher case. The Strecher case was not a parallel case. It was based upon past membership in the Communist Party while the Bridges case was based upon present membership and also preaching the overthrow of this Government by force. The Federal judge before whom the Bridges case would ordinarily have been tried, had ordered aliens deported under similar conditions. Special Judge Dean Landis of the Harvard Law School, was selected to try the case. Because he could not go beyond the evidence presented to the court, much of which was of doubtful value, and also because a great deal of real evidence was omitted by the prosecuting agents in presenting the case against Bridges, the judge, under the law, could do nothing else but render a decision clearing Bridges of the charges brought against him. Wouldn't you say that was not only sympathizing with but encouraging Communist leaders in their activities?" If that is not enough, what about the former Governor of Michigan, who, when the sit-down strikes were started in Michigan, called out the State Militia to protect the sit-downers in their illegal possession of property and to prevent American citizens, 75 percent of the workmen who wanted to work, from going in and pulling the sit-downers out by force. Wouldn't you say that that was sympathizing with and encouraging Communist leaders in their activities, particularly when the sit-down strike technique was first used in France by the Communist leaders there, and it worked so successfully there, that the Communist leaders of the C. I. O., adopted it and used it in those strikes in Michigan.

The fourth reason that the witness advanced for the rapid spread of communism in this Nation of ours was: "Federal funds have been generously used to advance the cause of communism in the United States." This statement was backed up by 3 days of testimony from the W. P. A. officials of the Federal Theater Project of New York City, testimony which proved conclusively that the Workers' Alliance of New York City, a Communist outfit, controlled, dominated, and directed the Federal Theater Project of New York City. They had been writing, preparing, and presenting communistic plays in the city of New York, presenting them on high-school platforms and public platforms, and copies of the same were filed with our committee. I will sketch one, because it is a sample. This one is called The Revolt of the Beavers. The word beavers is synonymous with workers.

This is a synopsis of the play:

A little boy and girl about 9 years of age get tired of school, play hooky; go out into the woods and play around until they get tired; fall asleep; in their sleep they dream, and in their dream they are transported by the North wind to some imaginary country near the north pole called Beaverland. When they get to Beaverland they discover the poor, down-trodden, hard-worked beavers, forced to work long hours at very little pay, poor food, bad working conditions, while the chief beaver lives in all the luxury possible, and is supported in his control over the workers by his trained army. A beaver professor organizes a revolt, imports arms, overthrows the government by force, the workers take over, and then they have heaven on earth in Beaverland, with frequent references to the situation in Russia and to what has been going on in Russia during the last 15 or 20 years. Would you not say that is a Communist propaganda play? Yet that is the kind of stuff that has been produced by the Federal Theater Project of New York City at our expense.

Then there is the play called "The Class of '29," built around eight or nine college graduates who went out in the world, could not find jobs; became radicals. Free love is preached all through the play. One of the girls suggests to one of the young men that they live together without the blessings of matrimony, because of the situation. The play makes fun of religion and of home life, and ridicules most of the things we have been taught to hold dear. That is what our money was being spent for, and I believe it is high time the American people woke up to that fact. I am very glad to say that as a result of our investigations and findings, backed up by the findings of the Woodrum committee, the Federal Theater Projects are no more, and Federal funds are not being used for their support.

Documentary evidence, acceptable in any court of law, has been filed with our committee to prove that the slimy trail of communism has penetrated into four phases of American life and society:

(1) The schools of our Nation.

(2) The American labor unions.

(3) The churches and pulpits of the Nation.

(4) Various departments of our Federal Government.

Communists and Communist sympathizers occupy key positions in several departments of the Government. The Department of Labor is honeycombed with them; you will find them on the pay roll of the Labor Relations Board; you will find them as assistants in the wage-and-hour law set-up. The practice of providing berths in the Government departments for "reds" should be done away with.

The strategy of the Communist leaders as explained to our committee is what is commonly referred to in Communist ranks as "the Trojan-horse method." The aim is to get Communist leaders planted on the inside of legitimate organizations, such as labor organizations, youth organizations, Y. M. C. A.'s, and then to begin the process of boring from within. At present the program has been changed somewhat by the Communist leaders. They now organize and set up legal organizations that work within the law as a part of the Communist united front. Within these legal organizations, front organizations, or transmission belts, as they are called, they set up a holding company, or illegal organization, that works in secret, outside the law, in an underground manner. These front organizations always have desirable objectives that serve as window dressing to attract and win the support of decent people; but behind this attractive window dressing is the illegal organization that carries out the Communist line, unknown and unsuspected by most of the membership.

The American League for Peace and Democracy was perhaps the best and most widespread example of a united-front organization, a transmission belt. It had about 4,000,000 members, most of whom were entirely innocent of its communistic origin, its communistic activities, and its communistic objectives. I want to discuss this organization because it is typical of all organizations that are part of the united front.

The American League for Peace and Democracy had its origin in Moscow in 1933. Stalin called a meeting of the executive committee of the International to discuss what should be done to head off the new menace to communism—fascism. Japan had just seized Manchuria. Hitler had come into power in Germany. Mussolini was rattling his sword in Italy and looking around for conquests. Moscow foresaw a military showdown with fascism in the near future, so Stalin decided he would need allies in the coming conflict.

Out of the deliberations of that meeting in Moscow in 1933 came the decision to set up a popular-front government in France and a popular-front government in Spain. The United States was not ready for a popular-front government, so they decided to set up the American League Against War and Fascism, as the first step toward a popular-front government in the United States. Earl Browder, America's representative at the Moscow meeting, brought the orders back here and commissioned Dr. J. B. Matthews to set up and head the new organization.

There are four classes of members in the American League: Communists, who occupy the strategic places of power and do most of the work; fellow travelers, who believe and act as Communists, but who do not carry membership cards for strategic reasons; stooges, often called dupes or decoys; and innocents, who constitute the great bulk of its membership.

The present objectives of American Communists, as given to our committee by former

leaders of the American Communist Party are:

First. Destroy the party in power—the Democratic Party—by driving a wedge between the left wing and the right wing of the party. We on Capitol Hill know that the wedge is nearly half through now and that the purge program of the President actually played into the hands of the Communists and gave great impetus to the wedge that the Communists are driving.

Second. Established the Farmer-Labor Party as the party in power, because Communist leaders occupy the strategic places in that party and will use those places of power and influence, once that party is in the saddle, to destroy the capitalistic system and to bankrupt the Nation.

Third. A receiver will then be required to take over the bankrupt and chaotic National Government, which receiver, by the very nature of the case, will be the highly organized, militant, small group known as the American Communist Party. Then, according to their leaders, "We will establish heaven on earth in America, as our brothers have established it in Russia."

All I can say is, God save us from that kind of heaven; I want none of it for mine. "Fantastic," you say, "It can't happen here"? I say it is happening here.

I have been asked, "What should be done about the spread of communism in the United States and how can it be checked?" My answer is: "The best way to stop the spread of communism would be to transplant all Communist leaders, pink intellectuals, parlor advocates of communism to 'red' Russia, and compel them to live there in the midst of communism for a period of 3 to 5 years. If this were done, I guarantee that 999 out of every 1,000 thus transplanted would be permanently cured of the disease." Of course, there are other things that should be done to check the growth of this "red" menace, such as:

1. Put the unemployed back to work in private industry at decent wages and thus remove the mass discontent, the fertile soil in which communism thrives.

2. Stop spreading class prejudice and hatred, which makes such an excellent seedbed for Communist seed.

3. Bring about a better and more equitable distribution of the products of labor.

4. Cultivate, encourage, develop the one crop we need in America—Americanism, patriotism, or whatever you want to call it.

If we will put forth our every effort toward the production of a real crop of Americanism, there will be no room for these foreign isms. Americanism, or patriotism, is so well defined and expressed in the little poem entitled, "The Best Land" by Edgar Guest, that I close with his words:

"If I knew a better land on this glorious
world of ours,
Where a man gets bigger money or is working
shorter hours,
If the Briton or the Frenchman had an easier
life than mine,
I'd pack my goods this minute and I'd sail
across the brine,
But I notice when an alien wants a land of
hope and cheer,
And a future for his children, he comes out
and settles here.

"Here's the glorious land of freedom. Here's
the milk and honey goal
For the peasant out of Russia, for the long-
subjected Pole.
It is here the sons of Italy and the men of
Austria turn
For the comfort of their bodies and the
money they can earn.
And with all that men complain of, and all
that goes amiss,
There's no happier, better nation on the
world's broad face than this.

"So, I'm thinking, when I listen to the wails
of discontent,
And some foreign disbeliever spreads his evil
sentiment,
That the breed of hate and envy that is sowing
sin and shame,
In this glorious land of freedom should go
back from whence it came.
And I hold it is the duty, rich or poor, of
every man,
Who enjoys this country's bounty, to be all
American."

Is the New Deal Betraying Us?—A Veteran Apparently Would Like to Know

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1941

Mr. HOFFMAN. Mr. Speaker, from a New York City veteran comes this letter enclosing an article by George Rothwell Brown. The veteran writes:

Read this article and if possible have some of those New Deal Congressmen read it. Mrs. Roosevelt could be taught something also if she took time out to read it.

How long in trying times like these must we stand for a misfit in our Government like "Old Lady Perkins." Wake up, America.

The Communists boasted they would start strikes all over our country when we started making war materials. Have they not made good? Again, wake up America.

Sincerely,

_____,

A veteran with two sons making $21 per month in an Army camp.

The article is as follows:

THE POLITICAL PARADE

(By George Rothwell Brown)

Now that Mr. Roosevelt finds himself confronted by the ugly fact that the international Communist Party is waving civil war against the United States, what is he going to do about it?

It is all very well for the President, as in a recent speech, to castigate the Communists for what they did to France in the betrayal of that unhappy country, as well as of French labor.

What he must deal with is not an historical fact in France, but an immediate fact on the domestic labor front right here at home.

The Communists, some of whose associates the New Deal has petted and coddled and put into places of power and responsibility in the very Government itself in Washington, are inspiring, organizing, and leading the strikes which are crippling America's war efforts.

This leadership is treasonable, and has been denounced in Congress as treasonable.

When is Mr. Roosevelt going to deal with treason?

The identical pattern of betrayal which led France to her doom is being followed in the defense strikes in this country, inspired and promoted by alien enemies, by misguided labor leaders, and by out-and-out labor racketeers.

If you would understand the similarity between what happened in France and what happens today in the United States, read the testimony given by former Ambassador William C. Bullitt before the House Judiciary Committee. It can be found in the CONGRESSIONAL RECORD of March 27, page 2682.

Mr. Bullitt does not refer to the popular front government, which sold France down the river to Hitler, as the French New Deal, but that is what it was. It may be added, in passing, on the responsibility of this writer, that this French New Deal was copied in this country—even down to the sit-down strike technique.

Speaking of the reforms of the French New Deal—under the Blum Government—but, as stated, not calling it that—Mr. Bullitt said:

"They did reduce enormously French production, because French industry was not organized suddenly to drop hours of labor greatly, and also lots of the manufacturers were very much frightened by these reforms. In fact, in some cases they closed their factories.

"The result of this was we had a diminution in production in France just when we needed a greatly increased production to meet this rising German threat.

"There was also another curious development which was this—that in the factories even working a 40-hour week, in many of the most important factories, especially those around Paris, where there were a great many Communists, that the workmen did not do much work during the 40 hours. They dragged their feet a good deal and did not turn out so much.

"But that was under the influence of a different sovereign, a sovereign in Moscow, and was not the attitude of the really patriotic Frenchman.

"It was just a case of the country not waking up to the fact that modern wars are won or lost before they are begun by the preparations that you make, and the analogy, to my mind, between the attitude in France and the attitude in this country during the past few months has been very, very striking."

Any reader of American newspapers today, as he follows the disheartening reports of strikes in industrial plants holding Government war contracts, knows that the pattern of French betrayal is being followed by the traitors and slackers and misguided fools on the labor front of our own country.

We have nurtured the Communist reptile, and now he turns and bares his fangs.

What is the New Deal Government, which has molly-coddled communism, going to do about it?

Mr. Speaker, the answer to which has been that the New Deal will do nothing about it except to encourage the wreckers.

Today it is a little difficult to learn whether John L. Lewis or F. D. R. is Mr. Big. The President says we must have coal. Everyone knows that if the steel makers are to continue in production, we must have coal. We know that the northern operators and Mr. Lewis have agreed; so why do they not dig coal? Why does not the President insist that coal be dug by the northern miners, there no longer being disputes between the mine operators and the miners?

Mr. Lewis says there will be no coal dug until the southern operators comply with his wishes. If coal is not dug, there will be no steel made, and if steel is not made, there will be no munitions and there will be no aid to Britain.

How about it, F. D. R., are you or Mr. Lewis, Mr. Big? And how do you like the aid which Mr. Lewis and the northern operators are giving to Mr. Hitler?

We Americans Must Reappraise Our Ideals

HON. JOHN W. GWYNNE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1941

ADDRESS OF HON. BEN F. JENSEN, OF IOWA, BEFORE JOHN LYON POST, 3150, VETERANS OF FOREIGN WARS

Mr. GWYNNE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by Hon. BEN F. JENSEN, Representative from the Seventh Congressional District of Iowa, delivered on the evening of April 18, 1941, before the John Lyon Post, No. 3150, Veterans of Foreign Wars, at Arlington, Va.:

Mr. Toastmaster, veterans of foreign wars, and ladies, more than a fifth of a century ago—and that sounds like a long time—you veterans, then young men, virile, vigorous, facing life, your future before you, laid your life, the happiness of those who love you, your all on the altar of your country. The impelling motive which caused you to don the uniform and to march forth to whatever the hell of war might hold for you was a soul-deep conviction that you were going out to fight to defend the American way, American customs, American justice, the American philosophy of life, of culture, the Bill of Rights, the constitutional Government itself. That was all summed up for you in those days when you faced life at its full tide by the slogan "to make the world safe for democracy."

You marched forth in those days, and you are members of the Veterans of Foreign Wars now because you marched forth in those days to fight to maintain those American ideals of liberty, of free enterprise, of equality of opportunity, all of those tenets to our American philosophy which we sum up when we say the American way.

It was a bitter thing, and I thank God that you survived it with your souls unseared, when you came back to find that you had not been fighting to make the world safe for democracy.

I thank God here today that even that bitterness did not sear your souls and blind your feeling of love and patriotism for your country.

It seems to me that the hour has struck when we Americans must reappraise our ideals; when we must again define the kind of government that we are ready to live for and, if necessary, to die for.

I can define it no better for you than it was defined away back in the year 1500 by a philosopher named Spinosa. Let me read you his definition of government which I think the most perfect definition of the American way that has ever been written in any language:

"The last end of the state is not to dominate men, nor to restrain them by fear; rather it is so to free each man from fear that he may live and act with full security and without injury to himself or his neighbor. The end of the state, I repeat, is not to make rational beings into brute beasts and machines. It is to enable their bodies and their minds to function safely. It is to lead men to live by, and to exercise, a free reason; that they may not waste their strength in hatred, anger, and guile, nor act unfairly toward one another. Thus the end of the state is really liberty."

That is the kind of government, my friends, that you went forth 24 years ago to protect. Today we are considering sending our young men away from their business and their homes to carry four great freedoms to every corner of the world.

The purpose of our involvement in the present wars in Europe and the Orient is to carry freedom of speech, freedom of worship, freedom from want, and freedom from fear to everybody everywhere in the world.

Now, let us reduce this to plain lay language and see what it means. It means, as someone recently pointed out, that in order to establish merely the first two items—freedom of speech and freedom of religion "everywhere in the world"—the United States will have to conquer, subjugate, and govern Germany, Italy, Japan, Russia, China, the Balkans, and most of the rest of the civilized and uncivilized world. Why, my fellow citizens, such a situation could be established if it were possible at all only by fire and sword. How would we establish freedom of speech, freedom of religion, freedom from want, and freedom from fear among the hordes of India without first subjugating the British Empire?

Let us, as good American citizens, get down to brass tacks and find out what our real responsibilities are and what we actually must do to maintain the American way.

There was a very wise and humble Man who 2,000 years ago taught amid the hills and vales of Galilee. He propounded a great truth when he asked this question: "What shall it profit a man if he gain the whole world and lose his own soul?"

I want in all reverence to paraphrase that question tonight and ask you, What shall it profit America if we seek to establish these four great freedoms everywhere else in the world and lose our liberty at home?

Some of these freedoms that it is now proposed we shall carry, if necessary, on the muzzle of American guns and the points of American bayonets to the far corners of the earth. Have we in America achieved freedom from want for our own people? Have we achieved freedom from fear for our own people? I venture to say to you, my friends here tonight, that more people are fearing for the future of America in this hour than have feared for the future of America at any time since the great civil conflict which rent the country in twain.

God knows, it would have been so much better if we were going to attempt any such globe-encircling crusade as is proposed that we had sent these people bread instead of bullets.

I said a moment ago that we must face our responsibilities and we must define what they are. Our first responsibility is to maintain and perpetuate the American way. Our second responsibility is to guard against the un-American groups within this Nation which would produce, if they could, chaos in our economic structure, disintegration of our governmental structure and consequent utter confusion of our social structure when they like unclean vultures may feed upon the spoils of a once glorious and free nation.

Our responsibilities, Veterans of the Foreign Wars, is to see that the very substance of our own Nation is not given away and dissipated, reducing us to that grinding poverty here at home that foreign nations have made us fertile fields for sprouting some destructive ism. The surest and most certain protection against fascism, communism, nazi-ism, and any form of totalitarianism so abhorrent to the American mind is to give the American way a chance to work here at home.

Must we have a little dictatorship now to enable us to free the other nations of the world from dictatorship? Which means to say, my fellow Americans, that we must drink from the cup of poison that we would strike from the lips of others. It is a false doctrine, and no man who approaches it can possibly be honest with himself or with his fellows because there is not an atom of truth in it.

Say these proponents of this crusade to carry these four freedoms to the uttermost parts of the earth, if we do not carry this crusade into the jungles of Africa and the stacks of the chimneys of Britain and the Valley of the Rhine, this great dictator across the seas will come over here and subjugate us.

Oh, that we had more of that spirit of Lincoln when he said:

"At what point shall we expect the approach of danger? By what means shall we fortify against it? Shall we expect some trans-Atlantic military giant to step the ocean and crush us at a blow? Never! All the armies of Europe, Asia, and Africa combined, with all the treasure of the earth (our own excepted) in their military chest, with a Bonaparte for a commander, could not by force take a drink from the Ohio or make a track on the Blue Ridge in a trial of a thousand years."

It is our responsibility to guard against the danger from the point where Lincoln saw it when he said:

"At what point is the danger to be expected? I answer, if it ever reaches us, it must spring up among us. It cannot come from abroad. If destruction be our lot, we must ourselves be its author and finisher. As a nation of freemen, we must live through all time or die by suicide."

My fellow Americans, honored as you are by the badge of the service you offered upon the altar of your country; honored as you are by the undying record of the age in which you were willing to march forth and to lay your lives and your all on the altar of an ideal, the price of liberty.

It is our responsibility, yours and mine, to see that we do build, practically, efficiently, and economically, a defense which will be impregnable against any assault which any nation or any group of nations might in future seek to commit upon us. But in building that defense we must also build our defenses against economic chaos. We must build our defenses against a debt which will bankrupt us. We must build our defenses against a condition which might so discontent our people that they would in a moment of dispair and blindness, listen to the false lure of some alien doctrine. It is our great duty and our great privilege, my fellow citizens, to constitute ourselves the protectors of those unborn millions who are not here to speak for themselves or to defend themselves. We must protect them against a staggering debt, against a ragged social structure.

We are not the originators nor the owners of this rich estate; we are the trustees vested with a life interest.

Yes, by all means, let us build a national defense. By all means let us succor every people we can, but let us not impoverish our own to do it.

Freedom, my fellow Americans, is not something you legislate. It is something you live and deserve. Freedom is not something that can be handed to you. You can only be given a chance to make yourself free.

Of course, we are not going to carry on any crusade to establish these four freedoms everywhere in the world. The great responsibility overshadowing all others that confronts you here this day is to be alert; to guard against politics being played with your national defense. A nation can thrive only as its people save and use their substance wisely and well.

The greatest field for squandering the people's substance ever known in history has been the field of war. Before last November 5 both major parties, both major candidates, made solemn covenant with the people of this Nation that we would be kept out

of war. It is your responsibility and mine to see that covenant is kept, and if it is broken we will be able to say to the betrayed people of this Nation yonder stands the man or men who broke their sacred promise to you.

Nothing has happened since November 5 to change the terms or weaken the demands of the covenant, but much has happened to render us uneasy that the covenant may be broken unless we are vigilant.

In conclusion, let us preserve our own free America first of all; let us preserve our own constitutional form of government first of all; let us unite as one people to create our national defense, but let it be a national defense. Then let us make known to the world that we will defend our liberties and our honor.

Let us give such succor as we can to the rest of the world, but in God's name let us keep our own strength and our own sanity and our own integrity in order that we may in a later time succor a world that will be exhausted and prostrated from war—in a time when it might well be that in America alone of every nation of the world there will still burn that beacon of hope to all men the torch of freedom, as proof to the world that our way, the American way, is the right way.

Food for the Small Democracies

EXTENSION OF REMARKS

OF

HON. ANTON F. MACIEJEWSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1941

RESOLUTION OF COUNCIL OF POLISH-AMERICAN PROFESSIONAL ORGANIZATIONS

Mr. MACIEJEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Believing that the lives of millions of children, women, and men in conquered European countries can and must be saved from the impending famine and pestilence which confront them and that renewed hope may be given them in the ideals of mankind, we, the undersigned, indicate our sympathy for and pledge our support to the National Committee on Food for the Small Democracies and its efforts to (a) urge agreements by the German and British Governments with an international organization of American and other neutrals by which the domestic food supplies of Finland, Norway, Holland, Belgium, and Central Poland can be protected from the occupying armies and authorities; (b) by which supplemental supplies can be imported through the British and German blockades; (c) to secure the efficient operation of such a neutral organization.

Approved by Council of Polish-American Professional Organizations at a meeting held December 12, 1940.

PAUL FOX, *President.*
THADDEUS SLESINSKI,
Secretary.

The Council of Polish-American Professional Organizations embraces Polish Engineers' Club, Polish-American Pharmacists, Polish-American Optometrist Society, Polish Dental Society, Polish Medical Society, Polish Lawyers' Association, Polish Teachers' Club, Polish Arts Club, University Friends of Poland.

Our Natural Heritage

EXTENSION OF REMARKS

OF

HON. THOMAS F. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1941

ADDRESS OF JAMES P. POPE, DIRECTOR, TENNESSEE VALLEY AUTHORITY

Mr. THOMAS F. FORD. Mr. Speaker, under leave to extend my remarks, I include the following address by the Honorable James P. Pope, Director, Tennessee Valley Authority, before the Des Moines Public Forum, Des Moines, Iowa, March 10, 1941:

Men born on this earth have a natural heritage. They inherit not only their bodies and minds, their institutions, their customs, and traditions, but they also inherit the natural resources of their country—the land, the water, the air, the soil, the minerals, the vegetable and animal products. The very existence of man depends upon this natural heritage. Certainly fortune has smiled on us in the bestowal of this birthright. The greatness of America rests on the greatness of her resources.

Five hundred years ago, when America was discovered, a billion acres of tillable land and 850,000,000 acres of timberland spread across the continent. No more fertile soil and no more luxuriant forests were to be found anywhere in the world. The earth abounded in coal, oil, and phosphates of incalculable value. Great herds of buffalo roamed in the West. Forests were filled with game. The streams were alive with fish and rivers of wild fowl flowed through the air. Millions of beavers swarmed along streams which formed the upper reaches of the great rivers. For a hundred years men who landed on the Atlantic coast faced a natural paradise.

THREE STAGES

It might be said there are three broad stages in the history of man and nature.

In the first stage, people live from their herds and move from place to place for pasturage, as in the case of the nomads of early times. Or they live by hunting and fishing, as did the American Indian. In either case, they live in harmony with the laws of nature. They do not destroy the natural resources of the country.

In the second stage, people live by tilling the soil, mining, and manufacturing. They use and exploit their natural resources. This process is pleasantly termed progress—civilization. To satisfy greed, man is prone to squander, destroy, neglect. In time the fertility of the soil is gone, minerals are exhausted, forests disappear, and the wildlife of the country is decimated. Many countries have gone through this stage.

The third stage—if it is reached—is that of restoration and conservation of natural resources.

Archaeologists are now telling the story of countries that never reached the restoration stage. Ancient cities are being unearthed. On the island of Crete, for instance, vast ruins of ancient palaces are being uncovered 43 feet below the surface. There are relics of luxurious dwellings, workshops, altars, and temples. There is evidence of great natural wealth. This was the Golden Age of which Homer sang: "There is a land called Crete, in the midst of the wine-dark sea, a fair, rich land, begirt with water, and therein are many men past counting, and 90 cities." Today most of Crete is barren land; its cities are few, and small, and its people are poor. This story has been repeated in many other ancient nations.

ALL STAGES IN THE UNITED STATES

In the compact history of the United States all of these stages may be studied. In fact, within 200 years, sometimes even within a generation, the whole cycle has been completed. Recent attempts to restock the streams of the Northwest with beaver offer a good illustration of what I mean. This industrious little animal up until 150 or 200 years ago had worked throughout the ages without interruption. By damming up thousands of creeks that are later joined into mighty rivers, he had helped to maintain a balance in nature of which he was unaware. Then came the trappers, urged on by inefficient business enterprises—both French and English—whose sole interest in the beaver was his hide. Fur trading became a major industry and one of the causes of the French and Indian War. Never were there so many beaver hats and coats in the world. Every English soldier had a beaver cap and every French lady a beaver coat. Within 50 years the beaver was almost extinct.

Five years ago I was in Idaho when the Department of the Interior began restocking the small mountain streams with beaver. Several hundred had been trapped and brought out there as the beginning of a Nation-wide program to restore the beaver to his once high estate. They were not being restored for their fur but for their teeth, for they were to be allowed to engage in their time-honored work of dam building—to hold back at the source the precious waters needed on the land below. The value of each beaver for this purpose was estimated to be $300 and his cost $8. Here, in the story of the beaver, we have the whole cycle of the relationship of man to his natural resources.

GHOST TOWNS

When I was a very young man I taught in a country school in Winn Parish, La. Morning and evening, listening to the soughing breeze in the treetops, I walked 2 miles through one of the finest forests of longleaf pine that ever grew. But the days of these big trees were numbered. For soon came the timber cruiser, walking through the forests with his notebook. He left with a blueprint of the forests' ruin. Behind him came the sawmills and lumber camps. The timber was bought for a song. The big trees were cut; the small trees were cleared by the swampers or left standing, bent and broken. Slash was piled high, a standing invitation to the lightning, the locomotive spark, or the careless match. Thousands of acres were burned. Of almost a billion acres of original forest land in the United States, only one-half, or approximately 460,000,000 acres, are now capable of producing timber. Nearly all of the finest forests are gone.

In the wake of such operations throughout the country came ghost towns, deserted villages, and desolate country. One lumber town in Louisiana had 5,000 people in 1917, with churches, schools, paved streets, and parks. In 1927, with all the timber gone, the town had one inhabitant. The grass was growing along the edges of the pavements, and the houses were occupied by bats and wild animals.

The present generation down in that section of the State talk about the time when they used to have the big trees. New trees are now being set out, and coming generations may again see the big trees. There, too, the cycle is being completed.

VANISHING LANDS

A similar story could be told of the farm lands of the country. Farming did not possess the lure of profit of the fur industry or the timber industry. It did not attract great corporations in pursuit of immediate riches.

Nevertheless there was widespread waste. Out of economic necessity farmers were forced to widely exploit their soil resources. They were unable to hold the topsoil and preserve its fertility. In the South cotton farmers took possession of the land along the south Atlantic seaboard and then moved farther and farther west. Cotton was the money crop which they planted year after year on the same land. Because they left their sloping fields exposed to erosion by water, tons of the best topsoil washed away with every big rain.

As a boy I lived next to an old pre-war plantation that had been owned by my grandfather. It had been worked to death, abandoned to scrub pine. There were gullies on it from 10 to 15 feet deep. Field after field had been cultivated for a few years and then "thrown away," as they say, and new land cleared. There were thousands of acres of this sort of land in almost every community in the South. In the Tennessee Valley area alone, of the 8,500,000 acres in crops and pastures, about 1,000,000 acres have become totally unfit for cultivation, another 2,000,000 have lost half of their topsoil, and about 4,000,000 additional acres have suffered appreciable erosion.

As to the country as a whole, listen to Stuart Chase:

"One hundred million acres of formerly cultivated land has been essentially ruined by water erosion—an area equal to Illinois, Ohio, North Carolina, and Maryland combined—the equivalent of 1,250,000 80-acre farms. In addition, this washing of sloping fields has stripped the greater part of the productive topsoil from another 125,000,000 acres now being cultivated. Erosion by wind and water is getting under way on another 100,000,000 acres. More than 300,000,000 acres—one-sixth of the country—is gone, going, or beginning to go."

To haul away the rich farm soil that is washed out of the bleeding fields and pastures of America every year, he says, "would require a train of freight cars 475,000 miles long, enough to girdle the planet 19 times at the equator."

The National Resources Committee has estimated that soil erosion has cost the country at least $20,000,000,000 in the last 50 years. What has been the cost in human misery? Mr. Jay Franklin has summarized it this way:

"Our enemies are of our own household. Cornfields running down the river—cotton-fields draining into the Gulf of Mexico—wheatlands on the Great Plains dyeing the Missouri or powdering the cities of the distant East—forests cut down and gullies eating farms like cancers—poor whites and croppers—chiggers and hookworm, malaria, ignorance, bewilderment, apathy."

DUST STORMS

Some years ago caravans of settlers again moved west along the old Oregon trail into Idaho, Oregon, and Washington. This time they piled all their belongings in old Ford cars instead of covered wagons. They had left the horrors of the Dust Bowl, the fields that had blown away, cattle that had starved, and homes that had been ruined. Where buffalo grass had once grown waist high, millions of acres of sod had been plowed up and the fields cultivated. Now the wind had carried away literally billions of tons of the finest soil on earth. I was in Washington, D. C., during the worst of these storms, and I saw the air filled with dust and the sun hanging like a lead dollar in the sky. Far out into the Atlantic Ocean these clouds hung for days. This was nature's exact and terrible retribution.

One could go on with the story. It could be applied to coal and oil and other mineral deposits. It is not a pleasant task to tell of this tragic side of the history of our American earth, but it is necessary to tell it and to continue to sound sharp warnings from one end of the country to the other. The people must not be permitted to forget what has happened and what is still happening to their natural assets.

THE OTHER SIDE

It is time, however, to look at the other side of the picture, to tell of what has been and is being done on the constructive side. We are entering, perhaps in a feeble way, upon the third stage of our history. Within the last quarter of a century we have been awakening from our slumber. We are at last becoming conscious of what has been going on.

About 30 years ago President Theodore Roosevelt aroused the country by calling a conference of the Governors of all the States at Washington to discuss the problem of conservation. Since that time we have been talking about it, and some things have been done about it.

The problem of conservation is one of immense complexity. It requires education, understanding, practical programs of action, and large sums of money. Although vast tracts are owned and are being conserved by the National and State Governments, the great bulk of this Nation's land is divided into relatively small holdings and is owned by the people themselves. Conservation programs therefore must be adjusted to the economic condition of the millions of owners of farming, timber, and grazing lands.

WILDLIFE RETURNING

In the first place, let us see what is being done for the vanishing wildlife. Federal and State protective laws have been passed. Some 275 wildlife refuges have been set up by the Government, covering about 14,000,000 acres. Wildlife is also protected in national and State forests and parks throughout the country. Fish hatcheries are being established in all the States. And it is said that the herds of deer in Pennsylvania are almost as large as those of colonial days. Even the Vice President of the United States is reported to have killed a deer in that State 2 or 3 years ago.

RESTORING THE FORESTS

As for conservation of forests, here, too, something real is being done. The Federal Government has established about 160 parks, monuments, and reservations, covering more than 20,000,000 acres of land. And more than 1,600 State parks containing over 6,000,000 acres of land have been created by the States. In addition to that, at the end of 1939 the national-forest area covered about 229,000,000 acres. In all these lands the natural resources in forests, grazing lands, and mineral deposits are being protected and conserved by the Government. Selective cutting of the timber is required. Fire-patrol service is being constantly improved, and these practices are also being followed to a very large extent by the private lumber companies on their own lands.

In the year 1938 about 25,000 acres of range lands were re-seeded. Small dams are being built, wells drilled, and natural springs developed. Literally billions of seedlings are being planted on the timberlands of the country. In the Tennessee Valley area alone, from the nurseries of the Tennessee Valley Authority, more than 110,000,000 trees have been planted within the last few years.

TIMBER BELTS

One of the most interesting projects undertaken is the planting of tree belts on the prairies and plains of the West. Within 5 years about 14,000 miles of effective tree barriers, 100 feet wide, have been planted. From 90 to 95 percent of the belts that were planted are effective, and the trees have grown from 4 to 8 feet each year. Some of them are now from 35 to 40 feet high. When this project was first proposed, it was ridiculed by many a skeptic. But the results in reducing moisture loss, in protecting cultivated crops, and in making the surroundings more livable and attractive have now silenced all criticisms. These shelterbelts are now found in Texas, Oklahoma, Kansas, Nebraska, and the Dakotas.

The work of reforestation is by no means finished. It has really only been started. The progress that has been made, however, indicates that the American people are on their way toward the restoration and preservation of their forest resources.

REBUILDING THE SOIL

Now as to the tremendous problem of the Nation's soil. During the last decade an attack upon this problem has been made in earnest. The Agricultural Adjustment Administration deserves much credit for its work. It is operating in more than 3,000 counties in the United States. Of the 9,000,000 farmers in this country, about 6,000,000 are cooperating in the program. These farmers have diverted some 30,000,000 acres from soil-depleting crops to soil-building crops. Something like 5,500,000 tons of soil-conserving lime and fertilizer have been applied to croplands. Cropping systems have been changed. Terracing of hillside is going on at a rapid rate; contour cultivation, furrowing, strip cropping, and other better farming methods are being applied. Substantial sums are beng paid to the farmers to enable them to carry on these conservation practices.

Another branch of the Government, the Soil Conservation Service, with which you are familiar, is carrying on a widespread program in selected areas to demonstrate the best methods of soil conservation.

There are a number of other Federal and State agencies such as the C. C. C., the Farm Security Administration, and others that are doing fine, constructive work.

TENNESSEE VALLEY PROGRAM

In my section of the Southeast, in addition to the foregoing work, the Tennessee Valley Authority, in cooperation with the land-grant colleges, has set up a far-reaching program with which you are probably less familiar. This effort revolves around the manufacture and demonstration of concentrated phosphate fertilizer. About 310,000 tons have been distributed since the Authority was established in 1933. Forty-seven States and two territories are using T. V. A. fertilizer for testing and demonstration purposes. The A. A. A. has distributed it as an aid to an educational and conservation program. In 23 States of the Union there are over 32,000 test-demonstration farms. About 24,000 of these farms are located in the Tennessee Valley States.

You may want to know what a test-demonstration farm is, how it is selected, and what is done about it. Groups of farmers organize themselves by communities to make the most effective use of the phosphate for soil improvement as a basis of a higher standard of living. They select a farm in the community for demonstration purposes. The owner of the farm agrees to comply with the practices prescribed—i. e., he and his neighbors work out a program for his farm based on the findings of the experiment station and based on his needs. This usually results in more acres of cover crops and legumes and less acres in row crops. He receives through the association whatever amount of phosphate fertilizer is required to carry out this program. He pays transportation costs of the fertilizer and the added costs of making the readjustment to his farm. He keeps careful records of the results obtained.

There are over 5,000,000 acres in these demonstration farms, more than 4,000,000 of which are in the Tennessee Valley States. The practices being carried out on demonstration farms are also being adopted by many of the 900,000 farmers participating in the associations.

Within the last few months I have visited a number of these demonstration farms.

This is what I found: Increased acreage yields, decreased erosion, reduced acreage in row crops, and enlarged acreage in winter cover crops, more and better livestock, reduced indebtedness, and increased income. I saw new houses, barns, and fences. I found enthusiasm among the farmers, increased interest in all community activities, and a new confidence in their future. Many of these benefits cannot be measured in dollars and cents.

PRINCIPLES OF CONSERVATION

At this point, an important principle of conservation should be mentioned. There are three different kinds of natural resources. The first consists of exhaustible resources like minerals. The second type includes agricultural, forest, and animal products, which are renewable resources. In the third category are the inexhaustible resources of air, water, and sunlight.

One of the great principles of conservation is that by using comparatively small quantities of some of the exhaustible resources in the right way we can make available for man's use and enjoyment larger quantities of the renewable resources. This is the principle that is being followed in the widespread use of phosphate fertilizer. A comparatively small amount in the soil makes possible the growing of legumes and grasses which hold the soil. These legumes at the same time capture from the air far more nitrogen than the phosphate used. In fact, for each pound of phosphorus used there are from 5 to 6 pounds of nitrogen captured. This nitrogen enriches the soil for the growth of other plants necessary for food and fiber.

It is not always possible, however, for farmers to manage their businesses in a way that will best conserve and build up their soil. They must have sufficient cash income to meet their obligations. Unless they can receive as much income from following conservation practices as by disregarding them, they cannot carry on their part of the program. It is necessary, therefore, that the income of the farmer be maintained, if not increased, if he is to be a working partner in the great enterprise of conserving the soil.

IMPROVING THE FARMER'S INCOME

The T. V. A. is trying in many ways to increase the cash income of the farmer who, while participating in the conservation program, allows a portion of his farm lands to recuperate from overwork. To this end, the T. V. A. maintains a group of research engineers who are constantly working at the job of finding ways to develop new tools, new farm equipment, new products, and even new markets.

Not long ago a new type of barn hay-drying equipment for use in areas of heavy rainfall was devised under T. V. A. auspices. Formerly, hay-drying equipment cost from $3,500 to $10,000. The new hay drier can be installed for about $300. The lower amount is within the financial reach of a good many farmers. It will encourage cover crops that conserve the soil and increase income.

A furrow seeder, devised and now in commercial production, plants grain and distributes fertilizer at the same time in furrows on hillsides without disturbing the matted root system between the furrows. This device again helps to conserve the soil while increasing income through higher yields of diversified crops.

A community refrigerator has been adapted to use by farmers. This refrigerator, accommodating about 60 families, affords an opportunity to store meat and other perishable products for home use or for the market. There are about 25 of these refrigerators now in use in Tennessee, Alabama, Georgia, and Mississippi. At one refrigerator located in Etowah County, Ala., during the first 12 months of operation 57 families stored 17,500 pounds of produce. Moreover, a recent study reveals that a community refrigerator pays for itself in less than 3 years.

In a community near Nashville, Tenn., the use of a freezer locker plant resulted in an increase in beef consumption of 8 to 10 times in 1 year. The importance of this result is apparent when it is remembered that only 5 pounds of beef per person has been consumed annually on the farms of Tennessee as compared with 40 pounds in Ohio.

A method for curing sweetpotatoes, using electric heat, has been devised. This reduces the loss in curing from about 25 percent to 5 percent, and usually increases the return to the farmer from 10 cents to 15 cents per bushel. This method is being used in many places in the valley.

A ¼-horsepower motor, costing from $5 to $18, can now be plugged in and put to work, churning, shelling corn, freezing ice cream, grinding sausage, sharpening knives, and doing a multitude of other things.

The results of the use of these new devices by farmers are gratifying. The files, which contain pictures, financial reports, and records of the individual farmers, tell the story of better incomes and improved farms. And they are chock full of human interest.

These T. V. A. research engineers are also working on minerals, timber, and other products in the Tennessee Valley area. There are projects for using scrap mica in plastic products, vermiculite in lieu of cork for insulation, kaolin for fine chinaware, sawdust for coal briquets, cull timber for panels, olivine and dolomite as new sources of magnesium, flax for making parachute webbing, and common clay as a source of alumina.

IMPORTANT IN NATIONAL DEFENSE

The importance of this work as a conservation measure must be clear to everybody. In addition to that, some of these projects hold promise of great national-defense value. Those for obtaining magnesium and aluminum from minerals of which there is an abundance in several States, and for obtaining parachute webbing from flax, are of especial importance to national defense. And these processes are now fairly well proven. At present our aluminum comes largely from bauxite mined in South America. We are also deficient in magnesium, an element highly important in processing aluminum. Last year we produced only 3,600 tons of magnesium while Germany produced 40,000 tons.

Such new processes, and the plants that utilize them, are of value to the country both in times of peace and of war. In this respect they are like T. V. A.'s ammonium-nitrate plant at Muscle Shoals, Ala., which produces a product that can be used for explosives in war and for fertilizer in times of peace. Thus they are of major importance on two vital fronts—conservation and national defense.

CONSERVING WATER RESOURCES

The T. V. A. has, of course, been engaged in other more widely publicized phases of conservation. It is conserving water for navigation, flood control, and electric power. These are the other major functions of the Authority. Their importance as conservation measures is everywhere recognized. Cheaper and more abundant electricity makes easier innumerable tasks in the home and on the farm, and at the same time stimulates the industrial economy of the whole area. Through greater efficiency, more employment, and larger pay rolls, this public resource is not only buttressing an important conservation program on the land—it is also making possible substantial increases in the value of the Nation's entire annual output of goods and services. More important still, at this particular time, it is playing a vital role in the country's national-defense program. We know already that the hundreds of millions of kilowatt-hours of electric energy that are now being used for national defense will, when the emergency is over, be used in peacetime pursuits.

CONSERVATION DURING NATIONAL EMERGENCY

The importance of carrying on our conservation program during this emergency cannot be overemphasized. During the last World War, under the slogan, "Plow to the fence for national defense," about 40,000,000 acres of grass were uprooted. Most of these lands were unsuited to farming, especially in areas of inadequate rainfall and high winds. The Dust Bowl calamity was the result. During the last few years more than 32,000,000 acres of this land have been shifted back to grass and pasture, and large supplies of grain and cotton have been stored to meet any emergency demands. If still larger supplies of foodstuffs become necessary, they should be supplied by stepping up production on lands suitable for increased yields. There must be no repetition of the disastrous performance of the last World War—plowing up marginal lands, wasting soil suitable only for pasturage or timber.

LONG PULL AHEAD

The task of restoration and conservation is a gigantic one. It may take a hundred years, on many fronts, to do the job. Certainly there is a long, hard pull ahead that will require all the energy and creative genius of the American people. It will require the awakening of our social conscience and a reconquest of our land. If we succeed, we will not only have preserved our natural heritage, we will have struck a mighty blow in defense of our democratic way of life.

Jackson Day Address

EXTENSION OF REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1941

ADDRESS OF HON. CLAUDE R. WICKARD, SECRETARY OF AGRICULTURE

Mr. PIERCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of the Honorable Claude R. Wickard, Secretary of Agriculture, at the Jackson Day dinner at Nashville, Tenn., Saturday evening, March 29, 1941:

Here in the shadow of the Hermitage, it may seem presumptuous for a native of Indiana, an outsider, to praise Andrew Jackson. There must be many here tonight whose ancestors knew Old Hickory personally and among you there probably are some who are kin to the Jackson family.

But Democrats cannot come together on Jackson Day without praising Jackson. And all of us share in the pride we feel for one of the truly great men of the Nation.

Furthermore, I feel that I understand how Tennesseeans feel about Old Hickory and about their State. I have some of that same feeling myself.

One reason for that feeling is my regard for Cordell Hull, my Cabinet colleague. He is a great American, one of our greatest, and all of us also share in the pride the Nation feels for him.

My mother's people, the Carnells, moved to my native Indiana from Tennessee. My grandfather's name was Andrew Jackson Wickard. My father's name was Andrew Jackson Wickard. I don't know why they changed the family custom when they named

me. I have always wished that my name had been Andrew Jackson Wickard, too. I would have carried the name proudly. For to me and to millions of other Americans the Jacksonian tradition and influence express many things that live in the American spirit and which must live on if we are to continue as a democracy.

The very essence of the American spirit is the freedom which belongs to the individual. Certainly nb one defended that freedom more fiercely than did Andrew Jackson. As a boy, he refused to clean an enemy officer's boots and received a sword cut across the head for that refusal. From that time on, he upheld on every occasion the worth and dignity which belong to free men.

There is in the world today a philosophy of life and government very different from Andrew Jackson's philosophy. The totalitarian leaders assert that men are not equal, but are of two kinds—master and slave. The totalitarian leaders say that man has no freedom, that he belongs to the state.

We challenge that concept today as Andrew Jackson, in his day and time, challenged any assault upon his individual freedom, or his worth and dignity as a man.

Americans are not serfs of the state. They do not belong to the state. The state belongs to them. This is the American spirit. This spirit has manifested itself as the occasion has demanded. Back in Jackson's day it manifested itself in meeting the challenge of the frontier.

One of Jackson's biographers called him The Border Captain. The name was a good one. America got very little military glory out of the War of 1812. On land there would have been practically none had it not been for Old Hickory. Jackson had physical courage that stood out in a time of remarkable physical courage. He had also the rarer qualities of leadership, military skill, judgment, and determination that was as strong as the finest of steel.

His letter to a Governor of Tennessee during the Creek campaign in 1813 is a model of fiery admonition to the wavering and doubtful. The Governor had suggested retreat and Jackson's letter in reply almost set the paper cn fire. Among other things, Jackson wrote: "Believe me, my valued friend, there are times when it is highly criminal to shrink from responsibility, or scruple about the exercise of our powers. Is it good policy to turn loose upon our defenseless frontiers 5,000 exasperated savages to reek their hands once more in the blood of our citizens? What! Retrograde under these circumstances? I will perish first."

His capacity for decisive action stood him in good stead during political campaigns; during the fight with Nicholas Biddle and the bank; in relationships with other nations; and in stating boldly his conviction that the rights of the Nation overshadowed the rights of any State.

The wilderness frontier of America is tamed now. We are a nation of 132,000,000 people. We possess the greatest abundance of the world's resources. We are strong in the men and the skill and the equipment to produce. We are a democracy, and yet the challenge we face is as great, or even greater, than the challenge which faced Jackson and his followers.

The frontier that challenges us now is not the frontier of land or space. The challenge now is for our people to push out onto the great plain of the world, as once they pushed through the Cumberland Gap and on that great plain to meet and conquer the threat to our way of life.

I do not speak merely of defending ourselves in a military way. We must, of course, be prepared to do that. I am talking about the part America must play in the world; the part it must play upon economic and social frontiers as the world reorganizes itself after this war. In that reorganization we must play a part worthy of this United States if the world of the future is to be an orderly and decent world.

Jackson helped to conquer economic and social frontiers as well as the physical frontier. The common people rose behind Old Hickory. Some of us remember Jackson's military victories and forget his fight with the special privilege of his day. Just as Franklin Delano Roosevelt has alarmed the Tories of his day, Jackson alarmed the die-hards of his time during his struggle with Nicholas Biddle and the Bank of the United States.

Jackson felt that Biddle and the bank had been given, or had grasped, the power to make some men richer and some poorer, without regard to the energy or industry of the men in question. This was domination and neither he nor the common people wanted any of it.

In the veto message that broke the Bank's power, Andrew Jackson stated the case against special privilege better than I can hope to do. This is what he said:

"Equality of talents, of education, or of wealth, cannot be produced by human institutions. In the full enjoyment of the gifts of heaven and the fruits of superior industry, economy, and virtue, every man is entitled to protection by law. But when the laws undertake to add to these natural and just advantages, artificial distinctions, to make the rich richer and the potent more powerful, the humble members of society—the farmers, mechanics, and laborers, who have neither the time nor the means of securing like favors to themselves—have a right to complain of the injustice of their Government. Its evils exist only in its abuses. If it would confine itself to equal protection, and, as heaven does its rains, shower its favors alike on the high and the low, the rich and the poor, it would be an unqualified blessing."

This struggle to insure equality of opportunity did not end by one magnificent victory like that of Andrew Jackson over the bank. The challenge of unequal opportunity is before us in every generation.

Under the leadership of Franklin D. Roosevelt, as great a Democrat in his way as Jackson was in his, the common people have won other battles as significant as the victory of Jackson over the bank. There are many victories yet to be won in the United States and elsewhere in the world.

We must find some way to end war. Unless we do our civilization will destroy itself.

We must find some way to use our resources so that we can get rid of unemployment and give security to the average man. Economic freedom is just as vital as political freedom.

We must find some way to preserve the freedoms we in the United States have taken for granted—the freedoms of speech and worship and freedom from want and fear. Otherwise, we are slaves.

These are the challenges of our new frontiers. To conquer those frontiers will require leadership as determined and courageous as that given by Andrew Jackson.

We have that leader. His name is Franklin Delano Roosevelt.

To conquer our present-day frontiers will require a people worthy of our leader. The average American today is just as good a man as the average American of Andrew Jackson's day. Pecple said the British had grown soft but people—including Hitler—have changed their minds about that. The American people will conquer new frontiers just as they conquered the old.

The American people simply aren't going to stand for a world dominated by dictators. Until Hitler and company tried to force their way upon the universe, the United States wanted to go its own way and mind its own business. But we couldn't. The dictators wouldn't let us. And now, just as the pioneers of Andrew Jackson's day wouldn't stand for outlaws loose in a community, we aren't going to stand for outlaw nations loose in the world. The United States has taken its position in no uncertain terms. In this period of world crisis, to do otherwise would be unworthy of Andrew Jackson and the other men and women who have helped make America great.

The times ahead of us will not be easy times. They may require sacrifices as great as any made by the pioneers. The hardships will be just as real. Nevertheless, our people have never yet failed to follow dynamic leadership. They have never failed to respond to a fight against aggression and tyranny.

Franklin Roosevelt has tried in every way he knew how to help the average citizen, the common man. He has helped the small businessman, labor, and agriculture, and in helping them has helped everyone. He has led our people in a united effort to save democracy in the United States. Now he is leading us in an all-out struggle to save democracy in the world.

I can speak with first-hand knowledge of some of the things done by this administration. Until 1933, I farmed in Carroll County, Ind. I made my living by farming. I had no other source of income.

During the depression I lost money. I lost money on corn, on hogs, on cattle, on almost everything that I raised. At the same time, other farmers were losing money—wheat farmers, dairy farmers, cotton farmers, and tobacco farmers—farmers paid for the privilege of feeding and clothing the country.

Franklin D. Roosevelt and the Democratic majority in the Congress reversed the spiral of depression and started us on our way upward again. They helped start agriculture on the upward path by approving national farm programs. Since May 1933, farmers have used these programs to protect themselves.

Before Franklin Roosevelt, the farmers wanted national farm programs, but the men then in the White House blocked them. Farmers were told that national farm programs were unconstitutional. They were told that farmers were sectional in viewpoint and that they just wouldn't work together. The claim was made that the programs would violate fundamental laws of economics and a lot of other things. Farmers knew that the arguments came from other groups that had their heads in the trough and wanted to keep them there. But farmers couldn't do anything about the situation until they got a friend in the Executive Mansion at Washington.

We had the surplus problem to wrestle with in 1933. We had too much corn, too much wheat, too much cotton, too much tobacco, too much of almost every farm product. If we had any way of getting surpluses to the people that needed them there wouldn't have been too much. We had no way then of doing that and the more farmers raised, the cheaper their prices and the harder the times. Farmers were busy digging their own economic graves.

Since 1933, the farm programs have protected farmers from surpluses. Instead of letting them crush the life out of prices, the surpluses have been stored as reserves. We have set up an ever-normal granary as insurance against scarcity.

Today, these reserves are one of the Nation's greatest assets. It is true that we still have too much cotton and too much tobacco. I wish I could tell you that I saw some prospect of using up the stocks of these crops we have on hand during the next year or two. I can't. But I do think that pretty soon we'll need to draw on the reserves of other farm products and we're going to have to expand the production of some of them. We are going to need increased supplies of certain foodstuffs to meet the demand here and abroad.

The second World War has not followed the pattern of the first World War. After about a year of that struggle, the Allies began to draw on us for almost every agricultural commodity we had. They took our wheat, our cotton, our tobacco, everything. The demand has developed more slowly during this struggle and, as a matter of fact, the British demand for large quantities of wheat, cotton, and tobacco hasn't developed at all and doesn't seem likely to in the near future. The demand from Britain for foodstuffs from the United States is developing, however, and developing rapidly. Some of the reasons are no secret. British sources of supply on the continent are cut off. The shipping situation makes short hauls necessary and with the passage of the lease-lend bill, funds are available here for British purchases.

Within the next few months, we are going to supply the British, and perhaps other friendly nations too, with meats, dairy products, eggs, powdered and condensed milk, as well as other foodstuffs and commodities.

These products are just as vital to the British as guns and planes, and we will supply them just as willingly. We'll see that the British get food. We'll have to if they are going to withstand Hitler.

So you see why I'm not worried about the feedstuffs we've piled up. Our carry-over of corn is about 700,000,000 bushels. I think of it as pork, beef, eggs, and other food for ourselves and the other democracies.

We've got ample supplies of other feedstuffs too and, for the most part, our current supplies of almost every farm product are ample too. I wish we had a few more hogs. Last year the price of hogs was so low that farmers cut down on their production somewhat. But by feeding the hogs on hand to heavier weights we can produce the pork and lard that we need. Farmers will increase their hog production rapidly if hog prices make production profitable. The country is likely to need more dairy products and more poultry products in the not too distant future. Given fair prices, production of these commodities will be stepped up quickly.

Farmers want to produce more. I never saw a real farmer that didn't like to expand his production. All that American farmers ask is a fair price and they'll feed this country, Great Britain, and anyone else that should be fed. They'll do it at prices that are fair to consumers too. By using our farm programs and our productive capacity in the right way we can keep down unwarranted increases in the prices of food. I don't think our consumers need to worry. During the months ahead, if consumers can get other things as reasonably as they can farm products, I think they'll be pretty well off.

After this war ends, I foresee something approximating starvation over wide areas of Europe and perhaps other continents as well. Our reports are that foundation herds and flocks of Europe are being depleted and that the reserves of all kinds of food are steadily diminishing. The belligerent countries are rapidly eating into these reserves of food and the war is reducing food production. Sooner or later these hungry people will look to America for food. During the war food will be one of our strongest weapons, and after the war it will be one of our strongest weapons too.

It is about time to dust off an old slogan, "Food will win the war." I would change it a little and make it read this way, "Food may win the war and decide the peace, too."

We are still suffering from the mistakes of the first World War. Then we urged the farmer to plow up the hillsides, the plains, and to grow more and more. We did not bother about consequences after the war ended. The country sent agriculture up in a balloon but neglected to send along a parachute—and the balloon burst.

There is no reason to make those same mistakes twice. Since 1933, we've stored up a lot of fertility in our soil. It's like money in the bank. The United States can raise all it needs without impairing soil fertility. Our boast has been that we could use the national farm programs to grow more if ever we needed more. Now, we can make that boast good. These programs are adjustment programs. Farmers will grow more of what we need and less of what we do not need.

I think American agriculture is well prepared for whatever comes during the months that lie ahead.

Much of the credit for that preparation is due our President. During the past 8 years, he led the Nation out of the depression. Franklin Roosevelt balked at a do-nothing policy. He had to fight every step of the way. Now we are beginning to realize the extent of his wisdom and foresight. The programs he planned to meet the threat of the depression are being used now to meet the threat of the dictators. The T. V. A. is only one example of the foresight of Franklin D. Roosevelt. But it is a good example. If the President had not insisted upon utilizing this magnificent natural resource in the interests of all the people, T. V. A. would not now be one of the strongest links in the national defense chain. In this fight, as in many others, Franklin D. Roosevelt insisted upon public good over private gain and time has proved his wisdom.

During the depression, some people advised us to do nothing. They said the storm would pass and anything we did might make matters worse. Such a policy was not worthy of Andrew Jackson, or of the United States, or Franklin D. Roosevelt. The Nation followed the President when he rejected that counsel.

Nor is a do-nothing policy in the face of the world crisis worthy of the spirit of Andrew Jackson or the United States today. Once again Franklin D. Roosevelt has rejected a do-nothing policy. Under Roosevelt leadership, ours is a policy of action, a policy that Andrew Jackson would have approved.

More and more, the people of the United States are realizing that democracy cannot exist in this country if democracy dies elsewhere over the earth. More and more, the people are realizing that war elsewhere is a constant threat to peace here. The people of the United States want a world in which there is freedom and security. They cannot have this kind of a world by isolationism and by refusal to defend democracy in its fight against totalitarianism.

Today the United States is the most powerful nation on the face of the earth. This country has realized the dream of Andrew Jackson who fought to make America great. If it intends to remain great, this country must act like a great nation.

The choice has been made. It was made when they reelected Franklin D. Roosevelt for the third time. That broke precedent, but now, as in Jackson's day, the American people will break precedent swiftly and gladly if it is in the best interests of the United States.

Let me repeat, the choice has been made. It was made in H. R. 1776, the lend-lease bill. Every Democrat in the Tennessee delegation voted for the passage of that measure—and in so doing voted for the defense of democracy.

For the defense of democracy demands more than words and wishes. It demands action. It demands the dynamic leadership of our President. We are getting action under his leadership.

The defense of democracy demands a just peace, one that will prevent another world calamity like this war. One that will promote good will among the nations of the world; one that is shaped by the ideals of Franklin Roosevelt, H. A. Wallace, and Cordell Hull.

The defense of democracy demands the elimination of widespread unemployment and poverty in the United States. We must not repeat the mistakes we made after the last war. We must avoid national policies that result in deflation, unemployment, poverty, and collapse. During the last 8 years this country has learned that the United States needs only to use its abundant resources in the right way to give its citizens security. If we have the same kind of leadership after the defense effort ends that we have now, we will use our resources to bring about a better way of life for all Americans.

The choice has been made. Our people will insist upon a nation in which freedom, democracy, and peace can exist undisturbed, a nation of which Andrew Jackson would have been proud.

Amount of Money in Lieu of Taxes Paid By T. V. A. to States and Counties

EXTENSION OF REMARKS

OF

HON. THOMAS F. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1941

STATEMENT BY GORDON CLAPP, T. V. A. GENERAL MANAGER

Mr. THOMAS F. FORD. Mr. Speaker, I ask unanimous consent to extend my own remarks in the RECORD and include therein a statement showing the amount of money in lieu of taxes paid to States and counties in the Tennessee Valley area by the Tennessee Valley Authority.

This statement, in my opinion, answers for all time the charge that this great publicly owned utility is enabled to charge low rates for electric energy because of its being exempted from taxation.

The statement, which follows, should make interesting, if somewhat irritating reading, for the enemies of this great public enterprise:

The Tennessee Valley Authority in the fiscal year ending June 30, 1941, will pay to 6 States and 111 counties a total of $1,499,417 in lieu of taxes on the basis of final computations, Gordon R. Clapp, T. V. A. general manager, announced today.

The amount to be paid exceeds by $495,630 the 2-year average of State and local ad valorem taxes previously paid under private ownership on utility properties and on reservoir lands allocated to power, now owned by the Authority.

The Authority has been making monthly payments in lieu of taxes since last July on the basis of preliminary computations subject to adjustment. The payments are made in accordance with section 13 of the T. V. A. Act, as amended by Congress last June. This section provides that the Authority in the fiscal year 1941 shall pay 10 percent of its revenues from power sales of the preceding year, excluding sales to Federal agencies, to the States and counties in which it owns property and sells electricity.

The section also provides that the minimum payment to any county or State shall be the 2-year average of ad valorem taxes on utility properties acquired by the T. V. A. and on the 40 percent of reservoir lands allocated to power production. Because of the operation of this minimum provision, the total payments of the Authority exceed 10 percent of power revenues by $51,175.

Tax data on which the final computations were based have been submitted to the officials of the counties concerned and, in ac-

cordance with his request, to a representative of the Governor of Tennessee for checking and verification, Mr. Clapp said. All questions raised by either State or local officials relative to the tax computations have been answered and, insofar as is known, settled to their satisfaction.

The final computations were based on an exhaustive study by the Authority's staff. After passage of the Norris-Sparkman amendment to section 13 of the T. V. A. Act, conferences were held with State officials in Alabama, Georgia, Kentucky, Mississippi, North Carolina, and Tennessee—the States in which the Authority has constructed dams or purchased power property from the private utilities. Methods proposed for caculating the amount of the Authority's payments in lieu of taxes were explained in detail and met with general approval, Mr. Clapp said.

T. V. A. staff members visited 70 of the 111 counties in connection with the collection of required tax data and checking of final figures with local county officials.

One half of the $1,448,242 representing the percentage payment is apportioned among the States in the same ratio as the book value of the power properties of the T. V. A. located in each State; the other half is apportioned in the same ratio as the sales of electric power within the States.

In the States of Georgia and Mississippi and in the 111 counties involved, the payments are determined by the minimum provision of the act for replacement of ad valorem taxes. In the other 4 States, Alabama, Tennessee, North Carolina, and Kentucky, these amounts are less than the amounts required to be paid in lieu of taxes on the basis of percentage of gross revenues. The payments in these 4 States, therefore, exceed the minimum of State and local ad valorem taxes.

The figures announced today apply only to the Authority's payments in lieu of taxes; they do not involve in any way the taxes and tax equivalents provided by municipalities and cooperative associations distributing T. V. A. power, which are now being paid in an amount in excess of $1,800,000 annually.

T. V. A. payments in lieu of taxes by States are presented below:

Average annual ad valorem tax paid prior to T. V. A. acquisition [1]

State	Power property	Reservoir land (40 percent)	Total	Computed payments
Alabama	$15,112.18	$30,866.61	$45,978.79	$321,799
Georgia	64,841.01		64,841.01	64,841
Kentucky		3,278.64	3,278.64	28,096
Mississippi	46,905.82	1,267.77	48,173.59	48,174
N. Carolina		3,749.51	3,749.51	33,889
Tennessee	799,017.96	38,747.21	837,765.17	1,002,618
Total	925,876.97	77,909.74	1,003,786.71	1,499,417

[1] The above data do not include an estimate of former business taxes.

T. V. A. payments to individual counties for the year ending June 30, 1941, are as follows:

Tennessee Valley Authority

PAYMENTS TO INDIVIDUAL COUNTIES, YEAR ENDING JUNE 30, 1941

Tennessee (12 months):	
Anderson	[1] $16,282.70
Bedford	5,621.75
Benton	[1] 896.38
Bledsoe	15,984.89
Blount	9,304.49
Bradley	[1] 32,408.97
Campbell	[1] 19,817.22
Cannon	7,174.84
Carroll	24.35
Claiborne	[1] 3,656.65
Clay	56.94
Cocke	3,024.00
Coffee	$2,715.92
Crockett	186.12
Cumberland	1,034.95
Davidson	11,078.41
Decatur	5,470.56
De Kalb	106.55
Dickson	1,551.97
Dyer	284.76
Fentress	39.15
Franklin	9,405.85
Gibson	543.87

A Bigger W. P. A. Program for Fiscal Year 1942

REMARKS

OF

HON. JOSEPH E. CASEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1941

Mr. CASEY of Massachusetts. Mr. Speaker, the unemployment problem is still with us and will remain with us until we meet it realistically. There was a time when the unemployment problem seemed too vast and too complex for us to solve. Right now, with the added stimulus given employment by all these defense activities, we can solve it.

If W. P. A. employed between 2,000,000 and 2,500,000 workers during fiscal year 1942, the unemployment and relief situation would be well in hand. As it is, W. P. A. will employ slightly more than 1,000,000 on the basis of the Budget figure. This is far too low.

Defense stimulation will cause unemployment to average about 2,000,000 less in fiscal year 1942. This means that unemployment will average about 5,000,000 if we use the most conservative unemployment estimates. The unemployed in need will average about 2,500,000 during fiscal year 1942. If W. P. A. employed all these needy unemployed there would still be about 2,500,000 unemployed who would not be on the W. P. A. program.

A program of this size should be the minimum. There are two major reasons why this is the lowest possible figure that would permit the W. P. A. to handle the job adequately. First, the estimate of average unemployment for fiscal year 1942 is based on a projection of the lowest unemployment estimate of National Industrial Conference Board. A higher estimate, the C. I. O., would give us 2,000,000 more unemployed in fiscal year 1942. Therefore, viewed statistically, a figure of 2,000,000 to 2,500,000 workers eligible for W. P. A. is on the conservative side.

Second, the estimate of average unemployment for fiscal 1942 assumes that the labor force will increase by only the normal amount—that is, by 600,000. It is practically certain, however, that more than the usual number will crowd into the labor force. There are some 2,000,000 or 3,000,000 surplus potential workers in the rural areas. Women who normally do not look for jobs, and youths who are in school because no work is available, are potential workers. Such persons are not counted in present unemployment figures because they have not been looking for work. When industrial jobs open up, however, many of these people will apply. This occurred in 1917–18 when the labor supply showed an abnormal increase of about 3,000,000. Many of these new workers will get the jobs that open up during fiscal 1942, so that unemployment will not decline as rapidly as employment increases. This is another reason why our unemployment estimate is on the conservative side.

For these reasons a W. P. A. program of from 2,000,000 to 2,500,000 is needed. There would be plenty of available people to put on a program of this size. This would in no way interfere with the defense effort.

Modification of the sponsors' contribution provision is essential for a program of this size. Defense projects at present require no sponsor contribution. The W. P. A. could expand its defense projects in the coming year to employ 1,000,000 workers; the remaining 1,000,000 to 1,500,00 could be employed on other useful projects with the help of sponsors' contributions. A satisfactory program could be operated for about $2,300,000,000.

Are the projects available? The need for expanded defense work is apparent. As military posts are increased in size and number, the work that W. P. A. is well adapted to do is also increased. As industrial areas expand, because of defense contracts, more community facilities and services are needed. In spite of the vast amount of local public works that W. P. A. has carried out in the past, there is still no community, whether it is a defense area or not, that does not need further public improvements.

National defense has become the Nation's dominant objective. It requires the maximum utilization of all economic resources—labor, capital, and management. For 10 years this country has wasted enormous labor reserves through idleness. We cannot afford to continue this course. Millions of workers will stand idle the next fiscal year in spite of the defense program. W. P. A. can put much of this idle labor to work on necessary defense activities. Any other course is a national waste.

The country needs increased defense work. The unemployed need jobs. Public policy and common sense require that these two needs be put together. A bigger work program can do this. A W. P. A. program of 2,000,000 to 2,500,000 workers would round out a program of full employment and full defense in 1942.

Urge Passage of School-Aid Bill

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1941

PETITION OF CITIZENS OF MICHIGAN

Mr. SHAFER of Michigan. Mr. Speaker, under permission to extend my remarks, I include a petition urging prompt action in the passage of the proposed Lanham bill to extend aid to school districts now being seriously affected by the expansion of military establishments and defense industries. This petition is signed by executives of various civic organizations in the community adjacent to Camp Custer, Mich., and indicates the seriousness of the school problems in hundreds of like communities in the United States. In fairness to the schools, citizens, and children of such communities, the Lanham bill should be reported and passed without further delay.

The petition follows:

BATTLE CREEK, MICH., *April 17, 1941.*

HON. PAUL W. SHAFER,
House of Representatives,
Washington, D. C.

DEAR MR. SHAFER: A number of active community committees and associations, whose presidents have signed below, realizing that the Federal housing reservation, now consisting of 250 homes in our school district, will bring to our schools approximately 500 children in addition to our increases from our own building program, and being aware that the Lakeview School and the Prairieview School are now overcrowded, feel that if appropriations contemplated under the Lanham bill, now before Congress, are not forthcoming in the very near future half-day sessions for our children, as well as the children from the Federal housing reservation, will be inevitable.

We therefore respectfully petition you to urge prompt action on whatever legislation is pending which may help relieve our school situation and properly aid in the defense program of the United States.

Very truly yours,

Lakeview Board of Education, by Raymond Gerald, president; Lakeview Parent-Teacher Association, by Mae J. Kikstadt, president; Prairieview Parent-Teacher Association, by Virginia S. Stadle, president; Battle Creek Township Board, by Walter Betterby, president; Battle Creek Township Improvement Association, by James S. Creighton, president; Metropolitan Auxiliary Spirit '38, by Pearl West, president; Battle Creek Township Service Committee, by Jane L. Penty, vice chairman; Lakeview Community Council, by Glenn O. Hoffimes, president; Metropolitan Club of Battle Creek Township, by Clarence West, President; Lakeview Sunshine Circle, by Eliza Hurdelbrink, president; Lakeview Alumni Association, by Donald Slighly, president.

Congress Should Pass National Old-Age Pension Law

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1941

EDITORIAL FROM RANGE FACTS, VIRGINIA, MINN.

Mr. PITTENGER. Mr. Speaker, the people of my district realize that the present social-security law is a failure so far as the aged folks are concerned, and they are supporting efforts to have Congress pass a national old-age pension law at this session, so that our pioneers, now in the sunset of life, may have enough help from the Government to guarantee to them food and clothing and the comforts of life in their old age. I have just received in today's mail from Martin Stram, secretary of one of the clubs, at Grand Rapids, Minn., a petition with 1,023 signatures. Under our Constitution these people petition the Congress that they have elected for redress and relief. I shall ask that this petition be referred to the Ways and Means Committee of the House. This is the committee before which proposed legislation for national old-age pensions is pending. I shall urge that the committee take favorable action.

In this connection, I call to the attention of the House an editorial in Range Facts, a weekly newspaper, of Virginia, Minn., on April 17, 1941. This is by George A. Perham, the editorial writer, who has long been a student of old-age-pension problems. Mr. Perham believes in the justice of a pension based on age. His editorial is as follows:

ARE WE GETTING NEARER?

For several years this column has from time to time carried arguments for a universal old-age pension—based on age alone—but not at 65 yars of age, because that would take more funds than could be made available. At a higher age, there would be fewer to pay. How much money could be made available would have to be estimated, while vital statistics should make it possible to determine where to place the age limit provided there could be some agreement on what would be a reasonable old-age pension. A process of adaptation would be necessary.

Until now we have seen nothing to indicate any other newspaper editor was thinking

along this line. Therefore it was with some surprise and gratification that in a Duluth News Tribune editorial discussing mainly what $30 a month means in terms of an investment at 3 or 6 percent, we read this paragraph:

"A great many people must be wondering about these things today. It might be more wholesome if we forgot all about need and paid every person above a certain age a fixed income, just for being that old. It would end all this business of liens and investigations and compelling relatives to help out. And it would give some people who had exercised a little thrift the feeling that they were getting something back after a lifetime of paying taxes from which others were the chief beneficiaries."

Perhaps some day the justice of an old-age pension for all will be generally realized and it will come about. But it will have to be purposely and solely for the benefit of the aged, not a scheme for correcting economic inequalities that always have and always will exist.

Morris Sheppard

EXTENSION OF REMARKS

OF

HON. W. R. POAGE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1941

POEM BY REV. S. P. GILMORE

Mr. POAGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem written by a constituent of mine, Rev. S. P. Gilmore:

IN MEMORY OF HON. MORRIS SHEPPARD

He built his name in halls of fame,
His memory lives on;
To him his duty was the same,
As honors great he won.

No mortal man was found more true,
To home and church and state,
Than he whose honored life we knew,
And live to mourn his fate.

Though fate as mortal man may say,
Is but the passing time,
He stopped here for a passing day,
And looked for things sublime.

He then beheld them in his work,
Those summits strove to reach;
His life, his duty, did not shirk,
Great lessons true did teach.

And though his lessons were his life,
Each day a lesson gave;
His messages were for the right,
To help each other live.

No greater honor can man know,
No greater gift can give,
Than faithfulness to live and sow,
That others here might live.

That honored, noble, stalwart man,
Our Morris Sheppard, friend;
For nations' rights he took his stand,
Was faithful to the end.

He wrote not just in halls of fame,
Nor just with word or pen,
But with his life he built a name,
T'will live in hearts of men.

—*A friend, Rev. S. P. Gilmore.*

Decentralization of Industry Essential to National-Defense Program

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1941

ANNOUNCEMENT BY THE OFFICE FOR EMERGENCY MANAGEMENT

Mr. PITTENGER. Mr. Speaker, in order to keep the record straight, we now have the Office of Production Management and, following that, a plant-site committee under that office. They are charged with the responsibility of really doing something about the problem of decentralizing industry, so that throughout the United States localities where no orders have been placed for making of war materials in our national-defense program may be properly considered and recognized. We are also told that these agencies are to work with the Army and Navy in this program.

I was very much interested in the announcement under date of March 26, 1941, by Robert W. Horton, Director of Information in the Office for Emergency Management. This announcement and the document therewith by the National Defense Advisory Commission clearly indicates a total failure in the past, and gently hints that the Army and the Navy and the Maritime Commission will in the future give some consideration to the question of decentralization. In Minnesota, for example, no consideration whatever is being given to the economic problems of the people, if other localities are to build war industries and continue to expand. Of course, the people of Minnesota will continue to furnish soldiers and continue to pay taxes, while their people remain unemployed, and while their skilled workmen are taken from home to the eastern shipyards and factories. There is no use kidding ourselves. That is what is taking place day by day. In the meantime, in Canada, at Fort William and Port Arthur, on the shores of Lake Superior, one of the Great Lakes, in case you never heard of it, they have an airplane factory going full speed ahead, and they are building ships, with thousands of men employed. This is taking place just a few miles beyond the boundary line that separates Minnesota from Ontario.

The announcement is as follows:

EXECUTIVE OFFICE OF THE PRESIDENT,
OFFICE FOR EMERGENCY MANAGEMENT,
Washington, D. C.

To All Members of Congress:

Realizing the extreme interest shown by Members of both the House and Senate in the location of new plant sites as a part of the national-defense program, I wish to call your attention to the resolution adopted by the National Defense Advisory Commission relating to policy in connection with further choice of new plant locations, a copy of which is attached.

If there are any further questions in regard to this release, please feel free to contact this office.

Sincerely yours,

ROBERT W. HORTON,
Director of Information.

[Office for Emergency Management, National Defense Advisory Commission, immediate release, March 26, 1941]

A statement of policy on the location of new defense facilities was adopted today by the National Defense Advisory Commission

Following its adoption, this policy was transmitted to the Office of Production Management for reference to the recently established Plant Site Committee.

The statement of policy follows:

"The National Defense Advisory Commission regards the selection of locations for the new industrial facilities required by the defense program as a task of outstanding importance. On the sites which are selected depends not only the strategic security of our defense industries and much of their efficiency for defense production, but also important and permanent consequences for the economic life of different parts of the Nation.

"Experience gained during the past 10 months would indicate that the immediate ends of national defense are largely consistent with the longer-run objective of a better-balanced industrial economy. To reach these objectives it has become apparent that the following principles must govern the location of new industrial facilities:

"'1. That sites be avoided in cities or regions where defense orders are absorbing or are likely to absorb the available labor supply, or to congest housing, transport, or other facilities.

"'2. That every possible preference be given to locations where large reserves of unemployed or poorly employed people are available and where industrialization during the defense period will contribute to a better long-run balance between industry and agriculture. These conditions are particularly acute in many areas of the South and West.

"3. That where facilities must be located in the present industrial areas, special attention be given to regions which have suffered a decline in their peacetime industries or to cities which have not been heavily engaged in defense production.

"4. That the proper location of new plants, the wider distribution of defense contracts, and an aggressive policy to promote the subcontracting of the larger defense orders held by private contractors, all be considered essential parts of a well-rounded program to obtain larger use of the human and material resources of the country in the defense effort.

"A plant-site committee has recently been established in the Office of Production Management. Upon this committee will fall the main responsibility for seeing to it that the principles listed above are carried out. Except as specified by statute, the responsibilities of the National Defense Advisory Commission in the location of plants will be superseded. The Commission recommends that the new plate-site committee be provided with a technical staff capable of giving detailed study to proposed defense locations and that it work closely with the Army and Navy at all stages in the consideration of new sites. The experience of the Commission with the earlier program suggests the desirability of a systematic review of the complete plans of the War and Navy Departments for new facilities at the earliest possible date. This should be with a view to seeing that the programs as a whole are

developed in accordance with a broad policy of decentralization as outlined above. It is also desirable that the committee, on the basis of appropriate study, be able to recommend specific locations for different types of defense production. Finally, it should be so staffed that it is able to investigate and give sympathetic consideration to the resources and facilities of communities which are asking for consideration as sites for defense plants."

Seek Action on Legislation To Improve Conditions for Custodial Employees

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1941

RESOLUTION BY LOCAL NO. 17, NATIONAL ASSOCIATION OF POST OFFICE CUSTODIAL EMPLOYEES

Mr. SHAFER of Michigan. Mr. Speaker, under leave to extend my remarks, I include a resolution passed by the legislative committee of Local No. 17, of the National Association of Post Office Custodial Employees, asking enactment of legislation now pending in Congress. The resolution follows:

DETROIT, MICH., *March 31, 1941.*

The Honorable PAUL W. SHAFER,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: At the last meeting of Local, No. 17, National Association of Post Office Custodial Employees, members voted that our legislative committee appeal to you legislators in Washington for your help in passing any legislation that will give us relief from the condition we, as custodial employees, find ourselves burdened with.

The cost of living has gone up much higher and the largest majority of these employees have families to support and children to educate. They find it impossible to meet these obligations without lowering their standard of living.

Employees in custodial service do not receive an automatic increase which is granted to other postal employees. Some employees in our building have been in service for 13 years with one $60 raise and none receive the maximum rate of pay. We seem to be the forgotten men of the Post Office Department.

There is never any money appropriated for us. There has been in the Federal building here in Detroit enough money saved in wages before vacancies were filled to give half the employees a $60 raise. These employees had to work harder to keep up the building, but the money saved went elsewhere. This being a first-class post office, with so many square feet of space to take care of, we feel we should receive the maximum rate of pay for work done, while at present we only receive pay equal to about a second-class post-office rating.

We, the legislative committee, are appealing to you in behalf of the custodial employees to do all in your power to relieve this situation. New legislation or appropriate money for our maximum rate of pay would help.

We call your attention to the following bills: H. R. 603, H. R. 2232, H. R. 2075, H. R. 1851, H. R. 1057, S. 474, S. 675, S. 220.

Respectfully yours,
JOHN SCHMIDT,
HENRY HIGGINS,
JESSE PETERS,
Legislative Committee,
Local No. 17, N. A. P. O. C. E.

J. Adam Bede and the St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1941

Mr. PITTENGER. Mr. Speaker, one of my constituents who has a clear vision of the good that will result from the completion of the St. Lawrence seaway project is J. Adam Bede, of Duluth, Minn. Mr. Bede is a former Member of this House, and served on the Rivers and Harbors Committee. He was then an ardent advocate of the seaway. Upon his retirement from the House his activities in its behalf have continued. In an issue of Bede's Budget, a magazine which Mr. Bede published many years ago, he pointed out how transportation has developed on the Great Lakes and the St. Lawrence.

In most effective language he said, in one of his articles:

In 1854 one man with a horse and a cart transferred all the commerce between Lake Superior and Lake Huron, more than a mile and a half, around the rapids of the Ste. Marie River, now popularly known as the Soo. One day some men with vision decided it would facilitate transportation to channel the rapids, and let the ships go through without unloading at this half-way point. But the owner of the horse and cart opposed the movement, and declared its advocates had hysteria. However, the dream came true; the horse and cart and their obstreperous owner, long in restraint of trade, have returned to dust, and a hundred tons of freight pass through the Soo in a single season.

These observations by Mr. Bede, made many years ago, are in point now, in connection with the St. Lawrence development. Those who are opposed to the project represent the horse and cart type of alarmists' ideas. On October 16, 1940, President Roosevelt established the St. Lawrence Advisory Committee, and on October 16, 1940, he advised Congress that the need for power was urgent, and that the project should be undertaken now. Since that date you are acquainted with other developments. Now is the time to pass enabling legislation, unless, in the language of J. Adam Bede, you want to continue to use "horse and cart" methods. I prefer the President's program of accomplishment.

Will Old King Coal Take Another Beating?

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1941

ADDRESS OF JOHN D. BATTLE, EXECUTIVE SECRETARY, NATIONAL COAL ASSOCIATION

Mr. VAN ZANDT. Mr. Speaker, honeyed words and glib phrases used by advocates of the St. Lawrence seaway cannot dispel the cold fact that approval of such an economic monstrosity is bound to cause the gaunt specter of unemployment to raise its ugly head and visit untold sufferings on many coal miners, railroaders, and employees in kindred industries.

The coal industry has been waging a heroic effort to rehabilitate itself. Thousands of American coal miners, despite their hazardous occupations, of necessity must follow their vocation to provide a livelihood for their women and children. They are eager to go down into the bowels of the earth and eke out an existence in order to keep them from the relief rolls of the Nation and their families from privation.

The St. Lawrence seaway, despite efforts to garb it in the attire of national defense, stands revealed as a classic example of a political parasite being foisted upon the American people under the guise of patriotism. Well may we join the coal miners of America and thousands of employees in every walk of life in exclaiming, "Oh, national defense. What sins are committed in thy name!"

Recently Mr. John D. Battle, executive secretary of the National Coal Association, delivered an address at Philadelphia before the eastern regional conference on Great Lakes-St. Lawrence waterway and power project.

Mr. Battle expounds the views of his association and discloses the devastating effect the St. Lawrence seaway is destined to have on employment conditions in the coal fields of America. Devoid of any glib phrases and minus the patriotic thumping of breasts, Mr. Battle has calmly analyzed the St. Lawrence seaway and exposes it as a delusion and a snare. Yet the proponents of the St. Lawrence seaway would have the American people regard it as a dream highway to the seven seas. Mr. Battle's address is as follows:

I shall be brief. There is no need for any lengthy exposition. The position of the National Coal Association and of the entire coal industry, producers and mine workers alike, in opposition to the St. Lawrence project is well known. The reasons for that position and the nature of our objections have been widely advertised.

Our opposition is not new. It dates from the inception of the St. Lawrence project

many years ago and has been renewed whenever the proposition has come to the front. We had hoped that we had heard the last of it when the Senate, in 1934, rejected the St. Lawrence treaty.

But the President has clung to it with the same tenacity as a dog with a bone and, now, under the broad cloak of national defense, is attempting to revive the project and to obtain the assent of Congress to a new St. Lawrence treaty that will permit immediate commencement of this undertaking.

We think the defense program is being done a serious injustice by injecting these political projects into it. If more electric power is needed for national defense, it can be had without further straining the credit and resources of the country by this proposed waste of taxpayers' money.

The administration contends, in advocacy of the St. Lawrence project, that "a new source of cheap power for national defense must be developed immediately."

Surely there can be no need for devising new sources of power so long as the Nation's premier power medium and greatest natural resource—bituminous coal—remains close at hand in virtually inexhaustible supply.

There can be no disputing the fundamental proposition that the cheapest and most immediate way to provide additional electric power, if needed for national defense, is to construct additional coal-burning steam plants.

There can be no escape from the self-evident truth that the only way that the St. Lawrence hydro project and seaway can be brought into being with any degree of immediacy—that is to say within 5 or 6 years—is by diverting to its construction men and materials in huge amount—now needed in present shipbuilding, present aircraft production, present munitions plants, and other things in these categories. It means sacrificing immediate and super urgent construction in order to embark upon a long-range project which is, by no means, so feasible and so advantageous as is now made to appear.

Congress will not have far to seek for complete proof that the St. Lawrence hydroelectric power facilities upon which the President is so insistent will cost twice as much and take three times as long to get ready as coal-burning, electric-generating plants of equivalent capacity. The immense steam plant for national defense, now being built by the T. V. A., affords a striking object lesson, and, since it is a Government enterprise, it is a yardstick that the administration cannot disavow.

The T. V. A. steam plant, started last August, will be finished and in operation next December, or sooner—total elapsed time 16 months, or less. It will have cost less than $15,000,000 and have a capacity of 180,000 kilowatts.

The time to complete and the over-all cost of the St. Lawrence hydro project are debatable questions, but, at the speediest, it will be 3 or 4 years before any electric power becomes available and, obviously, it will be much longer than that before the seaway becomes a reality. As for the cash, one point is clear, namely, that the New York Power Authority, a State agency borrowing the funds on the State's credit, is to be called upon to chip in $90,000,000 as its share in the enterprise, and is promised hydroelectric generating facilities stated to be 1,100,000 horsepower capacity.

Congress and the citizens of the State of New York have the right to assume that the New York Power Authority, if so minded, can build coal-burning steam plants for the generation of electric power in the State of New York just as expeditiously and just as economically as the T. V. A. is now doing in the State of Tennessee. If that be true, then it follows as a matter of elementary arithmetic that the New York Power Authority could build a series of strategically located steam plants with a total installed capacity equal to the 1,100,000 horsepower of St. Lawrence hydro power for $68,000,000, as compared with $90,000,000 outlay budgeted as one—and only one—of the items in the half-a-billion-dollar St. Lawrence scheme.

Aside from this initial saving of more than $20,000,000 in capital investment, a saving which would accrue to the taxpayers or the electric power consumers, or both, in the State of New York, this new increment of electric power, which the administration asserts is so needful for national defense, would become available early in 1942 instead of late in 1944 or 1945.

In the light of these facts, to undertake the St. Lawrence project would be a tragic blunder.

The coal equivalent of the hydroelectric power encompassed in this first stage of the St. Lawrence project is in excess of 5,000,000 tons' loss annually. This represents 5,000,000 man-days of employment in coal mines, the railroads, and related industries which would be wiped out each year. This is no time for further unsound experiments.

But to the basic objections which have been inherent in the St. Lawrence project from its inception, the present considerations of national defense and war perils afford further reasons for its rejection.

The St. Lawrence hydro power development runs counter to the cardinal national-defense policy of decentralization of supply bases. It would be an easy and vulnerable target for enemy bombers or sabotage. The superior advantages from the military standpoint of a dozen steam plants at widely separated points and independently operated is self-evident.

Furthermore, the National Defense Commission has clearly indicated an intent to locate war plants away from the Canadian border and the Atlantic seaboard, wherever possible.

The proponents of the St. Lawrence project have now trumped up a new alibi, and they are attempting to justify the waterway feature as an aid to national defense on the ground that it will permit the construction of ocean-going merchant ships and fighting ships on the shores of the Lakes, which is claimed are exposed to less dangers than shipyards on the seacoast.

But if we are thinking of this matter in terms of war, who would dare to build ships for war service in an inland sea with the risk that access to the Atlantic might be cut off by a few well-placed bombs in the locks at the International Rapids section?

And when we talk about the seaway in terms of national defense and war, let us not lose sight of the fact that the Great Lakes and cities of their shores are immune today from attack from the sea; but convert them to ocean ports, as it is claimed by the proponents that the St. Lawrence seaway will do, and the problem of their defense and safety in time of war becomes a seaport proposition with the extra risks and the extra defenses. When we develop the Mississippi, it is a truly inland waterway and we control its mouth to the sea. We do not control the mouth of the St. Lawrence nor important spans in this seaway from the Lakes to the Atlantic.

In the light of all of these considerations the obligation upon Congress to curb the President's intentions with respect to the St. Lawrence is abundantly clear. The producers of bituminous coal are of one mind in a resolve to leave no stone unturned to arouse Congress and the country to a realization of the folly of this undertaking before it is too late.

The President's unwillingness to submit the St. Lawrence project to the Senate for ratification as a treaty is significant of the fraud of the national-defense argument as applied to the project.

The Senate, in its present mood, can certainly be counted upon to ratify any treaty in very short order if the treaty is really a national-defense measure. A United States treaty with Mexico was submitted to the Senate a week or 2 ago, ratified within a few days of its submission, and debated on the Senate floor in less than an hour.

The designation of the St. Lawrence treaty as an "agreement" is manifestly for the purpose of avoiding the constitutional provision wherein the President is authorized to enter into treaties only with the advice and consent of the Senate and the concurrence of two-thirds of the Senators present.

The Constitution contains no definition of the word "treaty." There was no need to do so. Its meaning in the realm of international law has never been in doubt. The American colonists, the framers of the Constitution, were entirely familiar with treaties. They had made them with the Indians. They had seen them between Britain and France with reference to the lands on this continent.

Now, under the Roosevelt administration, some international agreements continue to be labeled "treaties" and to be submitted to the Senate for ratification, but not all. We now have the so-called reciprocal trade agreements which for all practical purposes are treaties but which are executed by the President and become effective unless both branches of Congress, by concurrent resolution, veto them.

Recently we witnessed the making of an international agreement between the United States and Great Britain in respect to naval bases. This was a treaty in everything except its name. Nevertheless, it was not contingent by any ratification by the Senate or any concurrence by either branch of Congress. The President merely sent Congress a copy of the agreement for their information. Now comes the St. Lawrence agreement which, although popularly referred to as a treaty with Canada, is, in fact, an agreement between the United States and His Majesty the King of Great Britain and is to become operative after it is approved by concurrent resolutions of the House and the Senate and after approved by the Canadian Parliament. The effect of this is to substitute a majority vote of both branches of Congress for the constitutional requirement of two-thirds vote by the Senate.

Canada is in a difficult position on this proposition. The President of the United States is insistent that Canada consent to the initiation of the St. Lawrence project, and Canada, under all the circumstances, cannot very well afford to go counter to the President's wishes. Now let me revert to the question of the St. Lawrence seaway as it relates to the coal industry. It may be that we are in for a long war, a war of many years. But we know that it cannot go on forever and that when hostilities come to an end international trade on some basis or other will be resumed, and in our present consideration of the St. Lawrence project we must not lose sight of its long-range effect in a post-war economy. The St. Lawrence project, if it eventuates, would almost inevitably destroy the present outlet for American coal in the Canadian market. Canada in years past has taken as high as 17,000,000 tons of bituminous coal from the United States. Currently our sales of bituminous in the Canadian market amount to around 10,000,000 tons annually.

American coal in recent years has to contend with a 75-cent per ton Canadian import tax, a 40-cent per ton tariff differential in favor of British coal, and subventions in the form of freight rebates which Canada grants to her own coal producers. But, even with these handicaps, our Canadian market is still a substantial item in our own annual production.

The basic contention upon which the St. Lawrence seaway rests is that ocean freight carriers will move in and out from all the Lake ports to Europe, affording a cheap all-water transport for our export grain and other

commodities. Not so much is said about what kind of cargoes these vessels will bring in to the Lake ports from overseas. There will be no point in their coming in empty.

There is wide divergence of opinion among trade and transport experts as to the probable course of events and volume of trade and diversions of traffic from rail to water if the seaway materializes, but virtually complete agreement that one of the most promising inbound cargoes will be coal from Britain, Russia, and other countries.

Canada and Great Britain, under the system of Empire preference, encourage the import of British coal into Canada. Coal from Canada, or Britain, or Russia enters the United States duty free.

Taking all of these factors into account, it will be seen that there is sound basis for anticipating that foreign coal in the long run, after the war, would displace American coal in the Canadian market and then enter in our domestic markets at Buffalo, Cleveland, Detroit, Chicago, Duluth, all large coal-consuming centers or adjacent thereto.

A similar situation will be presented with respect to the inflow into our markets of foreign petroleum oil, crude and fuel oil, from Venezuela and other Central-American points. This imported oil has been coming in at Atlantic and Gulf ports at the rate of 50,000,000 barrels annually.

This foreign oil does not now invade inland American markets, but in Atlantic seaboard territory is a serious menact to coal and is resulting in considerable displacement of coal. The St. Lawrence seaway, upon its completion, exposes the Lake ports and adjacent territory to a flood of foreign oil with resulting disruption of coal markets in large areas now immune from this destructive competition.

The displacement of coal by St. Lawrence hydropower, the loss of the Canadian market for American coal, the impairment of our own domestic markets for coal by the inroads of foreign coal, and foreign oil brought into the Lake ports on cargo vessels, all mean less coal for our own railroads to carry, less freight revenues, less train movement, less railway-fuel consumption.

Summarizing the foregoing in terms of coal displacement, there is the prospective loss in annual tonnage by St. Lawrence hydropower ranging from five to thirty-five million tons; the prospective loss of our Canadian market of upward of 10,000,000 tons annually; the further inroads of foreign coal and oil upon our domestic market, impossible of accurate forecast but which might easily amount to another 20,000,000 tons annually; and, added to all this, the resultant shrinkage in railroad-fuel conumption.

To visualize the consequences of any such displacement of coal, the loss of markets and decline in output, it need only be said that every million tons of coal displaced subtracts nearly $2,000,000 annually from the gross revenues of the coal producers, and 60 cents, or more, out of every dollar received by the producers goes to labor in the form of wages. It subtracts more than $2,000,000 annually from railway freight revenues and 44 cents out of every railway dollar goes to labor in wages. Every million tons of coal lost represents the loss of 1,000,000 man-days in work and wages for those employed in the mining, transportation, and sale of coal somewhere along the line.

The producers of coal, for whom I am authorized to speak, are as militant as ever in their opposition to a project that is a dagger aimed at their heart. They are not misled by this false claim that the St. Lawrence, either in its hydropower or its waterway aspects, is essential to national defense. They know that it is not. Their task today is to make the Congress and the country see that the national-defense claims for the St. Lawrence project are a fraud and that, instead of helping our national-defense efforts, its initiation would hinder these efforts. This job of acquainting the Congress and the country with a true picture of the matter is going to require individual work. The mere sending of resolutions is not enough. It is the kind of job that requires each person concerned to do something personal about it.

It can be done. Thank God, we have not yet been deprived of the right to speak our mind. Now is the time to exercise that right before it is too late.

Fellow Traveling Doesn't Pay

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1941

EDITORIAL FROM THE RICHMOND (IND.) PALLADIUM

Mr. SPRINGER. Mr. Speaker, I ask unanimous consent to extend my own remarks in the Appendix of the RECORD and to include therein a very enlightening editorial which appeared in the Richmond Palladium, of Richmond, Ind., on the 18th day of April 1941. I hope every Member of the House will read this very terse editorial, which speaks to the American people in unmistakable language. History has given to us the result of the action of the "reds" in many foreign countries which have fallen before the Axis Powers. It is the duty of the United States of America to awaken before it is too late.

The editorial follows:

[From the Richmond (Ind.) Palladium of April 18, 1941]

FELLOW TRAVELING DOESN'T PAY

The nonaggression pact just signed by Russia and Japan is another slap in the face for President Roosevelt, who has been wooing Red Joe Stalin for over 8 years.

It began shortly after Roosevelt was first elected President. Due to his insistence, our Government recognized the Communist government of Russia and permitted a Communist Ambassador to come to Washington. At the time it was understood between the two countries that the Russian Communists were not to take advantage of their right to circulate freely in the United States to use propaganda for the spread of communism here.

That understanding was soon broken, a fact that did not seem to bother Roosevelt. On the contrary, he appointed to Government office many who have been found to be fellow travelers with the Communists. He criticized Representative DIES, who has been turning up and exposing the "reds" and near "reds" in office and out of office but actively engaged in trying to overthrow our free institutions.

Now that Mrs. Roosevelt is not so thick with the "reddish" American Youth Congress—and whether this is real reformation or only expediency time alone will tell—there is hope that the President also will grow further away from Moscow.

He calls for unity in the Nation. God knows we need it, too, in the face of the Hitler menace, which is a combination or partnership of Hitler, Stalin, and Japan. Roosevelt calls for unity. He had better lead the way to that unity by himself, first breaking clean with Stalin and Stalin's fellow travelers in the United States.

The "War-for-Profit" Myth Is Folly

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1941

Mr. MUNDT. Mr. Speaker, war fever in Washington has happily subsided very noticeably in the past few weeks as Members of Congress and other Government officials have come face to face with what war might mean to this Republic and as citizens throughout the country have registered their vigorous opposition to any program—including convoying—which would plunge this Nation into a shooting war.

AMERICA'S SOBER SECOND JUDGMENT IS ALWAYS SOUND

The history of this Republic amply demonstrates that the sober second judgment of our citizens is thoroughly reliable and sound. It is only when this country blindly follows its impulses or emotions rather than its realistic judgment that it acts in ways likely to jeopardize its liberties, bankrupt its finances, or destroy its basic forms of government. The composite judgment of 130,000,000 Americans can be depended upon to point a rational and realistic national and international policy if this judgment is permitted to "jell" and if public officials will follow the desires of the people as a whole rather than the dictates of pressure groups representing fractional portions of our citizenry. It is the impact of this composite desire of the people to keep out of war and to prevent convoys by the American Navy which has contributed so largely to the very substantial increase in opposition to our entrance into war which is presently apparent in Washington. This revived and reinforced opposition to war is especially noticeable among Members of Congress, many of whom were elected on solemn pledges to their people to keep America out of the war.

NOW IS THE TIME TO ANALYZE THE FACTS

Mr. Speaker, now that reason is replacing hysteria in Washington and throughout the country, it is a good time to analyze the arguments and assertions used by the war crowd as they have sought by first one ruse and then another to put this country into a position where the sending of expeditionary forces of American boys to Asia, Africa, and Europe would become inevitable. It is a good time, now, to look realistically at the arguments which war propagandists have been using in their well-financed drive to involve American boys in the fighting overseas.

We recall, of course, that the first argument of those who would have us declare war now either by congressional declaration or by the extra-legal method of using convoys without sanction and against the opposition of the people's representatives was the scare campaign that this country could not defend itself and that we would be an easy victim of aggressor nations if they should force us to defend our interests in the Western Hemisphere. We do not hear so much of this argument any more because military experts and realistic analysts have demonstrated that a well-prepared America, located in our advantageous geographical position, can make itself invincible now that we are aroused to the need of modern machinery of war. With each passing month revealing the increasing reluctance of the Nazi armies to try to invade the British Isles over 22 miles of water and against a population half their number and with repeated demonstrations of the difficulty with which well-equipped armies can attack an entrenched army from the sea, it is becoming more and more clear that the powerful United States can defend itself against any possibility of attack. The defeatists who used to urge our entrance into a war 3,000 miles away on the thesis that we are too weak to defend ourselves have discovered that America still has the valor and resourcefulness which enabled us to carve out this greatest of all nations from a wilderness and that this country cannot be scared into entering a war which we do not need to fight.

Then, came a new attack from the war crowd. Dropping the effort in large part to convince the people that a country too weak to defend itself when fully prepared was strong enough while unprepared to send armies to invade continents 3,000 to 7,000 miles away, those who ask for our entrance into a shooting war revived the slogans of 1917. Here, they said, is a war to make the world safe for democracy; here is another war to end war. Our late lamented attempt to court the support of Russia conflicted rather badly with the first of these revived slogans and the good memories of people who remembered the days of 1917 and 1918 rejected the second slogan. Before entering another foreign war to save democracy or to outlaw war, citizens insisted on knowing in advance just how these highly desirable objectives which were sought and lost last time in a winning war could be secured this time. The failure to supply an answer to this question soon projected a hollow sound into the slogans of the war crowd and new arguments were sought for building up a war sentiment in this country.

SO NOW WE ARE ASKED TO GO TO WAR FOR BETTER BUSINESS

Mr. Speaker, we are now in the third phase of this war propaganda. Dropping the mantle of righteousness and piety and discarding the device of scare stories, the New York City crowd which is the fountain head for war propaganda in this country now outlines the unique theory that unless we send our boys and our resources overseas to enter another war, business will be difficult for America. It is pointed out by these disciples of the "war-for-profit" philosophy that an Axis victory would reduce business profits in America, would hurt our import-export trade, would force us to compete with chattel labor in Europe. Trump card played by the New York bankers and others who subscribe to the theory that it is better to lose the lives of American soldiers in foreign wars than to lose the profits from American trade in foreign lands is that if Britain, Greece, and China do not win the war our trade with South America will be decreased. The no-more-profits-from-South-American-trade bugaboo is the most frequently repeated argument of the business minds who urge our entrance into war as a boon to American business. It is an argument which is as heartless and mercenary as it is fallacious.

I ABHOR TOTALITARIANISM

Mr. Speaker, I hope that England wins this war. I abominate the whole totalitarian philosophy; I dislike nazi-ism, fascism, communism, and militarism with equal venom. I decry centralization of Government in the hands of one man or one clique in Europe or Asia and I oppose all tendencies toward statism in our own country. I believe in the philosophy of democracy and I am convinced that it will survive because it is best adapted to satisfy the yearnings of human beings throughout the world for liberty and justice. But democracy cannot be superimposed upon a people by war. It is a way of life which must be evolved by a people capable of operating it and experienced enough in its rudiments to appreciate its value. Wars do more to stultify and destroy democracy than they do to spread or to develop it. Our activity in making democracy work in America can do more to make democracy available to all the world than can our armies fighting on the foreign battlefields of Asia, Africa, or Europe. So abhoring totalitarianism and admiring democracy as I do, I submit that our first big duty is to protect and preserve our way of life in our sphere of influence. To do this effectively we must stop short of entering a shooting war in our humanitarian desires to give aid to countries defending territories governed by systems most similar to our own.

Mr. Speaker, the idealistic appeal to lend our strength to free men everywhere, very frankly, makes a deep impression on me. I wish that we were strong enough or miracle men enough to wave a wand or shake a gun and cause all the world to adopt the American system of self-government. But, as realists, we must recognize the fact that even though we were to sacrifice the lives of several millions of our best young men and spend our country into hopeless bankruptcy we have no assurance that we could project democracy to the four corners of the earth. We cannot give the four freedoms to four continents merely by offering our sons as living sacrifices on altars of the God of Mars which might be constructed on these continents. And when our leaders talk of forming an alliance with communistic, atheistic Russia in order to make the world safe for democracy it smacks too much of forming a partnership with Satan in order to fight a war on sin. And, since the fight-because-you-are-frightened argument defeats itself in logic and belies itself in fact I oppose our entrance into a foreign war as a problematical procedure for averting a possible war in the future by plunging into a positive war at the present. And as for the argument of the small clique of bankers and their associates who are directed by the economic philosophers of New York City, I deny that the war-for-profit argument is any more candid than it is Christian.

WHO WOULD MAKE THIS PROFIT OUT OF WAR?

Mr. Speaker, just who would make this profit out of war which we are now given as a reason for fighting another foreign war? What business opportunties are so great and who would reap their harvest that we should follow the siren call of interventionists and send our convoys and our troops to death for "better business"? Just what are the basic facts in the theory that some men must fight so that other men might earn an easier dollar? How logical is the contention that the United States must get a corner on South American trade even if we have to send 6,000,000 men into foreign fighting to secure this coup? And just what we would sell to South America and what would we accept in return if our American economy is to be based on the premise that if Europe and South America become too much the producer and purchaser to each other, America will operate in the red?

Mr. Speaker, if it is proposed to build our American post-war prosperity by precluding Europe from trading with South America we must ourselves purchase what South Americans produce. If we are to supply her needs, we must accept her products. In other words, if the profit-from-war dream of the New York crowd were to come true and South America becomes almost exclusively a North American trading post, it would mean that a vastly greater supply of South American farm products must be purchased by the United States. True, this might mean that manufacturers in this country could sell more to South America, but under such a system the already underpaid farmers of the United States, who comprise one-third of our population, would be driven from their farms. Bankrupt American farmers cannot buy the products of American factories, so by substituting South American products for North American products we simply sell our manufactured items below the Rio Grande instead of north of it, and even those who hope to profit from a monopoly on South American trade are dreaming of fool's gold. We should develop the largest possible trade with South America on a mutually profitable basis, and in a form which will not displace American farm products in our domestic markets, but any plan to make the South American republics our private trade territory ignores the basic elements of productivity in the two hemispheres.

EVEN THE NEW YORKERS DOUBT THEIR OWN CONCLUSIONS

Mr. Speaker, the other evening at a dinner of some 30 Congressmen I heard one of the high administration officials,

recently brought to Washington from a New York bank to aid in the defense program, voice his opinion that we should immediately follow the convoy route into a shooting war. He admitted this country had nothing to fear from a military attack, he wasted no time with the make-the-world-safe-for-democracy approach, but he frankly said that unless we won the war for England we would be faced with serious economic problems in maintaining our trade with South America.

Asked by Congressmen from farming areas how he proposed to consume the vast South American agricultural surpluses in view of our domestic farm surpluses, he frankly admitted it could not be done without forcing restricted production and reduced farm incomes in this country. As an alternative he proposed that the United States enter a post-war program of serving as "brokers" for all South American trade any place in the world. By making brokerage profits on all South American transactions with all other countries he argued we could control and direct trade of our southern neighbors, and profits could be used by American businessmen to develop South America, build railroads, construct great public works, and so forth. Typifying the New Yorker viewpoint of aid to American farmers he stated in substance, "Our great American agricultural regions were developed, after all, by transactions handled through New York brokers who made a small profit on all farm produce going out and all factory products going in and this money helped to build our cities and finance our great developments." Any farmer could have added the corollary, however, "This process has also served to deprive the American farmer of a full price for his products and has added to the cost of his purchases so that today our farmers are still operating at far below parity prices and their distress is the basic reason for the long-continued depression and unemployment in the United States."

Mr. Speaker, I deny the theory that this country should ever fight a war to establish a brokerage control of South America. I deny, too, that business profits stemming from all the world could compensate for the heartache and misery caused by sending mothers' sons to die in foreign wars so that other men might make a more-ready profit from international trade.

If America goes to the war, let it go for a nobler purpose than a stimulus to business, let our soldiers march to more stirring music than the jingling of cash registers, let our motive be more worthy than either greed or fear. America has nothing to fear except its own short-sightedness. America can and should gird herself so well that none will venture to attack this hemisphere. America, too, can meet whatever economic challenges may come from the war or its post-war aftermath. A prosperous, well-protected, free America can better cope with trade challenges or military threats than a bankrupt, disillusioned, directed-from-Washington America recovering from another venture into foreign war.

Mr. Speaker, our job is to be the friendly protector of the Western Hemisphere, and not the financial broker for all South American transactions. Our job is to help reconstruct a world at peace in terms of a peace-protecting adjustment after war, and not to participate in the war for a purpose so vague that if we had the victory in our hands today we would not know what to do tomorrow to mend the woes which gave rise to the fighting.

I conclude, Mr. Speaker, by attaching an editorial from the Washington Times-Herald of this morning, which gives cause to hope that even here in the East there is coming a realization that a war fought for profit or for trade with South America is a folly which the facts will never justify:

[From the Washington Times-Herald of April 21, 1941]

SOUTH AMERICAN TRADE AFTER THE WAR

REASONS OFFERED

Several main arguments are advanced by our more outspoken interventionists for American entry into this war. Advanced in private or semiprivate conversation, that is, not in print or over the radio to any great extent as yet.

There is the plea that Britain is fighting our battle, and the battle for democracy everywhere in the world, and that we owe it to ourselves and to democracy to get all the way into the fight.

There is the talk about how Hitler, if he conquers Britain, will come over here and subjugate us after a more or less bloody and horrifying invasion. How this invasion is to be achieved is seldom specified. But the argument still circulates.

We are also told that it will be more practical to send our men and ships to fight on the advanced British and European fronts than to wait till we have to fight a defensive war on our own shores.

BUSINESS ARGUMENT

All these arguments are pretty much in the emotional zone; you believe them or you don't believe them, and few people can be reasoned into changing their views one way or the other.

However, there is another argument for our early entry into the war which is aimed at the old American practicality and business sense that most of us like to think we have. This one is the argument about what will happen in South America after the war if Hitler wins.

Hitler, according to this reasoning, will sew up the South American market for himself and freeze us out of it. By inference, if the British win, they will generously let us have a big piece of South American trade for keeps, and we'll have no trouble keeping it.

CUT-THROAT COMPETITION

We believe this argument is provably an economic fallacy; that it simply will not pan out that way. Our expectation is that a lot of South American trade will be lost to the United States soon after the war, no matter who wins, and that therefore this is no argument for our entering the war.

Before the war, Japan was shouldering us out of the South American market—because Japan's costs of production were so much less than ours. We have a high standard of living, with a minimum wage of $16 per 40-hour week as our ideal, and with millions of our workers' wages far above that minimum.

British and German workers alike are now working long hours for bare subsistence wages. The rest is going into the war. After the war, whoever wins, Europe will be so broke that it can be counted on to put up the fiercest sort of competition for foreign trade.

To meet that competition, we can go in for export subsidies, or we can cut our workers' wages to the bone. We shall in all likelihood not do the latter. After the other war we tried the former. Refusing to take South American goods in exchange for our goods, and demanding gold, we loaned the South Americans the gold, and they in large measure defaulted on paying it back.

OVERLAPPING PRODUCTION

The reason why we refused payment in goods was that South and North America produce so many of the same things—cattle, wheat, cotton, wool, oil, etc., etc.

Senator WHEELER, of Montana, once observed that you cannot convince Montana cattle raisers that Montana stores should sell Argentine beef instead of United States beef—or that the United States Navy should eat Argentine beef instead of United States beef.

That's the political objection to this argument, and an objection that we believe nobody can overcome. The economic objection to it is that Europe needs the foods and raw materials which South America produces, and after the war can barter finished products for those materials at much better rates than we can sell our high-cost finished products to South America.

A South America-Europe economic hook-up is a natural; a North-South America one, save for coffee, novelties, and specialties, is an unnatural.

We're never going to get rich swapping our cattle, wheat, oil, etc., for South America's any more than the proverbial laundresses could get rich taking in one another's washing.

Oil Compact Commission

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1941

Mr. HARRIS of Arkansas. Mr. Speaker, on March 24, 1941, under leave to extend my remarks in the RECORD, I included a speech of J. Hendrix Alphin, in a State-wide oil and gas conservation hearing on March 21, 1941. Mr. Alphin is a member of the Oil Compact Commission, as a representative of the State of Arkansas, and it was stated in the transcription of his remarks that the Oil Compact Commission is composed of representatives from the States of Arkansas, California, Colorado, Illinois, Louisiana, Michigan, Nebraska, New Mexico, Kansas, Oklahoma, Texas, and Wyoming. Mr. J. A. Smith, president of the Independent Petroleum and Consumers Association of California, has called attention to the fact that California did not belong to the commission and wishes to have the RECORD corrected. I desire to include a portion of a letter that I received from Mr. Alphin, which clarifies and corrects this statement. It is as follows:

By reference to your letter of April 2, 1941, which concerns an address I made before a State-wide oil and gas hearing before the Ar-

kansas Oil and Gas Commission at Magnolia, Ark., on Friday, March 21, 1941, I would like to make this observation.

Undoubtedly, the stenographer who transcribed my remarks at this hearing failed to do so correctly. My notes disclose that I said, "The Oil Compact Commission is composed of representatives from the States of Texas, Oklahoma, New Mexico, Michigan, Colorado, Arkansas, and Illinois. It is hoped that by legislation now pending the full list of the Compact Commission will read as the States of Arkansas, California, Colorado, Illinois, Louisiana, Michigan, Nebraska, New Mexico, Kansas, Oklahoma, Texas, and Wyoming. These States contain over 97 percent of the known oil reserves of the Nation and are now producing over 95 percent of the Nation's daily supply of oil."

As is my habit, my notes were made in pencil and I had not, until you called it to my attention, checked any of the press reports of my address.

Food for the Small Democracies

EXTENSION OF REMARKS
OF
HON. ANTON F. MACIEJEWSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1941

RESOLUTION OF POLISH WOMEN'S ALLIANCE OF AMERICA

Mr. MACIEJEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Believing that the lives of millions of children, women, and men in conquered European countries can and must be saved from the impending famine and pestilence which confront them, and that renewed hope may be given them in the ideals of mankind:

We, 70,000 members of the Polish Women's Alliance of America, indicate our sympathy for and pledge our support to the National Committee on Food for the Small Democracies and its efforts to urge agreements by the German and British Governments with an organization of Americans and other neutrals: (a) by which the domestic food supplies of the conquered European countries, including Poland, can be protected from the occupying armies, and (b) by which supplemental supplies can be imported through the British and German blockades, and (c) to secure the efficient operation of such a neutral organization.

HONORATA B. WOLOWSKI,
President, Polish Women's Alliance of America, Chicago, Ill.
ADELE LAGODZINSKI,
Vice President.
MARYA A. PORWIT,
General Secretary.
VICTORIA M. LATWIS,
Treasurer.
Dr. F. B. KAPUSINSKI,
Medical Examiner.
HARRIET KARLOWICZ, *Editor.*
BARBARA A. FISHER,
General Counsel.

Board of directors: Gertrude Potocki, Albina Damsz, Bernice Wolnik, Maria Lopacinski, Bernice Jakubowski.

DECEMBER 19, 1940.

Annual Meeting of Associated Press

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Tuesday, April 22, 1941

ADDRESS BY HON. JESSE JONES

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered April 21, 1941, at the Waldorf-Astoria Hotel, New York City, by Hon. Jesse Jones, Secretary of Commerce, who was the guest speaker on the occasion of the forty-first annual meeting of the Associated Press. This great news-gathering organization has a membership of 1,264 daily newspapers in the United States and 749 daily newspapers in South America and other countries. I am a member of the Associated Press and have been attending its annual meetings for 35 years. At these meetings I have listened to great addresses by many distinguished Americans. It was my privilege to hear Secretary Jones, and I am glad to say that his patriotic and eloquent remarks made a most favorable impression upon the fine audience addressed by him. I think the address delivered by him is well worth a place in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

As much as I appreciate the invitation to address the Associated Press, I am sure Mr. McLean and my other friends among your directors did not invite me to speak solely as a fellow publisher. Possibly your invitation came because today is Texas' birthday, the one hundred and fifth anniversary of the Battle of San Jacinto, where Sam Houston won independence for Texas.

Whatever the reason, I am honored by the invitation. It is a privilege to meet with you and discuss informally some of our current problems.

Publishers everywhere in America are probably asking themselves two fundamental questions: First, like all patriotic citizens, they want to know about the defense program and how well it is getting along. Second, they want someone to essay the rcle of prophet and give them a glimpse into the future after the war. They would like answers to many perplexing questions. We all would. Some are concerned about the freedom of the press. When they contemplate the disasters which have befallen the press in some other countries, the more pessimistic are afraid that the same fate might be in store for them here. I have no such fear.

I am not so naive as to assume that I can come before you and speak with authority as a publisher. I have not given a great deal of time to the Houston Chronicle, although I would regard it a high privilege to be primarily a publisher and an editor. It is a role worthy of the ambitions of anyone. It affords an opportunity to be of service to one's community, and to one's country.

That this privilege is sometimes misused or carelessly and thoughtlessly exercised does not warrant condemning the entire press. Fortunately, most publishers and editors of American newspapers can be depended upon for a high order of integrity and patriotism. Fortunately, in America the people have the services of such agencies as the Associated Press, which strives to search out the news and report it impartially and completely.

As for the freedom of the press, in my view, and as President Roosevelt told the newspaper editors last week, we will never abandon the high ideal that the press should be free to seek out and to print the news and the truth, unless temporarily certain items having a military bearing might better go unpublished.

Despite any of our shortcomings, it is safe to say that in no other part of the world is so much information so well presented. I might add, parenthetically, that over the years the Associated Press has made a great contribution toward this achievement.

Here in the United States the press has reached its greatest height. To realize that, one need only compare American newspapers with those of any other country. In their news coverage, in the wide variety of it, in the character of its presentation, the newspapers of this country are unequaled. The very freedom of our press and the place it occupies in our lives gives it vast power.

But we should not forget that with that power goes responsibility. The greater the freedom, the greater the necessity that it always be exercised wisely and in the public interest.

It is by recognition of that responsibility that the American press will best serve its own future, and the cause of a free press everywhere in the world.

The careless or unreliable publisher or writer or news agency not only performs a disservice to his country, and its defense in times like these, but he performs a direct disservice to the newspapers of America.

If there should ever be censorship of the American press, it would be brought on by those shortsighted few who blindly and stubbornly refuse to recognize the responsibility that inevitably goes with freedom. But as a Government official I am glad to be able to say that I have never seen any indication that anyone in Government wanted to do any censoring, unless it be information which might aid those who are not America's friends. Freedom of the press is a part of the heritage of every free-born son of this democracy. It is a vital fundamental of our way of life. It is through the press, the dailies, the weeklies, and the magazines, that America speaks.

When editorial opinion strays widely from American thought, publishers might well afford to take stock of themselves and try to ascertain why. We should not bring about any lessening of our freedom or our influence through our own failings. Let's keep our standards high.

May I suggest that you check and double check the more sensational angles of stories which involve relations between this Nation and other countries. Resolve any doubts in favor of the nonsensational approach. To do so may help the men who are wrestling with our foreign relations.

Our press has never had a greater opportunity to serve our country than it has today. First, in printing impartially all the news that should be printed and, second, in arousing the people to the realization that our safety and our way of living are growing less secure by the hour; that hundreds of millions of people are at war destroying life and property and fine things inherited from many generations; that civilization is having a severe test and will be fortunate to survive.

I shall not embark upon any path of prophecy. Only a year ago at your meeting here, you had several war correspondents who talked like people from a strange world.

Little did any of us realize then the situation we would face today. How, then, can we foretell tomorrow? But without getting into the realm of speculation, if the aggressor nations are successful, our generation is apt to see little of tranquillity. We will probably not be able to maintain our way of life. We will certainly not be able to maintain our high standard of living. Our economy cannot compete with slave labor—and the great mass of the people of the Axis Powers and their captives are little more than slaves. They must live and work as they are told. They must accept such reward for their services as an all-powerful and ruthless state sees fit to give them. They may have butter only when guns are not needed.

And that brings me to the progress of our defense program.

One need only recall our lack of preparedness when you met here a year ago to see how far we have come. We did not even visualize the possibility of defense activity on anything approaching the scale on which it is now organized. It is not easy for a peace-loving people like ours to change overnight from purely peacetime pursuits to complete all-out effort at arming, even for defense.

This is particularly true because we have always had faith in the protection of the oceans, and have always believed that no power could invade us.

Maybe we can't be invaded, but we might become isolated economically, and that would inevitably lead to war. Trade outlets are the cause of most wars.

In the period of these few months more than 14,000 separate prime contracts, and probably more than 100,000 subcontracts, have been let for the manufacture of everything from a corporal's chevrons to bombers and battleships. These contracts call for the expenditure of more than $12,500,000,000. Seven hundred and eighty-four new defense plants costing more than $2,100,000,000 have been built or are under construction by the War and Navy Departments.

In addition to these, the Reconstruction Finance Corporation is building or financing more than 100 defense plants at a cost of $650,000,000. All of these plants are for the manufacture of war supplies.

The Reconstruction Finance Corporation is accumulating reserve supplies of copper, tin, antimony, chrome, asbestos, zinc, graphite, manganese, tungsten, rubber, wool, and a few other items of strategic materials. Most of these materials come from foreign countries.

R. F. C. has made commitments for the expenditure of more than $1,500,000,000 for defense, all in cooperation with the War and Navy Departments, O. P. M., and other defense agencies. This is in addition to war and navy contracts. No day is dull in defense activity.

Anyone who thinks that this is not progress doesn't know what he is talking about. Negotiating this many contracts involving in round numbers $16,000,000,000 is progress, and production is getting well under way. No doubt some mistakes have been made and some delays occasioned. It could not be otherwise. But we have capable men from industry and Government in charge of defense work in addition to the regular staffs of the Army and Navy. And don't think these service men are not capable. They have spent years in studying our military needs and know how to meet them. General Marshall told me only 2 days ago, after visiting camps and cantonments throughout the country, that we have a million and a quarter as fine men in training as he has ever seen, and that he had never seen higher morale in any army.

I am fairly close to defense activity. I have seen it in the sprouting stage, and now I see it bearing fruit. Its progress is not satisfactory in all respects, but under the circumstances I think it is better than good.

I am afraid, however, that as a people we have not yet realized the imperativeness of our defense necessities, that we have not yet been shocked. There is no room in America today for complacency. There is no place for indifference. Certainly there is no place for obstruction and it should not be tolerated. No matter how fast defense production climbs, it will not be fast enough to meet the need nor to satisfy our state of mind—our anxiety. There is no place in the crucial world of 1941 for any delay or any excuses.

There is no room for selfishness, whether it be the selfishness of industry seeking undue profits, or of labor seeking unjustifiable wage increases, and endeavoring to utilize the emergency to fight jurisdictional and internal battles. There is no place for profiteering of any kind. And there is no time for any stoppage of vital work to argue about the terms on which it is done. There must be but one selfishness, the selfishness of all of us for the protection of American democracy. It must not be sacrificed.

The time is rapidly approaching when each of us will be called upon to measure our patriotism, our love of freedom, and our devotion to the democratic way of life in terms of individual sacrifice. We will be fortunate if this sacrifice represents only a temporary doing without some of the things to which we have become accustomed—a little personal inconvenience.

We are too inclined to take it for granted that aid to Britain and the other democracies, and even our own defense, mean only the training of a few soldiers and sailors, and the appropriation of a few billions of dollars, followed by orders for airplanes, guns, ships, and tanks.

Our defense expenditures are now running at the rate of nine to ten billion dollars a year. The end of the year will undoubtedly see this rate stepped up to as much as $15,000,000,000 yearly, possibly more. To most of us, the difference between a million and a billion dollars is whether you spell the word with a "b" or an "m", but spending a billion dollars or $10,000,000,000 is a real undertaking.

It is impossible to understand fully the meaning of these huge appropriations of money until we translate them into labor and material.

Fifteen billion dollars is more than all the wages and salaries paid by all the manufacturing plants in the United States in any one year. It is twice the value of all the agricultural products produced in the United States in any recent year by our 6,000,000 farm families.

Some people seem to think that this colossal effort at defense need not interfere with business as usual. The European war might now be over if some of the democracies involved had not taken just that view in the beginning. And experience should teach us that anything short of a maximum effort—maximum aid to Britain and the other democracies, and maximum preparation for the defense of the Western Hemisphere—may be worse than no effort at all.

If we are to get ready to defend ourselves, let's be sure that we do a good job of it. That means we must give up some of the things we have been used to, when actually we will have more money in circulation from the Government spending all these billions for defense. With the expenditure of these billions, we must guard against inflation and run-away prices. We may have to submit to price controls to make sure that the defense effort is not impeded. A Government agency has been set up to guard against run-away prices. We should support that effort, and we should adopt a program of taxation which will pay a large part of the defense cost currently.

We are in the most momentous period in modern history. Whether it will be a grim, tragic tale of long and arduous struggle, or will lead to a peaceful and better world, depends upon the military outcome.

Putting first things first, the war must first be won. We are helping the democracies because we believe the survival of democracy is essential to our civilization. We should not underestimate the task. We will be called upon to pay dearly for something we would like to have avoided, something unnecessary and inexcusable. But when outlaws are at large and our future is at stake, we have no choice but to prepare to defend ourselves against aggression from any source. If we would preserve the kind of life we have been accustomed to, and want to continue to enjoy, we must lay gun on gun until every threat to our security has been met.

The Citizens' Part in National Defense and Aid to Britain

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, April 22, 1941

ADDRESS BY HON. ALEXANDER WILEY, OF WISCONSIN

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered before the Philadelphia Board of Trade on April 18, 1941, on the subject of the Citizens' Part in National Defense and Aid to Britain.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a great honor to appear before the Philadelphia Board of Trade this afternoon. My friend and colleague, the able senior Senator from Pennsylvania, JIM DAVIS, informs me that the Philadelphia Board of Trade is one of the largest organizations of its kind in the country.

Your existence dates from a meeting held at Wade's Hotel on October 15, 1833, which was called "to consider the propriety of forming an association by means of which the commercial and trading community in the city might be enabled to act with united efforts on all subjects relating to their interests."

I am honored to speak to a group which has so long a record of outstanding public service as this organization.

I am honored to speak to this group because I know that from the time of its inception in 1833, its membership has been made up of outstanding leaders, but I am primarily honored in appearing before your group because from your very inception you represented an ideal, which I hold to be vital in these chaotic days.

ACT WITH UNITED EFFORT

As I said a moment ago, your organization was called into existence so that you might "act with united efforts on all subjects relating to their interests."

That is the underlying theme of my discussion today of the citizens' part in national defense and aid to Britain. Today, as never before, there is a grave necessity for a sub-

mergence of group interests in a united effort for the preservation of those great values, spiritual and material, which we hold in common.

A businessman recently told a story about his young daughter. He was reading the Sunday newspaper. His little daughter kept interrupting him with questions, and finally, in order to give the little girl something to occupy her attention, he tore out one of the pages of the newspaper. There was a map of the United States on that page. He cut it into a jigsaw puzzle and then asked the little girl to put it back together again.

She took the pieces and in a remarkably short time she returned with the map completely and accurately assembled. He was startled to see her perform this difficult task so quickly, and he asked her how she did it. She said, "Why, Father, it was very easy. On the other side of the map there was a big picture of a group of men and women and children, and when I put that picture back together the United States was put together on the other side."

UNITED PEOPLE UNITED IN COMMON CAUSE IS INVINCIBLE

That brings me to the bedrock of our discussion today. When we are a united people, united in the common cause, with a common bond, we are invincible. No system of totalitarian efficiency is equal to American efficiency under the American system.

It is all very well to talk of mobilizing machines in defense, but I would much rather talk of mobilizing men and morale. When we have succeeded in mobilizing men and morale we have created the front line of American defense. That front line is found in the hearts and minds of the American people.

As long as we can submerge our petty differences, our racial intolerances, our self-seeking interest, our class consciousness, and our economic defeatism in a united front, our way of life will remain inviolate—bombproof to military and economic and propaganda dive bombers.

In speaking to you gentlemen today I feel the responsibility of my position. You do not ask a Senator of the United States to come to you to bring you entertainment. You are a thinking group, a serious-minded group. You are a responsible cross-section of our economic society, and you have for your purpose the promotion of the economic health of the Nation. I am sure in this troubled world you are sensitive to your responsibility. You know that the steps we take in this country now, politically, economically, and socially—the steps we take today will, in a large measure, determine our course tomorrow.

WE HAVE AN OBLIGATION AS TRUSTEES

Consequently, at the outset of my remarks let me suggest that the obligation each of us owes to this Naton, to our concept of government, to the future of this Nation that we are at present the trustees of, demands that you and I be fit—fit "soldiers" to meet whatever emergency may arise.

Fitness nowadays calls for clear thinking, a balanced intellect. It calls for vision, judgment—it calls for casting out intolerance and class hatred. It calls for perspective.

NEED PERSPECTIVE TO SEE NATIONAL PICTURE

With this quality of perspective, now let us look out upon the national picture. We are 131,000,000 people. The national indebtedness is about $46,000,000,000 plus an additional $9,000,000,000.

We are the richest nation in the world. We have the greatest ability for production. No groups of nations can be as self-sufficient as this Nation can be.

Until the war broke in Europe we went on our way smug and complacent. As a Nation we were unaware of the great world changes that were about to take place and were taking place. We were unaware of the dangers to our form of life, our form of government.

CALLOUSED TO NEGLECT OF THRIFT AND INTEGRITY

We had become calloused as a people to a neglect of the principles of thrift, industry, and integrity. For 7 years our Government had gone into the red approximately three and one-half billion dollars a year. That didn't dent us. We just sailed on. Our unemployment problem was approximately as large as ever.

A large segment of our society, about 80 percent of the farmers, were not getting cost of production out of their products. Pressure groups were dictating legislation in Washington to the President and to the Congress.

DEFENSE HAD BEEN NEGLECTED

We had no defensive air arm. We had no equipped Army. While we had a fair Navy it had no coordinating air arm, and the ships were not constructed to meet new conditions in war. Money by the billions was remaining idle because the investor had no place to go. Enterprise and initiative and invention were at a low level. Government was swollen by a bureaucracy such as our country had never seen before.

Still there was no awakening because Government pap was fed out in a thousand channels. We saw leaners and chiselers and grafters come into being. And very little was said about it. It was considered as part of the order of the day. The doctrine of Cleveland that the Government should be sustained by the people instead of the people sustained by Government was entirely reversed. In one sense a creeping lethargy seemed to have affected our people.

DOMESTIC PROBLEMS UNSOLVED

We had forgotten that the political leadership which took over in 1933 had promised the people to reconstruct America, to rebuild her financial bulwarks, to vitalize her morale, to build her strong. Yes; we had forgotten the platform and the promises. You will remember the job to be done was—

First. A drastic reduction of governmental expenditures by abolishing useless commissions and offices and eliminating extravagance.

Second. A Federal Budget annually balanced.

Third. The restoration of agriculture.

Fourth. The removal of Government from fields of private enterprise except where necessary to develop public works and natural resources.

Fifth. No interference in the internal affairs of other nations.

Sixth. The creation of jobs for the unemployed.

HITLER SHATTERED AMERICAN LETHARGY

Then Hitler came. He struck with lightning. Nation after nation went down before his blows and an awakening took place. History will probably say of him, "He woke the democracies to a sense of the danger they were in. He tumbled them out of their beds of ease and caused them to realize something of the real value of their freedom by making them appreciate that this freedom and way of life were in danger, liable to be snuffed out like they were in Denmark, Poland, Czechoslovakia, Norway, Belgium, Holland, France, Rumania, Bulgaria."

While this occurred fully in Britain, it is very evident our own people in this country, at least part of them, have not come to the realization of the imperative need of national unity. What do I mean? I mean we have not had the coordination between labor and management and Government in our defense program that we should have had. An indication of that is the present strike situation.

The question for our discussion today is, "The citizen's part in national defense and aid to Britain."

WHAT IS THE CITIZEN'S PART IN NATIONAL DEFENSE?

I. Citizen can create unity through tolerance

His part is to create unity through a spirit of tolerance and understanding. This is not time for wild-eyed intolerance—soap-box ranting.

This is possibly the bitterest social era the world has ever known. The part of the citizens today must not be to add to the world's bitterness, but to create a spirit of tolerant understanding.

It is written in Isaiah "They helped everyone his neighbor; and everyone said to his brother, 'Be of good courage'."

This land of ours was founded in the belief that it was vital to rid ourselves of intolerance, hatred, bigotry, and persecution. We have not always been successful in that ideal. There have been periods of witch-hunting in American history; there have been periods of intolerance, sectionalism, and racial and religious rioting.

Lincoln lived in such a period and he saw its dangers. In his message to Congress on December 1, 1862, he said:

"That part of the earth's surface which is owned and inhabited by the people of the United States, is well adapted to be the home of one national family, and is not well adapted for two or more. * * * We shall nobly save, or meanly lose the last hope of earth. Other means may succeed; this could not, cannot fail."

And, it was Lincoln also who said on December 10, 1856, in Chicago:

"Can we not come together for the future? Let everyone who really believes and is resolved that free society is not and shall not be a failure, and who can conscientiously declare that in the past contest, he has done only what he thought best—let every such one have charity to believe that every other one can say as much."

And, it was Lincoln again on February 27, 1860, in his famous Cooper Institute speech, who said:

"Even though much provoked, let us do nothing through passion and ill temper."

And, again, on March 5, 1860, at Hartford, Conn., Lincoln said:

"Our portions of this confederacy should act in harmony and use careful deliberation."

Mr. Chairman, I can think of no greater appeal to the people of the United States, in these troubled times, than those words of Lincoln's, and, so I say to you, that the first part which the citizen can play in national defense is a tolerant role—a role which seeks to mend the social fabric, rather than tear it asunder by creating class castes.

II. Citizen can reaffirm allegiance and faith in American ideal

The citizen can play a part in our defense program by reaffirming our allegiance, and our faith in the American ideal, possibly in the words of the American creed:

"I believe in the United States of America as a Government of the people, by the people, for the people; whose just powers are derived from the consent of the governed; a democracy in a Republic; a sovereign nation of many sovereign States; a perfect Union, one and inseparable; established upon those principles of freedom, equality, justice, and humanity for which American patriots sacrificed their lives and fortunes.

"I therefore believe it is my duty to my country to love it; to support its Constitution; to obey its laws; to respect its flag; and to defend it against all enemies."

In other lands youth is bludgeoned into a dreary acceptance and finally into a fervently fanatical subservience to totalitarian

philosophy. How much more inspiring will our crusade be to create in every boy and girl of this land an intense loyalty to our way of life.

Our way of life—that is a term that is greatly abused. I have never heard it defined. I do remember, however, that James Truslow Adams called it "the American dream." He wrote about:

"That dream of a land in which life should be better and richer and fuller for every man, with opportunity for each according to his ability or achievement. * * * The American dream that has lured tens of millions of all nations to our shores * * * has not been a dream of merely material plenty, though that has doubtless counted heavily. It has been much more than that. It has been a dream of being able to grow to fullest development as man and woman, unhampered by the barriers which had slowly been erected in older civilizations, unrepressed by social orders which had developed for the benefit of the classes rather than for the simple human being of any and every class."

III. Citizen can prepare to sacrifice

The average citizen can do his part in national defense by being prepared to sacrifice.

I hold no brief for those politic l goldbrick salesmen who evade their responsibility by letting the American people believe that we can retain our way of life without sacrifice.

These supersalesmen, these glib-tongued prophets of economic self-indulgence, are literally playing politics with American lives and American homes when they refuse to tell the American people that they are facing sacrifices unprecedented in American history. I think this is the time to be prepared for a big jolt.

As a nation we have been weakened by a decade of economic leaf raking. This last decade of boondoggling has crippled our economic reserves and our national credit.

Your organization was founded in 1833. When your organization was a little more than half a century old, in 1890, the average worker gave 1 day's work out of every 14, to government. Most of us do not realize it, but recently, before the current emergency, government was taking the economic output of 1 out of every 4 working days. Naturally, this has drained our economic bloodstream.

We Will Have To Meet Staggering Bills With High Taxation

All of this means that we are in for a period of sacrifice. We are going to have staggering bills with higher and more painful taxation.

The banks are loaded with savings but the interest rates are set at starvation levels. There will be tremendous changes in bank financing of the defense program here and abroad. There will be a sharp demand for money and credit, and don't you forget that Uncle Sam himself will be standing at the head of the line-up, waiting for loans.

IV. Citizens will have to make group sacrifices

But it is not alone the average citizen who will have to make sacrifices in terms of higher taxes, and possibly a lower standard of living—there will be group sacrifices, and the most obvious application of that kind of sacrifice today is the sacrifice involved in the labor problem.

Labor Policy of Day-to-Day Expediency

Let us be honest. Thus far during this critical period the labor policy of this administration has been written in the shifting sands of day-to-day expediencies. In recent weeks it has been a labor policy of chaos and calamity.

After the declaration of war in April of 1917, the United States tried to get its industrial work done without a clearly defined labor policy. During that time, and for almost a year, the Government urged conciliation. The public frowned upon strikes but strikes persisted and grew in number.

Finally, President Wilson began a decisive labor policy. He set up boards to define a labor policy and to mediate disputes. Strikes and lock-outs were banned for the period of the war. It was decided that the status quo in any plant had to be maintained (that meant that the closed-shop question was eliminated as a basis of dispute).

The right of collective bargaining was upheld, and these decisions and this policy settled the labor problem throughout the war. Strikes ended, and throughout the summer and autumn of 1918 there was a spectacular rise in industrial production.

We Can't Play Politics With the Labor Problem

There is a parallel here. By May of this year it will be just a year since we began to be definitely conscious of a possible menace to the United States. Since then we have rolled up our shirt sleeves and voted billions upon billions. We have drafted men and we have drafted industry.

But now, as in 1917, we are playing politics with the labor problem. This administration has pussy-footed on the labor issue and has adopted no clear-cut decisive policy which would define the relationship of industry and labor.

Our policy has been strictly a crazy quilt of day-to-day decision, and we have had the same results that a similar vacillating policy had in 1917.

Two Alternatives Have Confronted Administration in Its Labor Problem

Broadly speaking, there have been two alternatives which have confronted this administration. One of them was to adopt a decisive realistic policy which would consider the rights of both parties, which would guarantee the right of labor to enjoy the American standard of living at a fair wage, and which would, at the same time, underwrite the right of capital to enjoy the use of its property for a reasonable investment return. That is the policy to which your group subscribes.

The other alternative was to pile one board on top of another board without giving any of them any genuine power. We had a National Labor Relations Board, we had a Conciliation Service in the Department of Labor, we had a labor set-up in the Office of Production Management, and none of them prevented or decreased labor disputes, and that, after all, is the test of whether they were doing the job. Now, my friends, we have a Defense Labor Mediation Board whose creation is so recent that we cannot completely evaluate its work.

I do not criticize these agencies. I do not criticize their personnel or their policies. I do not criticize their functions or their objectives.

Administration Has Not Given Labor Boards a Foundation

But, my friends, I indict this administration for not giving them a foundation. This administration has still failed to write a decisive labor policy. No conciliation board conciliates on the subject of the closed shop. That issue is beyond their province. If strike votes are fraudulent, there is no decisive Government policy which meets the situation.

I believe it is the duty of the administration and the duty of Congress to write a labor policy. I do not want to see such a policy written by the enemies of labor—I do not want to see a policy written which will slaughter the hard-won rights which labor has achieved. I want to see those rights preserved in an intelligent program which also preserves the rights of industry—and the rights of the third party, the public. Such a program will undoubtedly call for sacrifice, understanding, and vision.

In Connection With a Labor Policy, I Believe—

There are several points I would like to make clear in connection with the labor problem.

First. There is a growing disposition in Congress to write legislation directed at this problem.

Second. Congress alone cannot stop strikes. Representative SUMNERS, the chairman of the House Judiciary Committee, makes the statement that strikes cannot be prevented by an act of Congress, because Congress can do only 10 percent of the job—90 percent of the job would be up to the administrative officials who would be required to enforce the law. In other words, there will be no definite stoppage of strikes until the Chief Executive takes a more decisive stand.

Third. Most Washington officials feel there should be a definite testing period for the defense Mediation Board because it is generally agreed that the Chief Executive will not subscribe to a more decisive labor policy until the Board has had a trial.

Fourth. I believe it is highly desirable for industry to seize every opportunity which it has to show that it has clean hands and that it is not receiving a disproportionate share of the payment for defense. If industry can do this, it will do much to allay labor's suspicion.

Fifth. Similarly, labor should welcome every opportunity and every investigation which may demonstrate that labor has a capacity for reasonableness. I believe that this is moderation's middle way.

Sixth. In any labor policy the rights of the public must be considered.

Seventh. I do not believe that government, except as a last resort, should take over and operate plants where defense work has been halted by labor difficulties.

Complete Governmental Control of Plants Undesirable

I regard this as the first step in what might eventually be the destruction of both unionism and private enterprise. We know that in the totalitarian countries government controls everything and the right of workers to organize independently has been taken away from them. I do not want to see that in America.

I do not want to see our system of private enterprise eliminated by a system of Government controls. I do not want to see Government management of everything. I do not want to see a commisar or a fuehrer or a duce running all enterprise in this country.

I do believe, however, that Government should be strong and should adopt a decisive policy in these labor problems. If we have any stake in the present conflict, it is primarily a stake represented in the preservation of our way of life. That is our vision, and the way we will secure it is not by extremes on either side but by moderation.

V. Citizen can aid in curbing inflation

I believe that the citizen can play a dominant part in national defense and aid to Britain by doing everything in his power to curb inflation. If the average citizen does everything he can to prevent inflation, he will be making an outstanding contribution on the economic front.

I don't believe that the question of whether or not we have inflation is entirely dependent upon government policy. I believe the individual can do a great deal toward maintaining stability. Probably the most obvious way in which the average citizen can help maintain stability is by deferring satisfac-

tion of some of the wants which they are now able to gratify.

The average citizen can also make a contribution toward stability by saving and by refraining from going into debt. We know that the demands on the market will be heavy enough, without adding any demands based on abnormal borrowing.

In the past we have had booms because of debt making. We have had depressions intensified by debt paying. The tremendous increase in our Government debt and the possibilities for private debt in our defense program involves very serious dangers. That makes it all the more necessary that the average citizen should resist the temptation to expand the individual debt.

Citizen Can Avoid Going Into Debt

That means that the average citizen may have to buy out of current income instead of on the deferred-payment system. That means less credit and more cash purchasing. We know that it is easy to borrow at the present time, but if this borrowing is not conservative, it may involve dangers to both the borrower and the lender, particularly in times of rising prices. Thrift is still a virtue. Debts still have to be repaid. The Government has not set a good example, but that does not alter the fact that the individual should. I believe, also, incidentally that business can join with the citizen in a policy of exercising restraint in inventory accumulation.

We Can Anticipate Problems of Post-war Readjustment

These suggestions, by the way, will do much to anticipate the problems of post-war readjustment. Your organization should readily agree with such policy because you know what these problems are. During the years following the World War, your group was engaged in trading reconstruction work, and I recall that at that time you urged upon Congress the necessity of a reconstruction commission to study post bellum conditions. I believe that was an excellent suggestion, and I feel that today we must even now begin to anticipate the aftereffects of the present conflict.

Daniel Webster once said:

"There are persons who constantly clamor. * * * They carry on a mad hostility against established institutions. They would choke up the fountains of industry and dry all its streams. In a country of unbounded liberty they clamor against oppression."

Against these subversive forces the average citizen can wage an effective battle. When the average citizen joins in a spirit of unity with his fellow citizens, their combined voice is the voice of public opinion—a force sometimes more potent than government itself.

John Milton once said: "Awake, arise, or be forever fallen."

Gentlemen, are the American people awake to all of the dangers which menace our way of life, the dangers from without and the dangers from within?

I believe that recognizing these dangers the American people will answer the challenge they present, answer them individually and collectively in the ways we have discussed this noon.

It is my fervent hope that out of the gethsemane ahead, the United States and our way will emerge strengthened and revitalized, both to a recognition of our opportunities and our obligations.

I believe that our republican democracy is a dynamic, living thing. That is may continue to work—and to grow—and to live—each citizen must dedicate his highest efforts.

Gentlemen, in this period we must be like Nehemia—too busy rebuilding the wall to be enticed from our work—our work is to build America strong; build her ramparts durable for a thousand years.

Keep your convictions and balance. If folks malign, abuse you, and this would tend to take your attention from your job—be strong—stick to your job.

Do not return hate for hate—the walls of America must be rebuilt. These walls have been sabotaged by years of loose thinking and living, by false economics, Government pap, and easy living.

Let nothing divert you from the master builder's job of rebuilding the walls. It takes men with courage and foresight—who exemplify honesty, thrift, industry, morality, and honor.

It appears difficult at times, especially if, for example, one of the privileged class, a newspaper editor or columnist, abuses his position and trust and indulges in misrepresentation or mud slinging instead of relating the facts—the real news.

But if you persist, you will be twice victorious—first, over the law of the jungle, which would return evil for evil; and, secondly, you will find the road "to satisfactory living with self." Bitterness, wrath, malice, and evil speaking will not be in your make-up. Your vision will be unimpaired—not blurred.

Oh, how America needs straight-thinking and straight-seeing men, now—men who possess tolerance and love of their fellow Americans.

Another Easter has come and gone—in the midst of our difficulties and perplexities. It suggests that we possess the power to rise above them. Easter is a season of hope. The first Easter dawned like this Easter upon a discouraged, distressed, and fearful world, but the first Easter restored to the followers of Jesus, faith and courage and gave them power to carry on in a victorious manner. Why? Because Easter gave to His disciples the answer to Job's question: "If a man die, shall he live again?"

Yes, we must be strong. We must not lose our nerve or faith. This is no time for the craven soul, the doubter of the American way—the defeatist.

Let us revive the patriotism of our fathers. Show up, for what they are, the self-styled intellectual pinks who would mock our faith and our free way of life.

Love of country is a noble thing. Our way of life, contrasted to that of the totalitarian way, is the difference between freemen and slaves. Onward then, in the task to make America safe by rebuilding her walls.

The Easter Message of Pope Pius XII

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 22, 1941

ARTICLE FROM THE CATHOLIC REVIEW

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD the Easter message of Pope Pius XII.

There being no objection, the message was ordered to be printed in the RECORD, as follows:

[From the Catholic Review, Baltimore, Md., April 18, 1941]

PIUS XII ASKS PRAYERS FOR EARLY, UNIVERSAL PEACE

VATICAN CITY, April 13.—Herewith is presented the official English translation of the Pope's Easter message Urbi et Orbi, which was broadcast by radio throughout the world:

We most cordially greet you all, beloved sons and daughters of Rome and of the entire world, in the spirit of Alleluia of Easter morn, in the joyful spirit of the resurrection and peace in Christ, after the desolation of His divine passion; but unfortunately, there has been no resurrection, no restoration, of peace among nations. In our joyful greeting to you there must be intermingled that note of distress which was the cause of great sadness and continual sorrow to the heart of Paul the Apostle while he was preoccupied about his brethren who were his kinsmen according to the flesh (Romans IX:12).

APPEALS TO BELLIGERENTS

In the lamentable spectacle of human conflict which we are now witnessing we acknowledge the valor and loyalty of all those who with a deep sense of duty are fighting for the defense and prosperity of their homeland; we recognize, too, the prodigious and, in itself, efficacious development made in industrial and technical fields; nor do we overlook the many generous and praiseworthy gestures of magnanimity which have been made toward the enemy; but while we acknowledge, we feel obliged nonetheless to state that the ruthless struggle has at times assumed forms which can be described only as atrocious.

May all belligerents, who also have human hearts molded by mothers' love, show some feeling of charity for the sufferings of civilian populations, for defenseless women and children, for the sick and aged, all of whom are often exposed to greater and more widespread perils of war than those faced by soldiers at the front.

FEARS MORE TERRIBLE INSTRUMENTS

We beseech the belligerent powers to abstain until the very end from the use of still more homicidal instruments of warfare; for the introduction of such weapons inevitably results in their retaliatory use, often with greater violence by the enemy. If already we must lament the fact that the limits of legitimate warfare have been repeatedly exceeded, would not the more widespread use of increasingly barbarous offensive weapons soon transform war into unspeakable horror?

In this tempest of misfortunes and perils, of afflictions and fears, our most powerful and safest haven of trust and peace is found in prayer to God, in whose hands rests not only the destiny of men but also the outcome of their most obdurate dissensions. Wherefore we express our gratitude to Catholics of the entire world for the fervor with which they responded to our call to prayer and sacrifice for peace on November 24.

ASKS PRAYERS FOR EARLY PEACE

Today we repeat that invitation to you and to all those who raise their minds and hearts to God, and we beseech you not to relax your prayerful vigilance but rather to reanimate and redouble it. Yes; let us pray for early peace. Let us pray for universal peace; not for peace based upon the oppression and destruction of peoples but peace which, while guaranteeing the honor of all nations, will satisfy their vital needs and insure the legitimate rights of all.

We have constantly accompanied prayer with our own endeavors. To the very limit of our power and with a vigilant consciousness of impartiality in spirit, and in our apostolic office we have left nothing undone

or untried in order to forestall or shorten the conflict, to humanize the methods of war, to alleviate suffering, and to bring assistance and comfort to the victims of war.

SEES LITTLE HOPE OF JUST PEACE

We have not hesitated to indicate in unmistakenly clear terms the necessary principles and sentiments which must constitute the determining basis of a future peace that will assure the sincere and loyal consent of all peoples. But we are saddened to note that there seems to be as yet little likelihood of an approximate realization of peace that will be just, in accordance with human and Christian norms.

Thus our supplications to heaven must be raised with ever-increasing meaning and fervor, that a new spirit may take root and develop in all peoples and especially among those whose greater power gives them wider influence and imposes upon them additional responsibility; the spirit of willingness, devoid of sham and artifice, that is ready to make mutual sacrifices in order to build, upon the accumulated ruins of war, a new edifice of fraternal solidarity among the nations of the world, an edifice built upon new and stronger foundations, with fixed and stable guaranties, and with a high sense of moral sincerity which would repudiate every double standard of morality and justice for the great and the small or for the strong and the weak.

INVOKES ARMS OF SPIRIT

Truth like man has but a single face; and truth is our weapon just as prayer is our defense and strength, and the living sincere and disinterested apostolic word inspired by fraternal affection, our entry to the hearts of men.

These are not offensive and bloody weapons but the arms of spirit, arms of our mind and heart. Nothing can impede or restrain us from using them to secure and safeguard just rights, true human brotherhood, and genuine peace, wherever the sacred duty of our office prompts us and compassion for the multitude rekindles our love.

Nothing can restrain us from repeatedly calling to the observance of the precept of love those who are children of the church of Christ, those who because of their faith in the divine Saviour or at least in our Father who is in heaven are very near to us.

PEACE IN SHADOW OF CROSS

Nothing can impede or restrain us from doing all in our power in order that, in the tempest of surging waves of enmity among the peoples of the earth, the divine ark of the church of Christ may be held firmly by the anchor of hope under the golden rays of peace—that blessed vision of peace which, in the midst of worldly conflicts, is the refuge and abode and sustenance of that fraternal spirit, founded in God and ennobled in the shadow of the cross, with which the course must be set if we are to escape from the present tempest and reach the shore of a happier and more deserving future.

However, under the vigilant providence of God and armed only with prayer, exhortation, and consolation, we shall persevere in our battle for peace in behalf of suffering humanity. May the blessings and comforts of heaven descend on all victims of this war, upon you who are prisoners and upon your families, from whom you are separated, and who are anxious about you; and upon you refugees and dispossessed, who have lost your homes and land, your life's support. We share with you your anguish and suffering.

HOPE IN GOD NEVER FAILS

If it is not allowed us—as we would honestly desire—to take upon ourselves the burden of your sorrows, may our paternal and cordial sympathy serve as the balm which will temper the bitterness of your misfortune with today's greeting of the Alleluia, the hymn of Christ's triumph over earthly martyrdom, the blossom of the olive tree of Gethsemane flourishing in the precious hope of resurrection and of the new and eternal life in which there will be neither sorrows nor struggles. In this vale of tears there is no lasting city (Hebrews 13: 14), no eternal homeland.

Here below we are all exiles and wanderers; our true citizenship, which is limitless, is in heaven, in eternity, in God. If worldly hopes have bitterly deluded you, remember that hope in God never fails or deceives. You must make one resolve—not to allow yourselves to be induced, either by your sad lot or by the malice of men, to waver in your allegiance to Christ.

Prosperity and adversity are part and parcel of man's earthly existence; but what is of the utmost importance, and we say it with St. Augustine, is the use that is made of what is called prosperity or adversity. For the virtuous man is neither exalted by worldly well-being nor humbled by temporal misfortune; the evil man, on the other hand, being corrupted in prosperity, is made to suffer in adversity.

To the powers occupying territories during the war we say with all due consideration: Let your conscience guide you in dealing justly, humanely, and providently with the peoples of occupied territories. Do not impose upon them burdens which you in similar circumstances have felt or would feel to be unjust.

Prudent and helpful humanitarianism is the commendation and boast of wise generals; and the treatment of prisoners and civilians in occupied areas is the surest indication and proof of the civilization of individuals and nations. But, above all, remember that upon the manner in which you deal with those whom the fortunes of war put in your hands may depend the blessing or curse of God upon your own land.

Contemplation of a war that is so cruel in all its aspects and the thought of the suffering children of the church inspires in the heart of the Common Father and forms upon our lips words of comfort and encouragement for the pastors and faithful of those places where the church, the spouse of Christ, is suffering most; where fidelity to her, the public profession of her doctrines, the conscientious and practical observance of her laws, moral resistance to atheism and to de-Christianizing influences deliberately favored or tolerated, are being openly or insidiously opposed and daily in various ways made increasingly difficult.

FOLLOWERS OF CHRIST SUFFER

The records and artifices of this generally secret but at times even public martyrdom, which insidious or open impiety makes followers of the Crucified suffer, are multiplying daily and constitute as it were in an encyclopedia of many volumes, annals of heroic sacrifices, and furnish moving verification of the words of our Divine Saviour: "The servant is not greater than his Lord. If they have persecuted me, they will also persecute you" (John xv: 20).

Is this divine warning not a source of tender comfort on that sorrowful and bitter way of the cross which you are following because of your fidelity to Christ? To all of you who are walking so sadly along this way, priests and religious, men and women, and particularly you young men, pride and joy of your families, who are called upon to bear the burden of these merciless and bitter days—whatever be your origin, language, race, social condition, or profession—all you upon whom the seal of suffering for Christ is stamped so clearly, a sign no less of suffering than of glory, as it was to the great Apostle Paul, you are numbered among those privileged intimate who are nearest to the Cross of Calvary and by this very fact nearest also to the pierced heart of Christ and to our own.

Oh that we were able to make you appreciate how profoundly our heart has been pierced by the cry of the Apostle of the Gentiles "Who is weak, and I am not weak?" (II Corinthians xi: 29).

SHARES THEIR SORROWS

The sacrifices you are called upon to make, your suffering in mind and body, your concern for your faith and still more for the faith of your children, we are aware of them, we share them with you, we lament them before God.

And yet withal, on this day we greet you with joyful Alleluia; for it is the day of Christ's triumph over His crucifiers, open and secret, ancient and modern. We convey that greeting to you with the voice and confidence with which, even in the days of the persecution, the early Christians exultantly sang that Alleluia.

Perhaps you do not recall the words of our Lord to Martha: "I am the resurrection and the life: he that believeth in Me shall not die forever" (John ii: 25: 26). The certainty they were assuring themselves of resurrection made of martyrs heroes of Christ and faithful unto death.

You enjoy that same certainty. Imitate them and with the greatest prophet of the New and eternal Testament raise your eyes to that heavenly Jerusalem where Christ gloriously reigns and rules and, while rewarding His good and faithful servants, proclaims the mystery and splendor of their triumph in the shining whiteness of their garments, in the indelible inscription of their names in the Book of Life, and in decreeing that they be exalted before His Father and the heavenly court, with admirable words which you in your perilous trials must never forget: "He that shall overcome shall thus be clothed in white garments and I will not blot out his name out of the Book of Life but I will confess his name before My Father and before His angels" (Apocalypse iii:5).

IMPARTS APOSTOLIC BLESSING

Beloved sons and daughters: To Jesus Christ, "Prince of Kings on earth, Who hath loved us and washed us from our sin in His own blood" (Apocalypse 1:5) raise your eyes while, as pledge of that heavenly peace which He alone can give to us and which we implore of Him in superabundant measure for all humanity, we impart to you, to pastors and faithful, to your families, to your children, that Christ may protect and keep you in His grace and love, to those who in the fulfillment of duty are fighting on land and sea and in the sky and especially to all those who have been so severely lashed by the scourge of war with heart overflowing with love, our paternal apostolic benediction

May the blessing of Almighty God, Father, Son, and Holy Ghost, descend upon you and remain forever. Amen.

Labor Relations and National Defense

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 22, 1941

REMARKS BY PROF. ALEXANDER HAMILTON FREY

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the

Appendix of the RECORD a memorandum of remarks made by Prof. Alexander Hamilton Frey at a symposium on labor relations and national defense conducted by George Washington University Law School at the United States Chamber of Commerce Auditorium, Washington, D. C., Thursday, March 27, 1941.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

[Memorandum of remarks of Prof. Alexander Hamilton Frey at a symposium on labor relations and national defense, conducted by George Washington University Law School at the United States Chamber of Commerce Auditorium, Washington, D. C., Thursday, March 27, 1941]

A bargaining situation exists between a buyer and seller if each is in a position to force upon the other some concession, some abandonment of a preferred position. For the seller to be able to obtain a price at all, there must be some degree of scarcity, some limitation upon the supply. This is the first essential of bargaining power. If the seller is offering something for which the buyer is willing to pay a price—i. e., which it is advantageous to the buyer to purchase at some price—the ultimate price which the seller receives, whether he controls all or only a fraction of the supply, depends upon the respective resources with which each of the parties can withstand a deadlock. In other words, if the seller has no capital, if he must sell to live, then—even in the extreme case where he controls the entire supply—he must accept the best terms offered, however much below what he regards as a fair price. Without some resources at the seller's command there is no element of give and take in the situation. This is the second essential of bargaining power.

Workers are sellers of labor, and today most of them, acting individually, lack either one or both of these essentials of bargaining power. With thousands still seeking employment, the labor of unskilled workers—who are in the vast majority—has little or no element of scarcity. Moreover, whether skilled or unskilled, the individual worker normally has no capital with which to withstand a buyers' strike. Furthermore, labor cannot be preserved and held for a more favorable market; a worker cannot tomorrow sell today's unexpended labor. Nor does the labor of an individual worker have the fluidity that attaches to most commodities or to credit seeking a market; a workman in Philadelphia does not have the resources with which to avail himself of an opportunity for employment that may exist in Chicago or even in Pittsburgh. He and his family are effectively bound to a limited geographical area of job opportunity; and within this area the job opportunities may, as in many a mill town, all be controlled by a single employer.

This unfavorable bargaining position of the individual worker has been greatly accentuated by the phenomenal growth in the use of the corporation as a device for conducting business enterprises, both large and small. In the commercial world the corporation has become much the most important employer of labor. Many persons, however, are still accustomed to think of labor problems in terms of the relations between an individual small businessman and his few employees. One so conditioned is very apt to overlook the most significant factors behind the current labor movement, factors arising out of the present commanding and expanding position of the modern corporation in national affairs.

In any large-scale enterprise, and especially if such enterprise is incorporated, the ultimate product is the resultant of the contributions of a number of groups among whom the benefits or losses of the joint endeavor are eventually distributed. First, there are those who contribute what is termed "capital," that is, money or property permanently dedicated to the enterprise; such persons are most frequently designated as the "owners" or, in the case of corporations, the "shareholders." Secondly, there are those who contribute money or property for a temporary period; such persons are normally designated as "lenders" or "creditors"—they are the ones who are said to have lent money or to have sold goods on credit or to have leased property to the enterprise. Thirdly, there are those who contribute labor; such persons may be skilled or unskilled workers, and their labor may be primarily physical or primarily mental or a combination of both. Finally, there are those who manage, who are at or near the top of the hierarchy of those who direct the activities of others; such persons are in the main the directors and principal executive officers of corporations. These four categories are obviously neither all-inclusive nor mutually exclusive. They may well overlap as in the case of a financial institution that lends a large sum to a corporation on condition that it be accorded significant representation on the board of directors. Nevertheless, for an adequate understanding of modern labor problems, it is essential that one bear in mind that various divergent interests (whether they be the ones just enumerated or others) contribute to the ultimate product of the enterprise and participate in its eventual distribution.

Obviously there must be some process whereby a decision is reached as to what each of these groups shall contribute to the enterprise and be entitled to receive in return. This is a matter of bargaining—bargaining, in the final analysis—between each of the first three groups (capital, credit, and labor) and the fourth (management). Shall the corporation attempt to obtain more capital? This the management determines. If so, upon what terms? Shall it issue common or preferred shares, par or no par, voting or nonvoting, convertible, redeemable, cumulative, participating, etc.? As to these terms the management bargains. But with whom? With the individual prospective shareholders? Rarely, if ever, in the case of a stock issue of any magnitude. The bargaining is with a group having at least as much bargaining power as the corporation itself, with a financial institution which will make a considerable capital contribution if the terms are satisfactory, with bankers or brokers who will underwrite certain types of issues on certain conditions, with the management of another corporation which will merge or consolidate only pursuant to an approved plan.

If the management determines to borrow funds for the corporation, it negotiates as to the terms with virtually the same powerful bargaining groups as in the case of an issue of stock. If the management determines to buy for the corporation raw materials or machinery or other property, today it bargains for the most part with another corporation. Although the law conceives of a corporation, for many purposes, as an entity, as a single fictitious person, it is patent that the influential corporations are in fact huge combinations of persons strongly equipped for bargaining purposes on all fronts.

But when the management seeks to obtain labor for the corporation (not the results of labor in the form of raw materials or processed goods), it does not bargain with another group. In the absence of an effective labor union, it deals with the individual worker, who, as we have observed, has no bargaining power. If four groups each contribute to a joint enterprise and only three of the groups participate in the determination of how the joint product shall be divided, the inevitable result is that the fourth group receives a disproportionately small share. And this is precisely what has happened and is happening in areas where labor unions are not permitted to flourish.

Labor unions are far from being panaceas for all social ills, but they can do much to remedy this particular abuse. In the first place, they provide a medium for concerted action by which the supply of labor available to an employer may be restricted so that even unskilled labor in an era of unemployment will have some scarcity value. Secondly, they constitute a potential source of that minimum of capital which the individual worker must have if he is to be able to resist at all when deadlocked with his employer over terms and conditions of employment. Labor unions have other values such as building up the morale of the individual worker and improving his knowledge and judgment with respect to labor and other matters. For the present, however, it is sufficient to emphasize that they do furnish the individual worker with at least a measure of the two essentials of bargaining power set forth above.

When an individual worker joins with his fellow workers in striking (as distinguished from picketing, boycotting, and other forms of labor activity) they are merely, by such concerted cessation of work, creating that element of scarcity without which a bargaining situation with respect to terms and conditions of employment does not exist. To take away from workers the right to strike is, therefore, to destroy the possibility of arriving at terms and conditions of employment in the established American way, namely, by a bilateral bargaining process. It may be that in the interest of national defense a decision to curtail in some way the right to strike may eventually have to be reached, but I sincerely hope that this will not be so; and in any event, such a conclusion should not be arrived at lightly, for if Government is to deprive workers of the capacity to bargain, it must then be prepared to determine for both sides all the terms and conditions upon which both capital and labor shall operate. Thus far the Federal Government has elected to put its faith in the ability of labor and capital voluntarily to reach agreements that in the long run will be in the best interests of society; and I pray that the day may never come when the American Government will attempt by legislative or administrative fiat to force upon both employers and employees prescribed wages, hours, prices, and other standards.

ALEXANDER H. FREY.

The Tennessee Valley Authority and National Defense

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 22, 1941

STATEMENT BY THE TENNESSEE VALLEY AUTHORITY

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement of the Tennessee Valley Authority on national defense.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

T. V. A. AND NATIONAL DEFENSE

Faced with the immediate and pressing task of carrying through a national-defense program on a modern scale, the people of the United States today are reaping in rich measure the fruits of their peacetime investments in the Tennessee Valley Authority project.

Since it was established in 1933, the Authority has been engaged in a broad program of regional development contributing much to the peacetime strength of the Nation and giving it stamina for emergency efforts. It has constructed great multipurpose dams on the Tennessee River to produce a vast supply of electric power, provide a modern navigation channel for the movement of commerce, and reduce the ravages of floodwaters.

It has carried on large-scale experiments in the production of phosphatic plant foods and demonstrated the value of concentrated phosphates in development of a permanent agriculture. It has carried on engineering researches to develop new farm tools and machinery and new methods of processing agricultural products. It has made great strides in promoting the conservation of natural resources of soil, forests, and water.

Its technicians in many fields, industrial, chemical, and mechanical engineers, and geologists, have canvassed the stores of raw materials of the valley and have developed new and improved old methods of putting them to practical use for the enrichment of human living. From its efforts have come new basic processes of great value, such as a method for extracting alumina, the raw material of aluminum, from certain clays found throughout the United States. It has made advances in construction of low-cost housing.

In its diversified program for the development of the region, it has cooperated with and coordinated the efforts of a wide range of agencies—Federal, State, and local units of government; cooperative organizations and private business; educational institutions and experiment stations. In the T. V. A. program there has been developed a technique for unification of efforts toward common ends, a democratic process for getting things done.

All of these things, from the projects and plans accomplished to the method of getting them done, are of basic importance to a democratic nation engaged in peacetime pursuits; when faced with an emergency in a hostile world, their value increases manyfold.

AN AGENCY FOR TOTAL DEFENSE

It has become increasingly clear that to buttress the Nation against the threats of totalitarian aggressors calls for no halfway measures; the need of the hour is for total defense.

Security is no longer obtained by maintenance of an armed force, a "standing army" organized as a kind of appendage to the body politic backed by a reservoir of citizen manpower that can be given guns and whipped into a fighting force in time of emergency. Armies must be equipped with a huge number of complicated machines and weapons whose operation calls for men with a high degree of technical skill and adequate training. Massed behind the armed forces must be a vast industrial machine capable of turning out rapidly not only tanks, guns, powder, and ships but an almost countless variety of products whose manufacture calls for skilled workmen, precision machinery, and capacity to produce in tremendous volume. Transportation systems, carrying raw material and finished goods, must be adequate to care for increased burdens. Basic to all must be a soil whose fertility has been built up and maintained to stand the stress of supplying food for the armed forces and the civilian population and providing raw materials for industry. All this must be bound by a unity of aim and effort.

Organization of defenses on this modern scale is a vast and complex task. The Tennessee Valley Authority, as it has developed since 1933 under the direction of the Congress, is peculiarly fitted to shoulder its share of the burden of mustering such a total defense. During its existence it has been the task of the T. V. A. to look at regional problems not singly but as a whole, to see the economic life of the region in perspective, to canvass its resources, and to plan and coordinate the most effective use of these resources.

ORGANIZATION AND PLANS

The Tennessee Valley region is well fitted to contribute to the national defense; it is an inland region, sheltered from attack by distance from the coast and by intervening mountains; it has vast resources of raw materials, some of them of critical or strategic importance to military defense. The history of the T. V. A. stems back to the national-defense development at Muscle Shoals in the first World War, where strategic reasons of safety, power, supply, and transportation dictated the location of a huge nitrate plant. Of nine sites recommended for such plants in 1917, it is significant that eight were in the Tennessee Valley. Construction of Wilson Dam, nucleus of the T. V. A.'s present multipurpose system, was commenced in 1918 as a defense measure.

The Congress, in establishing the T. V. A., placed upon it definite responsibilities for defense in case of need. It was given charge of the World War nitrate plant with instructions to keep it in stand-by condition. The Secretaries of War and Navy were given the right to call upon T. V. A. for manufacture of munitions or nitrogen ingredients of munitions. The T. V. A. Act provided that all its properties, in case of need, might be devoted by the Government to manufacture of explosives or other war purposes.

In carrying out the peacetime purposes of the T. V. A. Act, the Authority assembled a staff of competent engineers, technicians, and experts in many fields and welded them into an efficient, close-knit organization.

During the years since 1933 this organization has not only constructed dams, manufactured and tested phosphatic fertilizers, carried forward measures for conservation of soil and forests, guided research in many fields, and devoted itself to the day-by-day advancement of effort in many fields, it has looked into the future and laid plans which are now bearing fruit in terms of action.

When new supplies of electric power became an imperative demand, T. V. A. engineers were able, without loss of time or efficiency, to speed up construction schedules on existing projects and to undertake construction of a new dam and steam-generating plant in record time. When the Secretary of War called for reopening of the nitrate munitions plant the Authority was able to commence immediately, in accordance with plans already worked out, to adapt the plant for production. These same plans permitted the continued use of a part of the plant for production of phosphates essential to maintenance of the soil.

T. V. A. had at its fingertips a wide variety of detailed information for defense officials and private business about location, amounts and costs of raw materials; about transportation facilities and costs; about industrial water supply, markets, labor supply, and housing. Thus T. V. A. was in a position to save urgently needed time, providing short cuts around costly and time-consuming independent investigations. When the emergency arose the results of T. V. A.'s investigations were immediately available.

Because it had a trained and experienced supervisory staff seasoned and organized, the Authority was able quickly to expand its effort in response to the need for national defense. It was able to expand the number of employees from 13,000 to more than 18,000 within a period of 6 months without loss of time or efficiency. The requisite plans and the requisite technical personnel were available when the need for expansion arose.

Only recently the Tennesse Valley Authority, with a backlog of information to work from, has been called upon to make a survey of the industrial plants available and the kind and quality of products they can produce in the defense effort. This information, to be obtained in cooperation with the Defense Contract Service, Office of Production Management, will provide a basis for "farming out" or subcontracting certain parts of defense orders held by large firms and thus advancing the defense effort by making use of all the available industrial capacity.

Thus, through organization and planning, the T. V. A. has been able to swing into the defense effort without loss of time or energy. The chief requirement was a redirection of emphasis in the work that the Authority had been conducting since its inception. At the same time it has been able to continue its program for the general development and peacetime strengthening of the Nation.

POWER FOR DEFENSE

To produce for defense, industry demands great quantities of electric power. This point was dramatized a few months ago when it was realized that the production of aluminum in the Nation was inadequate to supply the demands, particularly for the manufacture of airplanes. It takes 10 to 12 kilowatt-hours of power to produce a pound of aluminum; the average amount of aluminum required per plane is 5 tons.

In the Tennessee Valley lies one of the major plants of the Aluminum Co. of America, which, since 1936, has been supplied large amounts of electric power from the new plants constructed by the Tennessee Valley Authority. More important still, the Nation found the Tennessee Valley Authority ready with plans, organization, and manpower to meet quickly the new demand for power; Tennessee Valley Authority was able to undertake the construction of new facilities in 18 months to add 300,000 kilowatts of capacity for national-defense use in industry.

Since 1933, under the direction of Congress, the T. V. A. has added more than 500,000 kilowatts of new installed capacity to the power supply of the Southeast. In the powerhouses of six great dams built since 1933—Norris, Wheeler, Pickwick Landing, Guntersville, Chickamauga, and Hiwassee—and in other plants acquired by purchase or lease, the T. V. A. now has an installed capacity of 1,049,600 kilowatts and is producing power at the rate of nearly 6,000,000,000 kilowatt-hours a year.

This power is flowing directly from the T. V. A. system to great industrial plants like that of the Aluminum Co. at Alcoa; the Monsanto and Victor Chemical plants in middle Tennessee; the Electro Metallurgical Co. plant at Muscle Shoals; the Tennessee Copper Co. plant producing copper and sulfuric acid. Through the systems of 113 municipalities and cooperatives, T. V. A. power flows to scores of other plants whose products are useful in defense—an airplane factory at Nashville, an electro-manganese plant at Knoxville.

These facts vindicate the judgment of Congress in providing for the development of power in the Tennessee Valley, despite the opposition which contended that no use could be found for the vast amount of power to be made available by the multipurpose system.

This power is now at work, and more power—much more power—is demanded.

The country finds the T. V. A. able to supply it.

When the Council for National Defense disclosed an impending shortage of aluminum for airplanes and other defense uses, it concluded that the logical place for a quick expansion of aluminum production was in the Tennessee Valley where the T. V. A. could build new facilities swiftly and efficiently to supply expanded production facilities of the Aluminum Co.

Gano Dunn, one-time consultant for utilities opposing T. V. A., declared in a report for the Defense Commission:

"From the point of view of national defense an increase in power for production of aluminum can be best obtained by an increase in the capacity of the Tennessee Valley Authority."

Foreseeing new needs for power, the Authority had speeded up the construction schedule for Watts Bar Dam by almost a year. To supply another 300,000 kilowatts of installed capacity, earmarked for defense use, Congress authorized the construction of the 90,000-kilowatt Cherokee Dam, a new steam plant at Watts Bar with 120,000 kilowatts of capacity, and nearly 90,000 kilowatts in new units for Wilson and Pickwick Landing hydro projects.

The authorization was approved on July 31. The next morning, August 1, T. V. A. construction crews broke ground on the Holston River for Cherokee Dam under the fastest construction schedule ever attempted for a project of this size. Now, 8 months later, construction is proceeding on schedule; 18 months from the start of construction, about one-half the time required for a project of similar size, Cherokee Dam is expected to be ready to impound water.

A storage project similar to Norris, Cherokee will be more than a mile and a quarter long and 175 feet high; it will impound 1,600,000 acre-feet of water which will not only turn the three 30,000-kilowatt turbines at the 90,000-kilowatt Cherokee powerhouse, but add to the power capacity of the six main-stream plants now in operation, as well as Watts Bar Dam, which will be completed next year. Already 80,000 kilowatts of the additional power have been contracted for by the Aluminum Co.

Furthermore, because of the power to be made available from these plants, the Reynolds Metals Co. has commenced construction of a new aluminum plant at Muscle Shoals, to use 20,000 kilowatts of primary and 40,000 kilowatts of secondary power. Both these contracts were approved by the Defense Commission. Now the Authority, keeping its fingers on the pulse of power demand in the region, is in a position to increase the capacity of the new steam plant to 180,000 kilowatts by adding a third 60,000 unit, and to advance the construction schedule for Fort Loudoun Dam by a year. A congressional conference committee has approved this action and it is now awaiting passage.

This swift response to the Nation's need for power and more power was made possible by the fact that T. V. A. had in existence a skilled, seasoned organization with a record of achievement behind it, and that it had planned ahead. When the demand came, the Authority was able to say where and how more power could be obtained in the shortest space and able promptly to construct the necessary facilities.

NITRATES FOR MUNITIONS

Again, when national defense made imperative the speeding up of munitions production on a large scale, the Authority had available the plans and the requisite force of chemical and construction engineers to prepare immediately for the operation of the nitrate plant No. 2 at Muscle Shoals, one of the largest such plants in the country.

When the T. V. A. was organized in 1933 it was given charge of this World War nitrate plant, with instructions to keep it in stand-by condition for use when called upon by the Secretaries of War and the Navy. In the intervening years, in collaboration with the War Department, the T. V. A. worked out plans for modernizing the plant against the time when its use might be necessary.

On November 1, 1940, the T. V. A. was notified by the Secretary of War to prepare to reopen the plant. The plans went from the blueprint to the operating stage at once, and before long the plant will be able to produce 300 tons per day of ammonium nitrate, a munitions ingredient. Involved in reopening the plant is the construction of a new and modern synthetic ammonia plant to supplant the World War method of production of ammonia by the cyanamide process. This new unit is rising rapidly, while the ammonium nitrate portion of the plant is being put into shape.

In record time T. V. A. was able to put 500 men to work on the construction phase of nitrate-plant preparation; soon 1,000 men will be turning out munitions ingredients from the plant.

PHOSPHATES FOR THE SOIL

No nation is stronger than its soil. In the First World War, the soil of the United States was overworked, its fertility sapped, to meet the wartime demands for food and raw materials.

During the last few years the T. V. A. has devoted a portion of the nitrate plant at Muscle Shoals to the experimental production of concentrated phosphate fertilizers. It chose phosphates, on the advice of agricultural authorities, because phosphorus is the key of the mineral elements of life, and most soils are deficient in it. New and improved methods of producing phosphates in concentrated form have been developed, and 300,000 tons of concentrated superphosphate fertilizer have been manufactured and distributed to farmers through cooperative programs with the land-grant agricultural colleges and through the Agricultural Adjustment Administration. More than 32,000 farmers in 26 States are proving its value in actual farming operations.

The value of phosphates in concentrated form has recently been emphasized by the request of the British Purchasing Commission that the United States supply 40,000 tons of triple superphosphate to fortify Britain's soils in her war effort.

The British asked for concentrated superphosphates because transportation of the same amount of plant food in this form would require less than half the number of ships as compared with ordinary commercial superphosphate fertilizer. This same economy of shipping, handling, and bagging which is of importance to the British when shipping bottoms are at a premium, demonstrates a significant point for American agriculture, since about 50 percent of the cost of superphosphate fertilizer to the farmer is represented by handling, bagging, and shipping charges; the cost to the farmer on the land is materially reduced by high concentrations of plant food.

Important to agriculture in ordinary times, the cheapening of fertilizer and the lessened requirements on the transportation systems to carry it assume even greater significance in emergency; it is imperative that the fertility of the soil be maintained.

The Nation now experiences a shortage of production capacity for concentrated phosphates, due largely to the increased demand resulting from the demonstration of the advantages of such fertilizers through the demonstration programs of the T. V. A. and the extension services of the several States and the educational efforts of the A. A. A. in its soil-conservation program. As compared to the present capacity of some 346,000 tons annually, of which 100,000 tons is that of T. V. A., it is estimated that more than 750,000 tons annually will be needed by 1945.

To help meet this impending shortage, the T. V. A. recently was authorized to construct a new electric furnace at Muscle Shoals to increase the Authority's capacity by 50 percent, to 150,000 tons annually of triple superphosphate or its equivalent.

The plans for ammonia and ammonium nitrate production involve no disruption in the manufacture of phosphates in a portion of the plant; here again, by planning ahead, the T. V. A. has been able to carry on a vital service to American agriculture without disruption by the emergency demands of defense; indeed, phosphate production is an essential element in the defense program.

Hand in hand with the use of phosphates in the program of the T. V. A. and United States Extension Services has gone a program for improved agricultural practices, reduction of erosion by planting of cover crops and by engineering works such as check dams, encouragement of livestock farming, particularly in the South, to replace single-crop agriculture. At the same time, the T. V. A. has taken a leading part in reforestation activities not only on its own lands, surrounding its reservoirs, but by providing seedlings from its two big nurseries for planting by C. C. C. camps and by cooperating owners. Thus the two resources of soil and forests are being strengthened through the T. V. A. program.

HOUSING FOR DEFENSE

The defense program has placed a heavy burden upon housing facilities and has made expansion of housing imperative in many communities where new defense plants are going up. Over the period of existence, the T. V. A. has gained experience in the construction of housing facilities in connection with its project; now it has been called upon to use this experience in the construction of homes for defense industrial workers at Muscle Shoals.

The Authority, for the Federal Works Agency, is now carrying forward the construction of 250 low-cost residences in three cities in the Muscle Shoals area to house workers in defense plants in that area. Besides the T. V. A. nitrate and phosphate plants, a large metallurgical plant is already operating in the area and a new aluminum plant is nearing completion.

Within the last few days the T. V. A. completed a group of six small cottages by factory assembly line methods. Built in sections, three or four to a house, depending on the size, the houses were moved by truck from the shop at Muscle Shoals to Pickwick Landing Dam. There, with the electric and plumbing fixtures already in place, the sections were bolted together and the houses were ready for occupancy within 4 hours. The T. V. A. reported:

"It is thought that the methods used in building these portable cottages may have an especial value in connection with defense or emergency housing, since large groups of low-cost houses built in this fashion could be quickly and easily moved from a location after the need for them had been satisfied, and made available to areas where housing deficiencies existed or where housing was below standard."

NAVIGATION AND DEFENSE

Although still incomplete, the multipurpose system of the Authority has added an important link to the transportation system of the country. There is now available for commercial use throughout the year a continuous navigable channel of 464 miles on the Tennessee, from Paducah, Ky., to Chattanooga, Tenn. The significance of this development is apparent when it is remembered that the first World War heavily overburdened the transportation systems of the country.

With the recent completion of a full 9-foot channel to Minneapolis and St. Paul on the Mississippi, the T. V. A. navigation development assumes even greater importance.

Waterways, of which the United States has 5,700 miles of 9-foot depth and 3,700 miles of auxiliary channels, are adapted to moving heavy bulk materials in large quantities, thus lessening the burden on other transportation facilities in times of emergency.

Already the Tennessee system is becoming widely used, although the controlling depth below Pickwick Landing Dam is only 6 feet during low water. By 1945, 9-foot navigation from Paducah to Knoxville, Tenn., will be provided. An estimated 110,000,000 ton-miles, 20 percent more than 1939, which was a record year, moved on the Tennessee in 1940.

New traffic on the Tennessee, since its improvement, includes gasoline, of which 80,000,000 gallons have been shipped since April 1938. Grain shipments, aggregating 55,000 tons since late 1939, have moved to the Tennessee Valley by water from St. Louis, Mo.; Muscatine, Iowa; and Minneapolis, Minn., and still further increases in grain traffic are in sight.

Pig iron from Birmingham, Ala., transferred to barges at Decatur and Sheffield, Ala., is moving down the river toward defense points in the Midwest; since 1939 about 24,000 tons have been transported, about 10,000 tons during the first 2½ months of 1941. Another significant movement has been that of automobiles, commencing in December 1940; a total of more than 600 cars have been shipped so far.

The most recent shipment of new materials was 1,300 tons of soda ash from Lake Charles, La., moved to Sheffield, Ala., via the Gulf Coast Intercoastal Canal, and the Mississippi, Ohio, and Tennessee Rivers, for the aluminum plant of the Reynolds Metals Co. This large shipment is only a part of the many thousands of tons of soda ash that will be required annually by the plant in processing alumina, the raw material of aluminum.

Besides providing electric power and navigation facilities, the T. V. A. multipurpose system is contributing toward the control of floodwaters; one has only to remember the ravages of the 1937 flood, with its disruption of economic life, its damage to industrial plants, transportation facilities, and farm lands, to realize the value of reduction of flood hazards to a nation in an emergency effort such as the defense program.

T. V. A. AND RESEARCH

The T. V. A. has advanced research in many fields, either in its own laboratories or in cooperation with State engineering and agricultural experiment stations and geology departments in the T. V. A. area. Many of these research projects, carried on in the interest of peacetime development of industry and agriculture, are found now, in the national-defense emergency, to be clothed with new significance.

About one-third of the strategic and critical minerals important for defense purposes are present in the Tennessee Valley in commercial quantities; during its 8 years of existence, the Authority has gathered much information as to location of deposits, costs of processing, and so on. It has done research in the use of Tennessee Valley resources; a striking example is that of olivine, an ore which contains 20 to 30 percent magnesium, more than any other common commercial mineral. A quarter billion tons are available.

The T. V. A. is concentrating its efforts, with considerable promise so far revealed, on this ore as a practical source of magnesium compounds from which magnesium can be obtained. This metal, lighter than aluminum, is highly important in defense; it is used in alloys for airplane construction, is an ingredient in incendiary bombs, and has many other uses. Thus T. V. A. research, carried on in peacetime, turns out to have special significance in emergency. In 1939, the United States produced some 5,300 tons of this metal, compared to an estimated 18,000 tons in Germany.

Another T. V. A. development of particular promise in view of the emergency is a process for extracting alumina, from which aluminum is made, from certain clays found in quantity in the United States. Laboratory tests have indicated the feasibility of the process, and the T. V. A. is preparing for pilot plant operation.

The significance of this development is obvious when it is remembered that most of the bauxite ore, present source of alumina, used in the United States is imported from South America. In times of emergency, a native source of alumina, eliminating long ocean shipments, is a contribution to the national safety.

Research and developments carried on by the T. V. A. in cooperation with the University of Tennessee engineering experiment station have developed a more automatic method of cooking cottonseed to produce an improved grade of cottonseed oil and to increase the effectiveness of small rural mills and thus indirectly encourage the return of cottonseed meal, containing vital plant foods, to the soil; and this cooperative research has also developed improved refrigeration methods for use in rural communities which have great possibilities for bettering the diet of rural people and increasing the profitableness of agriculture. T. V. A. research has also developed a furrow seeder designed for planting grains and fertilizer on sloping grasslands in the fall to protect the soil against winter erosion and to add an extra crop. There is a very considerable list of results from T. V. A. research which might be mentioned; these advances, while conceived as peacetime projects, are found to contribute to the Nation's basic strength in its national-defense program.

Thus the T. V. A., due to its achievements during the past 8 years, its program for the economic development of the Southeast, its well-coordinated organization, and its long-range planning for the future, finds itself in the forefront of the present effort to make the Nation safe against any foreign aggressor.

St. Lawrence River Development

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 22, 1941

EDITORIAL FROM RICHLAND COUNTY (N. DAK.) FARMER-GLOBE

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix an editorial entitled "We Want That Waterway," published in the April 8, 1941, issue of the Richland County Farmer-Globe of Wahpeton, N. Dak.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Richland County Farmer-Globe, Wahpeton, N. Dak., April 8, 1941]

WE WANT THAT WATERWAY

(Benson County Farmers Press)

Not so long ago we noticed an editorial in a North Dakota weekly, a good substantial paper it was, too, opposing the St. Lawrence waterway. The objections to the passage from the Great Lakes to the sea was that it would provide another great publicly operated power set-up.

Very evidently the article was one of many releases by a newspaper bureau operated and subsidized by the public-utility companies of the country. If the editor didn't have time to prepare his own stuff he really should look into the background of the propaganda that he does run.

It is hard to see how the public manufacture of electrical energy can be such a drawback to what, in effect, will move our prairies a thousand miles nearer the ocean. The chief objection is that it might create another Tennessee Valley Authority. That would be terrible if the Midwest could have cheap and abundant power without paying tribute to private companies, if we could have the electricity to process our own raw materials at low cost.

Any North Dakotan who opposes the St. Lawrence waterway cares little for the progress of this section. It makes no difference to him how much of an effect the distribution costs have on the producer's price. He cares not if our export outlet is at Duluth or Buffalo or New York. If shippers can whack 20 cents a bushel off their cost of delivering wheat in foreign ports, then it means that this section can compete with low-cost wheat from other areas of the world. Why oppose that because some power company doesn't like the idea of competition and public ownership?

Use of Convoys

EXTENSION OF REMARKS

OF

HON. WILLIAM H. SMATHERS

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, April 22, 1941

LETTER FROM W. R. CUNNINGHAM, OF NEWARK, N. J.

Mr. SMATHERS. Mr. President, in the course of the past 2 or 3 days a communication from Mr. W. R. Cunningham, of Newark, N. J., on the subject of no convoys has come to my desk.

I think the letter is so replete with wisdom, so full of good sense and logic, that I ask unanimous consent to have it published in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE PRUDENTIAL LIFE INSURANCE CO. OF AMERICA,
Newark, N. J., April 17, 1941.

Hon. W. H. SMATHERS,
United States Senate, Washington, D. C.

DEAR MR. SMATHERS: In the press and over the air we are every day being importuned to demand that this country, our United States of America, be kept out of war. The proponents of this cause, like the ostrich that sticks his head in the sand, refuse to see what current history has written in blood over Europe, that the issue of war or peace lies not with ourselves but with the madman Hitler.

Now this country, with the approval of the vast majority of its people, has undertaken to supply the enemies of the totalitarian powers

with the wherewithal to wage war in their own defense, and I think we here in America are sane enough to realize that the democracies in fighting for themselves are beyond question fighting for us, too; fighting that we may have time to arm to the teeth and be strong enough to resist any possible attack.

Now, all this preparedness for ourselves and munitions of all kinds for the democracies is going to add up to a tidy bill, which bill people like myself will be called upon to meet in the form of higher and ever higher taxes. This being the case, I feel it incumbent upon myself to give expression to the opinion that if American labor and American money is going into the production of armaments to be shipped to England, Greece, etc., it is our bounden duty to see that these things for which we are paying are delivered to those whom we wish to benefit. It is utterly unreasonable for America to spend $7,000,000,000 manufacturing war supplies and then permit the Germans and Italians to send a substantial part of this to the bottom of the ocean. Any step, convoy or otherwise, should be taken to prevent this.

The convoying of our merchandise to belligerent countries will not get us into war. We will get into war when Hitler makes up his mind that he is ready to take us on. If he disposes of Great Britain, it will not take him very long to reach out for the largest plum in the world, and a great number of people, through wishful thinking, would make his job in this country easier than we imagine.

Let us face the fact that the question of war or peace does not rest with us, and that whatever we wish will have little bearing on the final result unless we translate this wish into accomplished facts. Let us do all within our power to keep war from these shores; and since we will provide the democracies with the sinews of war, let us underwrite the delivery of these sinews.

Very truly yours,

W. R. CUNNINGHAM,
Supervisor.

Federal Taxation

EXTENSION OF REMARKS
OF
HON. CHAN GURNEY
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, April 22, 1941

EDITORIAL FROM SIOUX FALLS (S. DAK.) ARGUS-LEADER

Mr. GURNEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Daily Argus-Leader of Sioux Falls, S. Dak., of April 18, on the subject of the proposed increase in Federal taxes.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Sioux Falls (S. Dak.) Argus-Leader]

NOT ENOUGH

The administration in Washington and leaders in Congress of the Republican and Democratic Parties have agreed to endorse a tax program that would produce $3,500,000,000 in additional funds.

This isn't enough.

On the basis of expenditures as currently contemplated the total tax collections on the revised basis would be only about two-thirds of the proposed expenditures.

And we have a feeling that the expenditures will be substantially larger than the estimates.

It is entirely possible that the suggested increases combined with the existing taxes may produce only about 50 percent of the actual expenditures.

The American people are not children. They know that the defense program is enormously expensive. And they are willing to pay until it hurts for the security it is scheduled to provide.

Common sense points out, too, that our Government must be kept in a solid financial condition to withstand the shocks that are to be expected in the next few years.

In fact, solvency is one of the foundation stones of an adequate defense. Without it all our guns, airplanes, battleships, and ammunition may amount to little.

The preservation of the internal structure of our Republic rests importantly upon a strong Treasury.

The advantages of a pay-as-you-go policy are numerous. It will soften the inevitable headache that follows a war. It will contribute much to the suppression of inflation by reducing the available spending power of the people. It will serve indirectly as a brake on profligacy, extravagance, and profiteering.

We erred gravely during the World War in failing to recognize the realities. Though taxes were increased, they did not produce sufficient funds to match the expenditures. In consequence, domestic buying continued at an accelerated pace, with prices rising rapidly due to the buying pressure imposed on the markets. After the war we faced the dual complexities of dwindling activities and increased tax payments. How much better it would have been if we had paid for the war in full as we could have done quite easily.

The error at that time may be excused due to our inexperience. But today we have the lesson of 1917 and 1918. There are many men in Washington who can recall that period through personal recollection. They should be among the first to insist that the taxes be increased today to cover expenditures in full.

Such taxes will, of course, be onerous. They will compel the taxpayers to dig deeply into their pockets and to make some personal sacrifices. But these sacrifices are trifles compared to the troubles to which the people of many other nations have been exposed.

Let's be frank and sensible and adopt a real pay-as-you-go policy, thus demonstrating to the dictators that we as a Republic have the understanding and the courage to adopt voluntarily a program that they are required to force upon their people.

Operations of A. A. A.

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, April 22, 1941

EDITORIAL FROM WILLISTON (N. DAK.) DAILY HERALD

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "A. A. A. Hurts Some," published in the Williston (N. Dak.) Daily Herald of April 7, 1941.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Williston (N. Dak.) Daily Herald of April 7, 1941]

A. A. A. HURTS SOME

Small farm operators are being deprived of their lands, squeezed out, pushed down even below the levels at which they have operated in the past.

That's no surprise, you say; it's been going on for years. But there are many who will be surprised to learn that in many cases it is the A. A. A. program which contributed to the misfortune. The A. A. A., whose sole purpose and primary endeavor is to help the farmer, is today being found guilty of doing just the opposite in a few cases. It's no indictment of the whole program, but the situation has already started a movement for slight changes to remedy the injustice.

The difficulty arises from the fact that the A. A. A. has in large measure taken the gambling out of wheat farming. The money paid out by the Government is enough, usually, to take care of the cash outlay of putting in a crop. With the cost of planting taken care of, a farmer can enter his spring work with the confidence that if he gets a crop worth harvesting, whatever he receives for his wheat will be gravy, while if it isn't worth the cutting, he at least will have his planting costs taken care of by A. A. A. payments.

The tendency under such a subsidy is for the man who has a large acreage to get still more land to farm. If last year's crop was fair to good, he probably has enough cash on hand to pay the down payment on another quarter or two—or perhaps even enough to buy the land outright. So he goes to the county or to an insurance company which owns land near his, and buys some more. He increases his holdings with the confidence that he can sow wheat this spring without gambling much money, and if he gets a crop he'll show a profit at harvest time. In this way, large-scale operators can get more and more land until they own two, three, four, or five sections.

But how does this hurt the little fellow? Suppose a man is farming three quarters—which isn't enough out here, because the information gained from most careful studies is that a farm family should have at least a section. Of these three quarters, say he owns two and rents the third—has rented it for years. He'd like to buy it, but all the money he gets from his three quarters is hardly enough for family support, so he continues to rent. Comes now the big operator, however, and buys that quarter, taking from a small farmer one-third of his land to add another quarter to a string of 10 or 15 or 20. The small farmer didn't have enough land before, but now he has only half enough and his situation is worse than it ever was.

It doesn't happen very often, but it has occurred enough times in the last 2 or 3 years so that farm leaders are taking note of it and are starting to think of remedies which might be made in the A. A. A. program. Easiest remedy would be to reduce still further limitation on A. A. A. payments. Now, no farmer can get more than $10,000 from A. A. A., which is a lot of money to us in this wheat-farming section. If the limitation were reduced (some say to $1,000), the big farmer wouldn't be subsidized indefinitely by the A. A. A. program but after his expansion had reached a certain point he'd find he'd have to go the rest of the way on his own, not on Government money. This, it is thought, would act as a curb on expansion of big farms, thus protecting the holdings and leases of the smaller ones.

No one proposes junking the entire A. A. A. program because of this fault, but the suggested remedy will be strongly advocated.

Observations on Strike Legislation

EXTENSION OF REMARKS

OF

HON. WILLIAM R. THOM

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1941

ADDRESS BY HON. PAUL V. McNUTT, FEDERAL SECURITY ADMINISTRATOR

Mr. THOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I present herewith the text of a Jefferson Day address delivered Saturday night, April 19 last, before the National Democratic Club of New York City, by the Honorable Paul V. McNutt, Federal Security Administrator:

In the short year that has elapsed since we last paid tribute to the founder of the Democratic Party, momentous and fateful things have happened.

It is as if the sands of time had run out and the hourglass were turned upside down. A full page in history has been turned.

Four years ago the President of the United States, with that insight into events which has made him one of the great leaders of all time, told the American people that this generation had a rendezvous with destiny.

The time is now at hand.

The mightiest combination of forces in all history is now mobilized with the avowed purpose of wiping out every shred of decency and humanity which the race of man has acquired over centuries of struggle.

The slate is to be wiped clean.

The world remade.

There are still a few who purport to see in all this some great, irresistible force of the future; the future, we are told, bearing down on us like a wave. A new and virile organization of society replacing a decadent one. And because it is said to be new, because it is change, it is intimated that it must be good.

At least, it is inevitable, and so we had better make a deal with it.

Imagine making a deal with an irresistible wave.

The truth is, the whole argument is both false and vicious.

Totalitarianism is not the future.

It is a collection of the very dregs of the past—the cruel, ignorant, savage past from which men had prayed they were forever free.

Neither is it a wave.

It is the surging flood of intolerance, bigotry, and fear.

And, finally, it is not new.

It is older than man himself. It is the brutality and ruthlessness of the jungle.

And if the unshakable determination of the free peoples of the world can prevent it, it is not inevitable or inescapable.

But let no one be deceived.

The struggle will be a struggle to the death.

There can be no "deals."

Totalitarianism and democracy cannot live side by side.

The one must be destroyed or the other will perish.

Once again, it is a house divided against itself. The world cannot survive half free, half slave.

As the Nation rallies its forces and mobilizes its strength to keep democracy's flame burning in Europe and the East, may we not pause in our tribute to Jefferson to strengthen freedom's cause on the home front.

It has been said that this is a struggle between two conflicting ideologies.

The war therefore must be carried on with ideas as well as with battleships and guns.

Let us not only save democracy, let us improve it. Indeed, I have the feeling that you cannot preserve it anywhere unless you expand it.

Let us, then, have more of it.

This is a war to defend the bus drivers of Brooklyn, the sharecroppers of Louisiana, and the auto workers of Detroit. May we not guarantee the authenticity of the cause by improving their condition? It will give point to the issue. And it will increase and perfect the unity of freemen everywhere in their struggle against oppression.

It would, I should think, be illogical and in bad taste for us to strive so hard to save democracy abroad while letting it slip at home.

On the other hand, we must liberate the full spiritual and physical forces of democracy.

We have made a mighty effort to achieve a society based on the principles of equality and justice. In a death struggle with the forces of evil, we are unlikely to advance our cause by compromising with inequality and injustice.

Therefore we must never agree to give up any of our hard-earned social gains, as we are sometimes asked to do, on the theory that it is necessary to defense.

Dictators will not feel bad if we cut the budget of the Social Security Board. And the Nazis would certainly not be frightened if we were to reduce the monthly payments to old men and women and to dependent children.

It is just the reverse.

By extending social security and increasing our relief of humanity, we put iron into our democracy and prove all over again to both democrats and totalitarians what we stand for. We show we mean it.

And the same thing goes for what is sometimes referred to as our labor problem.

Astounding suggestions are being made in Congress and elsewhere. Strikes must be outlawed. Strikers punished. It is a choice, we are told, between defense and the closed shop.

After a hundred and fifty years of effort to insure labor against the worst abuse of the capitalistic system, we are now told we must give those efforts up because we can't have them and defense too.

I don't believe it. The argument starts from the wrong assumption.

It cannot be that one man's democracy is another man's poison.

After all, there are about 8,000,000 members of labor unions in this country. They have another 15,000,000 dependents whom they are supporting and another 40,000,000 workers who benefit by their efforts.

That's 63,000,000 people—half the population of this country. I don't think they would enjoy being pushed around to defeat a country where they don't have a free labor movement.

The real issue involved here is what kind of labor policy will bring about the maximum production of materials essential to the national defense.

Will a free labor movement, protected by the law of the land, be more productive than slave labor? Or are we caught in a dilemma in which we must either adopt Nazi tactics or succumb to Nazi domination?

The mere statement of the proposition is its answer.

I will never believe that a nation can preserve its strength by giving up its freedom—that the things which made us different from Hitler's Germany have to be pushed aside in order to insure his defeat.

I can never believe that free enterprise and free labor cannot outproduce slave labor and regimented management—with one hand tied behind it.

And here is a demonstration.

Only last Monday, one of the largest industries affecting the defense preparations of the Nation completed an agreement with one of the largest unions, without a single man-day's loss of time.

Negotiations had been begun between union and management 2 weeks before the expiration, on April 1, of the old agreement. On its expiration, the parties were not yet in accord. The old agreement was extended for 1 week. Negotiations continued. At the end of the week, the previous agreement was again extended. At its end, the new contract was signed by both parties.

This shows what happens when management accepts the principle of collective bargaining, as required by law, and union representatives meet in a spirit of cooperation.

No need here for harsh laws depriving citizens of what Jefferson would certainly call their natural rights.

Not even a government mediator was necessary.

Here is your "cooling-off" period working at its best—voluntarily accepted by both sides to the controversy. A "cooling-off" period before the expiration of the existing agreement—not after it.

The only government policy which is compatible with a democratic society is to insure to both labor and management complete protection of their rights under the law, and emphasize to both their respective obligations under a government which follows the teachings of Thomas Jefferson.

It is to be remembered that any unusual situation raises its problems.

In the readjustments made necessary by the defense program, some people find themselves better off—some, worse.

Under the American system, the fellow who finds himself squeezed is entitled to raise his voice in protest.

When defense contracts are offered to industry, some employers find themselves in a precarious position.

They have the privilege of dickering with the Government so that they won't get hurt. We permit them to strike. Democracy gives them that privilege.

Labor is entitled to the same privilege.

We believe that, in the long run, we make more progress by allowing to all a reasonable latitude for working out their troubles.

Thus we crack down neither on management nor labor because of what they do to the defense program. We accord to both reasonable freedom of action because of what they will do for the defense program.

And the results justify our faith.

Fascists and Nazis purport to believe that strikes are threatening the disruption of our efforts.

But strikes in America are not placing the Nation in peril, totalitarian propaganda to the contrary notwithstanding.

The benefits of letting both management and labor ease themselves into the harness have far exceeded any slight delay in production.

As Justice Holmes once said, strikes are democracy's safety valve. But it is not to be supposed that dictators would understand such a phenomenon.

Far more of a threat to defense production than strikes, either by labor or capital, is the loss of man-days in industry resulting from sickness and accident. For the year 1940, loss of labor power was several times greater from these causes than from strikes.

The point is that we should show several times the concern about the health of industrial workers as for the relatively few strikes which plague us.

The bottleneck is not strikes. It's human health.

It is my business to tackle this problem.

That's why I am so concerned to divert your attention from unimportant to vital aspects of American defense. As usual, they turn out to be the health and welfare of the average citizen—the man most entitled to the blessings of a democratic society. This essential truth was recognized a century and a half ago by the man who, ever since, has been the moving spirit of the political party to which we owe allegiance. It was the central thread of Jefferson's entire philosophy.

We should never forget that we have taken, in the affairs of the world, what is in substance a strictly ethical position. We are staking our shirts on the principles of decency and justice.

We are bound, therefore, to observe all the decencies of our own position and accord justice to all.

Decency is as decency does. We are fighting nazi-ism with democracy; not an imitation of fascism.

Otherwise we will be wide open to logic—and to some of those dirty tricks which history sometimes plays on nations which assume a holier-than-thou attitude—like France.

France seemed strong—internally and externally. Lulled into a mistaken feeling of security, she let her democracy slip. She abandoned, one by one, her great social reforms. The land which was once the cradle of liberty, equality, and fraternity, became hard and calloused. When the danger became apparent, it was too late for the lightning readjustments which were necessary. The hand of reaction had a death grip on the body and the soul of unhappy France.

In contrast to this tragedy are Britain's gallant efforts to defend the birthright of Englishmen and to rededicate itself to the democratic way of life. England, too, had all but forgotten about democracy. The liberal England of the early twenties had given way to a selfish, hardboiled land of appeasement. But when the blow fell the reaction was immediate. England began to look after her democracy.

Right now she is giving all-out attention to a housing problem—the problem of housing men, women, and children under the ground in public bombproof cellars, free to all alike.

The Government was making feeble efforts to house its underprivileged citizens before the war.

But it is doing the job now. And the great miracle of the century is that the morale of the English working classes is unscathed under the merciless rain of death from the skies which characterizes total war.

Before the war the British Government took little interest in what its working people ate.

But now it is a matter of grave concern to the Government. Large central kitchens all over London are serving good, nourishing meals at prices all men can afford to pay.

Democracy is interested in what people eat and how they are housed and whether they are sick or well, miserable or happy.

This, too, has contributed to the maintenance of the morale of a people harassed by the danger of invasion by a foreign foe.

It all goes to prove how devotedly the people will protect and how courageously they will defend democracy when democracy looks after their well-being.

I'm glad America didn't wait until enemy bombers droned overhead every night before taking stock of some of the all-important details of the democratic way of life.

I'm glad we started, back there in 1933, to get serious about unemployment and old people in poorhouses and farmers losing their land, and working men their jobs, and investors their money.

I'm glad we had in this country a political party with the vitality and drive to organize the dynamics of democracy and direct them against the forces which threatened to snuff out the flame of freedom for Americans.

I'm glad we had citizens who could respond immediately and effectively to a crisis in the life of democratic man by strengthening and extending his democracy and thereby making him stronger in every way.

And today, as democratic man the world over is facing an even graver crisis, let us meet it in America by responding in the same way—by securing and extending the democratic process, making it a living, driving force in the lives of the people for whose benefit it was invented.

In 1933 when the political heirs of Thomas Jefferson became charged with responsibility for the Nation's destiny, our democracy faced a crisis, in many respects as acute as the one we face today. The blind fury of unbridled economic forces had wrought such havoc as we had never before known in our century and a half of national life. There were, at that time, close to 45,000,000 hungry American citizens.

Hungry men do not make good citizens.

They began to carry shotguns to foreclosure sales. They took ropes to court houses to hang the judges.

There were food riots and hunger marches.

The ominous rumble of social unrest could be heard in cities and villages from Maine to California. Subversive talk was whispered on every side.

Men were losing faith in a democracy that stood idle and helpless while the people perished. Only a spark was needed to stir the smoldering passions of starving and bitter men into the flame of revolution.

You know the rest of the story.

It is one of the stirring pages in the history of the Nation and the Democratic Party.

With what fearless energy did the people's government give direction to the stream of events during the frantic weeks and months that ensued. Unprecedented problems were met with unprecedented solutions. Fear gave way to hope and hope, in turn, to confidence. The people regained their faith in liberal government. Once again, the common man held high his head and the miraculous powers of democracy were unleashed. And once more ordinary men began to accomplish the most extraordinary achievements.

The thing was done. The crisis met. The party of Jefferson and Jackson had guided the Nation safely through a storm that had threatened to shake it to its foundations.

What our party has done before, it can do again.

We know not what the future may hold.

No eye can penetrate the mist.

But one thing we know.

Secure and unyielding in the faith of our fathers, America faces the angry and evil forces which throb up and down the world, with a steadfast courage and a united will.

We are not afraid.

Leadership of C. I. O. Unions

EXTENSION OF REMARKS

OF

HON. JAMES J. HEFFERNAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1941

LETTER FROM FRANK R. McGRATH

Mr. HEFFERNAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter addressed to me by Frank R. McGrath, president of the United Shoe Workers of America:

UNITED SHOE WORKERS OF AMERICA OF THE C. I. O.,
Washington, D. C., April 22, 1941.

The Honorable JAMES J. HEFFERNAN,
House Office Building,
Washington, D. C.

DEAR SIR: I am a registered Democrat, living at 429 Bergen Street, Brooklyn, in your district.

Once again, in an effort to prevent trade-union activity, Congressman MARTIN DIES has published a list of alleged Communists who are active in the leadership of various C. I. O. unions.

In a list he included March 31 in the CONGRESSIONAL RECORD there appears my name. He also included Frank Farrell, of New York, and Powers Hapgood, as members of this organization.

No one of the three that he included as members of this organization at any time have had any request for any information or to appear before his committee. Thus, once again, he has perverted traditional rights guaranteed under the Constitution of the accused to have an opportunity to defend themselves or meet their accusers.

That he erred is obvious from the fact that he included Powers Hapgood as a member of the United Shoe Workers of America of the C. I. O., though he has not been connected with this organization since January 20, 1940.

I have known Frank Farrell as an ardent, sincere trade-unionist who has devoted his life and energies to the cause of the underpaid workmen. Frank has been known to me for about 20 years, and never once in all my acquaintance with him has any action or statement which he has made led me to question the patriotism and loyalty to the American way of life on the part of Frank Farrell.

As for myself, I am not and never have been a card-holding member of the Communist Party, or a fellow traveler, nor have I followed the Communist Party line by supporting the Communist Party's front organizations or in any other way. I am opposed to dictatorships and to those who condone their aggression. The only principles I follow are the principles of this country; the only organizations I have supported are the trade-union organizations of the American workers.

In all fairness to me, I feel you should place this letter in the CONGRESSIONAL RECORD.

Respectfully yours,

UNITED SHOE WORKERS OF AMERICA, C. I. O.,
FRANK R. McGRATH, *President.*

Questions and Answers

EXTENSION OF REMARKS

OF

HON. FOSTER STEARNS

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1941

ARTICLE FROM THE CHRISTIAN SCIENCE MONITOR

Mr. STEARNS of New Hampshire. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the

following article from the Christian Science Monitor of April 21, 1941:

[From the Christian Science Monitor of April 21, 1941]

QUESTIONS AND ANSWERS

(By Roscoe Drummond)

A young midwestern professor of government called at the office last week. Taking a busman's holiday from his duties on the campus, he was making the rounds of a number of newspaper bureaus in the Nation's Capital. He was asking correspondents the questions which, he said, were most frequently asked him by his friends, by his colleagues, and his students.

Now, frankly, a correspondent—at least a Washington correspondent—likes nothing better than to be questioned. He likes to be asked questions by his visitors and by his readers. Almost invariably—not always, to be strictly honest—he would rather discuss what his readers want to know than what he thinks they ought to know.

This young professor's queries were not a scholar's questions; they were an intelligent layman's questions—and all the better for it. He touched on matters which for the most part, have been covered in these messages, but despite the fact that he was no doubt confirming or checking his own conclusions, it was evident that Washington writers often take too much for granted, should be careful to relate day-to-day developments to basic trends and to write with as much directness and simplicity as one puts into conversation.

"Is the United States nearer war today than 2 months or 6 months ago?"

That was his first question. He meant, of course, active military belligerency. The answer is, "Yes." With the passage of the Lend-Lease Act the United States discarded the letter, spirit, and substance of neutrality. It is today a nonbelligerent ally of the defending democracies.

In fact, it is only technically accurate to say that the United States is a nonbelligerent ally. Actually, the United States is an industrially belligerent ally and is literally fighting the Nazis with its factories and its finance. The only reason Germany doesn't make war on America is that she doesn't want America fighting her with anything more than she is using already.

The United States is nearer the war because the war is nearer the United States. Mr. Churchill recently warned, and accurately, that the battle of the Atlantic was moving westward. That battle of the Atlantic may well be the decisive battle of this war. It will determine whether American aid shall reach the British shores. Unless it does, Britain, every British and American authority agrees, cannot prevail. Because Britain's survival is more acutely at stake than at any previous time, the United States is nearer the war.

"Is President Roosevelt deliberately trying to put the United States into the war?"

The answer I gave was an unqualified, "No" and this was the reply which my questioner received from other correspondents.

The basis of the President's guiding policy is that he is trying to avert the crisis which would make war for the United States virtually inevitable. That crisis is Hitler domination of Europe, the United Kingdom, Africa, and Asia. To forestall this fate, in which free America would be seeking to live and breathe in a world suffocated by tyranny, the President is acting to give total, maximum, all-out, immediate, urgent, and unstinting aid to Britain.

Even in the circumstances, war may confront the United States as a wiser alternative than a Nazi-dominated world, but it is only fair to say that the President has been seeking to make participation unnecessary.

Opponents of the lend-lease bill, many of them affirming their support of the objective of aid to Britain, have argued that this measure was but a preclude to convoys, accused Mr. Roosevelt of urging one step and holding the next in the background.

Convoys may well prove to be the crucial issue on which America will determine its role in the war, but the critical need of convoys does not spring from the method of aiding Britain through the lend-lease bill; it springs from the very policy of aiding Britain at all, which even critics of the bill embrace.

Aid to Britain which doesn't reach Britain is no aid at all. That is the reason the issue of convoys arises, not because the President has willed it. That is why the battle of the Atlantic is decisive.

"Can Britain win? What does Washington honestly think?"

There is no casual optimism. There are dark moments when doubts arise. But what appears to be the most careful, informed, and realistic judgment is this:

The present unshakable, unshatterable morale of the British people is the most powerful single factor insuring Britain's survival. But that will not be enough. Britain will only be in a position to prevail when American industrial power can give Britain air dominance and sea dominance.

But production will not be enough, and this is the heart of the problem.

Every naval or military authority I have talked with is convinced that Britain cannot win the war without the assistance of the American Navy in the North Atlantic nor obtain American war materials without the aid of the American Navy.

In a word, the most candid and informed opinion in Washington is that Britain can win only with American planes and American arms in unlimited volume and that these supplies can only reach Britain with the assistance of the American Navy in one form or another. How the Navy shall render that aid is the crux of America's role in the war. How America decides this question will very likely decide the war itself.

Free Postage for Soldiers, Sailors, and Marines

EXTENSION OF REMARKS

OF

HON. JAMES J. HEFFERNAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1941

Mr. HEFFERNAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to point out that I have been approached by many of my constituents who have complained that they get very little mail from the boys in the service. I have made a study of this situation and find that there is a greater contributing factor for such neglect than mere indifference on the part of the enlisted men in the service of the Army, Navy, and Marine Corps.

I find that the small amount of pay received by the enlisted men leaves them very little money for postage, which is of course, 3 cents per letter. I understand that bills have already been introduced at this session of Congress to grant soldiers, sailors, and marines the privilege of free postage, and I will support such legislation.

We all realized that our Government, through its various legislative and executive agencies, is doing everything possible to make the men in the service physically comfortable, leaving nothing undone toward that end. I am mindful that the social-welfare agencies have been doing, and will continue to do, all that is possible along social lines, taking in the matters of entertainment and recreation to keep the men in a happy frame of mind.

Nothing has yet been done to any extent, however, to make it easier for the soldiers from a monetary point of view to write more often, and I feel that our Government should make a contribution to the men in the service of franked mail, or in other words, free postage. Such action would go far toward increasing the number of letters that would be sent home to the dear and loved ones of these men who are very much concerned as to their well-being and health.

Some may say that putting such legislation into effect will cause a large expense to the Government, but the entire cost of furnishing the soldiers with free mail will be no more than the cost of a small battleship. This matter of postage is something that cannot be passed over lightly. We should make it easier for men in the service and give them the incentive to write often. A happy and contented soldier is one who will defend his country even if it means his life.

We must bear in mind the fact that the parents and loved ones of these men are much concerned with how their loved ones are, and certainly we who are members of this great legislative body should think of the families of these men as well as the men themselves.

Proper housing, proper food, proper equipment, proper supervision, and proper health facilities are all definitely important in their respective places. Letter writing and the inducement for writing on the part of these men who are far from home must be given a place as important as the matters referred to. We owe it to those unselfish citizens who are proud to have their husbands and sons engaged in a vital part of our national defense.

I know that the bills introduced to solve the service men's postage and mailing problems will be favorably received by the men in the service and their families at home. I trust they will be equally well received by the Congress.

More Taxes, Less Waste

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1941

Mr. SPRINGER. Mr. Speaker, our people are faced with the imposition of taxes which are heavier than they have heretofore known. The spending of vast sums in the past and before we stated our national-defense program created a debt of approximately $45,000,000,000, which was the largest debt our country has ever known. Large amounts of that money, expended before we began our

defense program, was squandered and wasted. The President launched upon a program of spending when he assumed office, and that policy has continued throughout his administration. He did not consider that the proverbial rainy day would come.

But that day did come, and when the Treasury is bare, we are faced with the very great necessity of developing our national defense in order that we may defend ourselves in case of an attack. The huge sums which have been appropriated for our national-defense program have created an enormous debt and this debt must be paid by our people. Therefore, we find that there is a necessity to impose taxes upon the people which are higher than we have ever known. I am confident our people will fully realize that "pay day has come" when they have these tax burdens to bear. They will realize that they are starting to pay for the folly of the Roosevelt administration, which has been the most spendthrift administration this Nation has experienced. It is a sad future for the children of our country, and it is a sad moment when we reflect upon the startling waste of much of the money which was spent and which created this very dim future for the children of our Nation. It is high time for this Roosevelt administration to about face and to cease the plan of foolish spending of money; every nonessential plan of spending money should be eliminated, and we should proceed with the development of our national-defense program. We have reached the point at which every group in our country should forget about subsidies and think of our national defense. The spending of money, today, should be limited to the preparation of our program of defense in order that we may defend our people, our institutions, and our country in the event we are attacked.

Mr. Speaker, when we consider the weighty question of imposing more taxes upon our people, and I do not know how the people will be able to pay those proposed taxes, we must consider the waste of money which has developed in our defense preparations. For every dollar which is spent, the administration now in power should see that we receive $1 in value. The great waste of money has been observed in almost every department of government, and this waste has been called to the attention of the President and his agencies, but nothing has been done about it. The waste of money in the construction of camps, for equipment and supplies and war material has been discovered, but no action is taken. New and novel projects have been proposed by this administration which will cause the expenditure of huge sums of money and which will not be helpful to our defense program. The St. Lawrence waterway project, which the administration now proposes, will cost untold millions of dollars, and it will not aid our national-defense program. This, as well as all other proposals which are not strictly within the realm of our defense program, should be defeated. We have one goal—that goal is our national defense. Let us meet the challenge; and let us stop the waste and the foolish spending of money before the crisis comes.

Mr. Speaker, I ask unanimous consent to extend my own remarks in the Appendix of the RECORD, and to include therein a very timely editorial which appeared in the Indianapolis Star, of Indianapolis, Ind., on the 19th day of April 1941, which editorial follows:

MORE TAXES, LESS WASTE

Much as the people dislike heavy taxes, American common sense will applaud the proposal to add $3,500,000,000 to the sum to be levied in the next fiscal year. Even that vast addition to the total that is being raised will be only two-thirds the Government estimates of its expenditures for the fiscal year beginning July 1. It is essential, however, that as much as possible be raised in taxes and as little as possible be obtained by borrowing. The credit of the Nation must be maintained and that cannot be expected if we continue, as in the last few years, borrowing billions with little apparent thought of the day of reckoning.

No definite announcement has been made as to the way in which the additional billions will be collected, but everyone will have to pay a part. The unfortunate feature in such cases is that those in the lowest-income brackets are hit hardest, in proportion to ability to pay. They may not have to make an income-tax return, but they pay just the same. If the $3,500,000,000 were to be distributed on a per-capita basis, every man, woman, and child in the country would pay approximately $27, which would be in addition to all money now contributed.

The citizens of this country who are called on to put up an extra $3,500,000,000 because of the preparedness and defense emergency should insist in no uncertain way that every cent possible be saved on nonmilitary expenditures. Along with the proposal to saddle an extra $3,500,000,000 there has been no evidence of any disposition anywhere along the line to cut down on the hundreds of millions appropriated annually for a long list of items that are still in the experimental stage or were inaugurated to get the country through the depression emergency.

The taxpayer will do his part patriotically for what is necessary. He should not be called on to finance nonessentials. There is, for example, the proposal to spend hundreds of millions on the St. Lawrence power project, along with other hundreds of millions on a Florida canal, an Arkansas Valley Authority, and a Columbia River undertaking. This is no time even to talk about such expenditures. The taxpayer is justified in losing patience with those who refuse to economize where economy is needed. The voters should see to it that any Member of Congress who would vote $1,000,000,000 for waterway and power projects, or is not for economy on nonmilitary items, is not returned to Washington.

National Unity

EXTENSION OF REMARKS

OF

HON. WALTER A. LYNCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1941

ADDRESS BY HON. WALTER A. LYNCH

Mr. LYNCH. Mr. Speaker, under leave to extend my remarks, I include herein an address delivered by me at the annual communion breakfast of the Holy Name Society of the United States Customs Employees at the Hotel Astor, New York City, Sunday, April 6, 1941:

I consider it a great honor and distinction to be invited to address the members of the Customs Service at your annual communion breakfast. No other organization has a biblical background such as yours, for it is recited in the New Testament that our Lord called Matthew from "the receipt of customs." Matthew was the first customs guard that history records, and afterward apparently received the O. K. of his county leader and was made collector of the port in the Sea of Gallilee.

From that time on we have had the tax gatherers with us. Saint Paul, who was something of a warrior in his day, was also a diplomat, because he advised the Romans to "render custom where custom is due," which isn't bad advice even today. Our Customs Service wants what is right and correct. It wants no more, but try to get it to accept less. Be it said, however, that it is the only known service in government that will voluntarily notify you and refund any amount which you have paid in excess, without any claim being made, which in itself is no mean distinction.

Your Service has been in existence in this country for 152 years. On June 1, 1789, George Washington, as first President of the United States, signed the first piece of legislation of the First Congress. I do not know whether the first filibuster took place immediately thereafter, but suffice to say that it wasn't until July 31, 1789, that President Washington signed the second law of the First Congress, which had to do with the creation of the Customs Service, and lo and behold, the boys went to work the next day without having to give a thought to civil-service examinations. From that day to this the United States Customs Service, whose unwritten motto is, "Efficiency in service, loyalty to the Service, and courtesy to the public," has developed a personnel that is second to none in importance as an investigating and policing agency of the Government, as well as the nucleus of our source of revenue.

In the century and a half existence of the Customs Service, vast changes have come over the world, but happily enough, the fundamental principles of our Government have remained for the most part immutable. Within that time the flag of every other country in the world has changed, but there has been no change in our flag, except that more stars have appeared in the firmament. Though our flag and fundamental principles of government have remained unchanged, our country, under our democratic form of government, has not failed to progress. Its forests fell before the onward sweep of civilization; its great prairies became the agricultural center of the world; its mountains yielded their ores so that cities of steel and iron might be built and to our shores came thousands upon thousands of immigrants seeking a haven from religious persecution in their homelands, or looking forward with longing eyes to a land where they might give to their children advantages which they themselves had never enjoyed.

So the cycle of time went on, and our democracy founded upon the principles enunciated first by the Jesuit Cardinal Bellarmine and vitalized and immortalized by Thomas Jefferson, that "all men are created equal" and that "government derives its just powers from the consent of the governed," became the greatest country in the world.

Devoted to peace, isolated from the rest of the world by vast oceans on our east and west, our country for more than a century and a quarter was able to keep free from the wars of Europe. But the progress that had

been ours and the inventions of our scientists, brought us nearer to the Old World and to the wars that have scourged Europe through the centuries.

Where 152 years ago the Atlantic was sailed in a month, today it is spanned in hours; the word spoken today in New York is instantaneously wafted over the air waves to Berlin, Paris, Rome, or London; undersea boats, which once existed only in the imagination of Jules Verne in Twenty Thousand Leagues Under the Sea, today are pirates of the deep that strike in the darkness of the night and send their victims to watery graves without a warning; the skies, where God had placed the sun to warm the earth and the clouds whence came the rain and the stars to guide the mariners at sea, are now filled by man-made machines that hurl their thunderbolts of death and destruction at fellow men upon the earth beneath.

It is in such a world we are living today, Catholic men. It is in such a world that the Catholics of America must realize that if they are to survive they must prepare to defend themselves and the country which they love. All Americans, Catholic, Protestant, Jew, or nonbeliever, must unite and be ready to defend those principles which the fathers of our country called self-evident, that "all men are created equal" and "government derives its just powers from the consent of the governed." The principles of American democracy are irreconcilably opposed to the tenets of the totalitarian governments of the world, whether those tenets be disguised in the cloak of nazi-ism of Germany, fascism of Italy, communism of Russia, or the militarism of Japan. Let me make this observation—that the sooner we put into concentration camps those in our country who would destroy our democratic form of government and foist upon us the totalitarian system of Hitler, Mussolini, or Stalin, the better off we will be. And don't forget that only about 3 years ago the pink Board of Education of the City of New York, which today is paler, more through fear of public opinion than conviction, refused to prohibit the use of public-school buildings for meetings of the Communists. The communistic groups still may hold their meetings in our public schools, but the Board of Education doesn't look upon them with such favor today, not because the Board of Education loves America more than it did 3 years ago, but, in my opinion, because it loves Stalin less since he became a partner of Hitler and Mussolini.

Catholic men, America needs you today—needs you more, perhaps, than ever in her history. She needs you because you are Catholic men; she needs you because she knows that you are members of that church which has been preaching like a "voice crying in the wilderness" against the deification of the state; she needs you because, as you are Catholic men, you believe that "all men are created equal" and "government derives its just powers from the consent of the governed"—that is true catholicism and true Americanism. It was Cardinal Bellarmine, the Jesuit, and Thomas Jefferson, the free thinker, who rightly interpreted the words of Christ, "Go forth and teach all men." He didn't say to teach only Aryans. He said "all men." You will remember that question in the catechism the good nun would ask when you first went to school, "Why did God create me?"—and your answer, "God created me to know Him, to love Him, and to serve Him in this life and to be happy with Him forever in the next." It made no difference whether prince or pauper, white or black, the answer was the same—and before God they are the same. If all men are created equal, then their rights are equal and king, dictator, or government has no more power than the people they govern give to them.

To preach such doctrine in the totalitarian countries of the world is treason, yet those are the principles of democracy, the foundation upon which our great country has been built. Those are the principles that the great President of the United States, Franklin D. Roosevelt, has proclaimed in his denunciation of the aggressor nations of the world, which have ruthlessly disregarded the inalienable right of the peoples of small nations to be ruled by the government of their choice.

There are some Americans who are afraid to proclaim these principles, but, thank God, there is one who fearlessly and defiantly hurls back the challenge of totalitarianism; there is one who is unafraid to proclaim his belief in American principles of democracy, and he is the President of the United States. Around him in this hour of crisis, let Americans, regardless of race, color, creed, or political affiliation, rally. Let us show to the world that we are in truth "one Nation, indivisible, with liberty and justice for all." The more united we are in our common purpose of defense, the more distant will the threat of war become.

America is unused to privation, but today, though at peace, we are in the shadow of war and America now calls for sacrifice in the real hope and expectation that the sacrifices that are made now will be the means of preventing greater sacrifices in the future.

I recall when the Seventy-sixth Congress had the selective-service and training bill under discussion, the letters I received. Many of the writers couldn't see the need of preparation; many of them, unwilling to make sacrifices themselves, suggested that our military and naval services be recruited from the unemployed, but the Congress of the United States declared, in no uncertain terms, that "all men are created equal"; that they have equal rights and, by the same token, they have equal responsibilities for the preservation of those rights and, in the American way, the youth of our country are responding to the call.

I well remember when the Seventy-seventh Congress had, only a few months ago, under consideration the lend-lease bill, I received letters expressing opposition to it; and the majority of those who then wrote were the same people who had opposed the military training of our youths. They charged Congress with abdicating its power; they accused the President of the United States of seeking to become a dictator; they had deafened their ears to words of reason, closed their eyes to the events of the time, blacked-out their minds to the cold, hard facts that confronted us and filled their hearts with Old World hate rather than with love of the country that had given them succor when they were in need, homes when they were homeless, and the protection of our democratic Government, which guaranteed to them and to their posterity freedom of speech, freedom of the press, and freedom to worship their God according to the dictates of their conscience.

Sacrifices must be made, not only, however, by the flower of our American youth, who have given up their homes, their jobs, and, perhaps, their careers to wear the uniform of their country, but sacrifice must be made both by capital and labor, so that our boys in the camps and on the seas may get the things they need and that the flow of materials might continue uninterruptedly to those countries that are fighting the aggressor nations of the world, so that the war may be kept from the Western Hemisphere. This is no time for a war in the United States between capital and labor. It might be well for the captains of industry to realize that there are to be no exorbitant war profits, and it might be well for the leaders of labor to realize that the American people are beginning to lose patience with strikes that halt production in essential defense industries. It is time for industry to sit down with labor at the conference table and to determine, not what is most advantageous to capital and what is most advantageous to labor, but what is best for the United States of America. The American people want to be fair to both capital and labor; Congress wants to be fair to capital and labor; but the American people and Congress want capital and labor to be fair to the United States and to the boys who are in service. There is no captain or group of captains of industry bigger than the United States Government; there is no labor chief or group of labor chiefs bigger than the United States Government. I have faith in the patriotism of the businessmen in this country; I have faith in the patriotism of labor in this country; and I feel that neither will let their country down in these dark days. I feel that the common sense of both, the love of country of both, will cause them to settle down and resolve their disputes in an amicable way, without the stoppage of production, and put their shoulders to the wheels of industry so that the flag of our country might continue to fly over a peaceful and liberty-loving people.

Democracy cannot fail when we have the will to make it prevail. And the American people have not only the will, but the fortitude and determination, that it shall prevail. No Hitler, Mussolini, or Stalin can ever change that determination; no totalitarian state will ever arise upon the ashes of our democratic institutions; our children will never be regimented slaves of the state, but the sacrifices that are made today by our youth, by capital and by labor, and by all Americans, will toughen the fiber, steel the heart, and discipline the mind of America, so that, united behind our President, the United States of America will proclaim to the world, either in the sunlight of peace, or the shadows of danger, or the darkness of war, that "all men are created equal" and that "government derives its just powers from the consent of the governed."

The National Safety Demands a Sea-Level Panama Canal

EXTENSION OF REMARKS

OF

HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1941

EDITORIAL FROM THE CHAPEL HILL (N. C.) WEEKLY

Mr. MANSFIELD. Mr. Speaker, under leave to extend my remarks I include an editorial from the Chapel Hill Weekly, of Chapel Hill, N. C., commenting upon the bill recently introduced by me to convert the Panama Canal into a sea-level canal.

[From the Chapel Hill (N. C.) Weekly of April 18, 1941]

THE NATIONAL SAFETY DEMANDS A SEA-LEVEL PANAMA CANAL

People whose memory goes back 40 years recall the argument about whether the waterway across the Isthmus of Panama should be a lock canal or a sea-level canal. The decision for locks was made because the method of construction was cheaper.

In those days there were no airplanes, and even long after the coming of airplanes nobody ever dreamed of such a weapon as the modern long-distance bomber. Nobody

thought that the Panama Canal could possibly be attacked except by land and sea forces, and against them one type of canal could be defended about as well as another.

The American people as a whole do not appear to be giving much thought to the danger of the Panama Canal from attack by air, but there are a company of men in Washington—in the Army Engineer Corps, in the Army and Navy staffs, in Congress—who are keenly alive to this danger. The leading spokesman of this company at present is Representative JOSEPH J. MANSFIELD, of Texas. He is urging upon Congress the necessity of converting the lock canal into a sea-level canal. He knows the facts, and his reasoning from the facts is absolutely convincing.

"If all the technical and scientific improvements that have been developed in the last 40 years are to be ignored," he said in Congress this week, in support of the bill that he recently introduced "we will certainly go backward instead of forward. The offensive features of air warfare are developing much faster than the defensive features and as yet we do not see much evidences of air defenses catching up. There must be planning for dispersion and avoidance of the dangers from offensive air warfare until we see more chance of effective defenses than is conceivable now.

"Our preparations for defense would be in a sad plight if they were confined to the measures that were considered satisfactory in the Spanish-American War. Our artillery consisted of old 3-inch cannon. The only rapid movements and reconnaissances we had, were by the use of horse cavalry. Think of depending upon such operations nowadays.

"Let us not make the mistake of adopting a complacent attitude with respect to the interoceanic canal across the Isthmus of Panama. It is unthinkable that anything physically possible should be left undone for its security, because its constant use is essential to peacetime prosperity and for the passage of our naval vessels in wartime in order that they may defend the Nation both in the Atlantic and in the Pacific oceans."

This is sound sense. With all that is going on across the seas to absorb people's attention in these days, it cannot be expected that public opinion all over the country can soon be aroused about the defense of the Canal. Congress ought not to wait for that. Mr. Mansfield's proposal is backed by the highest authorities in engineering and in military and naval strategy, and Congress should enact it without delay.

America's Role

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, April 22, 1941

ADDRESS BY REV. E. STANLEY JONES

Mr. WILEY. Mr. President, what part should America play in this world crisis?

I recently had the privilege of listening to Rev. E. Stanley Jones, the world-famous missionary to India. The subject of his talk was What's America's Role in This Crisis? Here is found a statement of a great Christian thinker—a statement which cannot be brushed aside by saying it is the result of prejudice or one-sided, loose thinking. Here is to be found the vision of a man who is looking beyond the present, who is sensing that if we of this generation are to do a real job we must find the solution to war.

All may not agree with what this great thinker says, but those who will read his address, found in the Christian Century, will be cognizant of the fact that they have met up with an idea.

It was Emerson who said, "Beware when a thinker is let loose; he may turn the flank of any science or knowledge."

Mr. President, I request that this address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

[From the Christian Century of March 19, 1941]

WHAT IS AMERICA'S ROLE IN THIS CRISIS?

(By E. Stanley Jones)

The question as to what should be the role of the United States in this world crisis haunts many minds. Many are inwardly dissatisfied with the statement of President Roosevelt that our national role is to be "the arsenal of democracy." We feel that God has some greater role than that for us to play in human affairs. Apart from the question of a divine vocation, it seems cheap that we should manufacture instruments of war with which other people are to fight what many believe to be our battles for us. And yet that is the position we are fast coming to occupy in the world mind. A Hindu chairman introduced me in India as "a man from that country which is supplying munitions to the rest of the world." I inwardly squirmed.

Just what is our national role? There are three possible roles. First, we can be a participant in the war. Second, we can be an arbitrator. Third, we can be a mediator. Which is it to be?

LESSONS OF EXPERIENCE

We can be a participant. This role I cannot accept. Our participation last time was disastrous to everyone concerned. It would have been far better to have had "a peace without victory," for drunk with victory we laid the foundation of this war in the Versailles Treaty. There is no reason to believe that our participation again would be any less disastrous. If we get into the war there will be one unexhausted nation at the close, and that will be Russia, and Russia will therefore decide and dominate the peace. And everyone will be too exhausted to object. And the probabilities are that the common people, seeing Russia as the only nonbelligerent, will turn to her as the messiah to lead them out of this recurring hell of war and depression. America should be unexhausted at the close of this war—that is, if she would have any decisive influence in the future of the world.

That leads us to the second possibility, that of arbitrator. The large majority of people think this is the role of America, namely, to stay out of the conflict, but to decide the right and wrong of the dispute and then throw her resources, short of war, to the side of right. I disagree, for this presupposes that right is on one side and wrong is on the other. The facts seem to point otherwise. There is no completely black and completely white in this war. If Hitler is the immediate cause of this war, the Allies are the remote cause. We laid the foundation of it in the Versailles Treaty and refused to modify it at any stage except under compulsion.

Lord Lothian, late Ambassador to the United States, said in an address given at Chatham House on March 24, 1937, "If another war comes and the history of it is ever written, the dispassionate historian a hundred years hence will say not that Germany alone was responsible for it, even if she strikes the first blow, but that those who mismanaged the world between 1918 and 1937 had a larger share for the responsibility of it." If so, then how can we take the role of arbitrator and decide one is right and the other is wrong? They are both right and they are both wrong. I do not decide the relative right and the relative wrong—that remains for a later stage.

THE MEDIATOR'S TASK

That leaves the third possibility, namely, mediation. I believe this to be our role. A man who is very successful in settling labor-capital disputes told me he prefers to be called in as a mediator rather than an arbitrator, for as an arbitrator he has to decide between two positions, both of which may have some wrong and some right in them, but if called in as mediator it is possible to get each to change and thus come to a third position, beyond each and yet gathering up the truth in each. In doing so, he usually lays the foundations of a lasting peace, whereas in arbitrations he often lays the foundations of another clash, since the party decided against feels its truth is not recognized and plans revenge.

When this war began a verse of Scripture became luminous for me and provided a guiding star amid the gloom. It has held good all through and I believe it to be valid as a guiding principle for the present. It is Ephesians ii: 15 (Moffatt), "To make peace by the creation in himself of a new man out of both parties." This principle Paul applied to the clash between Jew and gentile. He saw that if the Jews conquered the gentiles or the gentiles conquered the Jews, the foundations of a new clash would be laid. On the other hand, if neither conquered the other, but God conquered both, then out of the two would emerge a new man, different from each, but embodying the truth of each and eliminating the wrong of each. The emergence of that new man would create peace, a lasting peace, for the new man would be a cooperative man. The hope of the future is to produce that new man.

PEACE WITHOUT VICTORY

I am persuaded that if Britain conquers Germany, or if Germany conquers Britain, then in both cases there is laid the foundation of another war. So the thing see-saws back and forth down through the exhausting centuries. Do not ask me which I would prefer to have win, for obviously my sympathies are with Britain. I would prefer that Britain win, for I would prefer to have the British spirit rather than the Nazi spirit dominant in the world. Far rather. But as a Christian, I am not content to have the British spirit dominant in the world. As deeply appreciative as I am of the British spirit, I am no more content with it than the finest among the British themselves are. For the British spirit has often manifested itself in imperialism and selfishness which no one can justify. I no more desire the dominance of the British spirit than I want the dominance of the American spirit, for I am too conscious of the wrongs in the attitudes and spirit of my own Nation. When Hitler says that we say we are fighting for democracy when we are only fighting for plutocracy, I know that isn't the whole truth, but there is enough truth in it to make it sting.

Frankly, I do not want any existing national spirit to be dominant in the world. I want a new spirit—a third something out of each. That new spirit will be a cooperative spirit. Impossible, you say? Well, all right, then I shall give myself to the impossible. For I see that the opposite is not only impossible; it is ruinous. But is it so impossible? You reply that it is, as long as Hitler is there. I agree. But there are two

ways of getting rid of Hitler—smashing him from without and undercutting him from within. The smashing him from without method has produced a united people behind him. For our attempts to smash him only verify his central thesis—that the Allies are out to crush Germany, and have been from the beginning.

Upon that resentment Hitlerism feeds. Take that away and you cut the root of Hitlerism. It withers for lack of sustenance. There is only one way to get rid of Hitler and that is to get him out of the hearts of the German people. You can do that by righting the wrongs against which he protests, plus going beyond in a sincere offer of making a new world in which the Germans will play an equal, unhampered part along with others. If they were offered that, and sincerely offered it, would they prefer to hug the Hitlerian bonds of suppression and fear? I doubt it. He is their messiah, because they see nothing else. We must offer that something else.

A COOPERATIVE WORLD AT BIRTH

But that "something else" is just what is struggling to be born. This world crisis is meaningful. The thing that is struggling to be born is a cooperative order. All the great answers to the world need are going in one direction—the direction of cooperation. That is the one hopeful thing on the horizon. Fascism attempts to enlarge the area of cooperation, but stops within the limits of the state. Within the state they have a cooperative order, a national socialism. Nazi-ism enlarges the area of cooperation, but stops within the limits of the race. Within the superior Aryan race there is a national socialism, a cooperative order. Communism enlarges the area of cooperation, but stops within the limits of the class, the class of the workers. Within the limits of the class of workers there is socialism, a cooperative order. It is true that they say they are going on to a classless society, but in the meantime there will be a dictatorship of the proletariat, the class of the workers. Communism stops within the limits of the class with its cooperative endeavor.

I repeat that all the great answers are going in one direction—cooperation. If all of these are going in one direction, why is there chaos and confusion and war? For the simple reason that if you stop with cooperation within the limits of the state you lay the foundation of clash between states, as now. If you stop within the limits of the race, then other races will combine against you, as now. If you stop within the limits of the class, then other classes will combine against you and there will be class war. All of these try to found life on a partial truth, and hence they will break down.

The Christian is the one person who has no limits to his application of the principle of cooperation. His unit of cooperation is the last man of every state, every race, every class. "One is your Father, and all ye are brethren," sums up the Christian position—the world a human family, with God as our Father. But the family is the one cooperative order in human society. Were it based on competition, then it would not hold together for 24 hours. If every meal were a scramble as to which could get the most and pile it around his plate, without regard to his own needs or the needs of others, the home would be broken up in 24 hours.

A CHRISTIAN WORLD ORDER

And yet we expect the economic world to hold together on that basis. It cannot be done. So the next step forward is in the direction of a cooperative order. The competitive principle has made its contribution and has run its course. We are now at the end of an era. The Malvern Conference of the Church of England saw this clearly and frankly stated the first plank in the new order for Europe to be a cooperative commonwealth.

That cooperative commonwealth must not be merely European; it must be world-wide. Detached as America is, she is in a position to be the mediator of that new world order. We ourselves are the epitome of it. We have welcomed to our shores the have-nots of all nations and have given them a place in our national life and a share in our national wealth. And, deeper still, those of us who welcome the have-nots are ourselves have-nots; we are a nation of have-nots. We are, therefore, constitutionally on the side of the under dog. It is our natural role in life. And that is the secret of greatness—the servant of all becomes the greatest of all.

If we abandon that role and become militaristic and imperialistic, either on our own or in the defense of imperialism, then we have repudiated our part, abandoned our role, and have failed the world. For the world needs nothing so desperately as one detached, disinterested friend of all. We could be that friend of all.

It is not yet too late to stop this descent to Avernus. Our role is not to take sides and go to war in behalf of one side or the other—ours is to get both sides to change and to produce out of them a new man, so making peace.

STEPS TOWARD MEDIATION

In order to get both sides to change we should show our sincerity by making at least the following changes in ourselves. I hesitate to give specific steps for the reason that if those steps do not appeal to some they may reject the central thing I am pleading for, because they do not like the steps to that end. That would be unfortunate, for while I believe the central thesis to be sound, there may be a better set of steps. I venture to give these because they center around one idea, namely, equality of opportunity, for I believe that equality of opportunity is the keynote of the future. Anything less than that is bound to be unstable and is bound to crumble.

Equality of opportunity would build the future on enduring foundations. Note that I do not say, "equality", but, "equality of opportunity, for while we are not all equal in endowment, there should be equality of opportunity given by society. If the individual or the nation does not take advantage of that equality of opportunity, then the fault lies on them and they must take the consequences. These are the steps I would suggest:

First, we will undertake to give equality of opportunity to everyone within our own borders. Two classes are disinherited among us: those who haven't a white skin, and those who haven't wealth, inherited or acquired. We will wipe out those two disabilities by giving equality of opportunity to all. Democracy means equality of opportunity—social and economic as well as political.

Second, we will undertake to give equality of opportunity to all to come to our shores. That would mean putting the Asiatic peoples on the same quota basis as the rest of the world, 2 percent of those in the 1890 census, which would mean only about 250 people from all Asia. This would take the sting out of our relationships with Japan.

Third, we will insist on the redistribution of the raw materials of the world to all on the basis of equality of opportuntiy.

Fourth, we will insist on the redistribution of the land opportunities of the world. Peace is precarious as long as 26 percent of the earth's surface is held by one nation, Great Britain. It would be a happier and more prosperous Britain if she should divide some of the land space of the world with the have-nots. To that many Britons themselves agree.

Fifth, we will insist that all subject nations or peoples be given a free, unhampered opportunity to choose their own destiny.

Sixth, we will agree to enter a federal union, based upon a limitation of national sovereignty, with all nations of good will, whatever their particular type of government.

Seventh, as evidence of our good faith we will cancel all debts owing to us. Further, we will place at the disposal of this federal union the gold we have buried in our vaults, provided it is used for purposes of world reconstruction on the basis of need, apart from race or nationality.

I have said nothing about disarmament for I feel that if we take these steps then these huge armaments will drop off as a dead leaf before the rising sap of a new life.

If the reply is made that our nation is not willing to do this, then my duty is clear. As a Christian I shall stand for it, whether my nation is prepared to stand for it or not. I can wait. For the future belongs to some such move. We are in a position to make that move. If we do not, then we as a nation will play truant from our destiny.

The President

EXTENSION OF REMARKS

OF

HON. CHARLES A. EATON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1941

ARTICLE BY WALTER LIPPMANN

Mr. EATON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Walter Lippmann, from the New York Herald Tribune for April 19, 1941:

[From the New York Herald Tribune of April 19, 1941]

TODAY AND TOMORROW

(By Walter Lippmann)

THE PRESIDENT

In this tremendous time the American people must look to their President for leadership. They are not getting leadership from the President. They are not being treated as they deserve to be treated and as they have a right to be treated. They are not being treated as men and women but rather as if they were inquisitive children. They are not being dealt with seriously, truthfully, responsibly, and nobly. They are being dealt with cleverly, indirectly, even condescendingly, and nervously. They are asked to put their trust in the President, which indeed they must, for he is the President; but in return they must have his trust, and they must have his confidence, and they must have his guidance.

Only the President, because he is the Chief Executive, is in a position to know all the facts. Only the President and his advisers are in a position to weigh all the facts. Therefore, the President alone can lead the country. It is impossible for the country to lead the President. The newspapers do their honest and their courageous best to report the facts. But they are obstructed by an almost impenetrable censorship in all the critical quarters of the world. Editors, orators, writers do their best to discern the significance of the facts which happen to be available to them. But the policy of a government in a time of supreme crisis cannot be shaped by such partial judgments on insufficient evidence. Yet that is all that can come from private committees, from mass meetings, edi-

torials, and speeches. The policy of the Government must rest on the support of the Nation. But the Nation must first be informed, and always it must be dealt with squarely.

There is not the slightest reason to doubt that the American people will in the future as they have in the past do whatever they are convinced they must do to preserve their independence, their liberties, and their honor. Once convinced, they have authorized expenditures for defense which in fact are limited only by the country's capacity to produce. Once convinced, they have adopted conscription. Once convinced, they have committed themselves to aid their friends. Once convinced, and as soon as they are asked, they will pay taxes, they will save, they will forego business as usual and their luxuries and conveniences. They are working, and they will work harder, and they will forget petty differences—once they are convinced and are seriously asked to do so.

This people is made of better stuff—is more ready to face the truth, more ready to rise to the occasion—than the President implies by his cleverness and his maneuvers and his devices and his casual comment on great issues. Because the President is underestimating the American people, he is separating himself from the American people, denying to them the guidance which is their right and depriving himself of the support of the people's convictions which is the Government's indispensable need. In the presence of such momentous events—involving momentous decisions whatever may be the course of events—there is no substitute among free men for lucidity and courage and the simplicity of a noble spirit.

The President of the United States cannot administer the whole effort of the Nation. The reason why Mr. Roosevelt is failing to inform the people and guide them, and is thus becoming separated from them, is that he is exhausting his energies on tasks that no one man can possibly do well, and that no President in such a time as this ought to attempt.

It is absurd, for example, for him to think he can decide, as he did the other day, whether the steel capacity of the country is sufficient. It is absurd for him to think that he can, as is now proposed, settle the coal strike in the southern fields. It is absurd for him to think that the lend-lease program can be administered personally from the White House. Yet if he attempts all these things, and a thousand others besides, he will never have the time or the nervous energy or the physical strength to do well the great things a President must do—to anticipate the future, to determine the great issues of policy, to select the right men to execute the policies, and never to cease explaining to the people—directly and publicly and also privately and continually through their chosen leaders what the Government is doing and why.

If the President is to do the things which only the President can do, he will have to give up doing the things that others could do better, and would if they had the chance. He must trust the people, must guide them, and depend upon them. And he must trust individuals in the vast undertaking of the Government, and if there are men who cannot carry the responsibility, they must be replaced and others found who can carry it. Instead, Mr. Roosevelt is playing with the people, and in his own administration he will not give adequate authority to the competent and he takes upon himself the unnecessary burden of carrying along the incompetent.

That is not the way to make democracy work and prove itself in the greatest test to which it has ever been subjected. To fail to inform the people, waiting for them to lead him, is not democracy but demagogy. To act as if the people had to be manipulated is to deny the very virtues on which rests the hope of democracy; it is to think that free men will shrink from the truth and flinch in their duty. To fail to call into his councils men of all parties and factions is to cut himself off from the sources of wisdom and to close the only way to that union which is a nation's strength. To refuse to displace the incompetent, to hold back from giving authority to the efficient, to clutch in his hands so many strings that they must become tangled is to deal in a trivial fashion with a great occasion.

The Brighter Side

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1941

ARTICLE FROM THE NEW YORK DAILY MIRROR

Mr. MARTIN J. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Daily Mirror.

I was so impressed with the article by Damon Runyon that I could not resist asking for the unanimous consent of the House to have it reprinted in the CONGRESSIONAL RECORD.

It is refreshing to read the views of Mr. Runyon on the problems of our President and I hope other writers will follow his example by presenting the constructive side of the picture.

The following is the article:

[From the New York Daily Mirror of April 22, 1941]

No one ever seems to think of the terrible mental strain under which Mr. Roosevelt must be laboring. No one ever seems to think of the sleepless nights and the disturbing visions that must be his. We read more words of criticism than of sympathy for him, though it seems to us that he should have the deepest sympathy. You might judge from some of the comment that his critics think he is enjoying himself, when the truth of the matter is he is probably one of the saddest of men.

Mr. Roosevelt is flesh and blood and heart and soul. He is one of the great humanitarians of history. He will be so rated in the years to come. It is inconceivable that a man of his mold would not have tremendous feeling in this hour, one of the most critical ever faced by a Chief Executive of the United States. It is our guess that he prays nightly that God give him guidance in the decisions he must make and which will affect 130,000,000 Americans.

Mr. Roosevelt is normally a folksy sort of man, though he was born to money, to fine living, and to social position. He is a man who likes to laugh, who enjoys a good story, who dabbles in stamps and ship models as hobby, who finds pleasure in putting on old clothes, and going fishing, and who smokes cigarettes by the dozens, and gives his pals odd nicknames, and who loves to see those around him happy and contented.

He is still able to turn his familiar, reassurring, and warming smile on his people on occasion, but within him his heart must be as heavy as lead. It is not in human nature that a normal man could contemplate the dismal prospects of the days ahead without foreboding and sorrow, and Mr. Roosevelt is one of the most complete human documents the world has ever known. If the fellow in the street feels depressed, how must Mr. Roosevelt feel?

We think it cruel and unjust to suggest that Mr. Roosevelt wants to lead his people into war, which is the constant cry of his critics. Why would he? He knows the horror of war. He has seen the devastated cities and the homeless women and children and the crippled and blind men that result from war. His own sons would be in the fighting line with the sons of his old neighbors and friends and the sons of the little people he loves.

He has manifested that love time and again. In return the people have given him the greatest distinction ever bestowed upon a man in the history of the Republic. What a wicked thing it is to say that a kindly man like Mr. Roosevelt would want to sacrifice the lives of these people in war. We think that anyone who believes that Mr. Roosevelt would wantonly betray the confidence of the people is a fool, but too many forget that this confidence imposes upon him certain responsibilities, first and foremost of which is the preservation of our free life.

And with this threatened, as it is, Mr. Roosevelt would be derelict in the oath he took in the name of his Maker to defend the Constitution of the United States, did he not take steps to avert the threat wherever those steps might lead. He would stand before the bar of history as an incompetent and a traitor to the American ideals and to humanity. That is why today he occupies the most trying position of any man alive, probably torn by conflicting emotions and his days darkened by dread. It is strange that his critics cannot see that this greatest of human beings must be suffering in this hour of trial.

Well, we are going to have a little bet on Mr. Roosevelt to win the war for Britain without getting us involved in actual hostilities. We admit that this looks like a hard trick to perform but we have seen him accomplish miracles before and this may be another. In any event, we have always found it a good idea to string with the champion until he loses one.

It is said that from the White House he can see the majestic pile raised to the momory of another man whose life was made sorrowful by the burdens placed upon him when he was President, and, possibly, as he views that tribute of a great people to one of its great leaders, Mr. Roosevelt finds comfort and courage in the words of Abraham Lincoln:

"Let us have faith that right makes might; and in that faith let us to the end dare to do our duty as we understand it."

An Appeal to German-Americans

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1941

LETTER OF HANS SCHMIDT FROM THE NEW YORK TIMES

Mr. SABATH. Mr. Speaker, my attention has been directed to a letter

signed by one Hans Schmidt appearing on page 9 of the Sunday, April 19, edition of the New York Times. It carries suggestions that should appeal to German-Americans with few exceptions. It is an appeal to German-Americans to organize to perpetuate our form of government and to champion liberty and freedom of peoples. I have been so struck by its logical forcefulness that I cannot resist asking unanimous consent that the letter be printed in the CONGRESSIONAL RECORD. I do not know Mr. Hans Schmidt but his letter indicates that he is a sincere and intelligent citizen and I hope he will find great support for his proposals among the German-Americans in our country.

The letter follows:

[From the New York Times of April 20, 1941]

ANTI-HITLER MOVE—FREE GERMAN GROUP URGED HERE TO COMBAT NAZI-ISM

TO THE EDITOR OF THE NEW YORK TIMES:

Last Autumn the suggestion was made in these pages that a representative body of free Germans be created in the United States. While at that time many may have doubted the wisdom of such a move, today the vital need for a central organization of free and patriotic anti-Nazi Germans should be obvious to everyone.

The present world conflict is not mainly a struggle between nations for supremacy; it is a world civil war waged between the forces of a revolutionary nihilism, as symbolized by Hitler, and the forces of western Christian democratic and progressive civilization centered about the Anglo-Saxon effort to stem the tide of Nazi despotism. In this struggle the real battle lines do not follow national boundaries; they cleave through the bodies of nations; they cut through the soul of the individual.

The real task of this war, I contend, is to reconquer Europe and with Europe the German people for the cause of western Christian and democratic civilization. Until this eminent purpose with all its implications is fully grasped in the Anglo-Saxon democracies and translated into concrete and fearless action Hitler will continue to reign supreme on the continent of Europe.

FREEDOM INDISPENSABLE

Nothing could demonstrate more clearly the real character of this war as a world civil war and the readiness of democracy to launch a powerful spiritual counter offensive than the creation of a free German center in the United States. A "free Germany" appears indispensable not only for the destruction of Hitlerism but also for the preparation of a better and finer order to be enjoyed by western peoples after the war.

Though the position of the Germans in this war is not identical with that of the Poles, the Czechs or the French—they resemble the hammer in Hitler's hand rather than the anvil—nevertheless the fact remains that the Germans too are a conquered people, conquered by a weapon more terrible than guns—by chains that enslave their very souls. They have wrought the misery of serfdom upon themselves as they have wrought it upon others. They will have to produce the spirit and the tools that will break these chains.

We should not waste time in accusing or in excusing the guilty; but in the interest of all humanity and a better age to come we should do everything in our power to help Germany break her Nazi chains before all of Europe lies in ruins, and become a free and peaceful partner in a free and peaceful community of peoples. How weighty a contribution to this general purpose could be made by a free German center in the United States becomes evidence when we survey some of the major functions that would fall to it.

MEANS OF EXPRESSION

1. A free German center could provide the considerable but inarticulate anti-Nazi forces within Germany with assistance for the extermination of Hitler and his fellow bandits. The overthrow of the Nazis can come only from within Germany. But it cannot come without assistance and guidance from abroad. To be effective, this assistance should be centered in the hands of patriotic anti-Nazi Germans. To mention but one example, radio propaganda to Germany can be made effective only if the listeners are convinced—which at present they are not—that the messages they hear over the B. B. C. or via short wave from America are not enemy propaganda, but voices of trusted and respected compatriots who are working for the restoration of a prosperous and free Germany in a peaceful European community.

Only from a firmly established free German center abroad can the millions of workers, peasants, and craftsmen be reached, the soldiers and officers, Catholics and Protestants, the former Social Democrats as well as the liberals and conservatives—the many millions of German men and women who today are possessed of a deep and irrepressible but unfulfilled yearning for positive alternatives to Hitler.

2. A free German center would do much, by its mere existence, to prove to the Anglo-Saxon peoples that nazi-ism and Germany are not one and the same thing. While Hitler's envoys represent the brutal tyranny that today is official Germany, a free German center would serve as a mouthpiece for those many silent and decent Germans who cannot speak up for fear of the Gestapo, or because they feel themselves caught in a hopeless moral dilemma between their hatred of Hitler and what they conceive to be their duty, in time of war, as loyal citizens.

INSIDE INFORMATION

There is much information available about internal conditions in Germany that could and should be brought to the attention of the American and British publics through authentic channels. Germans abroad could perhaps render no greater service to the future of Europe and, incidentally, to their own homeland than steadfastly to uphold the banner of a free Reich as against Hitler's swastika in a world that, quite naturally in the heat of battle, tends to confuse the two.

3. A free German center could help, in collaboration with English, American, French, and other organizations, to prepare for a post-war settlement on a just and durable basis. It could study and prepare for those vital problems of internal and educational reform, of political and economic reconstruction whose solution is prerequisite to the rebirth of a Christian and democratic Europe.

It should not be forgotten that totalitarian control today deprives the German people of all those media, such as opposition parties, independent unions, or a free press, which after the collapse of Imperial Germany in 1918 prevented chaos and bolshevism.

There are many more tasks that a free German organization could undertake. If war should break out in the Pacific, it has been suggested that a battalion of free Germans be formed or a free German air squadron to fight jointly with the American, British, and Dutch forces against Hitler's "Nordic" Axis partner in East Asia.

Two major prerequisites exist for the functioning of a free German center in this country. First of all, it is essential that public opinion and the authorities both in the United States and in Great Britain approve of it and take an encouraging attitude toward it. No public recognition would be necessary in the sense in which recognition has been granted by Britain and the United States to the so-called governments in exile. Nevertheless, a free German center, even if conceived as an entirely private organization, is so eminently political in character that it could not function properly without the moral support of leading civic institutions and of the governments of both Anglo-Saxon countries.

The problem of American and British moral support for a free German center in the United States involves, of course, the much wider problems of peace aims; it involves the willingness on the part of the democracies to reach a just and durable peace settlement with a de-Nazified Germany. On this score the recent statements by Lord Halifax and Wendell Willkie and President Roosevelt's proclamation of the four essential freedoms laid a comprehensive and encouraging basis.

BROAD BASE ESSENTIAL

It is indispensable, furthermore, that a free German organization, in order to be effective be conceived on the broadest possible foundation. The old political parties of the pre-Hitler days are dead in the memory of the German people. But this does not mean that out of the ruins of Weimar could not rise a new and stronger bastion for a free German spirit.

To lay out its groundwork, men must, and can, be found who combine experience with courage, and who are trusted and respected by Americans and Britons as well as by Germans. To work against Hitler and not be considered traitors to Germany—to work for a free Germany and not be branded as "fifth columnists" by Americans—this must be the unalterable goal of these free Germans. They must be truly free, loyal to their cause, and responsible only to their conscience—not merely a conglomeration of Quislings, conscious or unconscious tools in the Allies' or in Hitler's propaganda service.

I have presented the problem of a free German organization because I sincerely believe that through its solution the war could be brought one step nearer to its end, and a just and lasting peace one step nearer to reality. Let those who rely merely on guns and tanks and propaganda machines to smash Germany have their say. Let those who suspect ulterior motives behind a proposal simply because it is unconventional express their suspicions. But whether Hitler wins or loses this war, let nobody say that there were not patriotic Germans who were ashamed of his dastardly doings and willing, according to their best abilities, to help free their country and all of Europe from his tyranny.

HANS SCHMIDT.

CHICAGO, *April 17, 1941.*

The Bituminous-Coal Strike

EXTENSION OF REMARKS

OF

HON. THOMAS A. FLAHERTY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1941

TELEGRAM FROM EDWARD PAGE, PRESIDENT OF NEW ENGLAND COAL & COKE CO.

Mr. FLAHERTY. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following telegram:

BOSTON, MASS., *April 21, 1941.*

Hon. THOMAS A. FLAHERTY:

Referring correspondence regarding bituminous-coal strike, our New England situation is becoming critical. Our railroads and many of our vital industries will be obliged to curtail operation unless mines resume within next few days. Your help is urgently needed to effect immediate resumption of operation.

NEW ENGLAND COAL & COKE CO.,
EDWARD PAGE, *President.*

H. R. 1057—To Establish a System of Longevity Pay for Postal Employees

EXTENSION OF REMARKS
OF
HON. MARTIN F. SMITH
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1941

STATEMENT BY LICAL PARK, LEGISLATIVE CHAIRMAN, WASHINGTON STATE FEDERATION OF POST OFFICE CLERKS

Mr. SMITH of Washington. Mr. Speaker, I vigorously supported the legislation introduced in the last Congress to establish a system of longevity pay for postal employees, because I considered it to be just and meritorious. I am again supporting such legislation in this Congress, and it was my privilege this morning to appear at the hearings before the House Committee on Post Office and Post Roads and to urge favorable action on H. R. 1057. I read into the record of the committee hearings a statement sent to me by Mr. Lical Park, legislative chairman, Washington State Federation of Post Office Clerks, which sets forth facts and arguments in favor of this legislation which to me appear to be unanswerable. The statement reads as follows:

WASHINGTON STATE FEDERATION
OF POST OFFICE CLERKS,
Seattle, Wash., March 24, 1941.

Hon. MARTIN F. SMITH,
United States House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: In behalf of the post-office clerks of the State of Washington may I request you to appear in favor of H. R. 1057 at the hearing on longevity pay for Government employees, to be held April 3 by the Post Office and Post Roads Committee of the House?

This bill, as you know, provides for a maximum salary for postal employees of $2,600 per year, to be arrived at by increasing the present pay by an additional $100 per year for each 5 years of service, beginning with the tenth year and continuing to the thirtieth.

It is a just and equitable measure not only from the standpoint of the worker but also for the Postal Service and the public.

First. Under present laws practically all chance of promotion or raise in pay ceases for the average employee after his fourth year in the Postal Service. This means to the career worker who enters the Service at 18 or 20 years of age that at 25 all chances of advancement are ended for him; whereas with increased experience, ability, and knowledge of the work should come increased pay.

Second. With the absorption of unemployment which is so rapidly taking place, the opening of new opportunities and the rapidly rising wage scales Government reports show, the young man of ability, such as the Government needs, will not enter or remain in such "dead end" work. Experience in the past proves this. On the other hand, experience also proves that increased wages as well as improved working conditions bring increased productivity. This for two main reasons: (1) Improved morale; (2) the more capable employees attracted by the better opportunities.

Third. With the increasing age of the worker comes increased expenses to him on account of the growing families and mounting responsibilities. The new social consciousness demands that employers, public and private alike, recognize such needs and meet them. The Government, especially, should encourage a normal human life among its employees by enabling them to provide for it.

Fourth. Increased pay is needed to meet the rising cost of living and increased taxes. In this city the rise is especially noticeable in rents and in all mechanical work, repairs, etc. Five dollars per month rise in rents takes 60 percent of $100. The State sales tax, which will be raised to 3 percent May 1, absorbs 65 percent of $100, figuring on a basis of $2,200 expended.

Fifth. Pay increases benefit the general public as well as the individual directly affected. Practically all the increase goes directly into business channels through the increased spending it makes possible. Thus it benefits all lines of business and builds up living standards and the morale of the country.

For these reasons, as well as others which will no doubt occur to you, the passage of H. R. 1057 will be of advantage to the Government, employee, and the public alike.

With grateful recognition and appreciation of your past assistance to the postal employees in improving working conditions, as well as your careful attention to all our national problems, I am,

Respectfully yours,

LICAL PARK.

Cane Sugar Refining Industry

EXTENSION OF REMARKS
OF
HON. JOSEPH CLARK BALDWIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1941

RESOLUTION ADOPTED BY NEW YORK LEGISLATURE

Mr. BALDWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution recently adopted by the Legislature of the State of New York:

Senate Resolution 76

Whereas the preservation of the cane-sugar refining industry in the State of New York is of extreme importance for the protection of the millions of consumers in the State of New York from an artificial sugar shortage and from exorbitantly high prices; and

Whereas there is sufficient sugar on hand, or in the nearby tropical islands, to meet any demand that the consuming public of the State of New York, or the consuming public of the United States may make; and

Whereas any change in the existing law that would grant additional millions of dollars to the already heavily subsidized beet sugar industry would further increase the heavy burden that the American consumer and taxpayer has to carry in order to continue the production of beet sugar: Now, therefore, be it

Resolved (*if the assembly concur*), That Congress be, and it is hereby respectfully memorialized, urged to oppose any change in the existing law that would add additional burden on the American consumer, cause further unemployment in the State of New York, or disrupt in any way our good-neighbor policy with South and Central America; and be it further

Resolved (*if the assembly concur*), That a copy of this resolution be sent to the President of the United States, the Vice President, the Secretary of State, the Secretary of Agriculture, the Speaker of the House of Representatives, and to each Member of the present Congress from the State of New York, and that they be urged to use their best efforts to accomplish the purpose of this resolution.

By order of the Senate.

WILLIAM S. KING, *Clerk.*

In assembly April 3, 1941.
Concurred in without amendment.
By order of the assembly.

ANSLEY B. BORKOWSKI,
Clerk.

Undermining Defense

EXTENSION OF REMARKS
OF
HON. THOMAS A. FLAHERTY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1941

EDITORIAL FROM THE WASHINGTON EVENING STAR

Mr. FLAHERTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of yesterday:

[From the Washington Evening Star of April 21, 1941]

UNDERMINING DEFENSE

The soft-coal strike, now in its fourth week, has reached a point where a choice must be made between vigorous governmental action to bring about the reopening of the mines and acquiescence in a situation which, without any real justification, will result in the progressive undermining of the national-defense program.

As matters now stand, an agreement has been reached between the northern operators and the United Mine Workers. This agreement covers about 80 percent of the mines and 250,000 of the 400,000 miners on strike, and if mining operations in this field could be resumed much of the threat to the Nation's security would be eliminated. From all available evidence, however, neither the northern operators nor the miners want to reopen any mines until the southern operators accept the terms of the contract, and this stand is maintained despite a direct appeal from Secretary of Labor Perkins that operations be resumed under a tentative arrangement.

The issue between the southern operators and John L. Lewis, president of the United

Mine Workers, concerns the maintenance of a wage-rate differential in favor of the southern producers. Mr. Lewis says that the differential, which is based on a disparity in freight rates, must go, and that the southern operators must pay the straight $7-a-day wage that the northern producers have accepted. Until that is done, he says, no coal will be dug, for the northern miners would not care to work while their southern brothers continue to starve. The wage differential in the past has amounted to 40 cents a day, and the producers in the southern fields say they cannot operate at a profit unless it is maintained. This is not a dispute which should cause serious trouble, however, for the facts can be readily ascertained from the Interstate Commerce Commission, which has ample facilities for weighing the freight-rate question.

Meanwhile, the strike is having increasingly serious consequences in industrial plants engaged on defense work. The steel mills, key to the whole defense effort, are expected to operate this week at less than 95 percent of capacity, although they had been working on virtually a 100-percent basis. At least 15 of the country's 228 blast furnaces are said to have shut down because of the lack of coke, and others are operating on curtailed schedules. This will not be a static condition, but is one that will grow progressively worse as long as the mines stay closed.

As of the moment, there seem to be two main avenues of approach to the problem. One is to get the northern mines open, and it is possible that the President may issue a direct appeal to both the miners and the operators to that end. The other is to bring about a resumption of negotiations between Mr. Lewis and the southern operators. At present they are at a stand-off, the operators insisting on resuming discussions in Washington and Mr. Lewis refusing to meet anywhere except in New York.

If this attitude is persisted in, there remains the possibility of referring this phase of the strike to the National Mediation Board. The only obstacle to the taking of this step is Mr. Lewis' open hostility to the Mediation Board, which he has called a strike-breaking agency, and his assertion that the miners would not tolerate its intervention. The Board has proved its worth and its impartiality in other knotty cases, however, and it is not to be supposed that Mr. Lewis, under the circumstances, would carry his defiance to the point of actually refusing to permit this Federal agency to take a hand in his own deadlocked negotiations.

The Shelterbelt

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1941

ARTICLE FROM THE COUNTRY GENTLEMAN MAGAZINE

Mr. HOPE. Mr. Speaker, in the current issue of the Country Gentleman magazine there is included a short article on the shelterbelt on the page entitled "Washington Round-Up," by Ed Hadley. I am submitting this article herewith as further evidence of the wide recognition of the good job which the Forest Service has done in connection with the shelterbelt project and because of the deserved reference to Mr. Paul H. Roberts, who has been in charge of this work since its beginning. Although frankly an experiment in the beginning, the shelterbelt is being acclaimed a success by practically everyone who has had an opportunity to learn what has been done.

SHELTERBELT IN DANGER

The Plains States forestry project, generally known as the shelterbelt, is in danger of being discontinued. Beginning as something of an object of derision, it has become one of the most popular of all Roosevelt undertakings.

This tree-growing program has been carried on largely through funds provided by the W. P. A. Though directed by Forest Service experts, it has had no specific appropriation of Department of Agriculture funds to sustain it. With W. P. A. appropriations being sharply cut the difficulties of of carrying on the shelterbelt work pile up. What is needed, those supporting the project say, is a specific appropriation to complete the work with skilled help.

Opinion generally is that Nebraska's ranch-born Paul H. Roberts and his force have done one of the remarkable jobs of our time. The shelterbelt project was carried on during the most unfavorable weather period in the known history of the Plains. Yet thousands of acres of thick tree growth now attest its success. And it has all been done at a cost of little over 6 cents a tree.

The Roosevelts Were Large Property Owners in Superior, Wis.

EXTENSION OF REMARKS

OF

HON. BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1941

ARTICLE BY RAYMOND G. CARROLL

Mr. GEHRMANN. Mr. Speaker, under the permission given me to extend my own remarks, I wish to include an article which appeared in different papers recently, entitled "Ships Are in Roosevelt Blood."

Superior, the largest city in my Congressional District is the twin port of Duluth, Minn. This great twin port is second only to New York in tonnage received and sent out. Eighty percent of the Nation's iron ore is shipped to the smelters in steel centers from the head of Lake Superior. I was told some time ago that the President's father and other relatives had owned some property in Superior, but never got the real facts. So I wrote a letter to Mr. Oyaas, who is president of the association of commerce, and he immediately located Mr. Stratton, who handled nearly all the Roosevelt property deals in Superior, even disposing of the last piece for the President's family not long ago. Mr. Stratton was active in the real-estate business in Superior all his life. He is as hale and keen of mind today as he ever was, and remembers every little detail, some of which happened many years ago. It is interesting reading, and I am sure the people up at the head of the Lakes will be very much interested to get and preserve the facts contained in this story.

The article follows:

WASHINGTONIA

SHIPS ARE IN ROOSEVELT BLOOD; INSPIRATION THAT HAS MADE F. D. R. THE SAILOR PRESIDENT—ROOSEVELT'S FATHER, THE LATE JAMES ROOSEVELT, PLOTTED SUPERIOR AT THE HEAD OF GREAT LAKES, AND HIS GREAT GRANDUNCLE, NICHOLAS J. ROOSEVELT, WAS "FATHER OF INLAND WATERWAYS"

(By Raymond G. Carroll)

WASHINGTON, April 19.—F. D. R., the sailor President. The extent to which the Roosevelt family has indulged in forward-looking with respect to waterway transportation is strikingly shown by two of its members: The late James Roosevelt, stern-visaged with side whiskers and straight as a reed, who plotted and built the business section of Superior, Wis., at the head of the Great Lakes and who was the father of President Franklin D. Roosevelt, and the late Nicholas J. Roosevelt, dreamy-eyed and mechanical-minded, who invented side-paddlewheels for river steamboats before Robert Fulton did, and aboard his own steamboat, the *New Orleans*, sailed from Pittsburgh for the delta of the Mississippi River in the fall of 1811 and heralded for the up-river towns along the Ohio and Mississippi Rivers the dawn of a new era and who was the great-granduncle of F. D. R.

It is this waterway-minded ancestry of President Roosevelt that is held responsible for his realization of the present urgency of ship building and the maintenance of the bridge of ships across the Atlantic. Mr. Roosevelt, before he was 14 years old, made eight trips to Europe with either his father, or mother, or both. There have been five Roosevelts who have been Assistant Secretaries of the Navy. The other four were desk men. F. D. R. alone knows the beam ends of a ship from its lee scuppers.

Superior, Wis., is the twin port of Duluth, Minn., separated only by the Bay of St. Louis and the St. Louis River. There are 2,350 miles of waterway from these two cities to the entrance of the St. Lawrence River at Belle Isle, near Newfoundland.

Philip G. Stratton, veteran real-estate dealer of Superior, on April 7, 1941, gave the following account of his relationship with the late James Roosevelt in a letter to Richard J. Oyaas, president of the Superor Association of Commerce:

"You ask me to tell of Mr. James Roosevelt's investments in Superior; to whom his real estate was sold; and how it is now used. I have had the public records in the Register's office examined and it is reported to me that James Roosevelt took mortgages on Superior real estate during the years 1888–99 amounting to more than $250,000. At that time he also held stock in a bank here and in a mortgage-loan company.

"In June 1890, he bought the corner of Twenty-first Street and Ogden Avenue, and built the 3-story, 11-house building still called 'the Roosevelt Terrace,' and in March 1893, he bought what was then called 'the Watkins Block' and is now known as 'The Normandy,' a 4-story store and office building on the northwest corner of Tower Avenue and Belknap Street. And he acquired other real estate I will speak of later. During those years a considerable number of other very substantial New York men invested in Superior; Thomas F. Oakes, president of the Northern Pacific, Frederick Billings, Warner Van Norden, the Duryeas, who were in the starch business that later became the Corn Products—to name only a few. Grain elevators, coal docks, and ore docks were building and lumbering was active. Mr. Roosevelt and the others came here summers to

supervise their investments. It happened I was the youngest employee of the mortgage loan company already spoken of, at the time of one of Mr. Roosevelt's later trips to Superior and was introduced to him and asked to assemble certain information for him. It was flattering to be the one to deal with so large a stockholder, and I took pains to get what he wanted and report it carefully and he was appreciative and my report led to a number of letters between us.

"James Roosevelt died in December 1900—his will is on file here since he had real estate interests in Superior at the time—and later one of the executors appointed by the will, Mr. Warren Delano, Jr., wrote me he had found my letters among Mr. Roosevelt's papers, and he asked me to call on him in New York. By then I had gone into real estate business, and was an officer of the mortgage-loan company Mr. Roosevelt held stock of. I stopped at Poughkeepskie, where Mr. James R. Roosevelt (half brother of President Roosevelt) and one of the executors of his will met me and drove me to Hyde Park, and I spent a considerable part of the day with him and met him and Mr. Delano in New York the following day. They asked me to act as agent of the James Roosevelt estate, and I was glad to accept the appointment.

"The Roosevelt estate owned 'the Roosevelt Terrace' and 'the Watkins Block' already mentioned; the southwest corner of Tower Avenue and Winter Street, a business location; 3 other business cites, 11 lots; and 90 residence lots. The executors wanted to dispose of the Superior assets—Mr. Delano was the executor I dealt with—and during the next few years the properties were sold. Mr. Delano, he is no longer living, was a most orderly and efficient businessman and it was a pleasure to act for him. One or two small matters remained after Mr. Delano's death, and Mr. Franklin D. Roosevelt, whom I never met, had them in charge.

"You asked who bought the Roosevelt real estate and how it is now used. The Terrace, a building of the highest grade of construction, is owned by 11 individuals—there are 11 houses—who own the heating plant and run it jointly. The Watkins Block, now the Normandy, has changed owners two or three times and is used for mercantile stores and offices. The corner of Winter and Tower has a store building and gas service station on it and is owned or leased by the Northwestern Oil Co. The G. H. St. John Co.'s grain and feed business, corner Eighth and Hammond, uses one property. A location on Tower Bay Slip was sold as part of the site for a building-stone company that supplied Lake Superior sandstone for this district but is now unused. The 90 residence lots were variously bought and many of them have homes on them. They were principally between Twenty-fourth and Twenty-eighth Streets. Sara Delano Roosevelt, the President's mother, owned 10 lots in Superior that I had to do with. There were houses on some of them. Four of the lots have had houses built on them since Mrs. Roosevelt sold them and two now have the synagogue of the Hebrew Brotherhood Association on them, the corner of Sixth and Hammond."

It might be here restated that all the Roosevelt holdings in Superior have been sold, so that President Roosevelt's desire to transform that lake port into a seaport by the completion of the St. Lawrence waterway is dictated wholly by sentiment, national-defense requirements, and his effort for the economic good of two friendly nations.

Just about three centuries ago the first Roosevelt arrived from Holland and settled on a farm on Manhattan Island. The first Roosevelts traded with the Indians, furs and skins. Later the Roosevelts became bankers, businessmen, and farmers who occasionally turned to politics when they had made their money. They built sugar mills, and operated ships. Two became President.

Nicholas J. Roosevelt, who married Lydia Latrobe, daughter of the leading architect and engineer of the country in 1800, had a passion for steamboat building. He got together $38,000; some he borrowed and some he inherited, and with it built the *New Orleans*, which steamed out of Pittsburgh in 1811 with himself and his wife aboard beside the crew. Two years before, also with his wife he had made the trip to New Orleans in a flatboat. He bore letters of introduction to be used at all the more important river towns and appears to have been received as a sort of amiable lunatic, whose design, magnificent and useful, was regarded as impossible of fulfillment. Practical men who knew the inland rivers, said the currents would prevent boats from ascending against them, steam or no steam.

But the dreamer Roosevelt had his laugh and triumph. His boat was about 116 feet long, with a beam of 20 feet. Its carrying capacity was rated at 100 tons. It was propelled by a stern paddle wheel—although Roosevelt was the inventor of side paddle wheels—but it carried masts, as well as sails so as to use the wind whenever possible. The boat made New Orleans, the very first steamboat down the Ohio and Mississippi Rivers, and once in the lower Mississippi it became a Natchez packet, until in 1814 it was destroyed.

Nicholas J. Roosevelt never got his money out of his steamboat but until his death and long afterward he was one of the most famous men in the United States—the "father of inland waterways."

Ships, shipyards, steamboats, yachts, cruisers, rowboats, submarines, destroyers, icebreakers, ferryboats—they are in the Roosevelt blood. That is why F. D. R. is so understanding about the importance of ships and more ships to the island of Great Britain.

The Role of the Brooklyn Public Library in the National-Defense Program

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1941

RADIO ADDRESS OF J. VINCENT KEOGH, MEMBER, BOARD OF TRUSTEES OF BROOKLYN PUBLIC LIBRARY

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks, I take pleasure in including the radio address delivered by J. Vincent Keogh, member of the board of trustees of the Brooklyn Public Library, over station WBBC, Brooklyn, N. Y., on April 18, 1941:

In the Brooklyn Public Library bulletin of this month, Dr. Milton James Ferguson, the chief librarian, wrote the following:

"War is tragedy—tragedy for both victor and vanquished. It is difficult, therefore, to put one's finger on any one spot and say, 'Here alone irretrievable loss was suffered.' In comparison with the life of a single small child, of whom large numbers have already been blotted from the face of the earth, a book by the rarest genius may be as nothing. However, no one thing can rightly be considered by itself; civilization is a combination of elements which, inextricably woven together, formed the world we yesterday thought destined for noble flight. And books filled with their message of courage and good cheer and aspirations to mankind may have a soul more alive and more important in the final judging of values than that of many a creature with slanted brow. War means destruction of books no less than of men.

"British libraries have been blown up and become as dust; British book stores, the source of supply of many a treasure for American readers, have vanished and are no more. When one soldier of a brave nation falls, two more take his place and carry on the fight. I believe that books, too, are valiant warriors in liberty's cause, and that, though they be cut down by regiments and divisions, they will arise again and press on to victory."

Books are not only valiant warriors in liberty's cause but they are more than ever, these days, brilliant defenders of the homeland. It is instinctively to books that the scientist, inventor, artist—yes, even the general—turns for facts and knowledge to assist in the great program that has become the first calling of millions of Americans, namely, the program of national defense.

After having heard, particularly in the past year, so much about the importance of national defense, you may be interested in learning what it means to you, to you as an individual citizen. The entire program, of course, was inaugurated, developed, and is presently being consummated not for some unknown generation but for the present living generation, for you, each one of you.

If you think of some apparently insignificant activity in which you engage, let us say taking a walk or going for a drive, and then realize that the present defense program seeks to defend your right to engage in that activity, you will have a greater personal interest in the matter. You have the unquestionable right to ask, not only of your Federal Government but of your local government and its agencies, What is presently being done to defend my personally enjoyed rights and activities? Further you may properly ask, What is such governmental agency as the Brooklyn Public Library doing to assist in the program?

In general, the Brooklyn Public Library has cooperated in the national-defense effort by making available to the public all its books dealing with defense problems, from the theory of democracy to machine-shop practice; by adding greatly to its books on these subjects; and by publishing lists to guide the public in the selection of such reading matter.

Last fall the Brooklyn public library took part in the Nation-wide cooperative effort to inform the National Defense Committee, through the Library of Congress, of holdings in all classifications bearing upon the defense program. It was stated at that time that the collection of technological books was meager but was being augmented as fast as limited funds permitted. The general scheme of interlibrary loans was agreed to and the Brooklyn Public Library offered to make all its resources available to anyone connected with the national-defense administration.

In the last year your library has made increasingly large purchases of new books dealing with the European and Asiatic wars and their potential dangers to the peace and safety of the United States; of books on military science and tactics; and books on engineering and machine-shop practices. Each month its bulletin has listed recent accessions in these fields. At the present time a special six-page book list is being prepared entitled "Men and Machines," which will list and describe briefly the best of the holdings in all branches of machine-shop work, so vital to the defense program. Previously a book list on aeronautics listed the best of the works available in that important subject.

This list is divided into such subjects as history and biography, which includes That's My Story, by Douglas G. Corrigan, the "wrong way" flyer; Flight, under which is found, among others, We, by Charles A. Lindbergh, and Listen! The Wind, by Anne Morrow Lindbergh. Other books on the list are on technological aspects, military aviation, and aviation as a career.

Not only are books sought at the library, but, in connection with the defense program, people seek pictures. The use of pictures may at first seem slightly irrelevant. Let me tell you in what way they contribute to our present "first calling."

A landscape architect assigned to design air-base camouflage came for air pictures of foliage of trees and wooded hills. An architect required air views of factories today and pictures of camouflaged factories during the last war.

Artists making recruiting posters ask for wireless and field telephones, regimental colors, life in the Army, parachutists, and ski troops.

Illustrators of technical articles and governmental publications asked for "earliest forms of protection from fire in Manhattan," allegorical pictures showing tl function of the War Department in the security of the United States, pictures of 105-millimeter howitzers, Army tents, Army scout cars, mosquito boats, color of the insignia of the marines; of Columbia; boats of the Coast Guard; modern Spitfires; capitals of South America; war-savings posters, British and American.

The protective coloration of birds, animals, and fish are called for constantly in the teaching of camouflage methods and in the actual preparation of camouflage drawings.

Methods of housing defense workers and types of men employed on national defense to be used in designing defense posters.

We answered an urgent call asking us to find the color used by the Free French forces to camouflage white Arabian horses during warfare.

An engineer asked for details showing the direction and extent of damage in bombed buildings after air raids in Madrid, London, etc.

The citizens of Brooklyn are very proud of the New Central Building adjoining Prospect Park at the Grand Army Plaza. This building, dedicated to the memory of the late borough president, Raymond V. Ingersoll, might be described as the nerve center of the efficient service afforded to all who are seeking further knowledge in subjects related to defense. The building represents what is regarded as one of the greatest surgical operations in American architectural history. It was built out of a building erected 20 years before.

It wasn't merely a face lifting that was done on the old library wing—that pigeon roost of recent fame—it was a major operation, with practically all the limbs and organs involved. Even the bones were scraped a bit. In the end the Italian Renaissance Palace became a streamlined twentieth-century library home; one whose sweeping lines have evoked exclamations of admiration from artists and whose functional arrangements have made visiting librarians emerald with envy.

When such a knowing critic as Lewis Mumford can say, as he did recently in the New Yorker, "Put alongside the Widener Library at Harvard, the Yale Library, the Harkness at Columbia, the Congressional, or the New York Public Library, Brooklyn's new one is tops." Brooklyn, which waits with undimmed hope year after year for the Dodgers to win a pennant and the Fulton Street El to come down, figures the new library center was well worth waiting for.

The Brooklyn Public Library, in opening its new central building, dedicated March 29th of this year, is making available not only the most modern of library buildings but also a streamlined library service to its readers. To speed up the process of obtaining books and also to give, with a friendly and interested though woefully small staff, all that personal help so necessary in a large library, the following organization and methods are being put into effect in Ingersoll Memorial:

A collection of popular contemporary books and a duplicate pay collection are maintained in the alcove at the rear of the circulation hall.

The remainder and greater proportion of the collection consists of reference and circulation material constituting six subject divisions: Art and music, science and technology, language and literature, history, biography and travel, social science, philosophy and religion, and general reference.

The loan period for new books has been extended to 14 days and for older books, not so much in demand, to 28 days. As this extension of time automatically replaces the old and troublesome renewal system, no book may be renewed after the loan period has expired.

The number of books that may be drawn at one time is governed by the reasonable needs of the reader and the material on hand.

Borrowers are asked to write their card numbers on the book cards before taking books to the charging desk. This method of self-charging saves the time of the borrower, as it eliminates long lines of people waiting for the librarian to write card numbers.

As recently as March of this year there was published in the Brooklyn Public Library Bulletin a list of new books which are available at any branch. This collection is entitled, "The Defense of America," and contains such pertinent titles as "A Study of Air Bombardment," "Housing for Defense," "Flight Training for the Army and Navy," "Your Year in the Army," "National Defense," and many other volumes dedicated to that "first calling" of our country—national defense.

It is encouraging to know that our Brooklyn Library system is functioning in the present for the future welfare of our citizens. Remembering that national defense is a concern of each one of us personally and individually, I urge you to explain to your friends and neighbors that our Brooklyn Public Library system is ready and able to give assistance to whomever seeks it, not only, of course, in the field of national defense, but even in this presently important field.

Trading in Futures

EXTENSION OF REMARKS

OF

HON. ANTON J. JOHNSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1941

Mr. JOHNSON of Illinois. Mr. Speaker, futures trading is somewhat of a puzzle to me. I would not even know how to trade in futures should I so desire.

It has always been my opinion that the futures market was a market place where one contracted for future-date delivery of actual wheat or corn as the case may be.

The following clipping from the Washington Post of April 14, 1941, if substantially correct, certainly disillusions me:

[From the Washington Post of April 14, 1941]

TRADING IN FUTURES

In view of the fact that great public problems accumulate upon us and continue to remain unsolved, many people naturally assume that there has been a serious failure on the part of education. Educators, on the other hand, point out that imputations of their failures are usually made in terms both vague and general.

It is possible, however, to be specific.

The problem of ruinously low agricultural prices is no doubt the result of definite causes. If our educators have discovered what those causes are, they have failed to make their findings public. They have not neglected, however, in their departments of economics, to support the present racketeering method of fixing low prices by means of the device of futures trading, to treat the farm problem as insoluble, and to advocate, as a necessary alternative, the giving of Federal subsidies to the farmers.

Economists, copying from each other, and on each other's authority, have definitely agreed on a false definition of the futures contract, as a result of which the weight of the authority of the schools has been thrown in favor of the market racketeers. That false definition, copied from Gemmill's Fundamentals of Economics, is as follows: "A futures contract may be defined as a contract for the sale of a stipulated amount of a specified grade of some commodity at a fixed price at a future date."

The following facts, well known to futures traders, show how false is that definition:

1. Those who buy wheat futures contracts, for example, as a matter of customary practice think alone in terms of price differences, not in terms of wheat of a specified grade.

2. The wheat-futures contract does not permit the naming of a specified grade of wheat.

3. One who buys a wheat-futures contract has nothing to say, when on rare occasions delivery is made, about what kind or grade of wheat he shall receive.

4. The determination of what kind or grade of wheat is to be delivered, under a futures contract, is at the option of the seller of the contract, resulting often in the delivery of a "skin grade" of wheat, fit only for chicken feed.

5. Deliveries of wheat of any grade, under wheat futures contracts, are negligible.

6. Those who wish, in good faith, to buy a specified grade of wheat, either for spot delivery or for delivery to arrive, buy it in the cash merchandise market, not in the futures market.

Any self-respecting economist, with a fair sense of professional pride, might be expected to meet the challenge of these facts. None of them, however, have ever been known to do so. It is no wonder that our so-called civilization is a confused mess, since our intellectual leaders do so sadly fail to face the facts.

ERNEST D. MACDOUGALL.

WASHINGTON, *April 10.*

Writings of George Washington, of Particular Moment in Our Time

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1941

Mr. SIKES. Mr. Speaker, the great weight of the words of George Washington has rightfully been felt time and again in the shaping of American policy.

The strength of his counsel is reflected in the strength of this great Nation. Now, in our time, it is equally important that we school ourselves in the careful logic of that matchless leader who holds first place in American hearts.

I desire to call to your attention excerpts from the Writings of Washington, as collected by Worthington Ford, and edited by Stephen Bonsal of the Washington Post:

In his address to both Houses of Congress on December 3, 1793, President Washington said:

"As soon as the war in Europe had embraced those powers with whom the United States have the most extensive relations, there was reason to apprehend that our intercourse with them might be interrupted and our disposition for peace drawn into question by the suspicions too often entertained by belligerent nations.

"I cannot recommend to your notice measures for the fulfillment of our duties to the rest of the world without again pressing upon you the necessity of placing ourselves in a condition of complete defense and of exacting from them the fulfillment of their duties toward us."

In addressing his "fellow citizens of the Senate and the House" on January 8, 1790, Washington said:

"Among the many interesting objects which will engage your attention, that of providing for the common defense will merit particular regard. To be prepared for war is one of the most effective means of preserving peace. A free people ought not only to be armed, but disciplined; to which end a uniform and well digested plan is requisite; and their safety and interest require that they should promote such manufactories as tend to render them independent of others for essential, particularly for military, supplies."

"Knowledge is in every country the surest basis of public happiness. In one, in which the measures of government receive their impression so immediately from the sense of the community, as in ours, it is proportionably essential. To the security of a free constitution it contributes in various ways; by convincing those who are intrusted with the public administration, that every valuable end of government is best answered by the enlightened confidence of the people; and by teaching the people themselves to know, and to value their own rights; to discern and provide against invasions of them; to distinguish between oppression and the necessary exercise of lawful authority, between burthens proceeding from a disregard to their convenience and those resulting from the inevitable exigencies of society; to discriminate the spirit of liberty from that of licentiousness, cherishing the first, avoiding the last, and uniting a speedy but temperate vigilance against encroachments, with an inviolable respect to the laws."

Writing to President John Adams from Mount Vernon on July 4, 1798, Washington said:

"At the epoch of my retirement an invasion of these States by an European power, or even the probability of such an event happening in my days, was so far from being contemplated by me that I had no conception that that or any other occurrence would arise in so short a period, which would turn my eyes from the shades of Mount Vernon. * * * In case of actual invasion by a formidable force, I certainly would not intrench myself under the cover of age and retirement, if my services should be required by my country to assist in repelling it. And if there be good cause, which must be better known to the Government than to private citizens, to expect such an event, delay in preparing for it might be dangerous, improper, and not to be justified by prudence."

Without waiting to learn his wishes, on July 2, 1798, President Adams sent the following nomination to the Senate, where it was unanimously confirmed: "George Washington, of Mount Vernon, to be lieutenant-general and commander in chief of all the armies raised and to be raised in the United States."

Not the least applicable to the present situation are the lines that Washington sent Henry Lee, Governor of Virginia, upon receiving the Governor's congratulations on what he had done for "the peace and happiness of this country." This letter was written in Philadelphia and is dated July 21, 1793:

"But were the case otherwise, I should not be less inclined to know the sense of the people upon every matter of great public concern; for, as I have no wish superior to that of promoting the happiness and welfare of this country, so, consequently it is only for me to know the means to accomplish the end, if it be within the compass of my powers."

"That there are in this as well as in other countries, discontented characters, I well know; as also that these characters are actuated by very different views; some good, from an opinion that the measures of the general government are impure; some bad, and if I might be allowed to use so harsh an expression, diabolical, inasmuch as they are not only meant to impede the measures of that government generally, but more especially (as a great mean toward the accomplishment of it) to destroy the confidence which it is necessary for the people to place (until they have unequivocal proof of demirit) in their public servants."

Writing at this time (January 20, 1799) to his neighbor, Lord Fairfax, Washington denounced the "open violations of treaties and the laws of nations that were taking place." He adds:

"But by the adoption of vigorous measures for self-defense the People with one voice have made a tender of their lives and fortunes to repel any attempts which may be made on the Constitution or the Government of their Country. * * * Notwithstanding the Spirit of the People is so animated that party amongst us who have been uniform in their opposition to all measures of Government * * * hang upon and clog its wheels as much as in them lye and, with a rancor and virulence which is scarcely to be conceived. * * * I have always believed and trusted that Providence which has carried us through a long and painful war with one of the most powerful nations in Europe will not suffer the discontented among ourselves to produce more than a temporary interruption to the permanent Peace and Happiness of this rising Empire."

Mr. Speaker, all too readily for our comfort do we find application for Washington's words in the world picture today. Apprehension for the way of life that characterizes freedom and democracy is justified. There is work to be done, much work, if our strength is to be a match for the strange forces that are rampant in the world. Totalitarianism and its "fifth columns" mock our institutions. Preparation, infinite preparation—both physical and moral—are required of us. Individually and as a nation we must steel ourselves in faith. Americanism must be made bigger than any threat which can confront it.

Blitzkrieg: A Warning to Americans

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, April 22, 1941

ARTICLE BY ROBERT GERARD

Mr. WILEY. Mr. President, I ask to have printed in the Appendix of the RECORD an article by Robert Gerard, formerly a lieutenant in the French Army. The article, which was recently published in the Christian Science Monitor is entitled "Blitzkrieg: A Warning to Americans." This article, among other things, brings out the definite fact that 120,000 well-equipped, well-armored German soldiers conquered all of France. They made up 12 mechanized German Panzer divisions supported by a few thousand airplane pilots. The remainder of the huge German Army simply followed and occupied the territory.

This article also brings out a serious criticism of our Army tanks. I hope that the tank technicians of our country will pay attention to this criticism. The article states that the tanks of the United States Army are high, of outmoded design, and have many sharp angles instead of rounded curves which permit shells to slip off their surface.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor of April 19, 1941]

BLITZKRIEG: A WARNING TO AMERICANS

(By Robert Gerard, formerly lieutenant in the French Army)

(Germany started its blitzkrieg against Yugoslavia and Greece just before this issue went to press. The Nazi rapid war of movement, using tank corps and other armored and motorized divisions, supported by dive bombers, is following, so far as terrain permits, the same method as that used against the French. This gives double significance to the following article, written by a French second lieutenant of the Tank Corps during the invasion of France, and condensed by permission from the Bulletin of the Harvard Business School Alumni Association. Robert Gerard's report provides to the free peoples of the Western Hemisphere a warning to be prepared with an equality of force that will render ineffective any possible threats by dictator countries.)

Except for the last few months of 1918, the World War was waged on the basis of position. Attacks were made by waves of men spread over the entire front, one succeeding another. The line of entrenchment, although breached at many points during the 4 years, was always reestablished. This kind of attack required a large amount of time and many human lives; the Germans wanted to avoid that kind of warfare. They knew that Britain and France had greater industrial resources and the Germans could not give those countries the time to convert their resources into weapons. They developed the blitzkrieg.

The blitzkrieg is a war movement made possible by the tactics of infiltration in attack. What does that mean? It means that the attack and subsequent advance is not made by waves spread out on a long front, but, rather, by little columns thin as needles which avoid the strong points in the enemy's defense and penetrate the weak points. Instead of spreading its fire power over the entire front, the attacking force concentrates all its fire on selected definite points. These tactics of infiltration in attack are speeded up by the use of two new technical weapons, the tank and the airplane. These are the essentials of the Nazi blitzkrieg. Let us see how these tactics work.

From the newspapers one can imagine hundreds of German tanks rolling wave after wave across the country, sweeping everything before them. Except in a very few instances, no such thing ever occurred. Each time I saw the German Army advancing it consisted of a small mechanized column, oblivious to what was going on to the left or right of it. Its attention was focused on the roads, not on the open fields, for in the modern war of movement roads are the most important thing. France was defeated by a series of raids through the French lines by small German mechanized units, preceded and backed by dive bombers.

In Rouen our group met one of these advance guards, which consisted of about 10 light tanks and 50 medium-size tanks, with a few side cars and 88-millimeter artillery guns. That advance guard, which was 60 miles ahead of the main body of German troops, had easily broken through the French lines south of the Somme River and had carefully avoided the remnants of the French motorized army, the only troops equipped to fight them with the same weapons. When this advance guard arrived in Rouen, it was well received by our four antitank guns posted in front of the bridges and by our 10 tanks, most of them operating on the northern side of the river.

The Germans lost 15 tanks and we lost all the equipment on the northern bank. That battle was like Dante's Inferno. The big oil tanks and oil refineries were bombed, flames rising into the sky, which was black with fumes. The Germans had been fooled; they thought the forces on the French side of the river were much stronger than they actually were and that the forces on the northern bank were weak. It is important to note that the Germans, according to blitzkrieg tactics of avoiding strong points and going around them, did not insist. They never tried to cross the river at Rouen, even though our 250 men, who had lost practically all their equipment in the battle, could not have prevented them from doing so.

Another striking instance of the infiltration technique which I witnessed was near Mayenne, halfway between the Somme and Loire Rivers. The French divisions had been broken everywhere; my group had lost all its tanks and antitank guns, and over a hundred of our men had been killed and wounded. A few sidecars and trucks with four machine guns were all that we had left. We found ourselves on the morning of June 18 in the center of a triangle, formed by three German motorized columns on three different roads surrounding us. From 6 o'clock in the morning to 4 o'clock in the afternoon we watched one of these columns pass. We had stationed a volunteer near the road to signal any interruption in the German column so that we might attempt a crossing. That column was endless, an entire Panzer division, so sure of victory and of the disorganization of the French forces that it was not even concerned with the protection of its flanks. We finally got the signal and started to cross. Half our group got by and the other half was completely smashed by the terrific fire of the oncoming German tanks.

How can an adequate defense against blitzkrieg tactics be established?

What is required is an active defense—defense by superior fire power which can in fact become a counteroffense.

Two weapons used extensively in this German blitzkrieg are the tank and the airplane. Against the tank it was thought that a good antitank gun would be effective. My experience makes me very skeptical about this. The old French 37 mm. and the new 25 mm. antitank guns proved too light to pierce the armor of the German medium tanks. The new 47 mm. antitank guns and the 75 mm. field artillery guns were extremely effective against most German tanks, as witnessed by my own eyes. But these latter guns have serious disadvantages. It is unusual if they are given the chance to shoot more than a dozen shells. They are very easily detected and even if they blow up one or two tanks they will be destroyed by others.

Big ditches can be used to stop tanks, but in a war of movement the troops do not have time to dig ditches everywhere. We had some success with land mines, but it is impossible to carry as many mines as would be necessary if they were to be laid on the terrain where the tank attack might be made.

The best way and the only way to stop tank divisions is to use a larger tank division. A good tank has a 44-mm. or a 75-mm. antitank gun mounted in it. This gun can pierce an opposing tank's armor and stop it. The gunners within the tanks behind these guns are better protected than those manning a simple antitank gun. Furthermore, the tank has mobility; once detected, it can zigzag, or rush into the enemy, or retreat, or take any other action dictated by the circumstances.

In contrast with the infantry, the French motorized forces showed admirable spirit and courage, mainly, I think, because they were able to give the Germans a dose of their own medicine. These few thousand men, who fought under terrific odds against an army superior in numbers, were the only ones to offer serious resistance. They used the same weapons that the Germans used and knew their tanks were better than the German tanks. On the average, each tank in our group destroyed seven German tanks before it was put out of use, but the German tanks outnumbered ours to such a degree that we lost our tanks one by one under the relentless pressure of an endless stream of German tanks.

The bulk of the French Army was quickly demoralized, because it soon realized the hopelessness of the defense. Trains had carried the French infantry divisions to the front, but they had to retreat on foot. Their rifles and machine guns were useless against German tanks, and their antitank guns were so few that they were soon overrun and destroyed by the German forces.

So much for the mechanized troops. Now the airplane.

I do not know of a time in my life when I was more scared than I was when the German dive bombers exercised their skill on our motorized column for the first time. The terrific noise of the siren installed in their tails and the lightning firing speed of their machine guns upset my nerves. On this first occasion we had several soldiers stationed on the tops of our cars and trucks looking in all directions, with a whistle to give us the alarm when the German planes showed signs of attacking on the road. Suddenly four planes came low from behind a hill and their bullets pierced the windshield of our car as we were jumping out onto the road. The pilots soon noticed that we sought protection in the ditches along the side of the road and they returned after bombing to machine-gun the ditches and caused many casualties.

There is little one can do against airplane attacks upon troops in the field. Dive bombers operate at too low an altitude to use aircraft batteries against them. The only effective active defense against a plane is another plane. If the Germans had not had such a superiority in the air, our troops would not have been submitted to such continuous destruction.

Much has been said about another aspect of the blitzkrieg tactics—the use of the "fifth column." On June 8, at 4 p. m., a French officer presented himself to my captain, showing a regular identification card, and said that at 4:30 p. m. 14 tanks would arrive on their way south to defend Rouen and that we should let them pass. The tanks would be recognized by the fact that their turrets would be open and that white flags would be waved. My captain was a very suspicious fellow. He told me to have everything prepared in case an emergency should develop. I arranged to have a subordinate officer go to meet the commander of the tanks when they were sighted. Half an hour later the 14 tanks arrived, turrets opened and white flags waving. My underofficer advanced along the road on a motorcycle to identify the commander. He suddenly turned and came back. At that moment the flags disappeared, the turrets closed, the swastika flag was raised, and a terrific barrage opened up. My underofficer was killed. Our antitank guns fired. They were German tanks.

Modern war requires perfect coordination of all armies. The German Army advanced and worked with the regularity of a high-precision clock. I observed a certain pattern in all attacks the Germans made upon our group: (1) A very few hours after our arrival in a village which we were to defend, an observation plane circled slowly above us. There was no use in shooting at it, the plane was armored. (2) One or two hours later dive bombers paid us a visit, systematically destroying everything. (3) Several hours later we were subjected to artillery fire. The use by the Germans of light, movable artillery on the front lines was very interesting. They had a three-purpose 88-mm. gun—antiaircraft, antitank, and field artillery—it was a beauty. They used no heavy guns whatsoever, for this type was too slow to move. Instead, they employed the dive bombers. (4) As soon as the artillery shells ceased, the tanks would arrive. The cooperation between the German motorized force, the artillery, and the air force was simply amazing. To insure coordination they integrated many different arms into one single unit.

Psychological effects of the blitzkrieg tactics are terrific. There was no continuous line of fighting. Germans were making motorized raids 50 miles behind our lines, and this lack of contact with the enemy oftentimes produced mass hysteria. False news spread at a tremendous speed, and we never knew where or when the Germans would arrive.

What does the experience of France mean to the United States? Moral, political, and military causes account for the collapse of France. How can we prevent such destruction in this country?

The need for a huge defense program to prevent a military debacle is evident. Everything possible should be done to speed up the defense program. One supreme factor should be remembered: It took only 120,000 well-equipped, well-armored German soldiers to conquer all of France. They were the fighting men in the 12 mechanized German panzer divisions supported by a few thousand airplane pilots. The rest of the huge German Army simply followed and occupied the territory which these mechanized troops had taken.

We want a defense system appropriate to our continent. The United States is too large a country to wage a war of position once an enemy debarks, for example, around Hudson Bay or near the St. Lawrence River. Such an attack would take the form of a war of movement, for, unlike Albania and Greece, where the lack of roads makes the

waging of a motorized war difficult, the strategic industrial areas in this country, mainly around the Great Lakes and along the Atlantic seaboard, are supplied with one of the finest networks of roads in the world. Excepting the Appalachian Range, the country is rather flat and ideal for motorized warfare. With a sufficient armored force, the United States could concentrate swiftly all the fire power of its army against the points where the enemy succeeded in debarking.

Not only is the armored force which the United States has planned too small, but the quality of its equipment is not overwhelming. It is true that our modern tanks with their rubber tracks have ground pressures below, and operate with less noise than either German or French tanks, but American tanks are armored with face-hardened, rolled armor plates which can be worked only flat in contrast to the French and German homogeneous cast armor which permits the use of rounded shapes. The French 22-ton "Somua" tank, the best that I have yet seen, has a beautiful functional design; it is low, thickly armored, and does not have a single angle on it, with the result that antitank shells tend to slip off its surfaces. United States tanks, on the contrary, are high, of outmoded design with many sharp angles instead of rounded curves. Furthermore, even though this country is manufacturing some medium tanks, it is concentrating on light 10-ton tanks. Actual experience under fire has shown that light tanks fare very badly; they cannot resist even light antitank weapons. The Germans really concentrated on 25-ton tanks mounting a field gun of about 3 inches which had a terrific armor-piercing power. I cannot help feeling that there is still room for improvement both as to the future size of the United States armed forces and as to the equipment which they shall use.

Americanism-Legislative Program of the Military Order of the Purple Heart

EXTENSION OF REMARKS

OF

HON. WILLIAM G. STRATTON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1941

LETTER FROM COL. FRANK HALEY AND RESOLUTION ADOPTED BY THE ORDER OF THE PURPLE HEART

Mr. STRATTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the Americanism-legislative program of the Military Order of the Purple Heart, together with a letter from Col. Frank Haley, the Americanism-legislative chairman, whose headquarters are at 815 Fifteenth Street NW., in the city of Washington:

THE MILITARY ORDER
OF THE PURPLE HEART,
Washington, D. C., April 21, 1941.

Hon. WILLIAM STRATTON,
House Office Building, Washington, D. C.

MY DEAR MR. STRATTON: Enclosed herewith is a copy of the Americanism-legislative program of the Military Order of the Purple Heart.

As you are aware, the Order of the Purple Heart was established by Gen. George Washington at Newburg, August 7, 1782. The War Department, on February 22, 1932, issued General Orders No. 3, which reestablished, out of respect to the memory and military achievements of General Washington, the Purple Heart—the badge of military merit of the Continental Army.

Some 70,000 Purple Heart Medals have been issued by the War Department. The Military Order of the Purple Heart is the only national organization composed exclusively of veterans wounded in action under conditions that entitle them to wear a wound chevron or who were awarded the meritorious citation certificate for valor, by the Commander in Chief of the A. E. F.

Your continued support of our program will be gratefully appreciated.

Sincerely yours,

THE MILITARY ORDER
OF THE PURPLE HEART,
FRANK HALEY,
Americanism-Legislative Chairman.

AMERICANISM LEGISLATIVE PROGRAM

Be it resolved, That the National Executive Committee of the Military Order of the Purple Heart, in executive session in the city of Washington, D. C., on this, the 28th day of February 1941, pursuant to a call by National Commander Capt. Herbert A. Church, do hereby unanimously adopt the following Patriot's Creed:

"I believe in the United States of America as a government of the people, by the people, for the people; whose just powers are derived from the consent of the governed; a democracy in a republic; a sovereign nation of many sovereign States; a perfect union, one and inseparable; established upon those principles of freedom, equality, justice, and humanity for which American patriots sacrificed their lives and fortunes.

"I therefore believe it is my duty to my country to love it; to support its Constitution; to obey its laws; to respect its flag; and to defend it against all enemies."

Whereas the reports of the special congressional committee on un-American activities reveal that fifth column activities, alien "isms," and insidious foreign propaganda threaten the destruction of our American democracy; and

Whereas radical activities, having the destruction of constitutional government and all of its privileges as their ultimate objective, are increasingly common throughout the Nation; and

Whereas radical agitators and their agents strive most diligently to corrupt the moral and social belief of the youth of our Nation; and

Whereas these activities are supervised, directed, and financed by subjects of other nations and find easy converts and enthusiastic supporters of violent revolutionary doctrines; and

Whereas the free democratic institutions—home, school, church, and state—cannot survive unless the American people are awakened to the imminent dangers threatening the very existence of these institutions; and

Whereas these institutions and free government can be preserved only by combating all subversive doctrines through legislation and education; and

Whereas a loyal and patriotic citizenship is necessary to the preservation of the Nation: Therefore be it

Resolved, That the following legislation and education programs be and hereby are adopted:

LEGISLATION

We hereby instruct our Americanism legislative chairman in Washington to promote and diligently work for the enactment of legislation to—

1. Outlaw every political organization which is shown to be under the control of a foreign government.

2. Compel deportation of aliens advocating any basic change in the form of government.

3. Make mandatory the deportation of spies and saboteurs.

4. Require all employees and officials of the Federal Government to be American citizens.

5. Withhold all Federal financial aid from any educational institution which permits members of its faculty to advocate to the student body communism, fascism, or nazism as a substitute for our own form of government.

6. Halt all immigration from foreign countries that refuse to accept the return of their nationals found under American laws to be deportable from this country.

7. Restrict distribution of totalitarian propaganda when that distribution involves any cost to the American taxpayers and/or when such propaganda emanates, and is shipped, from foreign sources.

8. Extend to at least 10 years from date of issuance that statutory period during which citizenship papers may be revoked.

9. Extend from 3 to 7 years the statute of limitations period during which persons can be prosecuted for traveling under false passports.

10. Make it mandatory for every instructor in our schools—elementary, high school, and college—to take an oath of alegiance to our flag and our Constitution, similar to the oath which our young citizens are required to take when they are inducted into the armed forces of the United States.

Be it further

Resolved, That Congress be urged to make sufficient appropriations for the carrying out of such activities.

EDUCATION

We hereby advocate the teaching of sound Americanism in the American schools and in the American homes and dedicate ourselves to the promotion of patriotic educational activities, patriotic youth activities, and patriotic community activities. It is our belief that the greatest need at this particular time is the enlightenment of our people to the menace of communism and other alien "isms." American citizens must be informed of the many ways in which communism and other alien movements bore from within. They must know of the many subsidiary and cooperating organizations and their activities.

It is vitally important for the patriots to keep in mind at all times the fact that the Military Order of the Purple Heart is not a law-enforcement body; that our mission is an educational one. It is to acquaint the public with the growth of subversive activities, to recommend and support a legal cure, to reveal to the public that communism and other alien "isms" are attempting to undermine our Government; that these foreign philosophies of government are reaching into the schools, the church, agriculture, and, in fact, into every phase of American life.

The first requirement of dictatorial government is the disruption of belief in God. The first principle of democracy must be the perpetuation of belief in God. We do not believe that Americans can serve their country well unless they bring into account most conscientiously, sincerely, and reverently the will and spirit of the one supreme Architect of the Universe. "In God we trust" must be our inner life.

Whereas the Military Order of the Purple Heart is vigorously opposed to the communistic and Nazi youth movements, especially as expressed in the summer camps for children and the existence of similar clubs in our schools and colleges; and

Whereas the relentless enemies of our American institutions are poisoning the mind of our youth, beckoning them with sporty uniforms, snappy salutes, exciting drills, and mysterious secret societies; and

Whereas if millions of our youth are to be won for the American way against the encroachments of foreign influence a strong pro-American education program must be carried on: Therefore be it

Resolved, That we recommend to the American schools, youth clubs, homes, and libraries the patriotic material distributed by the Military Order of the Purple Heart, Division of Americanism. This material consists of:

(1) Progress of Nations, in 12 volumes, containing a complete survey of the social, economic, religious, industrial, and political development of man from the dim dawn of civilization down to the present time; a publication designed to teach the obligation of citizenship through a better understanding of historical movements, and to instill into the minds of all liberty-loving Americans a full appreciation of the priceless heritage of democracy, in defense of which the members of the Military Order of the Purple Heart earned their honored decorations.

(2) Forward March, the photographic record of the World War and its aftermath, in two portfolios, a work designed to combat subversive doctrines and insidious foreign propaganda by exemplifying that evolution, rather than revolution, in government will insure the perpetuation of the free democracy which took root and flourished on American soil.

(3) The Modern University Plan of Personalized Education, consisting of 40 lectures on the humanities and social sciences, by Dr. Marcus W. Jernegan and Dr. Arthur P. Scott, department of history, University of Chicago. These lectures unfold step by step the story of man's struggle for seven centuries; of man's fight for the things we have always carried nearest our hearts; for democracy; for the right to worship God according to the dictates of conscience; for the right of those who submit to authority to have a voice in their government.

Through the universal use of these patriotic publications, lectures, and the Americanism documents we hope to stimulate a true appreciation of the priceless heritage of the American citizen so that the ideals and principles upon which this Nation is founded and for which our patriots fought and died shall not perish; be it further

Resolved, That we adopt as a national policy the following program, to be put into effect as soon as our finances will permit:

1. Nation-wide broadcasting of anti-communistic, anti-Nazi, and other antisubversive programs.

2. With the cooperation of the motion-picture industry, to arrange for the release of patriotic pictures for the use of schools and patriotic gatherings.

3. To arrange for patriotic speakers to present to educational institutions and public gatherings the true facts of the menace threatening America.

Be it further

Resolved, That we, who have been decorated by a grateful Government with the Medal of the Purple Heart, adopt the above program in fulfillment of the pledge contained in the preamble of the constitution of the Military Order of the Purple Heart:

"We, veterans of the wars of the United States, in order to perpetuate the principles of national patriotism and justice, do hereby ordain and establish the Military Order of the Purple Heart, an organization of those who saw active service in such wars and who, because of their valiant service, have been awarded the Order of the Purple Heart, founded by Gen. George Washington in 1782. We pledge ourselves to sponsor those principles of liberty, justice, and general welfare that have made the United States the great Nation that it is today. We further pledge ourselves to perpetuate those principles which are the very foundation of our national life."

Promulgated by order of the national commander, February 28, 1941.

Tennessee-Tombigbee Inland Waterway

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1941

STATEMENT OF HON. JOHN J. SPARKMAN, OF ALABAMA, BEFORE THE COMMITTEE ON RIVERS AND HARBORS, THURSDAY, APRIL 3, 1941

Mr. RANKIN of Mississippi. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I insert a very able and informative statement made by our distinguished colleague, the gentleman from Alabama, Hon. JOHN J. SPARKMAN, before the Committee on Rivers and Harbors on the subject of the Tennessee-Tombigbee Inland Waterway.

The matter referred to follows:

STATEMENT OF HON. JOHN J. SPARKMAN, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF ALABAMA

Mr. SPARKMAN. Mr. Chairman, I am not an expert on these matters. I know you have been hearing from some expert witnesses. But I believe I do understand this matter from a practical standpoint and from the interest of my people. I have a prepared statement.

The headwaters of the Tombigbee River rise within 20 miles of the navigable Tennessee River above Pickwick Dam, and the narrow divide separating the two watersheds is relatively low. The feasibility and desirability of connecting these two important basins so as to provide a navigation route to the Gulf of Mexico has long been recognized by leaders interested in the development of this Nation's natural waterways. From time to time, over a period of more than 100 years, the construction of such a waterway has been vigorously supported by various interests. In 1939 the culmination of this interest came with the recommendation of the Board of Engineers for Rivers and Harbors that the United States undertake the construction of a waterway to connect the Tennessee and Tombigbee Rivers.

The area tributary to the Tennessee and Tombigbee Rivers has a population of over 3,000,000 and is rich in natural resources. Cotton is the principal agricultural crop, but tobacco, grain, and vegetables are also produced in large volume. Forests of merchantable timber are extensive, and lumber is an important product. Deposits of coal, iron ore, limestone, phosphate rock, marble and other building stone, copper ore, zinc ore, clays, sand, and gravel are found in the Tennessee Valley and, except for coal and phosphate rock, in the Tombigbee Valley. The area is generally rural and agricultural, but urban and diversified development is being accelerated throughout the Tennessee Valley and an important steel-producing industry has grown up about Birmingham, which is served by the port of Birmingham, on the Warrior River. Many railroads and improved highways serve the area. In addition to the region immediately tributary to the Tennessee and Tombigbee Rivers, the Ohio Valley, the middle and upper Mississippi Valleys, and the Missouri River Valley would also be concerned, as the water route from the Ohio above Paducah to the Gulf of Mobile would be 200 miles less than via Cairo to New Orleans, while for points on the Mississippi above Cairo the corresponding reduction would be 108 miles. Water haul from points on the upper Tennessee River to the Gulf of Mexico would be shortened by some 650 miles.

Great as the estimated peacetime benefits are for a waterway connecting the Tennessee River directly with the Gulf, they are still greater when considered in connection with the defense program now under way. Emphasizing the favorable recommendation that has been made, I invite your attention to the fact that the area which would be served by such a waterway is located in the very heart of our "Citadel of national defense"—a zone abounding in industrial plants and great natural resources. Those authorities responsible for planning our defense have wisely located essential defense industries within this area and we should with equal wisdom authorize the Tennessee-Tombigbee waterway that would be so beneficial at this time and in the future.

It is fitting for me to enumerate some of the defense projects that would be served by this waterway, in order that you may visualize more clearly the importance of the improvement. One of the largest plants of the Aluminum Co. of America is located at Alcoa, Tenn., just off the Tennessee River a short distance southwest of Knoxville. The ore for this plant is received at Mobile after shipment from South America. At Mobile the ore is subjected to a primary reduction process and this partially reduced and deliquescent ore known as alumina is shipped in special cars to Alcoa where it is reduced to pig aluminum. The Alcoa plant has also a rolling mill where both aluminum sheet and structural aluminum shapes are produced. With the Tombigbee waterway in operation, the original ore could be shipped over a relatively short all-water route to Alcoa where both stages of reduction could be accomlished. This would provide a much safer location for the entire vital process of producing aluminum than exists at the present time, where one essential part of the process is on the relatively vulnerable Gulf coast. Alcoa is protected from the main directions of attack by mountain ranges.

The Reynolds Metals Co. is now building a large plant at Sheffield, Ala., for the production of aluminum, and they are also constructing there a rolling mill. The annual output of aluminum anticipated for this company, which will be ready for opening in the next few days, is 60,000,000 pounds of aluminum, and the rolling mill will roll the same quantity.

Mr. PITTENGER. Is this in your district?

Mr. SPARKMAN. Yes; this is in my district.

Mr. PITTENGER. What is the largest town?

Mr. SPARKMAN. The area is generally referred to as Muscle Shoals. In a radius of about 10 or 15 miles are the towns of Florence, Sheffield, Tusucumbia, and Muscle Shoals. There are really four towns in what they call the Muscle Shoals area.

Mr. PITTENGER. And that is in your district?

Mr. SPARKMAN. Yes. The Reynolds Metals Co. is getting its ore, and they have been shipping it in for some time already from South America. It is brought in through Mobile and from there in trainload lots to Sheffield.

Mr. PITTENGER. Is that iron ore?

Mr. SPARKMAN. No; it is bauxite. The Reynolds Co. is also buying bauxite in Henry County, Ala. I will indicate on this map, if I may, about where Henry County, Ala., is. It is right in the southeastern part of Alabama and lies on the Chattahoochee River, which runs into the Apalachicola, which in turn flows into the intracoastal waterway system. That ore is now being shipped by trainload lots to Muscle Shoals. A complaint has been lodged against the rail rates that are being charged on it. If the Tombigbee Canal should be built, it could come down the Chattahoochee and the Apalachicola and across to

Mobile, and by a water route up the Tombigbee. The plant is just east of Sheffield between Wilson Dam and Wheeler Dam. There are two T. V. A. dams right at the plant which is on the south side of the river. The terminus of this proposed canal back of Pickwick Dam is about 20 miles west of the location of this plant.

Mr. PITTENGER. Mr. Sparkman, I think last year, or the year before, there was testimony here that that water route would put all of these railroads out of business. Do you want to talk about that?

Mr. SPARKMAN. I am not an expert on that, but I believe the testimony shows that is not a fact; that experience in the past has shown, as a matter of fact, that it increases their business. I believe, if you will look at the statistics, you will see that the Southern Railroad has not suffered as a result of making the Tennessee River navigable.

Mr. SMITH. Is there any other county in Alabama where bauxite is found?

Mr. SPARKMAN. Not of this grade; it is found in several counties, but this ore in Henry County is of a better grade than in the others, and naturally they go after the better grade.

Mr. SMITH. Do you happen to know if this is the county from which bauxite is sent out to the State of Washington for the Aluminum Co. in Washington?

Mr. SPARKMAN. If you are getting any from Alabama, that is where it is from.

Mr. SMITH. Yes; they are getting some from Alabama.

Mr. SPARKMAN. If it is not from that particular county, it is from right in the immediate territory.

Mr. RANKIN. Let me say to the gentleman from Washington [Mr. SMITH] there is also a bauxite field in northeastern Mississippi.

Mr. SMITH. We are getting some from Mississippi.

Mr. RANKIN. Yes; you are getting some from Mississippi. It extends all the way from the Tennessee line down to about even with Macon, in Mississippi.

Mr. SPARKMAN. And, of course, there are extensive deposits in Arkansas.

Mr. SMITH. The same firm referred to by Mr. Sparkman, the Reynolds Metals Co., is constructing a new plant at Longview, Wash., which also happens to be in my district, and undoubtedly the bauxite they will use there will come from Alabama or Mississippi.

Mr. DONDERO. Is that ore similar to iron ore; is it mined?

Mr. SPARKMAN. No; bauxite is more of a clay. As a matter of fact, all clays contain aluminum, or contain a substance from which aluminum is made. It is a matter of reducing it. The thing we refer to as "bauxite" is a clay-like product containing a high degree of the aluminum product and, therefore, is more easily processed.

Mr. DONDERO. Is it processed the same way they process ceramic clay?

Mr. SPARKMAN. I do not know; I am not an expert on it. As a matter of fact, the entire Tennessee Valley contains deposits of clays with some aluminum in them. In addition to that, the T. V. A. has recently developed a process of reducing ordinary clays into aluminum. The process has not been perfected and they are still studying it; but, if it is perfected, we can go out anywhere and dig out ordinary clays and make aluminum out of them. They are now making a ton a day of alumina at Muscle Shoals out of ordinary clays in the Tennessee Valley.

Mr. SMITH. Do you happen to know how many pounds are required to make a ton of aluminum out of ordinary clay that is being used in its manufacture now?

Mr. SPARKMAN. I think 10,000 pounds.

Mr. SMITH. I think it is 8,000.

Mr. SPARKMAN. I know it is somewhere in that neighborhood, but I am not sure.

Mr. PITTENGER. To get back to the transportation angle: Is it your theory that the development of the Tennessee-Tombigbee Canal we have been hearing about in the testimony here will increase the industrial development and increase tonnage, not only for the railroads, but also for the water?

Mr. SPARKMAN. I think the experience in the past has been to that effect. I think our past experience has shown that is the logical result.

Now, in this same area, the Muscle Shoals area, the T. V. A., at the request of the War Department, is now enlarging, expanding, and rehabilitating nitrate plant No. 2 for the purpose of manufacturing ammonium nitrate, which is a basic material used in explosives, I believe, sometimes referred to as amatol. That plant is being reconditioned and remodeled to turn out synthetic ammonia for the use of the Government in the manufacture of explosives. In addition to that, the Electro Metallurgical Co. in the last few years has built a completely new plant at Sheffield. They originally started with one electric furnace; a few weeks ago they broke in a second electric furnace, and now they are starting on a program of building two more electric furnaces—in other words, quadrupling their production over what it was a few months ago. They are making ferro-alloys. The principal product they make now is ferrosilicon, which, I believe, is used in the manufacture of steel. I am not sure of that, but it is used in our manufacturing processes.

Du Pont is building a $48,000,000 powder and bag-loading plant at Childersburg, Ala., on the Coosa River, and its product could be transported by all-water routes to the interior. The Landsdown Steel & Iron Co. is building a shell-forging plant at Gadsden, Ala., which is 25 miles from Guntersville, a Tennessee River port. The Tombigbee waterway would provide a short all-water route for shells and matériel to Mobile, a port that would become one of embarkation should trouble develop at the Panama Canal or in the Caribbean area. In addition to that, Birmingham is making shell casings and making other defense items using steel and steel products.

Procter & Gamble are building a $14,000,000 shell-loading plant at Milan, Tenn., which is about midway between the Tennessee and Mississippi Rivers in west-central Tennessee. Both the materials to be used therein and the finished products of this plant could use the Tombigbee route to advantage. The Solvay Process Co. is building a $11,000,000 anhydrous ammonia plant at Henderson, Ky., which is on the Ohio River. The du Pont Co. is building a $74,000,000 powder plant at Charlestown, Ind., and a $3,000,000 bag-loading plant is under construction by the Goodyear Engineering Corporation at the same city.

Wright Aeronautical Corporation is building a $37,000,000 plant at Cincinnati, Ohio, which will produce engines, and the Tombigbee Waterway provides a short and essentially all-water route to Maxwell Field, Ala., Pensacola Naval Air Base and many other Army and Navy air fields completed or under construction in the southeast. The United States engineers of the Cincinnati district have just finished a searchlight-mirror plant which is to operate at Cincinnati and all-water shipments in connection with this activity could be made to and from Mobile for ocean shipment to Panama and the New Atlantic bases.

The Hercules Powder Co. is building a $36,000,000 plant at Radford, Va., which could ship via either the Ohio or Tennessee system after a short rail or truck haul and the same is true for their $9,000,000 bag-loading plant at Pulaski, Va. The Carnegie-Illinois Co. is building a $5,000,000 ordnance plant at South Charleston, W. Va., which could use the Kanawha River and enter the same navigation system.

The Nashville Bridge Co., of Nashville, Tenn., and the Ingalls Shipbuilding Corporation, of Decatur, Ala., which is likewise in my district, on the Tennessee River, as well as other inland shipyards on the Ohio River system, are participating in the Navy program of small-ship construction. Also a naval ordnance plant is in operation at Louisville, Ky. The Tombigbee waterway would constitute another means of egress for these small craft and would make additional repair yards for small craft readily available.

Mr. PITTENGER. What is the distance they would have to travel there?

Mr. SPARKMAN. From Decatur, Ala., the distance to Mobile would be shortened by probably 800 or 900 miles, or approximately the rail distance from Chicago to Washington, D. C.; to the Gulf, it would be shortened by about 650 miles.

Mr. PITTENGER. It is located where?

Mr. SPARKMAN. On the Tennessee River, at Decatur, Ala.

Mr. PITTENGER. At Decatur?

Mr. SPARKMAN. That is right.

In addition to the industrial plants enumerated, which concern only the more important new defense projects, there are the established industries of this area, whose activities are increased by the defense emergency and whose transportation requirements are greater than usual. The Tennessee-Tombigbee waterway would lessen the strain on any single form of transportation, and it would facilitate the movement of bulk supplies to the many cantonments, troop receiving centers, and military airfields that are being located in this general area.

There is a large and growing tonnage of petroleum products on the Tennessee River, shipment in part being made from the Illinois oil fields. At present few if any pipelines exist in this area. The Tombigbee waterway would greatly extend the area served by the Illinois oil fields and would relieve railroads of an increasing burden in the area most heavily occupied by our new Army. Further relief to existing transportation facilities would result from movement of grain via the Tombigbee from the Missouri River and the upper Mississippi grain ports. An increasing number of automobiles are being shipped by barge from Ohio River points to Guntersville, Ala., for distribution from there to the South and East. The same procedure could be followed with Army and Navy motor transportation destined for the southeast cantonments and troop centers to a greater and much more favorable extent if the Tombigbee waterway were to be constructed.

The Tombigbee waterway will provide a slack-water route for much of the present upstream tonnage on the Mississippi River, where I understand cut-offs delay upstream navigation at times by making it necessary to divide tows into two or more parts, which must be pushed individually through a reach having excessive slopes and water velocities. After the construction of the Tombigbee waterways, tows traveling from the Ohio and upper Mississippi Rivers downstream to New Orleans by way of Mississippi River will be able to carry their return loads by way of the Tombigbee with savings both in time and cost. Similarly the proposed waterway would provide an alternate all-water route during extreme high- or low-water periods on the Mississippi River.

The Board of Engineers recommends connecting the Tennessee and Tombigbee Rivers by way of the East Fork of the Tombigbee River, Mackeys Creek, and Yellow Creek,

provide a channel of not less than 9 feet in depth, a minimum bottom width of 170 feet in river and canal sections and 115 feet in the divide cut, and with locks approximately 75 by 450 feet inside dimensions. The plan of improvement consists of a summit cut to carry the pool of Pickwick Dam through the divide generally following the course of Yellow Creek and Mackeys Creek; a lateral canal skirting the east edge of the flood plain to bypass numerous sharp bends in East Fork and the upper portion of the Tombigbee, and canalization of approximately 180 miles of the Tombigbee River above Demopolis, Ala., by construction of eight dams.

Mr. DONDERO. Do you mean to say the canal section is 180 miles long?

Mr. SPARKMAN. Oh, no; the canalization of the river, widening and channeling the river, is 180 miles.

The CHAIRMAN. That is from Demopolis up, is it not?

Mr. SPARKMAN. That is above Demopolis, Ala., yes. From Demopolis down, it is all improved as part of the Warrior system.

Mr. RANKIN. By the way, I will say to the gentleman from Alabama [Mr. SPARKMAN] that formerly this river was navigable and boats plied all the way up to the confluence of Brown and Mackeys Creeks, which is just about 25 or 30 miles from the Tennessee River.

Mr. DONDERO. Why has that condition changed?

Mr. RANKIN. As on a great many other rivers, they let a lot of sawmills go in there and float logs on that river and unloose a great many of them and blocked it to where they could not get through. That is one thing. Another thing is that the railroad competition has eliminated some of it. I believe there is still a 7-foot channel up to Columbus. Besides there was no connection with the Tennessee River.

The CHAIRMAN. That has been the case all over the United States—elimination by railroad competition.

Mr. RANKIN. Yes.

Mr. SPARKMAN. To maintain the summit pool, a dam would be built across East Fork at the Narrows and the bottom of the cut through the divide would be carried to elevation 396 to assure a minimum depth of 12 feet with Pickwick Pool at its minimum controlled elevation. For the lateral canal section, 10 locks would be required. Water for lockages would be supplied by gravity from the pool of Pickwick Dam, and spillways, drainage ditches, and levees would be provided as required to take care of local drainage and protect the canal.

This waterway would be a valuable addition to the transportation facilities of our citadel of national defense. By the way, in this connection, I want to remind you gentlemen that during the World War one of the greatest problems we had to confront was our transportation problem.

Mr. DONDERO. In spite of the fact that the Government took over the railroads?

Mr. SPARKMAN. As a matter of fact, the Government, as I understand it, took over the railroads because it was felt necessary to do so in order to organize the system better and correlate the efforts.

Mr. RANKIN. And to facilitate transportation.

Mr. SPARKMAN. Yes.

The CHAIRMAN. They had about 140,000 carloads tied up between here and New York that they could not get to shipside because of the congestion.

Mr. SPARKMAN. Yes. With the largest concentration of troops ever known in this area in peacetime and with normal requirements mounting day by day, the railroads and highways are certain to become overtaxed. Troops, convoys, supplies, and new motor transportation being shipped in for military and naval use must be given the right-of-way, but it is essential that the normal activities of the area be continued with as little interruption and confusion as possible. The Tennessee-Tombigbee Waterway would relieve the railroads and highways of bulk freight and, in addition, would fill the need for expansion of transportation facilities for defense industries and defense projects.

Now, Mr. Chairman, there are some other features I would like to discuss, but I do not want to run over your time.

Mr. RANKIN. Mr. Sparkman, there are two items that you overlooked. One of them is the fact that in that area, especially northeastern Mississippi and southern Tennessee, a large number of milk condensers and cheese plants have been built. They are shipping more condensed milk and cheese than any other area of its size in the South. Another one is the fact that there are millions of tons of asphalt, what they call Kentucky rock asphalt, right there within a few miles of this canal which needs this outlet.

Mr. PITTENGER. And without this improvement, none of that development can take place?

Mr. RANKIN. That material could not be shipped out by rail, because the cost would be too great. I am talking now about Kentucky asphalt.

Mr. SPARKMAN. There are a good many things that are subject to water transportation on that system that I did not discuss. For instance, there are immense deposits of limestone and rock asphalt. In my own district, there is one of the largest rock asphalt deposits to be found in the world and on the Tennessee side are large deposits of phosphate rock.

Mr. PITTENGER. I will say none of us wants to develop one form of transportation so as to destroy another, and I think from now on the witnesses ought to emphasize that feature of the situation. There was testimony last year, or the year before, that the railroads serve that territory amply and any development here would take away from them and put them out of business. Now, I do not want to put them out of business; on the other hand, I do not want their shortsighted executives to stand in the way of industrial development that can only be possible with water transportation.

Mr. SPARKMAN. I certainly agree with the gentleman from Minnesota on that statement. I would not argue for anything that would put the railroads out of existence, because I think the railroads are essential for the welfare of the country.

Mr. PITTENGER. I agree with you.

Mr. DONDERO. You have to have them in your area, just as well as in other areas.

Mr. SPARKMAN. Certainly. I think we would be lost without them. But there are certainly certain types of freight that can move more efficiently and more—not expeditiously, but more economically on water than they can on railroads. There are some types of freight that you just simply cannot haul on the railroads.

Mr. DONDERO. That would include grain, copper, iron ore, on the Great Lakes and St. Lawrence seaway.

Mr. SPARKMAN. I certainly am glad to hear the gentleman's (Mr. DONDERO's) statement in that regard. I am expecting to hear a great deal of argument from him and others in favor of that seaway.

Mr. PITTENGER. It includes all heavy products.

Mr. SPARKMAN. That is true.

Mr. ELLIS. And right on that same point, and in line with what you say, Mr. PITTENGER, is it not true, Mr. Sparkman, that today you are developing bauxite and having it brought in from British and Dutch Guiana into Alabama for the manufacture of aluminum?

Mr. SPARKMAN. I have testified about that.

Mr. ELLIS. And they do that only because to bring it over from Arkansas to Alabama would be more expensive?

Mr. RANKIN. That traffic will all go by water on the Tennessee, Mississippi, and Ohio, whether this canal is constructed or not; but, going down through this canal, would bring a sufficient saving to justify its construction, would it not?

Mr. SPARKMAN. I certainly think so. And I would like to have an opportunity at some time to discuss that particular phase of it.

I want to say this, that the only way we can judge what would happen is by what has happened, and I would like to discuss something about the navigation increases we have seen on the Tennessee River, even in its uncompleted present condition.

The CHAIRMAN. Mr. SPARKMAN, if you would like, you can add those features to your statement.

Mr. RANKIN. Mr. Chairman, the gentleman from Alabama [Mr. SPARKMAN] has made a splendid statement, for which we are all grateful.

The CHAIRMAN. We will have to adjourn now.

(The committee thereupon adjourned, subject to the call of the Chair.)

The Vinson Bill

EXTENSION OF REMARKS

OF

HON. WILLIAM T. SCHULTE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

EDITORIALS FROM WASHINGTON NEWSPAPERS

Mr. SCHULTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials:

THE VINSON BILL

It is a welcome sign of our national common sense that, despite the provocation of the strike situation, the opposition to the Vinson bill has assumed formidable proportions. Organized labor has taken a united stand against the measure, and many Congressmen are skeptical of its provisions. Although Secretary Knox endorsed its general principle, the House Naval Affairs Committee failed to adjust the bill to the voluntary basis suggested by Mr. Knox and many others. As it stands, therefore, it invites opposition from thoughtful students of the strike problem.

Representative Vinson's bill is patterned after the Railway Labor Act. Yet it departs from the theory of that act in such vital particulars as to make the ultimate effect of the two incomparable. Each provides for what is popularly known as a cooling-off period. Each prescribes various steps that disputing employers and unions should take before resorting to dismissals or changes in working conditions on the one hand or strikes on the other. But the Railway Labor Act gains its force solely from the pressure that may be brought to bear upon the disputing parties by the National Mediation Board and public opinion. The Vinson bill resorts to criminal penalties.

Obviously this is a critical defect. Notice of intent to strike or to change conditions of work which might result in slowing down or stopping defense production would be required. It would be unlawful to strike without giving such notice or without giving Government conciliators and mediators a chance to settle the dispute. And violators of this provision could be imprisoned or fined not more than $5,000. The obligation placed upon employers and employees to settle their differences around the conference table is constructive. But the moral effect of establishing such an obligation is undercut when a penalty is attached to any misstep from the prescribed path of amicable collective bargaining. The spirit of compromise cannot be encouraged by fines and prison terms.

Fortunately, no penalty is attached to that section which outlines a policy of keeping open shops open and closed shops closed during the national emergency. The question here is whether Congress should attempt to write such a delicate policy into legal form. On the ground that no group should take advantage of the emergency to press demands that might curtail defense production, the closed shop issue may well be laid aside for the present. Still there is a question as to whether the national policy on this subject should be left more flexible than a statute can ever be.

The Vinson bill is in need of a careful pruning. It doubtless could be revised into a sound and reasonable approach to the problem of strikes in defense industries. As it stands, however, it is too drastic for enactment. If the House proceeds with consideration of this bill without careful modification, there is danger that the cause which it is intended to serve may suffer an unnecessary set-back.

HOW TO PROTECT LABOR

It was not wise for A. F. of L. President William Green to say that organized labor faces "vicious" legislation by Congress "because of the C. I. O.'s unfriendly attitude toward national defense."

Both pot and kettle are well smudged with blame for the present feeling of Congress. If C. I. O. unions have called more and bigger strikes in defense industries, A. F. of L. unions have outraged public opinion by jurisdictional work stoppages and extortionate "initiation fees."

Congress, in our opinion, does not desire to be "vicious" toward organized labor—certainly not toward the great patriotic majority of organized labor's membership. But if Congress has come to feel that drastic legislation is necessary to protect the defense program from unwise labor leadership, that is hardly remarkable.

How could it be otherwise, when those who head the factions of labor continue to wage their own civil war at the expense of true national unity, and hurl at each other uglier charges than most outside critics would care to make?

We hope Congress will at least greatly modify the pending Vinson bill, approved by a majority of the House Naval Affairs Committee. This measure has not received sufficient consideration in committee. Those who object to its provisions have not had chance enough to be heard. It goes much too far in several directions—especially in imposing fines and prison terms for strikes or lock-outs during the "cooling off" periods it proposes. If it were practicable, it would be foolishly wrong to attempt to jail men for refusing to work in private employment at any time.

But we fear Congress won't be much impressed by the fact that Mr. Green and C. I. O. President Philip Murray for once agree, and that both oppose the Vinson bill.

Public opinion is the force that can protect organized labor from unsound legislation, and it will work to that end—if, but only if, labor displays a real sense of its responsibility and a proper regard for public rights. And there are encouraging signs.

The willingness of unions and managements to settle their quarrels, once they are referred to the President's Defense Mediation Board, is one such sign. Another is the agreement by Pacific coast shipbuilders and workmen to adjust all disputes by arbitration, with neither strikes nor lockouts during the defense emergency. It may well become, as President Roosevelt hopes, an example to the rest of the Nation. Still another—especially if it forecasts similar action by other C. I. O. affiliates—is the expulsion of two officers of a Baltimore shipbuilders union on charges of communistic activity.

Every step by labor toward self-discipline and genuine cooperation in the defense program will help to defeat extreme legislative curbs on labor's rights.

Extra United States Judge for Northern Ohio

EXTENSION OF REMARKS

OF

HON. WILLIAM R. THOM

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

Mr. THOM. Mr. Speaker, I am today supporting the Senate bill for the creation of another Federal judgeship for the northern district of Ohio.

I come from the city of Canton, which is one of the seven cities in the northern judicial district of Ohio, having a population of more than 50,000 people. The entire district embracing the northern half of Ohio contains 40 counties with a population of about 4,000,000 people. The district now has 3 judges, 1 of whom sits at Toledo, and 2 at Cleveland. The present judge at Toledo is a former distinguished colleague of ours, the Honorable Frank Kloeb, who has written me strongly endorsing the addition of a judge to the Federal courts of the district.

I believe a case for this bill is made, as the lawyers say, by the statistics of cases filed. In 1923 the cases filed per judge was 955. In 1940 it was 1,642. In both years 3 judges were on duty. This district is particularly noted for the number of bankruptcy cases that come into the Federal court, due to the heavy business and manufacturing interests located in the territory. Also, for the same reason, the court is confronted with much litigation involving patents.

May I make the observation that after all, our courts will gain respect not by the number of cases they dispose of, but by the quality of their decisions. Where there is a heavy docket, we ought to be mindful that, after all, we want care and competency exercised in the disposal of litigation, and this demands that the judges shall have adequate time, and not be under pressures because of the volume of litigation.

In support of the need for an extra judge, may I quote Judge Robert N. Wilkin, one of the three judges now provided for the district:

There is enough criminal work in this court to keep one judge busy all the time.

The admiralty and patent work would keep another judge busy continuously.

The civil business, consisting of jury and nonjury cases, is more than one judge can attend to.

There is, in fact, a real need for two more judges in the northern district, instead of one as asked in the pending bill.

Under date of February 24, 1941, Judge Elmer D. Davies, United States district judge, of Nashville, Tenn., who is temporarily assigned for trial work in the United States District Court at Cleveland, Ohio, wrote Senator BURTON, of Ohio, as follows:

I wish to state that in all sincerity and frankness, it is my unqualified opinion that there is an urgent need for the appointment of an additional judge for the northern district of Ohio.

It is my understanding that by reason of the high capability of these two courts and the district attorney, this district has been selected quite frequently by the Attorney General for the purpose of instituting prosecutions in cases of first impression under newly enacted statutes and others involving prosecutions of intricate and comprehensive schemes to defraud.

For instance, during the 5 weeks I was privileged to hold court there, I succeeded in disposing of only approximately 35 cases, more than 3 weeks of my time being occupied by the trial of an important mail-fraud case involving two defendants who were operating from Denver, Colo. It is my understanding that Judge Darr, who is now sitting in Cleveland by designation, has been engaged for the past 2 weeks in the trial of a similarly large mail-fraud case. It is also my understanding that there is on the docket a case under the Sherman Act, involving a large number of members of the plumbing industry, located in different parts of the country, which will require several months for trial.

Parity for Whom?

EXTENSION OF REMARKS

OF

HON. JOHN Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

Mr. ANDERSON of California. Mr. Speaker, the 1942 agricultural appropriation bill has now gone to conference. Since this measure passed the House on March 6, several changes have been made in it, and at least two of them are deserving of special consideration at this time. One of these changes is an increase in the amount of funds appropriated for parity payments and the other is the restoration of $35,000,000 for the removal of surplus crops.

As the bill passed the House it contained an amount of $212,000,000 for parity payments. This is the same amount as was provided for parity during the present fiscal year. The Senate has seen fit to add another $238,000,000 for parity payments, which makes four hundred and fifty millions in all for this specific purpose.

Now, according to the Bureau of Agricultural Economics, the percentage of parity achieved by the basic commodities for the last 2 years is as follows:

	1939	1940
Cotton	55.0	60.6
Corn	58.4	71.8
Wheat	56.6	65.3
Rice	66.7	69.1
Tobacco	87.7	96.2

As I pointed out to the House on March 3, the basic commodities represent approximately 21 percent of the annual national income from agriculture in the United States. Under the present farm program the producers of these commodities are presently receiving approximately two-thirds of all farm-benefit payments. This fact is best illustrated by the following table, which was compiled from information furnished by the budget section of the A. A. A.:

	Surplus Marketing Administration under sec. 32, expenditures—fiscal year 1940	1939 agricultural conservation program	1939 parity program Agricultural Adjustment Administration	Total
Cotton and byproducts thereof	$55,108,186	$118,817,000	$96,195,000	$270,120,186
Wheat and wheat flour	32,179,539	83,941,000	53,614,000	169,734,539
Corn and byproducts thereof	7,711,615	89,791,000	60,131,000	157,633,615
Rice	3,071,410	1,536,000	1,801,000	6,408,410
Tobacco		6,949,000		6,949,000
Total	98,070,750	301,034,000	211,741,000	610,845,750

Total expenditures Surplus Marketing Administration	$193,803,423
Total 1939 agricultural conservation program	497,311,000
Total 1939 parity program	211,741,000
Total	902,855,423

How long is Congress going to continue this policy of appropriating the lion's share of Federal benefit payments to the so-called basic commodities and the crumbs to the rest? As the representative of a district that is devoted largely to the production of agricultural crops, I would be the last person in the world to argue against parity for any farmer. However, it appears to me that the only fair method to follow is one that provides equal benefits for all. Let us proceed on the basis of full recognition for the American farmer, not just for particular farmers who are producing certain crops.

Speaking of parity calls attention to a table placed in the hearings before the subcommittee of the Committee on Appropriations of the Senate by Milo Perkins, Administrator of the Surplus Marketing Administration:

During the calendar year 1939 approximately 70 percent of the farmers' total cash income from the sales of farm commodities came from the sales of milk and dairy products, poultry and eggs, meat animals, and fruits, vegetables, and nuts. Except in the case of beef, veal, and lambs, prices received by farmers for their 1940–41 production of the numerous commodities included above have been substantially below parity. The percentages of parity prices which farmers are receiving for these various commodities are given in the following table:

Commodity:	Percent of parity
California oranges [1]	56.8
Florida oranges [1]	44.4
Florida grapefruit [1]	39.8
Texas grapefruit [1]	31.0
California lemons [1]	65.1
California Bartlett pears [1]	53.8
California winter pears [1]	18.8
California plums [1]	90.9
United States apples [1]	61.0
Northwest apples [1]	52.6
Walnuts [1]	67.6
Raisins [1]	65.9
Commodity—Continued	Percent of parity
California dried prunes [2]	57.9
United States onions [1]	86.5
United States cabbage (for market) [1]	79.2
United States tomatoes (for market) [1]	82.1
United States fresh peas (for market) [1]	70.2
Peanuts [2]	55.6
Potatoes [2]	62.3
United States dry edible beans [2]	62.0
Seedling pecans [2]	58.0
Improved pecans [2]	45.0
United States peaches [2]	63.0
United States pears [2]	64.0
Eggs [2]	68.0
Butter [3]	78.0
Cheese [3]	78.0
Evaporated milk [3]	72.0
Hogs [2]	78.0
Beef cattle [2]	125.0
Veal calves [2]	117.0
Lambs [2]	125.0

[1] For the season 1940–41, as of Mar. 10, 1941.

[2] As of Feb. 15, 1941, or most recent quotation available.

[3] For the 10-month period May 1940 to February 1941.

Mr. Speaker, from these figures it is apparent that many farm crops, other than the basic crops, are bringing prices that are substantially below parity. Here is where the Surplus Marketing Administration comes into the picture. As pointed out in the second table listed above, all of the parity payments go to the producers of five crops. These same crops receive about three-fifths of the conservation payments, and in the fiscal year 1940 these same five crops received over half of all the funds appropriated for the surplus-removal program.

I maintain, and I think I am fully justified in so doing, that more of the funds allocated to the S. M. A. should be devoted to the nonbasic crops. Last year Congress appropriated approximately $135,000,000 to the Surplus Marketing Administration in addition to the revenue funds that are provided under section 32 of the A. A. A. This year the House approved an appropriation of only $100,000,000, in addition to the revenue funds, and the Senate has seen fit to increase this amount by $35,000,000. No matter what the conferees decide to do to other provisions of the agricultural appropriation bill, that $35,000,000 should most certainly stay in; in fact, it should be increased. The Surplus Marketing Administration affords the only real relief to the producers of the nonbasic commodities.

Harvard Acts on Race Issue

EXTENSION OF REMARKS

OF

HON. ROBERT W. KEAN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

ARTICLE FROM NEWARK NEWS AND A LETTER OF HON. ROBERT W. KEAN, OF NEW JERSEY, TO THE SUPERINTENDENT OF THE UNITED STATES NAVAL ACADEMY

Mr. KEAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Newark (N. J.) News for April 20 and a letter written by me to the Superintendent of the United States Naval Academy upon the subject referred to:

[From the Newark News of April 20, 1941]

HARVARD ACTS ON RACE ISSUE—TO ALLOW NO DISCRIMINATION BY OPPONENTS

CAMBRIDGE, MASS.—Harvard's director of athletics, William J. Bingham, was ordered by the Harvard Corporation today to advise all athletic opponents the university would countenance no racial discrimination. Bingham had asked the corporation for a statement of policy after the barring of a Negro lacrosse player, Lucien A. Alexis, Jr., of New Orleans, from the Harvard team in a recent game with the Naval Academy brought protests from several quarters.

In a letter to Bingham, the corporation expressed the opinion "in the future the athletic committee should make it plain to other institutions with whom we are competing that it is Harvard's principle there be no racial discrimination among our students."

ALTERNATIVE OF FORFEIT

After the game with the Naval Academy, which Harvard lost, it was stated Harvard first had the alternative of benching Alexis or accepting a forfeit from Navy. Rear Admiral Russell Willson, Superintendent of the academy, said his institution drew no racial lines in sports, but admitted he had sent a telegram to Bingham saying Navy should have been advised about the situation in advance of the game.

However, Alexis did not play, and Bingham later explained, "We were guests of the Naval Academy and had no choice in the matter. Had the game been played at Cambridge I would have insisted he be allowed to participate."

Navy is scheduled to play Harvard on the football field this fall, and Harvard has a Negro player on the squad, Ray Guild, of Cambridge.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., April 23, 1941.

Admiral RUSSELL WILLSON,
Superintendent, United States Naval Academy, Annapolis, Md.

MY DEAR ADMIRAL WILLSON: I note in the enclosed article, which appeared in the Newark Evening News of April 20, that the lacrosse team of the Naval Academy refused to take the field against Harvard when one of the members of the Harvard team was a Negro. I cannot understand such an un-American attitude by the authorities of the Academy.

At a time when we are conscripting into the armed forces of the United States all boys of military age, without regard to creed or color; when many Negro young men are volunteering their services, to die if necessary, in defense of their country; when the Negro people are called upon to do their part in meeting the tax burden which now confronts us, including the maintenance and support of the Naval Academy, the action of the midshipmen and the authorities of the Naval Academy in raising the question of color comes with ill grace and is subject to the severest criticism.

When I was attending Harvard there were a number of outstanding Negro athletes there, and I had the privilege of playing on a team with a Negro boy. At no time was there any friction among teammates or the student body, and I can conceive of no justification for the action displayed by the Naval Academy in this instance.

I most strongly protest against it, and respectfully request a full explanation.

Very truly yours,

ROBERT W. KEAN.

Military Service Recommended for War Advocates

EXTENSION OF REMARKS
OF
HON. WILLIAM G. STRATTON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

LETTER PUBLISHED IN MORRIS (ILL.) DAILY HERALD

Mr. STRATTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which was published in the Morris (Ill.) Daily Herald of April 16, 1941:

[From the Morris (Ill.) Daily Herald of Wednesday, April 16, 1941]

VOICE OF PEOPLE

DEAR EDITOR: Why is it often the case that the ones who advocate our entrance into total war have ample excuses to protect their own hide in the event that ghastly time comes? These individuals represent mainly two classes—the old women of both sexes and the victims of sour stomachs, weak eyes, low blood pressure, and anything else which can be a claim for deferment.

The great tragedy of war is that it wounds, maims, and kills, the healthy, youthful, and red-blooded specimens of humanity, while the weak saplings are left behind to become a more serious charge upon society.

I have no objection to the system of deferment under the draft law, nor do I make any criticism of the way it has been administered, but it seems to me that in consideration of the 85 percent of the American people who oppose the final leap into war the present law should be amended to the effect that anyone who advocates our total participation as a fighting belligerent should automatically be subject to military service regardless of age or physical condition. Such a policy would be fair and just and without a doubt would silence them who enjoy fighting wars with their mouth only.

A VETERAN.

Eighteen Reasons Why the St. Lawrence Seaway Should Be Defeated

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

Mr. VAN ZANDT. Mr. Speaker, national defense is now the rallying cry. Every citizen has adopted the policy of preparedness and fully supports all Government undertakings to that end.

The proponents of the seaway project, defeated in the past when the project has stood upon its own merits, have now placed it in the column as a necessity to our national defense, endeavoring to secure its approval. It is recognized that to so place this project as a necessity to our national defense is a breach of faith of the American people.

It is fully realized that our efforts toward preparedness must be fully realized within the next year and that immediate aid to Britain is of foremost importance. The St. Lawrence project cannot be completed until 1946. Therefore its use as a defense project cannot possibly be considered.

The proponents advance the argument that the power development is most vital to our defense effort. Yet as previously stated, only New York benefits from this phase of the project, and the action of the Defense Commission has been to place factories manufacturing articles necessary to military preparedness at widely scattered points west of the Appalachian Mountains. Such has been done to lessen their vulnerability against possible bombing. Therefore there is no justification for the project from the standpoint of time or power development as aiding our national-defense effort.

The project will most certainly hinder our efforts rather than accelerate them. Important adverse effects to our national defense are as follows:

First. It will slow up our aid to England and our own defense requirements by directing to the project enormous quantities of steel, lumber, cement, explosives, and other material now so urgently needed for the production of ships, airplanes, guns, tanks, and other "musts" of military defense. Newspaper reports on January 7, 1940, said that steel industry had already reached 97 percent of its capacity.

Second. It will slow up our aid to England and our own defense armaments by creating shortages of the materials which are necessary for defense housing, and the necessary expansion of factories and buildings now required for production of arms and ammunition, and other implements of war.

Third. It will slow up our aid to England and our own defense armaments by diverting manpower so urgently needed for essential industry at this time.

Fourth. In the event of a war invasion it will be difficult to defend.

Fifth. Under war conditions material could not be handled as quickly and safely through the seaway into the open Atlantic and down the Atlantic coast to our own Atlantic Gulf ports and west coast as they could by our present inland methods of transportation, for the following reasons:

a. Lack of protection from unfriendly powers.

b. Time required for movement.

c. Necessity for light-draft ships which we do not have.

d. Excess equipment necessary for this special service.

e. Increased manpower.

Sixth. Only 5 percent of American ships of 2,000 tons or over could be operated through the seaway.

Seventh. Only about 30 percent of foreign ships of 2,000 tons or over could use the seaway.

Eighth. Only the smaller ships of our Navy could use the seaway.

Ninth. In this time of strain upon our national finances it will require millions of dollars to prepare the lake ports for this new form of navigation service.

Tenth. Weather conditions will permit the use of the seaway for only 8 months of the year.

Eleventh. Out of the moneys spent of our tax dollars only 6 percent would be for the benefit of American workmen and shipping, and 94 percent for foreign workmen and shipping.

Twelfth. It will reduce employment in many of the major industries of the United States.

Thirteenth. It will tend to reduce the earnings of American marine workmen millions of dollars each year.

Fourteenth. It will increase our cost of living.

Fifteenth. It will increase our taxes by millions of dollars each year.

Sixteenth. It will give a subsidy to foreign workmen, shipping, and factories at the expense of the American workmen and industries.

Seventeenth. It will place American workmen in competition with cheap foreign labor.

Eighteenth. It will place an intolerable burden on American workmen and industry for all time to come with no hope or benefit.

National defense is not served at this time by uneconomical practices. The expenditure of money and the use of labor and materials in the construction of

water power and navigation facilities in the St. Lawrence River which cannot be available for several years is a detriment to the national-defense program.

Dairy Leaders Call Emergency Meeting

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

NEWS RELEASE OF THE NATIONAL COOPERATIVE MILK PRODUCERS FEDERATION

Mr. KNUTSON. Mr. Speaker, under leave to extend my remarks, I include a news release from the National Cooperative Milk Producers Federation entitled "Dairy Leaders Call Emergency Meeting," which sets forth the manner in which the American dairyman is being discriminated against. I commend its reading to each Member of the House:

WASHINGTON, D. C., April 21.—Closing a 3-day meeting the executive committee of the National Cooperative Milk Producers' Federation today called an emergency meeting of dairy farmers at Chicago, Ill., May 1 and 2 to consider the effect of the national-defense program upon dairy farmers and to propose steps for immediate action. In connection with the call, the committee released the following public statement:

"To Dairy Farmers of the United States:

"We face a crisis. Eight years of economic depression, followed by vast internal changes incident to the national-defense effort, have placed dairy farmers in a serious plight. Our farms are being drained of labor into industrial plants and the Military Establishment. Industrial prices are spiraling upward to our disadvantage. City wages are skyrocketing and forcing us to pay farm labor more than our price returns can sustain. We are being injured by the slow-down of manufacturing operations incident to strikes accompanied by violence and resulting in the maiming and killing of people and the destruction of property. The time lost by these industrial shut-downs can never be recovered.

"Such unseemly and unpatriotic disturbances make the procurement of dairy equipment precarious and enhance their prices beyond our capacity to pay except at great sacrifice. Such manifestations of noncooperation materially hinder and handicap our Government in its defense effort designed to keep democratic institutions from perishing on this earth.

"Now, despite these ills from which we suffer, dairy farmers are being asked greatly to increase our national production of milk and its products on the presumption that this can be done without adequate recompense either for current production or for extra capital, which in most instances must be invested to achieve the desired results.

"On the other side of this picture defense industries are being adequately compensated for plant expansion. Labor's wage increases are neither curtailed nor restrained, and yet there is no essential difference between a dairy farm and an industrial plant. Both are factories, equipped to produce essentials of peace and war.

"In the immediate future, unless dairy farmers demand a constructive policy, we can see no break in the clouds of our adversity. We can look forward only to a tightening of economic pressure.

"We are confident that dairy farmers, as always, are willing to do their part. They are willing to make sacrifices for the common good. But they cannot do otherwise than resent a policy which calls for oversacrifice from a part of the people and allows other parts to reap great rewards in profits and wages.

"The National Cooperative Milk Producers Federation is the largest and oldest commodity federation of farmers in America. Because of this fact, it has had to assume a leadership position in behalf of all dairy farmers of this Nation. It first exercised this leadership during World War I, when it fought for fair dealing and compensatory prices under conditions not far different from those in which we now live. It has held steadfast to this trust in the subsequent years.

"The time is now at hand when this leadership must again be raised and this great responsibility to our people and to the Nation must be renewed. To that end we are calling on all member associations to send representatives to a special national meeting for the purpose of appraising the situation and instructing the federation's board of directors with respect to proposals for a sound national program as to dairying in relation to our national defense. This meeting will be held May 1 and 2 in the Congress Hotel, Chicago, Ill."

All members of the committee signed the call. They were: N. P. Hull, Lansing, Mich., president of the federation; M. R. Moomaw, Canton, Ohio, president, Stark County Milk Producers association, Inc.; John Brandt, Litchfield, Minn., president, Land O'Lakes Creameries, Inc.; George W. Slocum, Milton, Pa., director, Dairymen's League Cooperative Association, Inc.; Clarence A. Brody, Constantine, Mich., president, Midwest Producers Creameries, Inc.; W. S. Moscrip, Lake Elmo, Minn., president, Twin Cities Milk Producers Association; Fred H. Sexauer, Auburn, N. Y., president, Dairymen's League Cooperative Association, Inc.; R. C. Mitchell, Southbury, Conn., director, Connecticut Milk Producers Association; A. H. Lauterbach, Chicago, Ill., general manager, Pure Milk Association; and Wendell P. Davis, Boston, Mass., general manager, New England Milk Producers Association.

Rural Cooperation Well Grounded—Greatest Adult Educational Movement in World

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

ARTICLES FROM THE EXTENSIONER, COLLEGE STATION, TEX., AND THE PROGRESSIVE FARMER

Mr. PATMAN. Mr. Speaker, in the Extensioner, published at College Station, Tex., February 1941, there is an editorial concerning the progress of the cooperative movement among farmers in Texas. It is as follows:

[From the Extensioner, College Station, Tex., of February 1941]

The story that begins on the next page reflects the impression of the writer that the ideal and practice of cooperation are well grounded among the rural people of Texas.

Cooperation among farm people to control in as large a measure as possible their economic well-being is at once the weakest and the strongest motive of mass effort. It is weakest because the effort is supported voluntarily, but is strongest because it is maintained by self-interest, one of the most powerful of human forces.

The background of farm cooperatives is a succession of attempts since pioneer days to find a lasting working method. So many movements have had their moments in the history of agriculture since the colonists practiced getting together to talk about farm problems that the multiplying totals of cooperatives today give weight to a theory that there is a time for everything. It cannot be hurried or delayed.

FARMERS WELL INFORMED

The greatest contribution to the maturing of cooperatives is the national-mindedness of farm people themselves. World trade, tariffs, transportation rates, raw materials, and national economy have become realistic to them. Men are to be found in any community capable of talking constructively on these topics. Another high-ranking factor is the extension service at A. and M. College, which maintains a specialist who gives his full time advising with cooperatives.

HISTORY OF FARM-COOPERATIVE MOVEMENT

But in distributing honors for today's realization of a practical cooperative plan, farm organizations that now are little more than memories call from the shadows for recognition. The Grange, still a large influence in agricultural circles, brought the cooperative store into Texas in the late 1870's. The town of Granger in Williamson County is a permanent marker to the Grange movement because it took its name from this organization. The Grange also progressively agitated the establishment of A. and M. College.

The Farmers' Union, which followed the Grange, contributed its bit by preaching cooperation, especially the establishment of cooperative cotton warehouses. One such building still exists at neighboring Bryan but is not now operated cooperatively. The Farmers' Alliance also had its day in the prolonged effort to achieve the economic independence of farmers. A later attempt at cooperation was the Farm Bureau Federation, which directed its activities primarily at cotton marketing.

SOURCES OF FARMERS' CREDIT TO BE FARMER OWNED

Experience being selective, no doubt much that was constructive in the early day movements was salvaged for the day of permanent achievement. Among weaknesses of pioneer efforts were the absence of flexible credit, power machinery, and rural electrification, and the lack of a suitable State law for cooperatives. All these are not only available to farmers now, but they are moving toward control of their sources of credit through ultimate ownership of the Bank for Cooperatives.

GREAT ADVANCE

A backward look along the thorny pathway of trial and error shows how far farmers have advanced toward control of the processing and marketing of their products. This is well illustrated in figures compiled by C. E. Bowles, extension cooperative marketing specialist.

During 1940, 75 new farmers' cooperatives were chartered, bringing the total of such business organizations in Texas to some 840.

One-half of the 22 cooperative freezer food locker plants in the State were established in 1940.

The achievement of the people of Midlothian in establishing a cooperative gin, freezer-locker plant and cotton warehouse, and with a creamery and cheese factory in prospect, forecasts what the future holds for farmers.

Historians may well call the developments of the past 70 years the greatest adult educational movement ever achieved in the world.

A COUNTY AGENT'S FARM PHILOSOPHY

Mr. Speaker, recently there appeared a very interesting article in the Progressive Farmer relative to the farm philosophy of a county agent. It was as follows:

[From the Progressive Farmer]

Live and help live.

Sell your feed on the hoof.

Be very proud that you are not proud.

Do as the woodpeckers do: Use your head.

A winner never quits, and a quitter never wins.

The garden is the best-paying acre of the farm.

Just pretending to be rich keeps some folks poor.

Recipe for long life: Do not exceed the feed limit.

Borrowing trouble is the worst kind of debt.

You can absolutely depend on luck if you put a "p" in front of it.

A small jack can lift a car, but it takes a lot of "jack" to keep it up.

The money the other fellow has is capital; getting it from him is labor.

A husband is like an egg: If kept too long in hot water, he becomes hard-boiled.

The world owes every man a living, but every man must do his own collecting.

The man who is cruel to dumb animals would be cruel to folks if he were not a coward.—"Uncle Tom" Marks, in the Progressive Farmer.

Thomas Jefferson—Tammany Sachem

EXTENSION OF REMARKS

OF

HON. M. MICHAEL EDELSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

ADDRESS OF HON. ALEXANDER I. RORKE, ATTORNEY AT LAW, OF NEW YORK CITY

Mr. EDELSTEIN. Mr. Speaker, on April 19, 1941, the National Democratic Club gathered to celebrate the one hundred and ninety-eighth birthday of Thomas Jefferson, the founder of the Democratic Party.

From the very establishment of our country in 1789 Thomas Jefferson began the fight for the realization of the principles which are so ably summarized in the phrase "Jeffersonian democracy." His stanchest and strongest supporters in the fight against the efforts of plutocracy to entrench itself were the members of the ancient and honorable Society of Tammany, or the Columbian Order. Jefferson and the Society of Tammany fought for the principles of true democracy, to obtain the franchise for all, to provide a free education for everyone, and to give each person an equal opportunity to achieve economic security. Nor did they forget that equality in a democracy leaves no room for intolerance and oppression. It was the efforts of Tammany which made New York City a haven for all immigrants, whether they sought a chance to make a living or to find a refuge from political persecution. Nearly all of the progress of New York City was made under the Democratic Party of New York County, popularly known as Tammany Hall.

Today, when so many shout "Jeffersonian democracy" without knowing, or even caring, what it really means, it is indeed a pleasure for me to incorporate in the CONGRESSIONAL RECORD the address of Hon. Alexander I. Rorke, a prominent attorney of New York City, whose address at the Jefferson Day banquet of the National Democratic Club so succinctly and admirably presents both the principles for which Jefferson stood and the important part in the advancement of those principles played by Tammany Hall:

Hon. Edward J. Flynn, chairman, members, and guests of the National Democratic Club, ladies and gentlemen, tonight, amid these patriotic decorations and music, in the presence of so many outstanding Democrats of our country, our State, and the five boroughs of our municipality, and under the auspices of the National Democratic Club of New York, it is my assigned privilege to speak on behalf of the steadfast leaders and the stalwart rank and file of the Democratic political organization of New York County—affectionately known to all good, true, and sundry men as Tammany Hall—on this, the 19th day of April 1941, on which you commemorate a famous birthday which, by coincidence, is the one hundred and sixty-sixth anniversary of the Battle of Lexington; in honor of Thomas Jefferson, the first Democratic President of the United States, a patriotic rebel, who helped precipitate the American Revolution, who succinctly crystallized and declared its causes in the Declaration of Independence; who risked life, liberty, and honor with others in order that the ideals of freedom and equality set forth in that document might be realized in America; and who laid the foundations of that Jeffersonian Democracy which has always been the inspiration of Tammany—the custodian and expounder of the ideals and principles of the third President of the United States.

It is most fitting that the Democratic Party of New York County should express here its appreciation of the Master of Monticello, because no political organization in America ever rendered greater service, truer loyalty, or more steadfast adherence to Thomas Jefferson and to candidates who believed in his principles than the Democratic organization of New York County, whose political roots reach back, through the Society of Tammany or Columbian Order and the Sons of Liberty to the men of the American Revolutionary period upon whom Jefferson relied so confidently for support to secure for all men and their posterity that life, liberty, and happiness with which Almighty God had endowed them, without regard to race, creed, color, or condition.

He favored, as did his fellow Democrats in New York, the utmost of free speech. While he differed from many in their opinions, yet he always insisted they had a right to express them.

In this connection—and by way of digression—many Americans today have noted a growing tendency to suppress the legitimate expression of thought. Political partisanship, taking its cue perhaps from European systems, or influenced perhaps by foreign propaganda, has intolerantly endeavored to prevent its opponents from setting forth their arguments.

This intolerance was evident at times in the last national political campaign, when even candidates for the Presidency were subjected to indignities by those who hurled various objects at them, or hissed and booed as they traveled in automobiles or as they addressed their fellow Americans.

At a recent Town Hall meeting of shabbily aristocratic intelligentsia in New York City, historic quotations from George Washington and Thomas Jefferson were received in a chilling silence that was intended as a deliberate insult to their memory.

At present the question of what the United States may, or may not, do in connection with the wars of Europe has developed an intolerance which Jefferson and Jeffersonian Democrats could never countenance.

Labeling has become a most vicious vehicle for silencing free speech. An American who would have his country armed to the teeth and prepared for war against any and all aggressors is labeled an "isolationist." If he believes in furnishing aid to any European country he is branded an "interventionist." If he advocates reposing absolute power in the office of the Presidency, he is plastered a Hitlerite or a Stalinite. If he opposes too much power in that office he is branded an obstructionist or an unpatriotic Republican. Would he keep America from foreign wars?—Out with him—"the son of a pacifist." Does he want peace without further shedding of blood?—Down with the yellow "appeaser defeatist." Would he send American soldiers into a foreign conflict?—"Mark the bloody warmonger." If he suggests that this is a war for democracy which we should join, he is a munitions profiteer. Should it be his opinion that this is a war for trade—"Jail the spy of the Axis Powers," but if he claims—

"There is no flag in any land,
Like our own Red, White, and Blue."

shoot him on the spot—he must be a "fifth columnist" for someone, or a Benedict Arnold at least.

All this is bad, as indicating a tendency to suppress free speech; but, bad as it is, Americans today may well thank God and Thomas Jefferson that they are able to exercise the right of free speech contained in Jefferson's declaration and maintained by those who are Jeffersonian Democrats.

Jefferson and the Society of Tammany, or Columbian Order—which was founded on May 12, 1789, a few weeks after George Washington's inauguration as first President of the United States, to perpetuate democratic principles and institutions—very early incurred the enmity of the Tories and the large landowners in New York and other States.

During the revolutionary period the Tories had been in the majority, the Revolutionaries a minority. The slogan of the Tories had been merely "Taxation without representation is tyranny." They were willing to be taxed, provided they were permitted to sit in Parliament and determine the amount of taxes to be imposed on the Colonies; but the Revolutionaries, particularly those who stemmed from the north and south of Ireland adopted a better slogan: "These Colonies are, and of right ought to be, free and independent."

When the Revolutionary War was won the Tories, seeking to profit by the victory, organized the Cincinnati that endeavored to exclude from public office in the Army, Navy, and Civil Government the democratic men who by their sacrifices had brought the United States into existence. The wealthy landowners of New York procured laws excluding the Revolutionaries from voting in public affairs unless they possessed land or a large sum of money in the bank.

Against these un-American elements who sought to cheat the patriots of their birthright Jefferson and the Society of Tammany bent their efforts. They declared that the men who had risked their lives to create the country were good enough to vote and to hold any office in it.

When Jefferson was nominated for the Presidency Tammany stood by him to a man. He was elected. The Federalist Party was broken and with it the power of the tory aristocracy.

In 1826 Tammany, inspired by Jefferson's ideals, secured complete manhood suffrage.

Tammany elected Jefferson an honorary great grand sachem of its society. As such he is an immortal, as are his fellow grand sachems George Washington, John Adams, James Madison, John James Monroe, John Quincy Adams, and Andrew Jackson. Each eagerly accepted the honor.

Jefferson attended Tammany's banquets, inspiring its members to keep the democratic faith, and in turn being inspired by the sentiments of its members to carry on in his efforts for the welfare of America.

So great was the admiration of the society for Jefferson and his achievements that on every recurring Fourth of July Tammany has caused the Declaration of Independence to be read in public mass meeting in order that Americans would not only recall the ideals for which the colonists fought and the freedoms which they won, but cleave to them, lest through their neglect or indifference our democratic government should perish from the earth.

Jefferson was solicitous of foreigners who desired to become citizens of the United States, particularly those whose political opinions and religious beliefs had driven them from their native land. So, too, were his Tammany associates. Those intrepid Jeffersonian Democrats, tooth and nail, fought the Tory elements that sought to exclude the aliens and they demanded that the gates at American ports be kept open to admit all foreigners who came here with a heart full of love and affection for the principles and institutions of our country.

For that stand Tammany was damned from Hell Gate to Golden Gate and from Pontchartrain to Champlain by political enemies who sneered that Tammany wanted to make the scum of Europe citizens of the United States.

Many who sit in this august assemblage tonight and still believe that ours is a fine country in which to live can thank God that through the efforts of Tammany their ancestors were permitted to enter the United States.

The so-called scum of Europe justified the efforts of the Jeffersonian Democrats who stood by them. In the Civil War, when Abraham Lincoln, Republican President, was at his wits end the Tammany Board of Aldermen of New York City, sons of foreigners, appropriated a million dollars—mere chicken feed today, a colossal sum then—to aid the North in its efforts to preserve the Union. Incidentally that appropriation was made on Patriot's Day—April 19, 1861. On hearing of that act President Lincoln said to Gen. Daniel E. Sickles, one of the sachems of Tammany:

"Sickles, I have here on my table the resolution passed by your aldermen promising to do all in their power to support the Government. I have also their resolution appropriating $1,000,000 toward raising men for the war. When they were handed to me I felt my burden lighter. I felt that when such men break their party lines and take this patriotic stand for the Government and the Union all must come out well in the end."

The patriotic Jeffersonian democracy of Tammany during that war, at its own expense, equipped an entire regiment—the Forty-second New York Infantry—sent it to the front, where it engaged in 36 battles and engagements. Its loss of 18 officers and 325 men killed and wounded justified the imposing memorial on the Battlefield of Gettysburg that marks its achievements.

Tammany always was patriotic, courageous, liberal, nonsectarian, and tolerant. Jefferson hated religious intolerance and discrimination against the foreign born.

His doctrine in this respect was not lost upon the Democrats of Tammany, who almost single-handed fought and wiped out the bigoted "know nothings," the A. P. A.'s, and the Ku Klux Klan, who directed their venomous attacks against Catholics, Jews, Negroes, and foreigners—particularly those aliens who came from the south of Europe.

Many had feared that the United States might have difficulty from the commingling among us of the various races, creeds, and nationals of Europe.

In their homelands they had fought and killed each other from eras that antedated by centuries the holy birth that occurred in the reign of Augustus Caesar and in the satrapy of Herod, King of Judea. Not a quarter of a century from that time to this has passed, although living alongside each other, border to border, and frontier to frontier, that has failed to see them rise in arms, invade and slaughter each other, and take each other's territory either for the love of God, the love of country, the love of liberty, or the love of king and womankind.

It was feared that the racial hatreds that had been so deeply bred in their bone in Europe would come out in their flesh here in the United States; yet Tammany, perhaps by the grace of Providence as well as by its equitable dealing with them, in less than 75 years accomplished in New York City the greatest miracle of modern times—it molded the minds and the hearts of New York's more than 50 races to such a degree that they lived here in peace, in harmony, and in brotherly helpfulness, and prospered under the flag and the democratic institutions of America, an achievement that Europe, with all its boasted systems and cultures, has not yet accomplished in 2,000 years of continued racial, religious, political, and national jealousies, hatreds, and wars.

But here in this cosmopolis, under the principles of Thomas Jefferson as practiced by Tammany leadership, Irishmen and Hebrew, Pole and Italian, Kurd and Armenian, Bulgar and Serb, Lett and Finn, German and Slav, Scot and Englishman, Catholic and Protestant, Jew and Mohammedan—white, black, yellow, brown, and red men—were held to be alike in the fatherhood of God, in the brotherhood of man, and in the equality of Jeffersonian Democracy.

From their immortal political valhalla, the shades of Jefferson, Jackson, and their Democratic successors showered success upon Tammany that reared the magnificent structures of New York City which tower into the clouds, that installed the railroad tunnels which burrow under the ground, beneath the rivers, and transport our teeming cosmopolitan populations and commerce, that fostered our schools, factories, shops, parks, streets, and hospitals.

Tammany grew powerful, won the confidence of the people, the loyalty of its members, and the good will of the nonpartisan population of the city.

Politically it obtained control of Manhattan; it united the five boroughs into a solid Democratic phalanx that spread its influence throughout the State, elected several Governors, and nominated one of their own for the highest office in the gift of the people.

Future historians will record the high tide of Tammany's success in following Jeffersonian ideals.

Today Tammany, the inheritor of the principles of Jefferson, contemplates with patriotic satisfaction its achievements in keeping the torch of democracy burning in New York in every decade since 1789. Its leaders and followers possess the blessing of all citizens who appreciate its battle for the oppressed, for the immigrant, the suffering, the dispossessed, the poor, the aged, the widow, the orphan, and the laborer, as typified by liberal immigration laws, old-age and widows' and children's pensions, social-security laws, workmen's compensation acts, and its personal donations of money to relieve the sufferings of the Jews who survived the massacre of Kishinev, the Messina and San Francisco earthquake sufferers, the flood sufferers of Johnstown and Galveston, and its financial assistance to the cause of Cuba libra and to prevent the foreclosure on the home of Charles Stuart Parnell.

No Democratic organization in America equals it in the continuity of its existence, in its service to America, and its devotion to Democratic ideals, its patriotism, its courage, and its dogged persistence.

As the Democratic parent of the boroughs of New York City, which labored from 1789 to 1932 for the welfare of its children, it was entitled to some brief respite from its labor. It has been resting recently while some of the younger members of its political family have tried their hands at the arduous labor of providing for our 7,000,000 urban population who have begun to think that it's now about time for the head of the family to go to work again, take over, and continue to provide properly for their general welfare.

And in this connection—would you believe it? Only last night the shade of Thomas Jefferson appeared to me, thanked me courteously for my address to be delivered in his behalf, and assured me he would not forget my interest in him, and showed me a copy of Ginn's History of the United States, wherein—at page 185—it is writ that the Revolution, which started on April 19, 1775, ended on April 19, 1783, when the Army was disbanded—exactly 8 years to a day.

Will someone kindly page a Democratic astrologer who can tell, or foretell, what, if anything, those 8 years may presage?

I care not what others may think about it; but as for me, it means that a thousand years from now, when all the cruel wars of today—foreign as well as domestic—will have been forgotten, and when Gabriel blows his angelic trumpet and the dead arise and move toward the golden gates, and the portal custodian, Thomas Jefferson, eagerly asks, "Who was in political control of Manhattan when the trumpet blast set the wild echoes flying?" the joint reply from the Pilgrims outside the gate and from the seraphim and cherubim within will be—

"The Jeffersonian Democrats. Hallelujah."

Shakespeare's Birthday

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

Mr. RANKIN of Mississippi. Mr. Speaker, we often pause to call attention to the birthdays of distinguished men, or the anniversaries of great events.

Today, April 23, is the greatest birthday anniversary in all the secular annals of mankind. It is the anniversary of the birth of William Shakespeare, the rarest genius and the richest soul "that ever lived and loved and wrought of words the statues, pictures, robes, and gems of thought."

He was the greatest intellect of all time. He was the greatest dramatist and the greatest poet, as well as the greatest philosopher, the world has ever known.

He raised the literary level to the highest plane it has ever reached.

As Victor Hugo once said, Shakespeare is "an intellectual ocean that touches all the shores of thought." Toward it, as someone else has said, "all rivers run and from it we receive our intellectual dew and rain."

It bears upon its placid bosom the literary commerce of an enlightened world, and will probably continue to do so throughout all coming ages, "to the last syllable of recorded time."

A Tempest in the Topeka Teapot

EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

ARTICLE FROM THE WASHINGTON POST, EDITORIAL FROM THE McPHERSON (KANS.) REPUBLICAN, AND AN ARTICLE FROM THE WICHITA (KANS.) BEACON

Mr. HOUSTON. Mr. Speaker, Public, No. 379, known as the Social Security Act amendments of 1939, was passed during the first session of the Seventy-sixth Congress and was approved on August 10, 1939, after the Congress upheld the Social Security Board's recommendation "that State public assistance plans be required, as one of the conditions for the receipt of Federal grants, to include reasonable regulations governing the custody and use of its records, designed to protect their confidential character."

The Kansas State Legislature has taken no action toward meeting the requirements of the act and, under leave to extend my remarks in the RECORD, I include interesting press comments on the situation now prevailing in my State, as follows:

[From the Washington Post of April 21, 1941]

$5,000,000 AT STAKE IN TEST OF KANSAS FUND PUBLICITY LAW

(By the Associated Press)

TOPEKA, KANS., April 20.—Kansas must decide by July 1 whether the luxury of a bloodless rebellion against the Federal Government is worth $5,000,000 a year.

At stake is an 82-year-old Sunflower State tradition of open publicity for all expenditures of public funds.

Five million dollars is the amount Washington pours into the State annually to pay half of each assistance check for the needy aged and other relief recipients. The Federal Social Security Board has stated bluntly that this flow of cash will halt July 1 if Kansas continues to publish names of assistance recipients and amounts of grants after that date.

The 1941 legislature put the issue up to the citizenry at large by refusing even to introduce a secrecy law, although the ultimatum from Washington came before the lawmakers went home April 6.

Gov. Payne Ratner said he would call a special session in the summer to consider the question unless the Federal board changes its position. The executive indicated he hardly expected any backing down.

Leaders in the legislature and in the Ratner administration took the position that the people should decide so important a matter.

"We felt we should obtain the reactions of the people and then could proceed to do whatever is necessary," explained the Governor. "It seems to me that the Federal Government is seeking to destroy the last vestige of the sovereignty of the State of Kansas."

Congress put the nonpublication provision in the Federal social-security statutes recently, acting on the theory that needy persons should be spared as much humiliation as possible.

The legal impediment to compliance with Washington's request is embedded in the Kansas constitution, adopted in 1859. The section reads:

"An accurate and detailed statement of the receipts and expenditures of the public moneys, and the several amounts paid, to whom, and on what account, shall be published, as prescribed by law."

Kansas counties publish each month, in the official county paper, long lists of all their expenditures down to 5 cents for a cake of soap at the jail. Nearly all counties include in these lists payments to those on relief.

The constitutional requirement fits in with a Kansas tradition of "laying all cards on the table" in governmental matters.

A lot of the legislators and the State's militant editors believe the tradition is worth fighting for, even if the foe is the Federal Government.

[From the McPherson (Kans.) Republican of April 9, 1941]

IT IS NOT JUST SPUNK

The fact that the Kansas Legislature completely ignored the threat of losing Federal welfare funds must not hastily be charged to pique on the part of a Republican legislature over the threatening words of a Democratic official appointed by a Democratic President.

Naturally Republican lawmakers do not like to be told by Democratic officials what laws to pass, but that is not the main reason. Kansas lawmakers are Kansans, and as true Kansans they refuse to be driven to desperation. Whether they think, or even are conscious, of per aspera, they instinctively know that when someone says a thing cannot be done that is just the time when the Kansan gets to work to show it can be done.

Perhaps the overzealous Government official didn't interpret his law right and thereby read into it too much wishful thinking. Perhaps he raised his children by constantly threatening to take away their sticks of candy and naturally thought Kansas lawmakers were like his kids. Whatever promoted the situation, it would have been wiser to poke around in a hornet's nest.

Kansas lawmakers cannot be threatened or bought by a 5,000,000 stick of candy. They believe Kansas will still live if the candy is taken away. Indeed, it might even be doing better if it didn't have so much candy. So there you are. Kansas refused to move and it is still the Government's move.

[From the Wichita Beacon of April 20, 1941]

BLUNDER MAY COST STATE FIVE MILLION

(By Betsy Jager, Wichita Beacon staff correspondent)

WASHINGTON, April 19.—An extraordinary blunder by the Kansas State Legislature may cut in half after July 1 the amounts now being received by Kansas people under the old-age assistance, aid to the blind, and aid to dependent children programs.

That blunder was in not considering legislation during the session just ended that would safeguard the confidential character of public-assistance lists and records, as suggested to all State agencies administering approved public-assistance plans by the Federal Security Agency in a letter sent out to the various States on November 15, 1940, in ample time for the required action.

Kansas is the only State in the Union that has not taken steps to comply with the Federal law which was enacted in 1939, having been passed in the Senate by a vote of 57 to 8 and in the House by a vote of 361 to 2. The Kansas delegation in Washington, composed of 8 Republicans and 1 Democrat, with the exception of 1 Republican Representative who was paired against the bill, voted for the bill. This fact seems to have been overlooked, or ignored, by the present predominantly Republican Legislature of Kansas.

MAY LOSE FIVE MILLION

Unless the State legislature resorts to the expensive procedure of holding a special session within the next few months so as to comply with the Federal law, the Federal Government will be forced to withdraw the approximate $5,000,000 the State has received annually for assistance to the aged, the blind and dependent children.

In 1940 Kansas received from the Federal Government $4,020,989.13 for the public assistance programs, and to date the amount received by Kansas totals $12,722,049.31. When the next quarterly budget, which will be ready in July, is prepared by the Social Security Board, the Board must, under the law, find that the State's plan is in conformity with Federal regulations if the State is to receive the Federal contribution. It is not a happy outlook for the aged, the blind, and the dependent children of Kansas.

The Social Security Board, and the Congress, held that the fact that personal and confidential information is of a privileged character does not in any way restrict the State agency in using it for purposes directly connected with the administration of the program. Such purposes include establishing eligibility, determining amount of assistance, and providing services for applicants and recipients of public assistance.

GENERAL DATA AVAILABLE

That general information given to the public not identified with any particular individuals, such as total expenditures made, number of recipients, and other statistical information and social data contained in general studies, reports, or surveys of welfare problems, would not fall within the class of material to be safeguarded.

The Board and the Congress believed that the provision in the Federal law prohibiting the publishing of names of individuals and amount received by each was necessary for efficient administration, and that it was essential in order to protect beneficiaries against humiliation and exploitation, such as resulted in some States where the public has had unrestricted access to official records; that experience has proved that publication of this information does not serve the avowed purpose of deterring ineligible persons from applying for assistance; and that the public interest is amply safeguarded if this information is available to official bodies.

The Board found that candidates of both major parties for local, State, or National office in at least eight different States have obtained lists of old-age assistance recipients and have canvassed such persons requesting their votes. In more than one instance, there has been an implication, if not an actual statement, that recipients would have their grants increased, "if they voted right."

The publishing of lists of public assistance recipients has, in some instances, meant the solicitation of the recipients by organizations promoting aged and blind pension plans or increased grants for money with which to finance newspapers to build up the organizations.

It is difficult for Washington officials to see why the Kansas Legislature held out against the Congress of the United States and acted contrary to measures taken by 47 States. It will also be interesting to hear the explanations of its membership to the aged, the blind, and the dependent children, of Kansas, if and when payments are cut in half in July.

You Can Defend America Through Moral Rearmament

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

ARTICLE BY GOULD LINCOLN

Mr. SMITH of Washington. Mr. Speaker, 2 months ago I placed in the RECORD an article by Mr. Gould Lincoln, which was published in the Evening Star, Washington, D. C., in which he reviewed the book Come Wind, Come Weather, by Daphne du Maurier, describing the moral rearmament movement in England.

I now desire to place in the RECORD another article by Mr. Lincoln, which was published in the Evening Star yesterday, April 22, 1941, in which Mr. Lincoln reviews the booklet entitled "You Can Defend America." This important document emphasizes the urgency of mobilizing our Nation spiritually and is deserving of the serious study and consideration of every American citizen.

The article referred to reads as follows:

[From the Washington Evening Star of April 22, 1941]

"YOU CAN DEFEND AMERICA" BOOKLET MAKING THOUSANDS THINK OF NATION'S DESTINY

(By Gould Lincoln)

The most challenging document produced in America since war broke in Europe and forced an emergency upon this country is a booklet entitled "You Can Defend America." It is already making thousands of Americans think. Once people really thing, they begin to act.

The booklet presents a program—not a legislative program except insofar as each individual American acts as his own personal legislature. The program is sound and simplified, not simple. It calls for sound homes as a first line of defense. As the second line of defense it demands teamwork in industry, and as the third line, a united Nation. You cannot have the weapons and supplies needed for total defense in these days of piping warfare unless you have all three.

So highly did Gen. John J. Pershing think of You Can Defend America that he wrote the foreword carried in it. He said: "No patriotic citizen can read it without feeling its inspiration. * * * I commend its message to every American." Since its publication last week, the little volume, which can be read in a dozen minutes, has been praised by Governors of States, among them Governor Saltonstall, of Massachusetts; Governor Sewall, of Maine; and Governor Schricker, of Indiana. Labor leaders, industrialists, and mayors of the country's big cities have joined in the recommendation that it be widely read and that its suggestions be followed.

CITES "WALLS" THAT FAILED

Succinctly the booklet points out that "once China built a wall," that "yesterday France built a wall," and that "today America builds a wall, a ring of steel, ships and planes and guns." The walls of China and of France proved of no avail against invading enemies—not because they were not stout walls. There had been neglect of essential morale and unity among the people back of those walls. Obviously if America should lack—or does lack—what China and France lacked, its "wall" will go the way of their walls.

The cardinal weakness among peoples who have proved unable to defend themselves has been selfishness of the individual, which inevitably results in "softness," an unwillingness to go the route. That kind of selfishness too often communicates itself unhesitatingly to groups of people who believe they have a common bond.

So "you can defend America" starts with the American family, the home, to pound more "guts" into the people as a whole. It is there they must find the courage needed, if anywhere. "Why don't the nations get along like one big family?" the booklet asks, and rather cynically it answers, "The trouble is they do!" Too many Americans, it says, like to sing "Home, Sweet, Home"—when they are away from home. It urges, then, that homes pull together, as the first line of defense.

"If we perspired more in time of peace, we would bleed less in time of war," the booklet quotes from Generalissimo Chiang Kai-shek, to help make its point that teamwork in American industry today is vital to national defense.

STRIKES COURT DISASTER

The country, through Congress and the President, is engaged at present in an effort to make the country strong by law. Laws are being framed and passed to raise the needed money, to expend that money, to keep industrial plants engaged in national-defense production constantly at work, to weed out "fifth columnists," Communists, and Fascists. Back of any law, however, must be the will and the belief of the people, or the law becomes a mere nothing, a matter of no substance. It is obvious that a law which merely keeps men in industrial plants will be of little avail if the men themselves have no heart in their work. It should be just as obvious that management hamstrung on every side, by Government and by labor, will have no heart in turning out vitally needed weapons and supplies.

Strikes in this country in the last year have been extremely costly to national defense. Anyone who believes that all the strikes which have occurred have been unjustified—or that all of them have been justified—is a fool. But, more particularly, anyone's a fool who does not realize in this day of crisis that all strikes—stoppages of work—are harmful and court disaster. The arguments advanced in "You Can Defend America" for adjustment are appealing. They go back to the selfishness of all groups, capital and labor. They are the kind of thing that should make the work of conciliators and mediators much easier and more effective.

Philip Murray, president of the C. I. O., commenting on the booklet, said, "It brings us back to fundamentals. It charts in brief compelling outline a practical program for home, industry, and Nation."

William Green, president of the American Federation of Labor, said, "It should do much to lift our people to a sustained level of self-giving patriotism. It will, in my opinion, help toward that teamwork in industry and general morale which are essential if our armed forces are to have the backing they deserve, and if the spirit of our Nation is to be united in support of what we hold dear."

The group which prepared the booklet is the same which has supported moral rearmament in this country and in England. "Human nature is the bottleneck in the production of national morale," it wrote, and then proceeded with its formula for the eradication of the bottleneck, which, boiled down, means that the people as a whole must return not only to a belief in God, but to His guidance.

The New Order

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

ADDRESS BY JUDGE T. W. DAVIDSON

Mr. PATMAN. Mr. Speaker, United States District Judge T. W. Davidson, delivered a very interesting and instructive speech on The New Order before a joint session of the Texas Legislature at Austin, March 4, 1941. It is as follows:

Mr. President and members of the Texas Legislature, the walls of this chamber are sacred to me. As time rolls by they will become so and more so to each of you. As we walk by the portraits of Sam Houston, of Stephen Austin, of O. M. Roberts, of James Hogg, and those who have guided this ship of state for a hundred years, we feel that we are in the house of our fathers.

Our minds turn even further away to the land from whence they came—to the Hermitage, to Monticello, to the old House of Burgesses at Williamsburg, to Stratford, to Mount Vernon, to Arlington, and other shrines of America's patriotic devotion. When we behold these pictures we are conscious of the golden age of American patriotism and southern chivalry.

Our fathers raised the torch of liberty. Symbolically it stands in New York Harbor, enlightening the world. The spirit of Washington was caught up by Bolivar, Mirandi, and Martin, and its benign blessings spread from Canada to Cape Horn. It spread across the seas. The thrones of tyrants toppled and liberalized governments appeared.

We love the men who ushered in this regime. It is sometimes referred to as the old order, but many of us are proud of this heritage from our noble fathers: we are proud of the greatness of our country; and we understand the meaning of the poet when he said:

"Breathes there a man with soul so dead,
Who never to himself hath said
This is my own, my native land."

THE NEW ORDER

Over the radio we hear that all that is left of France, the great European republic, is being encouraged and coerced into becoming a part of the new order. Rumania has accepted her place in the new order. Bulgaria, without firing a gun, like the children of

pacifism, is accepting her place in the new order. Denmark awoke with the coming of the morn and found that she had accepted the new order without knowing it, even in the night. Norway, Belgium, Holland, each in turn, has accepted the new order. The new order was tendered to Finland; she gallantly defended her conception of civilization and justice.

But what is this new order that is to reorganize Europe and shape civilization? Briefly stated, by a survey of the European situation, and especially from the acts and doings of those that command in that unhappy continent, the new order is state socialism, backed by military rule. It is the rule of the absolutist. The judiciary, with its safeguards, has been submerged beneath the waves of fascism, nazi-ism, and communism. These are the triplets born to Father Greed and Mother Hate.

Let us descend from the heights of more lofty platitudes and, staying away from any unkind remarks, examine the new order in Germany, the source of its military power, which seeks, like the sword of Mohammed, to bring under its shadows the civilized world. In my young manhood it was my pleasure to know a plain but highly educated old gentleman from Germany. He was a Jew; he could trace his ancestry back to the House of Levi. His children entered into all that was America and America's—blessed and embraced it with open arms. One of his type remained behind in the fatherland. A friend of his journeyed to see him. He had been the head of a great banking house—the banking house was closed. He had owned a palatial home—the visitor found strangers there. He procured the address of its former owner and occupant, and found him, his wife, and five children living in a dungeon where not even the sunshine could penetrate. Strange to say, he was still cheerful. He believed in Jehova, the God of the universe.

What wrong had this man done? No law had he violated; he was simply a member of a race that the world of nazi-ism saw fit to hate and to persecute. It was a part of the new order. Hate is the essential element of the religion of the new order. Someone must be hated, and this man was the victim.

But let us turn to Austria. We are told that Austria became a part of the German Reich by her own election and free will. The man who was guiding the ship of state of the Austrian Nation, Mr. Schusschnigg, had committed no crime, yet for the past 4 years the bayonets of the German Army have stood at his chamber's door. He may not write, as you and I. He may not speak over the radio nor to the passing stranger. He may not travel about into the lands where freedom of speech and freedom of press prevail. His only sin is entertaining different political views, and for this sin he is imprisoned and his liberty is gone.

How different is it here in the land given us by our fathers. When Governor O'Daniel beat Mr. Hines and Ernest Thompson in the election, everybody took up the threads of his life the next day and went happily along, including Ernest and Mr. Hines. When Franklin Delano Roosevelt beat Wendell Willkie for the Presidency, Willkie is allowed to travel over the face of the earth and boldly proclaim the same foreign policy as the man who defeated him, not subject to coercion, but privileged to say, to think, to write, to travel. How different.

But what of the new order in Russia? There it has had 22 years to crystallize and show just what it is and how it is and how it would operate. Still a military despotism; still no courts of justice—the temple of God and the temple of justice alike are closed to the petitioner.

Stalin wields the scepter over a hundred and sixty million people. Every confederate, every associate, that sat by his side and rolled into power with him has disappeared. When they had aspirations or political convictions of their own, they went down the chute, called the blood purge, where their heads rolled into oblivion, and none heard of their passing.

The artist, the poet, and the historian for the past 200 years have told us much of the Cossacks as the heart and center of the great Russian Cavalry. But where is the Cossack today under the new order? His politics were not right. He didn't fall into the new secret political organization that dominated the land for which he had fought for hundreds of years. He is no more. The only group of Cossacks that we know about now is a band of traveling musicians over here in the United States who are afraid to go home The rest of them, hundreds of thousands, have gone down into Death Valley for no offense other than loving their country well enough to entertain different political views from Mr. Stalin—from Mr. Stalin, whose secret hand is so powerful and whose power is so insidious that he can dictate the death of a man across the Atlantic in his quiet retreat in Mexico. The new order has its agents over here as well as elsewhere.

But we are told that all this will change when the democracy of Old England goes down and when Britannia no longer rules the waves. How will it change? In that respect we are not advised. Military despotisms never change until a more powerful hand hurls them into oblivion. It has been left alone for almost a quarter of a century in Russia, and there you have an opportunity to see what it will do if left to its own initiative. Sufficient is it to say that in the land of the Russians there is no independent judiciary or court of justice as we know it. Sufficient to say that the church and the temple of worship are closed and are used for profane purposes, or have become the habitat of bats and owls.

The gory and fiendlike story follows communism and State socialism into Spain. As a matter of propaganda it was stated often in this country that Spain was a democracy. She was not a democracy any more than Russia is a democracy. Franco's regime was inclined more toward the Fascists of Italy, and the existing regime then in power was borrowed from Russia. England took no choice between the two—it would have been a choice between two bad actors.

When the Spanish Civil War was at its bloodiest I met Judge Martin Traviesco, of Puerto Rico, an American of Spanish birth, born in Puerto Rico, educated at Cornell, and in the territorial courts under the appointment of President Roosevelt, a very scholarly and splendid gentleman. He told me that his brother was run out of Barcelona by the Communists, or those in power, and that he passed into France just one day ahead of a death trap; that the following day the train on which he passed through was halted in the tunnel under the Pyrenees and every male passenger required to get off, where he was shot. He told me that his sister lived in Madrid; that a government committee of inspectors raided a house next door to where she was living; that the stork was visiting the house that night at the time of the raid. He said that his sister was in the house because the lady was her friend; that an eminent Spanish physician went down and met the government's examiners and explained to them the situation and asked them to wait. They did wait, and when the doctor came down to depart they took him, overpowered him, stretched his arms across a block, and chopped off his hands with a meat ax, and then remarked to him that he would never live to help another rich man's wife give birth to a child.

Those things are so brutal they sound impossible, but no one who talked with Judge Traviesco could question his integrity or his veracity. Hatred is the religion of this particular brand of state socialism. The fiendishness with which they do their work in taking from those that have is not unlike that of the highwayman who holds you up, takes your wallet, and then snuffs out your life.

Thirty thousand Spanish priests were said to have been slain during this bloody war. They were not slain under arms, but slain because they were priests and it was open season among the adherents of Russian communism for anything that bore the name of Christianity and for any man that wore a white collar and had property. Judge Traviesco further stated that the secret political societies that dominated the courts and to which the landowners were probably ineligible included his hired help and servants; that they were taught to be disloyal to him and constituted a secret force that reported the doings, the comings, and goings into his household to a government committee.

In one locality they may hate the Jews, in another the property-holding class, and in another the church, but somebody must be hated and destroyed wherever state socialism in its present form spreads its branches.

So much for the new order, as it stands out in full-fledged power of war and might and regulates the affairs of nations according to its dreams.

THE "FIFTH COLUMN"

Over the radio and in the columns of the press we learn that our Government has in the past 4 months destroyed at ports of entry 15 tons of subversive literature from Communists, Nazis, and Fascists seeking to turn us away from the old order and to teach us to accept the grandeur (?) and beauty (?) of the new. Thirty thousand pounds of reading matter, or 15 tons, in a few weeks for the consumption of the American reader, many of them youths.

The attorney general's office of Oklahoma recently convicted a young man under the laws of that State. In his possession had been found great quantities of this literature, much of it printed in Moscow. He had fallen a victim to the "fifth column" and became a champion of the new order.

From Oklahoma City hails a man by the name of Oscar Ameringer, born in a German village, an organizer of socialism, an antagonist of former Postmaster General Burleson, of our own State, a student of Marxism and all that the new order stands for. On the 19th of last April Mr. Oscar Ameringer, by invitation, addressed several hundred of our young people upon the university campus of this city. The burden of his song was socialism, the immediate purpose was to cut off aid and sympathy from the United States to Great Britain, who was holding up the standards of free government. "Let us starve the war," was his slogan. He knew that Germany was getting nothing from American markets, he could not have meant starving Germany; he meant to starve England. He declared, according to press reports, that the world was "suffering from a hangover of nationalism," and compared the United States to a "jackass standing knee-deep in a field of grass starving to death because he can't eat it all." His remarks were cheered by our children—yours and mine, by the sons and daughters of Texas.

I, too, subscribe to the theory that this is a land of free speech and free press. I know that many of our great institutions of learning encourage the youth to accept nothing as true, but to prove it to his own satisfaction, and to build up his own standards of thought and action. The great danger is that in this formative period the standards selected may be those of the militant Nazi, Oscar Ameringer.

I do not accept everything that my father thought or believed, but I do accept from him two things and will hold to them until I find

something that is better. One is the tenets of the Christian civilization and the other the American Constitution and the government it created.

Every man, every boy, every woman, every girl must, if we would attain any success in life, have a standard, a goal, and an objective. When a government better than the American form of government has been devised and tried I am ready to accept it. If a faith or a creed better than that of Jehovah and Jesus Christ could be proclaimed, I would be ready to accept that. Patrick Henry said, "My feet are guided by the lamp of experience," and my course will remain under the standards of law and order, of justice and mercy.

This "fifth column," this propaganda, being on the offensive, being a militant, going concern, like any offensive, tends to succeed and create new adherents. The man or the principle on the defensive is the one that must suffer. This socialistic offensive attacks us in a well-organized way, where we are most vulnerable. It attacks the youth, who has not yet formulated his conceptions of life, nor his course of action. It attacks labor, and whispers in his ear that he is the victim of capital, and sows the seed of hate between employer and employee. And in the form of Grapes of Wrath, and other texts, it appears upon the screen. A large percentage of those who saw, for instance, the production entitled "The Grapes of Wrath" didn't realize the deductions that it brought forth as the seed of discord, planted in the mind of the youthful observer. What are these deductions? Religion is a subject of ridicule, the funeral a burlesque, the landowner a brute, the officer of the law a tyrant, and only one spot of peace could be found for the weary soul, and that was where the sheriff and the police and the hand of the law was supposed never to come, a paradise of communism, where nobody owned anything in separate.

The approach of the "fifth column" is not unlike the early tactics of the Apostle Paul in spreading the blessings of the Christian faith. He took his believer where he stood and led him from there into his own doctrine. The "fifth columnist" takes the isolationist and makes use of him as far as he can go. If he can keep American influences at home, then nazi-ism can conquer the rest of the earth. The "fifth columnist" approaches the pacifist and tells him that there is nothing worth fighting for. He tells him to forget the words of the great preceptor Thomas Jefferson, who said:

"Is life so dear or peace so sweet as to be purchased at the price of chains and slavery? Forbid it, Almighty God."

This "fifth columnist" joins himself readily and most insiduously to the industrial laborer and teaches him that his employer is an enemy and an object of hate; that he has a right to strike against his own government when the Government doesn't do what he thinks is right. He teaches him to disregard the old American maxim:

"My country, may she always be right, but right or wrong, my country still."

It seeks such champions as Harry Bridges and Earl Browder to carry the mission of dissatisfaction among those who have real or imaginary wrongs at the hands of their employers.

When I was Lieutenant Governor and presided in this chamber, my rooms and my offices were headquarters for representatives of labor. Some of the most wholesome measures for the protection of labor and for the safety of employees were drafted by my hand in the Lieutenant Governor's quarters. I am glad to remember those men as patriots, and to know that most of them that are living now are sailing under the banners of the American Federation of Labor, men who, unlike Oscar Ameringer, are not willing to toss all nationalism into the scrap heap, but are willing to stand by you and me and say, "My country."

What is the effect of this great volume of literature, and these speakers of the Oscar Ameringer type? As I entered this building I paused to observe the painting, The Capture of Santa Anna at San Jacinto, where freedom triumphed over a military dictator. Among the characters whose faces appear in that picture is one whose collateral descendant lately returned from a great university (not a State institution) and grieved his father by disclosing that he had embraced state socialism and communism. The greatness of Texas, the wonder of the American Government, is forgotten by him, and he is ready to follow the disciples of Oscar Ameringer, of Karl Marx, and Stalin. I can see the tears that came into the eyes of that father when he learned that his son, in whom his hope and ambition centered, had departed from the faith of his fathers.

The effect of this propaganda is not so readily observed by the average man or woman when dosed to the youth of the country, but when you hear them weeping over the loyalists in the late Spanish contest; when you hear them declaring that Sacco and Vanzetti were judicially murdered; and when you hear them say the American Constitution is old and antiquated, you know that the "fifth column" is getting in its work.

I would not have my remarks interpreted as criticizing our institutions of learning. They are yours and they are mine. We, too, use the thought of the great philosopher, cannot step out and with one full sweep pull the tares from among the wheat. We must grow them out and teach them out. A man cannot write in his will, when he would disinherit John, "I will and direct that my son John take nothing from my estate, unless he gives his estate to somebody else, so that there is none left for John." Otherwise John comes in for his share. If he would disinherit John, he must will all of his estate to his daughter Jane, or to others, and leave none for John. We can probably not eradicate subversive thought from our educational system by any bill or measure of this body. We can direct it into different channels. We can put ourselves upon the offensive and by militant organizations, like the Boy Scouts for the little fellow and the American Legion with the large ones, produce the type of men that Sam Houston, John H. Reagan, and James Stephen Hogg would have us to bring forth.

I would like to see a chair of American Government and History installed in every State school of Texas, where those who are preparing to teach are being tutored. I would make it a part of every teacher's course of study, and there the struggles of our fathers for freedom would be taught. There the background of our system of government would be painted and brought forth. There American history would be taught again to mature minds and not to those of the lower, intermediate grades alone.

The personnel of these chairs should be chosen by a select body, one of whom should be recommended by an institution like the American Bar Association, like the American Legion, and like the American Federation of Labor, and then, of course, by your Governor and your Supreme Court.

We should not stop by forcing this course into the schools, because for some it might seem distasteful, but it should be made attractive. How many of you have ever enjoyed for a week the Davis Mountains of our own State? How many of you have been to Fort Davis, where clean, cold water bubbles from the ground beneath the palisades of rock of wondrous beauty? How many of you have seen the oak groves and the group of giant sycamores that cluster around these springs? How many of you have seen the rock homes that still stand there, with the barracks and quarters of the soldiers of the early period of our State? How many of you have slept under its delightful climate, where it is not so cool as to give you a cold, but where you can sleep under a blanket every night, just 1 mile high? I should acquire a spot like that and upon it I would build a school, or a lecture hall; we might call it a Chautauqua, or a school of Americanism, where the best teachers and speakers upon law and government would lecture, and during the summer vacation of the school teachers of Texas I would provide for them a free course, at least every third year, where the beauties of the stories of one's native land would be made to live again in the minds of those that teach the youth. There they might be taught the philosophy of Moses and of Christ, Himself, that man is rewarded according to the deeds done in the body, that he is punished for his evil doings, and blessed for his righteous acts. There they might be taught the words of Jefferson:

"Let us found a government in which there will be no extremely rich and no abjectly poor. Then let us say to every man, 'With the gifts God has given you—your brain, your brawn, your energy—work out your own fortunes under a just government and an equal jurisprudence.'"

To the youth I would say, in the language of the very wise man:

"My son, hear the instruction of thy father and forsake not the law of thy mother."

And I would let them hear the intonation of that hymn:

"Faith of our fathers, keep our country true and free,
Faith of our fathers, holy faith, we will be true to thee."

Presentation of South Dakota State Flag at Valley Forge

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

ADDRESS OF MRS. JOHN H. CUMBOW, SIOUX FALLS, S. DAK.

Mr. MUNDT. Mr. Speaker, under leave to extend my remarks, I take pride in including in the permanent archives of the CONGRESSIONAL RECORD the remarks of Mrs. John H. Cumbow, of Sioux Falls, S. Dak., in connection with the presentation of the South Dakota State flag to the Valley Forge Association on April 10, 1941.

Mrs. Cumbow is the State regent of the South Dakota Daughters of the American Revolution.

The address follows:

From the sunshine State of South Dakota I bring greetings and sincere cooperation in this undertaking in preserving Valley Forge as a national shrine to the memory of our first patriot, Gen. George Washington.

The locality of our State is geographically the center of North America. Agriculture and farming are the main pursuits in the eastern and central parts of the State, and in the western section mining and grazing are the chief occupations.

At Lead is located the second largest gold mine in the world, and only 2 miles from

historic Deadwood. The country here is mountainous. Harney Peak is over 7,000 feet in height. The mountains are covered with beautiful pine trees, and kinnikinnick grows profusely on the ground. Deer are often seen in the mountains and along canyons and sparkling streams.

The Black Hills abound in minerals—tin, beryl, rose quartz, coal, manganese, mica, and felspar. I have watched with interest the development of Mount Rushmore National Monument, comprising the busts of four great Americans carved from solid gray granite—George Washington, Thomas Jefferson, Theodore Roosevelt, and Abraham Lincoln—which are visible at 60 miles. The head of Washington is 60 feet from forehead to the point of his chin.

South Dakota takes pride in its many churches in all localities, and its schools and colleges.

At Yankton is buried a real Daughter, Charlotte Warrington Turner, whose father, William Warrington, was a bodyguard of Washington when the Continental Army camped at Valley Forge.

It is a joy and privilege for the South Dakota organization of the Daughters of the American Revolution to present the South Dakota flag to the Valley Forge Association.

MY STATE—SOUTH DAKOTA

Mine is a State of prairie loveliness,
Tree-fringed lakes, or river, cliffed and bold;
Of centuried buttes and granite spires that press
To skies beyond their pregnant lodes of gold;
A land where coyotes howl and wild ducks wing,
Of forest-sheltered buck and antelope;
A land of drought—or rain abundant spring—
Of sun and wind and snow—of toil and hope.

Mine is a State whose varied loveliness
My soul enthrall. Oh, when days are fine
And I can see uplifted, motionless,
Miraged—a ranch, spruced streams, a smokestacked mine;
I hear God speak in loving majesty,
The dauntless language of eternity.

—*Roberta Robertson*, from Pasque Petals.

Spiritual Defense of America by Moral Rearmament

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

ARTICLE BY DAVID LAWRENCE

Mr. SMITH of Washington. Mr. Speaker, without a mobilization of our spiritual forces in the present national emergency, military and naval strength will prove to be empty and wholly inadequate. This vital fact is pointed out in the booklet entitled "You Can Defend America," which stresses the need and value of the moral rearmament of our people. The moral rearmament movement has contributed richly to the building of national morale in England and will do the same in America.

Mr. Speaker, by unanimous consent of my colleagues, I insert the article by Mr. David Lawrence, which appears in the current issue of the United States News, Washington, D. C., entitled "You Can Defend America," reading as follows:

YOU CAN DEFEND AMERICA

(By David Lawrence)

A booklet comes to hand. In it is a foreword by General Pershing, who "commends its message to every American." It is a penetrating declaration that emphasizes the importance of spiritual defense in the world crisis.

We have been thinking a good deal in terms of military rearmament. We are asked now to consider moral rearmament as an indispensable factor in the building of national morale. Without it we cannot face the exacting tasks that face us.

Today America is building ships, planes, and guns. "But," it is asked, "is this enough? Does America have total defense? Does she build character? Spirit? The will to sacrifice? Does she build men? Men who pull together? We in America ask, 'What can I do?' What can 130,000,000 Americans do? Plenty."

Then follow three lines of defense:

"Sound homes.

"Teamwork in industry.

"A united Nation."

Pointing out that America "needs guts as well as guns," and that "national character is the core of national defense," the pamphlet declares, "Congress can't vote it. Dollars won't buy it. It's your job to build it."

The plea is a simple one. The booklet can be read in a few minutes. Some of its passages are reproduced here in part:

"Human nature is the bottleneck in the production of national morale. We need a new spirit in the country. But to get it we must start with a new spirit in every citizen. And that means you.

"Either you sacrifice your personal selfishness for the Nation, or you sacrifice the Nation for your personal selfishness.

A NEW SPIRIT FOR THE HEART AND MIND

"America needs a change of heart. We must live the American way.

"Americans are honest, unselfish, neighborly, clean, and free.

"Or are they? Always? Are you? All the time?

"If not, what can you do about it?

"A new spirit can grip your heart and mind and muscle—if you are willing. You can change. How?

"The first step is to face the facts. The facts about yourself. Honest? Unselfish? Neighborly? Clean? Free? At home? In industry? In politics?

"Our fathers looked to God for their direction. We've looked about every place else.

"We still print 'In God We Trust' on our money. Everybody carries the idea around in his pocket. Is it just an idea? Or is it the main point?

"William Penn said: 'Men must be governed by God, or they will be ruled by tyrants.'

"What are you governed by? Your wife? Your husband? Your desires? Your pocketbook? Fear of losing your job? Personal ambition?

CHANGED LIVES ARE NEEDED NOW

"Only God can change human nature. When you decide to be governed by God, then the change comes.

"It's like joining the Army. You decide there's something worth fighting for. You enlist. You put yourself under orders. Then you are given new equipment. You find new comradeship. Your way of living changes. And your whole outlook on life.

"To be governed by God means to listen to a wisdom beyond your own. And obey.

"George Washington listened at a time of conflict—and gave a nation freedom.

"Abraham Lincoln listened at a time of crisis—and preserved a nation's unity.

"Lincoln said, 'I have so many evidences of God's direction that I cannot doubt this power comes from above. I am satisfied that when the Almighty wants me to do or not to do any particular thing He finds a way of letting me know it.'

"You don't have to be President to do as Lincoln did. When you take time to be quiet and listen, God will guide your thoughts. He will give you orders. And a plan. Directions how to put things right. Creative ideas about yourself, your home, your job, your community, your nation.

"Musket and powder horn once hung over the door of every American home. Our fathers were not afraid to use them. The minute men at Lexington and Concord seized them and ran to defend their country. Not a man in America would hesitate to do it again if invaders threatened his homeland.

"But America has already been invaded. Like parachute troops in the night, fear, hate, and greed have slipped into our homes, our industries, our communities. Like termites they are eating away our national character.

"The fight is on. The fight against our softness, graft, laziness, extravagance, buck passing, materialism—allies of the "fifth column." The battle line runs through every home, every office, every factory, every farm.

"It is a daily battle. It takes courage. Imagination. You've got to be tough inside. You've got to think hard, and live clean.

"You and 130,000,000 other Americans can enlist today in this fight. You don't have to wait to be put into uniform. You're in the Army now.

"First lick the enemy inside yourself. Then get the next fellow to join you in this battle for a new America. Get your newspaper, radio station, and movie theater to fight for a new morale.

"Fight to make your home and community a pattern.

"Fight to bring teamwork in industry.

"Fight to unite the Nation.

"Then America will have what ancient China lacked. What modern France lacked. She will have total defense."

Then there's another striking passage which says:

"America does not need to be divided and quarreling at home just to prove she is a democracy—any more than husband and wife need to get into an argument just to prove they have minds of their own.

"A crack football team isn't all made up of quarterbacks. Every man has his part. Each depends on all the others. So with the Nation. Unless we have national teamwork someone is likely to take the ball away from us.

THE WAR INSIDE OURSELVES

"Nations in Europe have gone down because they were at war inside themselves. Their people couldn't get together. They refused to face facts. They were caught unprepared. Even as the storm broke, men fought to get more for themselves.

"National unity is the heart of national defense. If a nation is united, no "fifth column" can slip through and sabotage its strength.

"A united people will have the spirit which no disaster will shake and no danger will weaken.

"Unity is more than agreeing on what we like or whom we hate. Teamwork cannot be built by high talking and low living; by fine ideals and selfish lives.

"'Teamwork,' said Knute Rockne, 'is a combination of self-sacrifice, brains, and sweat.' It means working together for America. Honest teamwork between Government

and business, labor and management, union and union, Republican and Democrat, city and farm.

A UNITED PEOPLE FREE FROM FEAR

"A united people will build the new America. A Nation set free from fear, hate, and greed. A Nation that holds the secret of the new world.

"Friction between men slows up work more than friction in machines. If employers or workers destroy teamwork by their selfishness, then America is in danger. And the gains each fought for will be swept away.

"The defense of the Nation demands that all rise above self-interest. It means each faces up to his own mistakes. It means we join forces for the common good.

"Then our industries will run at capacity. Our manpower will be put to work. Together we all will produce the materials and morale to make America strong."

I have quoted the pamphlet at length because I believe its wide distribution at this time is in the public interest. Copies of the pamphlet, which is entitled "You Can Defend America," can be obtained by writing to Moral Rearmament, Judd & Detweiler (printers), Washington, D. C., or to Moral Rearmament, Fairmont Hotel, San Francisco, Calif. The pamphlets cost 10 cents each for quantities of less than 1,000. All profits have been waived by printers and paper manufacturers. Two million copies have been printed already.

It may well prove that this booklet will become the basis for the national philosophy of total defense for America. Newspapers could help by reprinting it, radio stations by broadcasting it, ministers, speakers at luncheon clubs and civic organizations by reading excerpts from it, and, last but not least, individuals can derive inspiration by reading and rereading it and asking themselves in the meditative quiet of conscience whether the message doesn't really go to the heart of the effort we must make for military and spiritual rearmament.

The Position of Farm Groups With Other Groups and Pending Legislation Before the Congress of the United States

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1941

ADDRESS OF HON. HAMPTON P. FULMER, OF SOUTH CAROLINA, BEFORE THE ATLANTIC COTTON ASSOCIATION, GREENVILLE, S. C.

Mr. FULMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert a copy of an address delivered by me before the Atlantic Cotton Association in convention at Greenville, S. C., on Friday, April 18, 1941.

I deeply appreciate the fact that at this moment the great thought in the minds of the President, the Members of Congress, and the American people concerns the ruthless and destructive war that is now raging in Europe, and the building of our national-defense program as speedily and efficiently as possible.

However, I want to call to the attention of the administration, the Congress, and the American people that we cannot have a well-balanced and successful national-defense program unless we have a well-balanced and prosperous agriculture. During the period ahead when the defense program reaches a peak, agriculture must be economically strong if it is to do its part in national defense and if farmers are to have living standards comparable to those of the people in the cities. To have less is to impair defense. In other words, a successful agriculture is a major part of any successful national-defense program.

A major portion of the farm problem is based upon the disparity which exists between the agricultural dollar and the industrial dollar. It is caused by the fact that prices for major agricultural commodities are established by speculators whose major consideration is not domestic but world crop conditions and the fact that those prices are established without any consideration as to production costs and in the imposition of which the producers have absolutely no voice. This, with the consequent failure of tariff to protect domestic agricultural markets, condemns the American farmer to sell virtually at world-price levels.

LOW FARM INCOME

The most important problem facing the southern farmer today is that of low income. It is not just a matter of uneven distribution. There is not enough total agricultural income in the South to support the region's extremely dense farm population. In fact, the South has the lowest income of all the major farming regions of the United States; its per capita return from the land is the smallest.

These figures, secured some days ago from the Department of Agriculture, may be of interest to you:

In 1909, farmers' percentage of the national income amounted to 16.4 percent; in 1917, 1918, and 1919, it amounted to 19 percent, and in 1932, 3.7 percent, and in 1940 to 5.9 percent.

INCOME OF INDUSTRIAL GROUPS

Let me give you some interesting information and figures contained in a statement issued some days ago by the National City Bank, of New York, quoting:

"A tabulation of reports of 2,590 leading corporations shows combined net profits, less deficits, of approximately $4,253,000,000 after taxes in 1940, compared with $3,565,000,000 for the same corporations in 1939, a gain of 19 percent.

"Net profits of the following industries, as reported after depreciation, interest, taxes, and other charges and reserves, were charged off as follows:

	Percent
"Lumber	76.8
Paper products	73.8
Agricultural implements	67.2
Meat packing	12.4
Cotton goods	77.4
Knitted goods	33.3
Printing and publishing	22.6
Fertilizer	13.0
Iron and steel	98.8
Building equipment	50.5
Electrical equipment	45.1
Hardware and tools	39.8
Machinery	72.5
Oil and gas	19.6
Department stores	28.3
Construction	68.6"

You will note from this statement how cotton mill margins have advanced while the price of cotton has remained the same. Had it been the other way around, with mill margins constant, present cloth prices would mean that cotton would now be selling for 19¾ cents per pound instead of 11½ cents. In the meantime, this great industry is opposing every effort that may be made to increase the farmers' income from cotton, unless we secure the cash from the Treasury of the United States. It is interesting to me, and should be to you, to note how the textile mills and industry generally are able to pass on to the consuming public high, fixed tariff rates, increased wages, and fixed prices, but when it comes to the suggestion of issuing certificates to be purchased by the textile mills of the country, to be passed on to the consuming public, according to their statement, "This would ruin the whole industry."

Looking beyond the immediate future to the conclusion of the present hostilities and the tapering off of the defense program, we can see that the problems of agriculture are likely to be more acute than they have ever been, and that the need for a strong farm program is going to be greater than ever. The Nation will then be faced with the problem of absorbing into other employment large numbers of people who have been employed in defense industries. With such employment there will be a diminishing national income with accompanying decline in farm income.

A great many people stress the importance of regaining our foreign markets.

If we will face the real facts, you can come to no other conclusion than that our cotton market for export is definitely and permanently reduced.

I do not mean by this that we will not continue to export some cotton, but we should face the facts and endeavor to work out some constructive program whereby the cotton industry of the South may be able to continue as one of the most important industries of the United States, an industry that affects the lives of millions of people, one that has a determining factor in many lines of business, including yours.

What are the real facts?

New extended uses of cotton, on a large scale, have failed to develop over a period of many years of extensive and expensive research.

During the 12 years beginning in 1926 and ending in 1938 foreign consumption of foreign-grown cotton increased from 10,000,000 to 16,000,000 bales, while in the United States during the same period our consumption remained steadily around 7,000,000 bales annually.

However, this is not the whole story, for during recent years production and consumption of synthetic fibers have increased by the equivalent of about 2,800,000 bales annually.

In 1938 alone the world output of synthetic fibers totaled the equivalent of about four and one-half million bales of cotton.

Synthetic output in the United States increased 20 percent in 1940 and it is estimated to be 480,000,000 pounds. Ten years ago American production totaled only 127,000 pounds. The most sensational developments in the field of synthetic fibers such as spun rayon, nylon, and vinyon are only in their first stages of commercial exploitation and promise revolutionary increases in the near future. The paper trade has likewise enjoyed a tremendous degree of technical improvement. It not only threatens to take from cotton its use as a material for bags, but likewise is encroaching upon the use of cotton in the home in the form of towels, table covers, napkins, window shades, curtains, and even bed sheets and pillow cases. Newly developed plastics are also increasing the pressure placed upon cotton consumption.

In normal years pulp-consuming countries import nearly 6,000,000 tons. Canada succeeded in increasing its exports, practically all coming to the United States duty-free, in 1940 to 1,068,000 tons from 706,000 tons in 1939. The consumption in the United States established an all-high at 9,751,000 tons in new pulp in 1940, compared with 8,880,000 tons in 1939.

The annual import of newsprint, practically all coming from Canada duty-free, amounts to around 3,000,000 tons annually.

In 1938, the most recent year for which complete statistics are available, the United States consumed 13,388,000 tons of paper, an average of 206 pounds per person.

According to figures that I have secured from the Department of Commerce, during the year 1938 we imported into the United States, duty-free, newsprint, wood pulp, and pulpwood equivalent in pulpwood cords to the total amount of 15,157,000 cords. Prior to the war these imports were coming in from Germany, Russia, Scandinavia, and Canada. At this time these imports are coming in, duty-free, from Canada, and it may be of interest to you to know that Canada is buying considerable cotton from Brazil. It can be said, according to these figures, that now normally about 50 percent of the wood used to meet our paper requirements is imported duty-free.

We all know that we have too much cotton at this time, and the only way the cotton problem can be solved is to get rid of the surplus cotton.

Not only that, but we must create an outlet for all future surpluses, so that the country may be spared the jitters every time God is good to the South by giving us a bountiful cotton crop.

It is very sad, but nevertheless true, that up to this good hour no constructive solution has as yet been submitted which will solve this surplus cotton problem.

The question—what to do about it—what is the solution?

In that, as stated, an emergency exists, apparently there is but one visible remedy for the dilemma, and that is a large substituted use of our cotton.

We consume colossal quantities of wood pulp, of which we have only a limited domestic supply. Both cotton and wood pulp are basically cellulose.

A joint consideration of these two economic problems should develop the answer to the crisis.

Preliminary experiments in the use of cotton for pulping have indicated technical feasibility, and it is now planned to conduct a number of commercial experiments to develop further technical and increase cost information.

Paper manufacturers using raw cotton under the 1940 Department of Agriculture program found that the preliminary treatment of raw stock was less expensive than that for other materials, that the treatment required smaller quantities of chemicals, that the cooking process required less time, less power was consumed and that the quality of the finished paper was generally satisfactory, and in some cases superior.

It may be of interest to you to know that I had the Bureau of Standards research laboratory at Washington to pulp a bale of cotton for the purpose of ascertaining the feasibility and possibility of using cotton in mixing with wood pulp and synthetic fibers. I am quoting from a paragraph contained in the report submitted to me by the Bureau of Standards:

"Raw cotton can be used satisfactorily from a technical standpoint in the manufacture of paper. To have raw cotton suitably pulped for use in papers now made wholly from wood pulp, however, it would be economically advantageous to have the raw cotton converted to paper-making pulp or half stuff on a large scale near the source of supply for sale to the paper industry. This would not be necessary in the case of mills now using rags and preparing their own half stuff, provided the raw cotton is free from foreign material."

We have held several very successful conferences on my bill, H. R. 99, with technical men from three or four of the departments, and with several technical men representing the pulp and paper industry. I believe we have made wonderful progress. Even the representatives of the pulp and paper industry frankly admit that cotton can be used in mixing with wood pulp, but they state that it will take about 2 years to install proper machinery and that they are fearful that the extra cost will ruin their industry. It is interesting to me to note how the various industries of the country are able to pass on to the consuming public high fixed tariff rates and increasing wages from day to day, but when it comes to legislation that would be helpful to agriculture, we find practically all of these industries are fearful of the result of such legislation.

My bill provides for an internal-revenue tax on pulp products, not containing a small proportion of cotton, in percentages fixed under the act.

The percentages are as follows:

Five percent in newsprint and paper board.

Ten percent in other paper.

Fifteen percent for rayon, cellophane, and plastic.

If you will read this bill very carefully, you will note that the administration of same will be very simple and inexpensive in comparison with every other temporary proposal.

In using the small percentage of cotton, as provided for in the bill, we would be able to use 4,000,000 bales of cotton annually, and, as recovery advances, naturally the amount of cotton for this purpose would increase as the years go by.

As to the effect on the pulp-products industries, this proposal would not unduly hinder sales for the reason in supplying surplus cotton at reduced prices to pulp converters who seek exemption from the excise tax the Government shares in the additional expense incurred, and the surplus cotton at reduced prices would be consumed in this country.

About 2 years ago, at the suggestion of the President of the United States, a special congressional committee composed of five Members of the House and five of the Senate was appointed to investigate the forest problems of the United States. As vice chairman of this committee, I had the privilege and the pleasure of holding hearings and visiting in the various sections of the United States, and if you will secure a copy of our report which includes our recommendations, you will find that according to our findings our forests, one of the greatest national resources that we have, are being ruthlessly destroyed and the prices that are being paid to farmers and small private landowners are nothing short of highway robbery.

I believe you will agree with me in that we would be able to consume an additional 4,000,000 bales of cotton annually under this programs, as well as being placed in a position to properly preserve and utilize our own forest resources, that this bill should receive prompt and favorable consideration. I contend that this bill will definitely solve our cotton problem in the South, which is really a national problem; therefore its passage should be of the greatest interest to the people of every section of the United States.

The Agriculture Committee of which I am chairman will commence hearings on major farm legislation on April 22.

My bill, the income certificate plan (H. R. 3378), will be the major bill up for consideration during these hearings. However, we will give consideration to other bills including appropriations out of the Treasury of the United States for 100 percent parity payments, bills proposing high loans in the amount of full parity with a further reduction in cotton to around nine or ten million bales, and bills proposing actual price fixing.

It may be of interest to you to know that I was the author of the original Agricultural Adjustment Act, passed by Congress in 1933, which carried a processing tax provision. This program was working wonderfully prior to the time the United States Supreme Court decided that this act was unconstitutional, based on the grounds that agriculture is a local problem. I feel sure that if the members of the present United States Supreme Court were called upon to pass upon the constitutionality of the old Agricultural Adjustment Act, it would stand up 100 percent under the Constitution of the United States.

During the past years we have had a wrangle in the Congress every year in trying to get an appropriation for the purpose of paying even a part of parity, and I believe that the time has arrived when it is going to be impossible to secure the necessary funds out of the Treasury to make parity payments, especially 100 percent parity.

Still there are those, including the textile mills of the country, who oppose every bill that is offered, and the only suggestion they have is we should secure the money out of the Treasury of the United States.

When the Farm Board was created and the high-loan program placed in operation under the Hoover administration, I stated on the floor of the House that it would be just like putting that much money in a rat hole unless we were able to absolutely control production in line with domestic consumption, and the amount of cotton that we would be able to actually export.

You remember what happened when this program came to an end. We lost millions of dollars. Still today there are those, in Congress and out of Congress, who believe that we can settle the cotton problem by placing a high loan on cotton.

There is a bill pending in the Senate proposing 100 percent loan on cotton with a further restriction in production to the actual amount that we would be able to consume in the United States and the amount that we may possibly be able to export. This would tend to further cut the production of cotton to around nine or ten million bales.

If we do this, naturally, the farmers of the South will be driven into dairying, growing wheat, raising cattle, hogs, and producing all of these crops which are grown in other agricultural sections of the country not only for the consumption of our own people but for general markets. This increased production of all of these crops, especially for markets other than for our own markets, would bring about tremendous competition with every other agricultural section of the United States, which would tend to bring disaster to all of the agricultural sections of the country, including the South.

In the second place, this Senate bill would leave our market wide open for a tremendous increase in consumption of rayon, jute, and all types of synthetic fibers in that the bill does not carry a compensatory duty on these highly competitive products.

If I were engaged in the cotton-warehouse business, naturally, from a purely selfish viewpoint, I would be very anxious to see a high loan bill pass, because it would tend to place additional cotton in the warehouses of the country.

In the third place, it would take a tremendous amount of money to subsidize any amount of cotton that we might be able to export so as to place the price of our cotton on a competitive basis with foreign prices.

You will note that under the income certificate loan program the loan will perhaps be about 2 cents per pound above the world price; however, this will subsidize the farmer to this extent instead of Europe, and it will not call for much money out of the Treasury for the purpose of subsidizing any cotton that we may be able to export to Europe.

Then there is the price-fixing bill. In that Congress has passed numerous price-fixing bills for various groups, there is a very strong sentiment in Congress and out of Congress for actual price fixing for our major farm products. I do not believe, however, that we

could work successfully the actual price fixing of farm products unless we could change our marketing and distributing system. There are just too many people handling farm products, all of which would make it impossible to keep a check on price fixing.

I want to warn you, however, that unless you want to see legislation passed proposing a high loan or actual price fixing, you had better become interested in and active for the passage of legislation along the lines proposed under the income certificate bill.

My bill, the income-certificate plan, is somewhat similar to the original Agricultural Adjustment Act. I believe that the passage of this bill will definitely solve the securing of parity for farmers.

Let me give you some definite information about the provisions of this bill, the income-certificate plan, H. R. 3378:

The purpose of this bill is place farmers on a parity with other groups as to prices for their products in line with the prices that they have to pay for that which they purchase. This bill represents the first major effort to make the farm program self-supporting since the historical Supreme Court decision 5 years ago invalidating the bill, the Agricultural Adjustment Act and specifically outlawing processing taxes.

This bill has eight definite and specific aims:

First. The Secretary of Agriculture is to ascertain parity prices on cotton, wheat, and tobacco, and at the proper time prior to the planting of these crops, is to announce the parity price for each.

Second. A loan program will automatically become effective. The loans will be based on two-thirds of the parity price. Cotton loans will be computed on a basis of ⅞-inch middling cotton.

Third. A compensatory duty will be placed on rayon and other synthetic fibers comparable to the amount of the income certificate placed on cotton to avoid giving these competitive fibers an economic advantage.

Fourth. A duty will also be levied on jute and jute products that are imported from India, a large cotton-growing country, in line with the amount placed on cotton by the income certificate plan.

Fifth. The bill also provides that the income certificate will be based on a graduated scale, in being applied to the different types of cotton goods, so that it would not work a hardship on consumers who buy cotton goods like overalls, work shirts, etc.

Sixth. Cotton bagging, cotton bags, cotton twine, unspun cotton articles would be exempt from the marketing certificate requirements of the act.

Seventh. The difference between the loan price and parity will be paid to the farmer from the funds secured from the income certificate plan. No money will be placed in the Treasury or taken out of the Treasury to make these payments.

Eighth. A provision authorizing an appropriation for the subsidizing of cotton for export. Suppose the Secretary determines that the parity price of cotton is 15 cents per pound. This would automatically mean that a loan of 10 cents per pound, basis ⅞-inch middling would be made available to the grower of cotton. If the parity were 18 cents, then the loan would be 12 cents. The loan program would definitely accomplish two things: First, it would put a bottom under the price of cotton, thereby weeding out speculation; and in the second place we would definitely know what amount would have to be raised under the certificate plan to pay the difference between the loan or the price the farmer receives for his cotton and parity.

My committee reported a bill some days ago which will come up for consideration next week. This bill carries a provision increasing the loans on wheat, cotton, and tobacco to 75 percent of parity. This would place the loan on cotton at about 12 cents per pound. This bill is more or less an emergency bill, having for its purpose being helpful in connection with this year's crop, pending the passage of a real, major parity farm bill. If we are able to pass this bill, and if we are able to retain the Senate amendment in the appropriation bill, which will come up in the House within the next few days for consideration, we will then be in a position to pay farmers practically parity prices on this year's crop.

It may be of interest to you to know that I have a bill pending which proposes the placing of a duty on the importation of fats, oils, starches, and jute. Estimates of the quantities of cotton that will be used if jute and hard fibers were replaced entirely by cotton amount to 2,250,000 bales of cotton, as follows:

Jute	*Bales of 478 pounds net*
Bags:	
Mill feed	248,000
Fertilizer	74,000
Sugar	62,000
Potatoes	56,000
Wheat	50,000
Flour (all kinds)	19,000
Other	111,000
Total	620,000
Bagging for wrapping bales of cotton	135,000
Textile wrapping	90,000
Wool carpets and rugs	95,000
Twine and cordage	75,000
Other	85,000
Total	480,000
Grand total, jute	1,100,000
Hard fibers	
Binder twine rope	550,000
Other (mostly twine and cordage)	600,000
Grand total, hard fibers	1,150,000
Grand total, jute and hard fibers	2,250,000

I consider it a shame and a disgrace to have our farmers plow under and cut their production of cotton, while, in the meantime, we are permitting India, a large cotton-growing country, to ship into the United States duty free, jute and jute products, pound for pound, taking our own cotton market to the extent of one and a half million bales of cotton. Just stop and think for a moment. Farmers are hauling their fertilizer, grain, rice, mill feed, wheat bran, and cottonseed meal in jute bags at a time when they are stacking up millions of bales of cotton in the warehouses of the country covered with old, heavy, wasteful, and disgraceful jute bagging, costing the taxpayers in interest and storage around $50,000,000 annually.

No other country in the world, not even India, where jute is grown, uses this old, heavy, wasteful, and disgraceful jute bagging.

If you will make a thorough investigation, getting the real facts from those who are actually acquainted with just what they are doing in foreign cotton-growing countries, you will find that they have made wonderful strides along the line of increased production per acre, quality of cotton, every bale properly graded, in the method of baling and marketing, having installed a high-density gin compression, net weight selling of cotton, all of which we in the United States have failed to do, costing the cotton farmers and the cotton industry millions of dollars annually.

It is a well-known fact that this is one of the major reasons why we are losing our cotton markets.

Japan used to buy our cotton, but today Japan is the largest producer of rayon in the world, producing about 550,000,000 pounds annually. Japan does not use a yard of cotton manufactured in Japan. The citizens of Japan are using goods made out of synthetic fibers and Japan is exporting her textile goods to other countries, much of which has been coming into the United States. If Japan succeeds in getting hold of a large slice of good lands of China, she will not need to buy anybody's cotton.

I appreciate this opportunity of speaking to you. I hope that the information given will be helpful, and I am hoping that your organization will become active in line with other groups in helping to pass legislation in the Congress to take care of the cotton industry of the South.

The Vinson Bill

EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

EDITORIAL FROM THE WASHINGTON POST

Mr. HOUSTON. Mr. Speaker, under permission given me to extend my remarks in the RECORD, I wish to insert a timely editorial which appeared in the Washington Post of April 23.

This editorial contains sound logic, and I am in complete accord with the view that "the spirit of compromise cannot be encouraged by fines and prison terms."

The editorial follows:

[From the Washington Post of April 23, 1941]

THE VINSON BILL

It is a welcome sign of our national common sense that, despite the provocation of the strike situation, the opposition to the Vinson bill has assumed formidable proportions. Organized labor has taken a united stand against the measure, and many Congressmen are skeptical of its provisions. Although Secretary Knox indorsed its general principle, the House Naval Affairs Committee failed to adjust the bill to the voluntary basis suggested by Mr. Knox and many others. As it stands, therefore, it invites opposition from thoughtful students of the strike problem.

Representative VINSON'S bill is patterned after the Railway Labor Act. Yet it departs from the theory of that act in such vital particulars as to make the ultimate effect of the two incomparable. Each provides for what is popularly known as a "cooling off" period. Each prescribes various steps that disputing employers and unions should take before resorting to dismissals or changes in working conditions on the one hand or strikes on the other. But the Railway Labor Act gains its force solely from the pressure that may be brought to bear upon the disputing parties by the National Mediation Board and public opinion. The Vinson bill resorts to criminal penalties.

Obviously this is a critical defect. Notice of intent to strike or to change conditions of work which might result in slowing down or stopping defense production would be required. It would be unlawful to strike without giving such notice or without giving Government conciliators and mediators a chance to settle the dispute. And violators of this provision could be imprisoned or fined not more than $5,000. The obligation placed upon employers and employees to settle their

differences around the conference table is constructive. But the moral effect of establishing such an obligation is undercut when a penalty is attached to any misstep from the prescribed path of amicable collective bargaining. The spirit of compromise cannot be encouraged by fines and prison terms.

Fortunately, no penalty is attached to that section which outlines a policy of keeping open shops open and closed shops closed during the national emergency. The question here is whether Congress should attempt to write such a delicate policy into legal form. On the ground that no group should take advantage of the emergency to press demands that might curtail defense production, the closed-shop issue may well be laid aside for the present. Still there is a question as to whether the national policy on this subject should be left more flexible than a statute can ever be.

The Vinson bill is in need of a careful pruning. It doubtless could be revised into a sound and reasonable approach to the problem of strikes in defense industries. As it stands, however, it is too drastic for enactment. If the House proceeds with consideration of this bill without careful modification, there is danger that the cause which it is intended to serve may suffer an unnecessary set-back.

National Defense and Some of the Domestic Problems Involved

EXTENSION OF REMARKS

OF

HON. ROBERT RAMSPECK

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

ADDRESS BY HON. ROBERT RAMSPECK, OF GEORGIA

Mr. RAMSPECK. Mr. Speaker, under the authority granted, I print herewith an address delivered by me on April 11, 1941, at a dinner devoted to discussion of national-defense problems, which the Atlanta Woman's Club sponsored:

The United States is today engaged in a program for national defense that dwarfs any effort in its entire history.

The Congress has already appropriated for this program more money than was expended during 1917 and 1918.

In April 1917 our Army comprised 200,000 officers and men, of whom 67,000 were federalized National Guard men.

In April 1941 we have an Army of more than a million—Regulars, guardsmen, and selectees brought into the armed forces by the operation of the only selective service law ever adopted by this Nation in a time of peace.

In April 1917 we had 9,000 officers in the Federal service, of whom 3,200 were National Guard men. We had 3,000 Reserve officers.

In April 1941 we have 14,000 Regular officers, 16,000 National Guard officers, and 38,000 Reserve officers on active duty, a total of 68,000. Beyond this is a reservoir of 86,000 Reserve officers of all categories.

In April 1941 we have approximately a million and a quarter civil employees of the Federal Government, or almost twice the number we had in 1917. Almost 300,000 of these have been recruited since last July.

Most of the new civil employees are engaged at navy yards, arsenals, and in other defense activities.

Yet in the face of this colossal undertaking a large percentage of our people apparently do not feel the urgency of the situation.

This state of mind—this failure to understand the seriousness of the task we face—is the cause of many of the domestic problems which now beset our people.

After many weeks of consideration, our country has adopted a course of action committing the United States to aid for those countries who oppose aggression.

If we are to be successful in this course of action we must have the united support of all our citizens. We can no longer take things as usual, but must subordinate individual rights to the general welfare.

Until the necessity for such unusual effort and such united action is understood, we cannot hope for maximum results.

The success or failure of this program depends largely upon the cooperation of certain groups. We must have an all-out effort on the part of industry, labor, the armed forces, and civilian personnel.

At this point in the effort we are getting splendid results from those subject to the draft, from the National Guard, and the Organized Reserves, and from the civilian personnel.

We are not getting the cooperation we should have from some labor groups, nor from some in industry.

Before we can successfully cope with the situation and achieve the maximum production of things needed for national defense and for carrying on the policy of aid to England and other countries we must bring home to all groups the urgency of the situation.

SOME FAILURES TO COOPERATE

At the beginning of the defense program the Federal Government faced an absolute refusal for several months on the part of some corporations to expand facilities. As a result the Government is paying for much of the plant expansion either directly or through tax amortization.

The National Economic Committee recently said, "Speaking bluntly, the Government and the public are 'over a barrel' when it comes to dealing with business in time of war or other crisis. Business refuses to work, except on terms which it dictates. It controls the natural resources, the strategic position in the country's economic structure, and its technical equipment and knowledge of processes. The experience of the World War, now apparently being repeated, indicates that business will use this control only if it is 'paid properly.' In effect, this is blackmail, not too fully disguised."

Dorothy Thompson recently wrote: "There are still many persons who would rather defeat Roosevelt than defeat Hitler and rather defeat labor than defeat nazi-ism. The defense program gives them an opportunity to seek the suppression of labor on the ground of a national emergency."

Miss Thompson, referring to some employers, also said: "For some of them, the defense program is just a colossal boondoggle of Government investment in capital goods that can be dressed up in the Star-Spangled Banner."

Samuel Grafton, in the New York Post of April 5, 1941, said: "We are ready to defy powerful nations in order to establish equal justice, under law, but are we too weak to make an outstanding American industrialist, Henry Ford, take an equal place under labor law with that accepted by his competitors, General Motors and Chrysler?"

Another writer has said: "Many of these labor baiters seem to feel that it is the part of labor to meekly join the Army, recruited 95 percent from wage earners, or meekly produce material for the Army, while prices and profits march merrily on."

SOME MISTAKES OF LABOR

The quotations I have given are critical of employers and of management, but there is fault on the other side also. I recently said in a newspaper interview: "I'm absolutely certain that the House will pass restrictive legislation unless the unions themselves put a stop to two things: (1) Strikes in national-defense operations, and (2) exaction of high initiation fees from workers on defense-construction projects in cases where the union has been unable to furnish the necessary employees from its own ranks."

The New York World-Telegram commended that statement and commented in part as follows: "We welcome Mr. RAMSPECK's statement, because for months, we have been saying the same things and precisely with the same friendly motive of desire to save labor from doing irreparable damage to its own great cause. We, too, have fought for the rights of labor. We have always known, and said, that labor must accept the greater public responsibility that should go with increased power, or eventually see its gains become losses. Management is more to blame than labor for some of the strikes. There is need for an impartial method of clearly fixing the blame on management when it belongs there. We hope the President's new mediation board will supply that method."

The same article goes on to criticize labor for its initiation fees, jurisdictional strikes, outlaw strikes, and failure to exhaust other methods before resorting to strikes.

Dorothy Thompson, in the article to which I have referred, also points out that labor has in its ranks some of the gangsters, racketeers, and other crooks produced during the prohibition days. She also says that there are some Communists in the ranks of labor.

Another writer says that "organized labor is not perfect. It can be tough and greedy."

Walter Lippmann, in a most thought-provoking article, recently recorded the fact that no single plan would prevent stoppages of work. He says: "In the soft-coal industry there is an old, well established system of collective bargaining. Yet production has been stopped. In the Ford plant there is an old, strongly established system of nonunionism. Yet production has been stopped. At the Allis-Chalmers plant there are in operation the machinery of the Wagner Act, plus many State and Federal agencies for conciliation. Yet production has been stopped."

WHAT IS THE ANSWER?

I have alluded to these critics of both labor and management for the purpose of bringing to your attention the fact that we are faced with a difficult and delicate situation which vitally affects the national defense of our country.

These well-known commentators seem, as I see it, to agree that there is blame on both sides—that the answer to the problem does not lie in any simple plan nor in any one plan.

I am just as much concerned as you are with this problem. Perhaps I am even more concerned. I have been sympathetic toward labor. I have fought for its right to organize and bargain collectively. I deeply regret its failures in the present emergency, but I am positive that 95 percent of those in the ranks of labor are just as patriotic as you and I. The trouble in the ranks of labor is caused by a small minority and by a few leaders with selfish aims.

Some of the trouble is caused by Communists who have worked their way into some of the unions.

We must help labor rid itself of the Communist, the racketeer, and the selfish leaders who care nothing for the rank and file membership.

We must require that employers live up to the law of our land, and must provide that labor shall have a fair share in the wealth it produces.

LEGISLATION

Demands are coming to the Congress for legislation to prohibit strikes. Is it wise to enact such legislation?

England has not done so and its situation is certainly more dangerous today than that of our country. We did not do so in 1917 and 1918.

France did prohibit strikes last year, but the result was a disappointment. Ambassador Bullitt told the House Judiciary Committee that after such a decree was issued there was a general strike and the order was rescinded within 24 hours. Mr. Bullitt says the workmen went back to the factories for their allotted number of hours but they did not produce. Their hearts were not in it. It was not until the Germans broke the French lines, and were on the way to Paris, that the French workers really began to give maximum production. Then it was too late. In the last month of the war, with part of their plane factories lost to the Germans, the French workers actually produced two and one-half times as many planes as in any previous month. At last they were convinced of the need for maximum production. But it was too late.

France was defeated because its people could not become convinced of the urgency of the situation until it was too late. They were betrayed by corrupt officials and mislead by Communists. Theirs is a tragic fate. We must not repeat their error.

Mr. Bullitt says that the tragic truth is that the French people did not become really conscious of the danger to their country until after the Germans had broken through the Maginot line.

Some of our people are just as hard to convince today as to the urgency of the situation facing the United States.

That statement applies to some in all groups—to those in labor, those in the employer class, to those in other walks of life. We must convince them—before it is too late.

There are those who earnestly believe we have made a mistake in the policy we have adopted. They say this is not our war. I agree with them that it is not our war, but I disagree with their opposition to the policy of aiding England and the other countries resisting aggression.

I would not have voted for the policy simply to aid England. I voted for it because it seems to me the most effective defense of our country and our beliefs. Both, I believe, would be immediately endangered if Germany should win.

I believe we should exert every effort to bring the facts of the present situation to all groups of our people. We must not be too late, as was France. We must realize that time cannot be regained once it has been lost.

If we are to avoid being too late, we must mobilize the productive capacity of this Nation as we have never done before. If we can get all groups to realize the urgency of the hour, then they will lay aside everything else—just as soldiers do, they will compromise their differences, adjust their difficulties, because they feel themselves enlisted in the common cause.

We in the South must realize that we are more of a unit in support of this policy than is any other section of the country. Therefore we must have patience with others and do our part to show them the need for total support of the defense effort.

None of us wants war, and most of us believe that our best chance to avoid it is to give every possible bit of material assistance to those who fight for the things we hold dear—to those who believe in right rather than in might; to those who uphold God and the family; to those who practice freedom.

The United States faces its greatest test. Victory will be ours if we—each and every one of us—place our country and its welfare before all personal and selfish interests. With such unified effort we cannot fail.

Dr. Frank Graham, of Chapel Hill, N. C.

EXTENSION OF REMARKS

OF

HON. CARL T. DURHAM

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

LETTER OF DR. GRAHAM TO JOSEPH LEIB, AND A LETTER WRITTEN BY STEPHEN DUGGAN, DIRECTOR OF THE INSTITUTE OF INTERNATIONAL EDUCATION

Mr. DURHAM. Mr. Speaker and Members of the House of Representatives, Dr. Frank Graham, of Chapel Hill, N. C., is president of the Greater University of North Carolina and is now a member of the mediation board. His democracy has been questioned. I have known Dr. Frank Graham for over 30 years. In the long list of truly great and useful men who have served North Carolina, I doubt if anyone has been more useful or surpassed and held a closer place in the confidence, respect, and love of our people than Dr. Graham. His entire life has been full of useful service to church, State, Nation, and our democratic way of life. He is a Democrat without partisanship, bitterness, and narrowness. Living with him in a college community for the past 30 years has caused us to have a common interest in many matters of a public nature, and I know, by intimate association, of his loyalty to democracy and our institutions. He is truly a leader without show and has lived by that principle that what we do for ourselves will die with us, but that which we do for others is eternal and will live forever.

APRIL 19, 1941.

MR. JOSEPH LEIB,
National Press Building,
Washington, D. C.

MY DEAR MR. LEIB: I did not understand that you had asked me in your first letter what my personal attitude was toward the war. I would have replied then as I reply now: Full aid to Britain and the democracies at whatever cost and risk. I have reread your letter and find that you did not ask me what my personal attitude was, but asked me whether the American people were ready to declare war on the Axis Powers. I replied to you that people whom I knew differed on this question. Some were opposed to America going into the war under any circumstances; some were for full aid to Britain even at the risk of war; some were for full aid to Britain without war; and yet others were in favor of our going into the war at once. I was at that time in the midst of a legislative session and had neither the information nor the time to get the information to make any classification of the proportions of these several groups. It seems to have offended you that I did not make some uninformed assertions and generalizations. I stand by my statement of a lack of authoritative information acknowledged in my first letter.

In answer to your question in your letter of April 17, I say, what everyone who knows me knows, that I have never been and am not now a member of the Communist Party, that I have never been and am not now a Communist, that I do not believe in the principles and activities of the Communist Party, and that on more than one occasion I have clashed with those who have been suspected of following the Communist Party lines. I have been called a Communist by some reactionary industrialists, and I have been called a spokesman for the capitalists by Communists. A newspaper publisher told me that in the same week he came across materials, in one case, in which a paper published in the interest of southern industrial development attacked me by implication as a pro-Communist enemy of southern industry, and, in another case, in which the Communists attacked me as a tool of the southern mill barons.

I am an independent southern Democrat who political, economic, and social platforms are included within Christianity and democracy, now so desperately at stake in the world. As vice chairman of the Committee to Defend America by Aiding the Allies, I have been called a warmonger and other names for this stand, which I have maintained from the beginning. I am on record for aid to all the democracies from China to Britain, including Spain and Finland. I have been for the organization of the nations for peace since the days of Woodrow Wilson, and devoutly hope that America this time will not only aid the democracies to win the war but will follow through for the organization of the nations for the prevention of war and for the establishment of a just and humane peace.

With regard to being a member of the University of Moscow board of trustees, the closest I have ever been to Moscow is France. I was a member of the advisory committee to the board of directors of the Institute of International Education, 2 West Forty-fifth Street, New York City, which had as its program the establishment of university student centers and summer schools in many parts of the world for the purpose of promoting international understanding and good will among all the peoples of the world. This project was a part of the purpose of a great foundation to prevent war in the world. After America recognized Russia, Moscow was simply another strategic center included in this program of international education and understanding. However, the Soviet Government prevented carrying out the project at Moscow. As I recall it, Mr. Thomas W. Lamont, Mr. Dwight Morrow, Mr. John Bassett Moore, Dr. Alvin Johnson, Miss Virginia Gildersleeve, and other such representative Americans were members of the board of directors of the Institute of International Education, and our advisory committee was compcsed of about a dozen American university presidents. In reply to his question, I told your newspaper acquaintance over long distance that Dr. Stephen Duggan, director of the Institute of International Education, could give him first-hand information regarding this matter. I know that Dr. Duggan and all the members of the board of directors and the advisory committee will consider the charge with its implications as fantastic.

With regard to the Southern Conference for Human Welfare, I know that the first chairman and executive officers and the overwhelming majority of its members are as true southerners and loyal Americans as any of the citizens of our Southern States. I also know that during my term as the second chairman, the Southern Conference for Human Welfare was not a Communist transmission belt. An inspection of the treasurer's books and the names of the officers and board of directors would reinforce this statement. It may be true that a handful of Communists attempted to make it a transmission belt, but the overwhelming majority of us have stuck by the southern conference to prevent such a misuse of the conference and to carry out its real purpose in American democratic ways in behalf of justice to organized labor, tenant farmers, Negroes, unorganized work-

ers, and the forgotten millions. I have been assured by those who have checked the rolls that there are not more than a dozen Communists out of 1,200 members. Regardless of claims, 12 can hardly dominate 1,200. It is not our purpose to drive even the dozen and their allies, if any here, or anywhere, underground, but to meet them and defeat them in the open in a free and democratic struggle through open discussions, education, religion, legislation, and humane good will, as against subversive violence, hate, irreligion, and a blind allegiance to the party line of any foreign power. I am simply one of a number of devoted southerners, white and Negro, who are determined that Negroes, tenant farmers, and the struggling millions shall not become the prey of false fanatical activities, but that through interracial cooperation and understanding we work together to make our freedom more secure and our democracy more democratic, under the United States Constitution, the laws of our States and our Nation, and the American Bill of Rights. It is my opinion that there are no more loyal citizens anywhere than American Negroes. Some of the present leadership of the conference is too isolationist to suit a number of us, a number which has grown, I believe, to an overwhelming majority in recent months. Yet I respect the sincerity of the isolationists and also have faith in the sincerity of their assurance that their isolationist pacifism springs, not from communism but from Christianity as they interpret America's role and opportunity.

I have always been a participationist and try to win others to this view, but this fact does not prevent me from respecting the sincerity and patriotism of the isolationists.

I realize that in the many stands which I have taken in my own South in the midst of tense social situations I have been called a Negrophile in attempting, along with an increasingly large number of our southern people, to be fair to the Negro, and in the midst of strikes I have been called a tool of the capitalists by some Communists and a tool of the Communists by some capitalists. To those who know me I do not have to say that I am neither. I simply try, on the basis of the facts in each situation, to be fair to both capital and labor, management and the workers. Both have their rights and duties under the Constitution and laws of the land, especially in this hour, critical with the humane hopes of mankind. I do not claim to have the final answers to any questions. I am simply trying to do my part, realizing that it is a very small part, to make my State, my section, and my country a little better place in which to live.

I also have a deep conviction that freedom and democracy crushed anywhere in the world means that freedom and democracy are hurt everywhere in the world, and that we Americans, instead of dividing and miscalling each other names, should give ourt utmost aid to imperiled freedom and the stricken democracies in this, the world's darkest hour.

At the call of Woodrow Wilson I enlisted as a private in the United States marines. For that I have no apology. At the call of Franklin D. Roosevelt I will do my little part now, whether that part be in the back lines or the front lines in our total struggle in behalf of religion and the precious things of the human spirit, in behalf of the freedom and democratic organization of the peoples of the world, including the German people, for justice and peace.

With good wishes to you, I am

Sincerely yours,

FRANK P. GRAHAM.

INSTITUTE OF INTERNATIONAL EDUCATION, INC.,
New York City, April 16, 1941.

Prof. RALPH MACDONALD,
Raleigh Hotel, Washington, D. C.

DEAR PROFESSOR MACDONALD: This institute was organized for the purpose of diffusing a knowledge of American civilization and culture in foreign countries and a knowledge of foreign civilization and culture in the United States. Its board of trustees, given on this stationary, is a guaranty of the character of its work. Since the date of the summer session in Moscow several of the former members, including Dwight Morrow and President Livingston Farrand of Cornell, have died.

One of the institute's functions is to act as the representative of summer sessions in other countries. For example, until this war broke out it was the representative of the summer session at Oxford and Cambridge Universities in England, of the University of Paris and Grenoble in France, of Berlin and Munich Universities in Germany, of Perugia and Florence in Italy. Since the outbreak of the war it has retained its place as the representative of San Marcos University in Peru and the University of Chile in Santiago. There is nothing new about this function; it has existed for a great many years.

When the institute is requested to represent a summer session which it has not represented previously it is customary to organize a board of sponsors. For example—to come near home—when it was requested last summer by the University of San Marcos to organize a winter session for Latin-American students, it formed a board of sponsors. The session was held at the University of North Carolina, whose distinguished president received the suggestion with great enthusiasm. I may say that that summer session for Latin-American students—their summer, our winter—was remarkably successful. The students were delighted and received a splendid education in American culture and civilization. It has had great repercussions throughout the whole of Latin America.

Similarly, when in 1935 I was requested to advise in the organization of a summer session at the University of Moscow, I formed a sponsoring committee. The list of sponsors is appended. You will note that the committee consists of educators exclusively, most of them very distinguished educators. May I hasten to say that no one of them had anything to do with the administration of the Moscow summer session nor taught in it nor appeared at it. No one could appear at it for the simple reason that it was called off before the date of its initiation. Why the University of Moscow called it off I have never been able to learn. The ways of the Soviet are very mysterious.

I am sending you under separate cover a copy of my Annual Report for 1938, which contains the most complete description of the work of this institute. You may wish to refer to it.

Sincerely yours,

STEPHEN DUGGAN,
Director.

If Ships, Why Not Groton?

EXTENSION OF REMARKS

OF

HON. WILLIAM J. FITZGERALD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

EDITORIAL FROM THE HARTFORD (CONN.) COURANT

Mr. FITZGERALD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Hartford Courant of Wednesday, April 2, in reference to the reopening of the Groton Iron Works, at Groton, Conn.:

[From the Hartford (Conn.) Courant of April 2, 1941]

IF SHIPS, WHY NOT GROTON?

We have undertaken to make ourselves the "arsenal of the democracies" and our energies are being diligently applied to the manufacture of implements of war for our own defense and for the use of those nations that are resisting the Axis Powers. But except for our own purposes it does no good to turn out planes, and tanks, and guns, and munitions of all kinds, unless these weapons can reach those countries that are standing off the aggressor nations. "Cash and carry" no longer applies to the situation. The beleaguered nations have all but run out of cash, and even if they had quantities of it they haven't enough available merchantmen to come and get what we are more and more being able to furnish them.

Dr. Arthur J. Marder, in his article published in yesterday's Courant, made it unmistakably plain that if we are to render Britain alone the assistance she so greatly needs we will somehow have to supply her with ships, so heavy has been the toll taken of her shipping by Nazi submarines and bombers. Moreover, to insure the safe delivery of our lease-lend cargoes he says that we shall in all probability have to convoy the ships with our naval vessels. "If the crisis in the Atlantic is as serious as available statistics suggests," says Dr. Marder, "then there is no time to lose. We are committed to saving Britain as essential to our own security. No policy is worthy of the name if a state is unwilling to employ the means essential to the realization of that policy."

On the same day that we printed Dr. Marder's illuminating article the New York Times carried an editorial in which it said that thus far more than 5,318,000 tons of British and neutral shipping have been sunk, and the prospect is that from 3,500,000 to 5,500,000 more tons will be lost this year. Against this Britain and the United States combined are expected to produce not more than 2,100,000 tons of new shipping. A total of 451 merchant vessels is now under construction, or contracted for, in this country and under the emergency program of the Maritime Commission this number is expected to be doubled. "But this will necessitate," says the Times, "the building of additional shipyards." Very likely it will, but that is no excuse for not utilizing to the fullest extent such shipyards as we already have.

Here, for example, is the Groton Iron Works in this State now lying idle. Six concrete and steel shipways are available there, to say nothing of buildings that could be utilized once the necessary machinery had been installed. The Maritime Commission, we understand, considered utilizing the facilities that this well-located shipyard affords, but finally rejected the idea because it professed to believe that the proximity of the Groton Iron Works to the plant of the Electric Boat Co. might interfere with employment at the latter concern. Furthermore it questioned whether sufficient housing was available to take care of the influx of new workers. But also the Commission may have felt that the New England area is already getting more than its fair share of the defense business and that for political reasons it might be desirable to pass up the development of the Groton Iron Works and favor some other community.

This is not a matter into which political or geographical considerations should be permitted to enter. If cargo-carrying ships are the most vital need of the moment they should be built wherever they can be constructed in the quickest possible time. To revamp an idle shipyard and take full advantage of the facilities it already has would

seem to be the thing to do. Connecticut stands in no need of this industry from the point of view of the spending program, but it has something to contribute at Groton with respect to shipbuilding facilities, and that is the main consideration if it is important to get ships off the ways with the least possible delay.

Last Call

EXTENSION OF REMARKS

OF

HON. JOHN M. VORYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

AN EDITORIAL FROM THE WASHINGTON TIMES-HERALD

Mr. VORYS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following thoughtful and timely editorial from the Washington Times-Herald for April 20, 1941:

[From the Washington Times-Herald of April 20, 1941]

LAST CALL

It is not certain, but it is possible, that this United States could make a better peace for itself now than it could after the war which it seems about to enter all the way.

PEACE NOW OR LATER?

It is also not certain, but it is also possible, that our friends, particularly the British Empire, could make a better peace now than after the war.

It is not certain, but it is also possible, that our enemies—that's almost the official name, now—could make a better peace now than after the war. Hitler is an astute man, and he must know this.

THE WAR CAN'T GO ON FOREVER

This war will end some day.

We know it is not certain, but we also know it is possible, that it could be ended on better terms for all parties to it, including ourselves, by negotiations, in the near future, rather than by fighting it to a finish, which military experts believe will take not less than 5 years and perhaps as many as 10.

We think this possibility should be explored before we plunge all the way into the war.

In regard to the small nations and the racial minorities, for whom this war allegedly started, it is possible that a better deal could be made for them now than could be made for them years hence, after they have been invaded, torn, harassed, and exiled all that time by the devils of war.

We know the main interventionist arguments against such proposals as this.

NO PEACE WITH HITLER

It will be said, for one thing, that the United States cannot make a peace with the monster Hitler; that he must be first destroyed before there can be talk of peace.

It is not certain that we can destroy Hitler because it is not certain that we and the British can get more and better soldiers on the Continent of Europe at one time than he will have. This is not defeatism. It is simply history that a great war machine, ably officered, cannot be beaten except by a better war machine and a great deal of bloody fighting.

We have had a peace with Stalin ever since the first Roosevelt administration recognized the Soviet Government. Stalin and Hitler are two of a kind.

ARMED TRUCE

It will be further objected that any peace concluded now would be only an armed truce.

True enough. If a peace conference should leave Hitler first power in Europe, Stalin and Japan sharing control of most of Asia, the United States supreme in the Western Hemisphere, and Great Britain holding most or all of its present empire, it would be nothing but an armed truce.

At least we hope the United States would have sense enough this time not to sink a lot of battleships and chop its Army and air forces down to skeletons. All the great powers would be wise to keep their arms just in case any one of them should try to start something. Until one government for all the world is organized by some as yet undiscovered genius, any peace will be only an armed truce.

But that has been true throughout recorded history, except for the 400 years or so of the Pax Romana. Peace in this world is an interval between wars, meaning it always is an armed truce. But far fewer young men get killed and much less real wealth is destroyed in an armed truce than in a fighting war.

PEACE PANIC

It will also be objected, though not out loud, that a sudden peace now would bring on a serious, probably world-wide depression.

Also true. Big war orders make a certain kind of boom. Postwar readjustment, while the defense industries are retooling for peace production and writers are again beginning to label our defense industries "merchants of death," is bound to throw a lot of people out of work for a while.

But we know of no comeback to this proposition: That the longer this war goes on, meaning the more real wealth is tossed into its far-flung and ever-growing furnaces, the worse the postwar slump will be. If it goes on long enough, we shall all sink together into communism or a new dark age.

Baltimore C. I. O. Union Ousts Communists

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

ARTICLE FROM THE BALTIMORE NEWS-POST

Mr. D'ALESANDRO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Baltimore News-Post of today:

[From the Baltimore News-Post of April 23, 1941]

PROBE MARITIME "REDS," SAYS D'ALESANDRO—PRAISES C. I. O. UNION FOR OUSTING TWO COMMUNISTS HERE

WASHINGTON, April 23.—An F. B. I. investigation into the communistic situation on Baltimore's waterfront is to be asked by Representative THOMAS D'ALESANDRO, Jr., of Maryland, Mr. D'ALESANDRO announced today.

In issuing a statement praising leaders of the C. I. O.'s Marine and Shipbuilding Workers' Union for expelling two Baltimore officers of a local union found guilty of fomenting communistic disturbances, Representative D'ALESANDRO said:

"Recently I called the attention of the Dies committee to the activities of Communists in Baltimore.

"TIME IS RIPE"

"Not much was done about it, probably because Representative DIES was swamped with information of a similar type from many other places.

"I think the time is ripe now for an investigation into the situation in Baltimore by the Federal Bureau of Investigation.

"In this connection I want to congratulate William Smith, a general board member of the International Union of Marine and Shipbuilding Workers of America, for his patriotic spirit in exposing the activities of two officers of the local union who were expelled on charges of communism.

"PRESSED FOR ACTION

"The national leadership of the C. I. O. and the I. U. M. S. W. A. also should be commended for their prompt action in expelling these men.

"I think it is now time for Mr. Smith to go before J. Edgar Hoover, of the F. B. I., and give him what information he has about communistic activities in Baltimore and on Baltimore's waterfront."

I Am An American Day

REMARKS

OF

HON. SAMUEL A. WEISS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

Mr. WEISS. Mr. Speaker, President Roosevelt, on March 29, proclaimed Sunday, May 18, as I Am An American Day, to be observed "in recognition of our citizens who have attained their majority or who have been naturalized within the past year."

The proclamation requested Federal, State, and local officials, and patriotic, civic, and educational organizations to join in exercises "calculated to impress upon all our citizens, both native-born and naturalized, the special significance of citizenship in this Nation."

There is no question that we are now living in one of the most crucial periods in our history. Democracy and civilization throughout the world are being challenged. Hitler has called democracy a failure.

We must all unite to revive patriotic enthusiasm. The I Am An American Foundation must be commended for arousing such enthusiasm throughout the country, which has been possible through the efforts of its able president, Edward Arnold, well-known actor, and the committee composed of distinguished Americans of our great country. The objective of the Foundation is to reawaken patriotism and love of country in defense of liberty; to rededicate ourselves to service in defending our ideals of a free democracy; to encourage those who have reached the age of 21, and

aliens who have become naturalized Americans to enter the estate of full citizenship, with a determination to assume individual responsibility in holding aloft the torch of freedom under the Constitution. The Foundation pledges itself to the national observance of May 18 as I Am An American Day to honor native-born citizens who have reached voting age, and aliens who have received their final naturalization papers within the past year, impressing them with the seriousness of their responsibilities as full-fledged Americans. I heartily commend the leadership for its vision in this fine undertaking, and I urge all the communities in my district, and throughout the country, to formulate community-wide sponsor groups to carry on the high purposes of the I Am An American Foundation. Such cooperation is needed more today than at any time in the history of our democracy. I feel certain that genuine Americans who love their country and its beautiful heritage will not fail.

Gen. Martin Witherspoon Gary

EXTENSION OF REMARKS

OF

HON. BUTLER B. HARE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

ADDRESS BY HON. BUTLER B. HARE, OF SOUTH CAROLINA

Mr. HARE. Mr. Speaker, the Honorable Martin W. Gary, an outstanding young lawyer of Edgefield, S. C., and a major general of the Confederate States Army, was the owner of a colonial mansion located on a 40-acre estate in the town of Edgefield at the time of his death in 1881. A number of years later this estate, by inheritance and purchase of the interests of others, became the property of General Gary's nephew, the Honorable John Gary Evans, a former Governor of South Carolina. This estate is one of the most attractive and historic spots of the State. A few months ago Governor Evans and Mrs. Evans offered to convey this property to the town of Edgefield to be held as a memorial to General Gary and maintained as a public park for the recreation, pleasure, and enjoyment of the citizens of Edgefield County. A deed to the property was delivered by Governor and Mrs. Evans at a formal dedication service in Edgefield, S. C., March 12, 1941.

It was my privilege and honor to be one of the guest speakers at this memorable exercise, and, having obtained unanimous consent, I am extending my remarks by including the address delivered on this occasion, which is as follows:

Edgefield County may well congratulate itself upon being the beneficiary of as many history-making achievements as any other section of our State. Its long line of illustrious leaders, both from a military and civil standpoint, have made and bequeathed to posterity accomplishments which should be cherished and revitalized by every succeeding generation. Your meeting today is an index of gratitude and a public expression of your obligations to perpetuate the ideals wrought and fought for by your historic leaders. Time will not permit me to call the roll and recite the accomplishments of the many men and women who have made conspicuous contributions to your local and national life.

The thoughtful and generous action of Governor and Mrs. Evans in dedicating this memorial to General Gary is an outstanding recognition of the services he rendered his county, his State, and Nation. His contributions to society and the welfare of his country were not the products of an accidental career. They were the fruits of a life bedded and nurtured in an environment pregnated with positive conceptions of what constitutes the obligations of a good citizen to his community, his State, and his God.

General Gary's ideals and convictions were not subject to compromising and subversive influences. He inherited a type of culture and a conception of duty which rebelled at the suggestion of surrendering a conviction or sacrificing an ideal merely to avoid a conflict between such ideals and forces calculated to weaken or destroy those patriotic virtues so essential to our American conception of life, liberty, and freedom. It would take too long to pay appropriate tribute to his character and his signally strong intellect, and I will not undertake to describe in any great detail his conspicuous actions in war and in peace.

As a citizen, we would characterize him as one who developed in early life those virtues that stand for positive integrity and courage in both private and public conduct. These virtues were well demonstrated in many ways, and his older friends present can bear testimony of his action following the War between the States, in 1870, when he refused to subscribe to a coalition movement between conservative white and patriotic colored men, although there were a number of strong and courageous men who did subscribe to the idea with the hope that it would bring peace and harmony between the then warring factions in the State. His position was that peace and harmony at the sacrifice of the political and social ideals of his State would be a peace that would not only lower the dignity of the people but could only be a temporary and an uncertain makeshift. That is, the price of uncertain harmony would be too much to pay for the experiment. His vision in this respect was a rare and far-sighted virtue. It does not prevail in all leaders or in all countries today. There are many at this particular moment who want peace at any price, and there are a number of countries that have already made a supreme sacrifice and received but little in exchange. That is, they have surrendered their ideals of government, their ideals of life, and even their ideals of God in order to obtain what they may think is peace. Mart Gary was not of that type. He knew that peace, happiness, freedom, and liberty throughout the ages have been bought and paid for at a price and rarely obtained at a reduced rate.

No student or patriotic citizen can forget the price paid for liberty and freedom in our own country and the part paid by citizens of your county who followed Gen. Andrew Pickens, Sr., of the Pendleton District, father of Col. Andrew Pickens, Jr., of the War of 1812, and grandfather of F. W. Pickens, one of our Civil War Governors, both of whom were from Edgefield County. General Greene, in describing the battle of Eutaw Springs, one of the decisive conflicts of the Revolutionary War, and referring to the part Gen. Andrew Pickens, Sr., and his copatriots took in that encounter, said that after exhausting their supply of ammunition they met the enemy and fought hand to hand with the barrels of their rifles and then with sticks and bare hands and came out of that glorious conflict "as naked as they were born." Think of the price they were willing to pay for the peace and liberty we have enjoyed for 150 years and more. Their action is another illustration that real peace is never purchased with compromising arrangements and we know that no one was more conscious of this fact than Gen. Martin W. Gary, the great hero of the peaceful revolution of 1876, that leader who succeeded in lifting South Carolina out of the "burning mire of a political hell unparalleled in all history."

It would be a great inspiration to the citizenry of your county and State if they could at the beginning of each day march to the tomb of General Gary and at the rising of the sun lay hold of his marble hands, turn their faces heavenward and pray that their lives be rededicated with a philosophy of life and government that actuated him in the discharge of every private and public duty.

General Gary was born in the Cokesbury district of South Carolina in 1831 when the political atmosphere was almost overflowing with difference of opinion among the leadership of the Nation as to the wisdom of the policy recently established by the passage in Congress of another protective tariff act which was violently opposed by both John C. Calhoun and Robert Y. Hayne of our State. Mr. Gary's father was a student of politics and government, and no doubt the lad imbibed very early in life the difference in thought that was soon to develop between the North and the South on the rights and powers of the Federal Government as contrasted with those reserved to the several States under the Constitution.

Regardless of the conception of others and the tempered notions that may have existed among his contemporaries, he had strong convictions about the constitutional rights and powers of the several States as contrasted with those of the Federal Government. I regret that I will not be permitted to dwell upon this point, but let it be said that in view of recent political thought there seems to be a revival and widening sentiment to the effect that General Gary was eminently correct in the political philosophy to which he subscribed.

He located in Edgefield when 24 years of age and began the practice of his well-chosen profession. At the age of 30 he made one of his first speeches in the State legislature urging the withdrawal of the State from the Federal Union. Soon after the ordinance of secession was adopted in 1860 he enlisted in Company B of the Hampton Infantry. He distinguished himself as a leader shortly afterward in the first battle of Manassas when Col. Wade Hampton was severely wounded and Col. Johnson killed he took command as senior officer and captured a number of guns, the first to be taken by the Confederacy.

History records that he participated in every engagement in which the Hampton Legion was involved. He was at Sharpsburg when 56 men out of the 77 of his company were either killed or wounded. He became a brigadier general in 1864 and a major general in 1865. Upon the surrender of General Lee at Appomattox he passed through the lines of the opposing army and joined President Jeff Davis, at Greensboro, N. C., and escorted him to the home of his mother in Abbeville, S. C., where the last cabinet meeting of the Confederacy was held and, according to tradition, the seal of the Confederacy was thrown into the Savannah River the following day. It is said that he never surrendered and never missed a fight in which his company was engaged.

As a leader in battle he was fearless without daring and courageous without ostentation. He not only rendered conspicuous military service for the Confederacy but he was equally great in the discharge of his obligations as a true American citizen during the trying days of reconstruction.

He played a prominent part in organizing the red-shirt democracy and restoring political order out of the chaos which prevailed for 10 years following the War between the States. Probably no man in the State during the hectic days of 1876 contributed more in arousing the people to a sense of duty and responsibility than did Gen. Martin W. Gary.

Edgefield County is not only rich in a history of which it may be justly proud but the manner and extent to which her people have gone to emulate the life of her past leadership is highly commendable, and your continued efforts to emphasize and perpetuate the lives and character of the great men and women of the past is evidence that the patriotic and civic virtues which demonstrated themselves in the citizenry of the past are still alive and are now exhibiting themselves equally as great. I could give illustrations of daily occurence to verify this statement but your presence here is sufficient evidence to justify this observation. The spirit which prompted the Governor and Mrs. Evans to present this memorial to commemorate the virtues we have referred to in the life of General Gary is nothing more or less than a reappearance of the same virtues in the life of these honored citizens of our State. However, this is not the first evidence we have in support of this conclusion. For half a century the life and conduct of Governor Evans as a private citizen and as a public servant illustrates that great virtues may be inherited as well as acquired, and I take this opportunity of saying that it is my prediction the next generation in its program to maintain and perpetuate the example set by this meeting will include the name of the Governor as one who has brought honor and distinction to his county, contributed much to the advancement of his State, and whose life has been an inspiration to many young men and women throughout the Nation.

I am sure he will pardon my personal allusion but I am glad to testify personally to the fact that his life has been an inspiration to many of our people, for I well remember as a younger man his positive, courageous, and progressive administration when he was chief executive of this State. I want to thank him for affording me this opportunity to give expression of my personal gratitude for the inspiration he has been in my life.

Mr. Chairman, in conclusion, I want to express to you and others my sincere and personal appreciation for the honor and opportunity of being one of your guest speakers on what I consider a most momentous occasion. I join with you in paying tribute to the leadership of your county—paying tribute to the men and women who have been such an inspiration to many of us in the past. I would like to say further that this meeting is not wholly due to the past leadership of your town and county but is in a large measure due to the men and women whose patriotic virtues are just as great and would have proven or would now prove to be leaders as great as those of the past if opportunity and provocation should afford.

I, therefore, congratulate those who are responsible and made provision for this meeting. I congratulate those who have been glad to join with others interested in demonstrating the same virtues and the same philosophy of life which give rise to this occasion.

The President's Fault

EDITORIAL FROM THE ATHENS (OHIO) MESSENGER

Mr. JENKINS of Ohio. Mr. Speaker, under leave to extend my remarks, I wish to have included therewith an editorial which appeared in the Athens Messenger, a paper published at Athens, Ohio, in the congressional district which I have the honor to represent.

I think that the Athens Messenger is probably the most widely circulated and largest paper published anywhere in the United States in a city of the size of Athens. Mr. Gordon Bush is publisher, editor, and general manager of this paper, and his editorials are widely read, because they are clear and pungent and exhaustive of the subjects which they treat. In this editorial Mr. Bush discusses the political situation as it relates to the present outlook for war. The editorial follows:

[From the Athens (Ohio) Messenger]

IT'S PRESIDENT'S FAULT

President Roosevelt complains of the "apathy" of the American people relative to their danger from the war going on all over Europe.

President Roosevelt complains that we, in the middle back country, are not excited enough.

We wondered just when the President would wake up to the fact that he has kept the people from knowing anything more than generalized scores, voiced by himself and his associates, from Bullitt to Knudsen?

Secret arrangements with Great Britain have been going on for over a year. Congress has been shocked and forced by administration men into submission, into appropriating billions for this and that without knowing any more why or how much the action is needed, than do the people—being allowed to know only the vague warnings that "if England falls we will be in a tight spot."

Just why, just how, and what we are supposed to do about it, outside of rearming ourselves, has never been told straightforwardly to the American people.

Enumeration of the instances in which Mr. Roosevelt has run the war show for this country single-handed, and exactly as do the dictators he condemns in Europe likewise run their countries, is too commonly known to all of us to need rehearsing.

All through the 1940 campaign Roosevelt, realizing the American aversion to getting into European troubles, said time and again he would not lead us to war; he would not send American boys to fight in foreign countries; that he hated war; that our foreign policy was safe with him.

But he never told us why, and the millions voted faith in him, while just as many millions voted against him, because they saw too clearly how much the President did not say.

Now these same blind followers of a secret foreign policy are getting alarmed and asking what this is all about that has been stewing and brewing for so many months. They are not going all out with the administration because they are suddenly, belatedly, alert to the fact that Mr. Roosevelt has been long conducting our participation in foreign wars in the good name and credit of the United States, and without taking the people into his confidence.

He declared in wrath at Madison Square Garden, when his stock was most threatened during the campaign, that no one had any right to doubt his sincerity; nor to question the right of his actions; that he could answer every charge of warmongering, but that none were in order.

That went swell as a campaign speech. Following his election, he went all out again for every plan of participation in a war which many Americans still fail to understand until it has now gotten right down to forthright, seeable, shooting participation.

Suddenly he ruffles at the fact that his American followers are not at his back, with pitchforks and clubs, raging to fight in the best traditions of the American Revolution. He has led America a long way to war, and many are willing enough to go, but unity of purpose and full agreement with the course chosen for us is not present, for the simple reason that Roosevelt has not been honest, open, nor fair with the American people.

Washington's Near Horizons

ARTICLE BY JACOB SIMPSON PAYTON

Mr. JENKINS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I am glad to include therein an article written by Mr. Jacob Simpson Payton, who is the Washington correspondent for the Christian Advocate. The Christian Advocate is the official paper of the Methodist Church and represents that great, militant organization. Dr. Payton's articles are read by millions of people each week, and his views concerning national events that center in and around Washington are respected by all who read them and accepted by many who read them.

[From the Christian Advocate]

WASHINGTON OBSERVATIONS—WASHINGTON'S NEAR HORIZONS

One cannot see far from Capitol Hill. Out of the north the towering spires and roofs of Washington march down from the wooded hills. Eastward Maryland offers but a grudging glimpse of her historic countryside. To the south the majestic Potomac soon swings out of sight. Westward the eye wanders to sad Arlington where "taps" has sounded many times.

And yet from these hill-encircled lowlands this impersonal thing, called the Government, is supposed to see all and know all. From this point of limited visibility the plight of sharecroppers, migrant workers, job hunters, and other unfortunate Americans by the millions must somehow be seen and given

sympathetic consideration. From here also the sleepless eyes of the Department of Justice must range the land for those enemies of our liberties who congregate in the hideaways of great cities. From Washington, at the head of tidewater, the gimlet-eyed House Committee on Ways and Means must detect where the least discernible objects known to governments may be found—the purses of individuals and corporations.

These domestic problems, in varying size and urgency, have always haunted the lawmakers. To date they have never been too big nor complex for solution. At present, however, the eyestrain follows the attempt to peep beyond the hills that rim Washington to read the destiny of America in far-off places—Berchtesgaden, Rome, Tokyo, Singapore, Vichy, London, Sofia, Moscow.

The Census Bureau has just announced that the center of America's population has shifted from Linton to Washington, Ind., 30 miles distant, during the last decade. This change of direction southward instead of westward, a fact unique in our national history, passes without comment. Why? Americans are absorbed with a larger question: Where will the center of the world be—its military might, its sea power, its commercial strength, its commanding voices, its financial ascendancy—when one of the two mightiest forces ever engaged in conflict falls exhausted to its knees?

That is why Washington stands on tiptoe and gazes anxiously into the future. Who are the illusioned? Who follow only beckoning mirages? Who see more bears than there really are? Who are listening to false oracles? Are they the isolationists or the interventionists? If America only knew.

—*Jacob Simpson Payton.*

We Must Have Action Now

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

Mr. CANNON of Missouri. Mr. Speaker, under leave granted to extend remarks, I desire to include two timely utterances by men whose broad humanity and devoted service to their fellow men have endeared them to the American people.

The first is a brief excerpt from a speech on national defense by Chester C. Davis, member of the Advisory Commission to the Council of National Defense, delivered before the Association of Commerce at St. Paul, Minn., April 15, 1941.

Mr. Davis said:

Nearly two decades have passed since the long fight for equality for agriculture began. I recall vividly the early leadership and sponsorship which this organization and the people of this city and the Northwest provided. We sought to establish the principle that the farmer's income was determined by the relation between his costs and his prices, and that he was entitled to get and keep a fair relation between the two. That principle has been accepted as the law of the United States.

It has not been easy or possible to apply that principle with uniform success in the market place. But current tendencies to regard it as outmoded and obsolete disturb me. The formulas may need revision, technological changes may need to be taken into account, but the policy that accepts and seeks to attain for agriculture a fair standard of relationship with industrial wages and industrial prices should not be cast aside and need not be apologized for. I see altogether too pronounced a tendency to do both in the present agricultural picture. There is no equity and but little foresight in a philosophy that accepts and justifies every wage increase organized labor can wring out of the present crisis, and exonerates increasing industrial prices as necessary because of rising costs, while denying the same kind of accounting to the American farmer.

We have many and difficult adjustments ahead of us. The defense program means that we shall have unequal pressures on different markets. Some farm supplies may be difficult to obtain. Costs may rise and many farm prices will continue to reflect the loss of foreign markets. The principle of fair parity in farm income and farm outgo must be maintained—if for no other reason than because the farm plant must remain healthy and solvent for national defense itself.

The second is an arresting comment from the trenchant pen of Edward A. O'Neal, president of the American Federation of the Farm Bureau, appearing in the current issue of the Nation's Agriculture.

President O'Neal admonishes:

If the Farm Bureau, in all of its history, ever faced a period in which action was needed, that time is now. Unless the farmer does get into action, and soon, he will become the forgotten man of this critical period in our national life.

It has been said that every citizen must make sacrifices in the national interest during this period. But, in fact, what do we find? Policies are being followed which will permit labor and industry to make more, rather than less, out of the national emergency.

Efforts have been made to keep the price of steel and other essential commodities from running away, but recently the steel workers have won an increase of 80 cents a day in wages, the coal diggers are to get a dollar a day more, and innumerable pay increases in many lines have taken place. Just as surely as day follows night, the cost of everything the farmer buys is going to go up. His labor costs have already gone up, and serious farm-labor shortages have already begun to develop. His taxes will go up and up. These things happen with creeping insidiousness, and before he knows it the farmer is out on a limb and in imminent danger of having the limb cut off.

Let me quote a few statements made by that distinguished friend of agriculture, Senator RUSSELL, of Georgia, during the debate recently on the agricultural appropriations bill. Among other things, he said:

"The farmer should not be the only sacrificial offering. He has not yet had a single cost-plus-fixed-fee contract. It has not been necessary to repeal any limitation on his profits, for the producers of many commodities are selling below the cost of production. He has no farm board as the equivalent of the Labor Relations Board to protect him against speculators, unfair trade practices, and decreasing income. He has never gone on strike in an attempt to starve the consumer into higher prices. He has no floor under his wages nor ceiling over his hours, but in the nature of things toils unremittingly from daybreak until setting sun.

"He pays his share of the cost of legislation to afford security to other groups without enjoying that security. He has received the lowest income and enjoyed fewer of the benefits and blessings of modern-day civilization than any other group in the United States. Despite this, he is still the bulwark of the Nation and is impervious to the subversive influences which cause trouble and confusion in some other groups."

The farmer was and is ready for any emergency. Stored up against the day of need are mountainous stock piles of every farm commodity, available in nearly all cases at prices that represent only about 75 percent of fair exchange value—the parity promised to farmers for so long. Because he had always practiced a philosophy of abundance, food and fiber, the sinews of war, are on hand in enormous volume.

Where is the industrial counterpart of agriculture's stockpile which at last harvest time held 23,000,000 bales of cotton, more than a billion bushels of wheat, more than three billion bushels of corn, countless tons of lard, pork, dairy products? Industrial leaders assured us last year that there would be plenty of steel, aluminum and other essentials. Even though industry made frantic attempts to increase production, shortages did develop and priorities have been imposed in order to keep the defense effort from breaking down completely.

We were told that the labor situation was well in hand. Labor has its wages-and-hours law and its National Labor Relations Board to keep order on the labor front. As the emergency became more critical, we were told that production of material for Great Britain and for our own defense is vital to our national interest; but in spite of that, industrial strikes have been allowed to go on, some of them for months, in plants that were engaged in 24-hour-day efforts to produce implements of war and defense.

During all of the confusion, agriculture was ready, and was taken for granted. It has received little consideration, and its spokesmen were relegated to the background of the inner national councils, while consumer representatives were moved up to the front row.

Considering assurances given industry and labor, could not we fairly expect that farmers would be assured of prices based on fair exchange values? Parity will penalize no consumer because it is simply fair-exchange value.

But price goals have been announced on some farm commodities, and these prices are not tied to parity. Farmers are willing to feed the hungry in the democracies, if necessary, but in increasing their efforts they expect to receive the same considerations that other groups are getting.

Many farmers consider the modifications of the farm program already announced to be an outright invitation to abandon their corn adjustment program. Furthermore, Government-owned corn will be offered for sale to hold the price at approximately 75 percent of parity. The announced hog price is nearly a dollar under parity price. Farmers were amazed and confused. It was hard to understand why the administration, after 8 years of trying to raise prices to parity, should apparently reverse itself and attempt to keep some prices from reaching the parity goal. If additional supplies are needed, why not simply gear up our national program to greater capacity, and assure farmers of parity prices, instead of encouraging farmers to increase production indiscriminately?

The only way out for the farmer is to take the battle to Congress. Bills to give the farmer parity are awaiting action by House and Senate. It is now or never for the farmer. I pledge you here and now that the American Farm Bureau Federation will demand of the President and Congress, of Republicans and Democrats, a definite legislative action to give the American farmer full parity at this session of Congress. You are the ones who elect your Congressmen and Senators, and you are the ones who must tell them what you want. Let every farmer who can hold a lead pencil write to the men who represent him in Washington and ask them when they are going to redeem their pledge of parity to the farmer. They are in Washington to serve you in this emergency. They will respond if you will do your duty. We must have action now.

War Experience and Sugar

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

ARTICLE FROM THE SUGAR BULLETIN

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Sugar Bulletin of April 1, 1941:

[From the Sugar Bulletin, New Orleans, La., April 1, 1941]

WAR EXPERIENCE AND SUGAR

(By C. J. Bourg)

We are passing through a history-making period. The value of the continental sugar industry to the consumers of the United States is being demonstrated again. The first World War proved to the American people the importance of having a constant supply of sugar at home and available. It was only after the war, when domestic supplies of sugar had become exhausted, that foreign producers enjoyed a profiteering period which cost the American consumer upward of 25 cents a pound for sugar.

If the first World War taught a lesson in regard to sugar, it was that continental production of sugar in the last analysis becomes the most effective safeguard of adequate supplies at reasonable prices which the consumers of sugar in the United States should have at all times. Every nation in the world has sought to make itself self-sufficient in sugar since 1918, excepting the United States, where there has been only a restricted partial attempt at self-sufficiency.

For years the American Sugar League has sounded the warning that the voice of experience should be heeded by the United States Government and that American farmers should be permitted to produce more sugar, as a cash crop for themselves and as a protection to the consumer in supply and in price. Even some of our friends have at times felt that the matter was being overemphasized, based upon that "It can't happen here" feeling which has existed with regard to national defense as well as with regard to sugar supplies. But gradually the restrictions of war in all parts of the world are bringing about the emergency about which we have warned so many times.

The price of sugar has risen progressively in the past few months. The increase in price has not yet reached the levels which can honestly be termed abnormal or excessive. True enough, there have been increases from the low levels of 1940, when several national records were established on sugar prices—raw refined, and retail. There has been a restoration of prices toward normal levels for raw sugar and refined sugar, and so far the retail prices of sugar to the ultimate consumer continues to be fair and reasonable and acceptable to the housewife.

Getting right down to the bare facts, everyone who is informed on the sugar market knows that the recent increases in prices on raw and refined sugar have been brought about almost exclusively by corresponding increases in the rates of ocean freight and insurance, and because of the scarcity of cargo vessels. In the case of the Philippines, there is the prospect of no facilities for transporting sugar across the Pacific Ocean. What is stabilizing the United States sugar market and keeping it from running away? It is the existence of supplies of sugar within the United States, sufficient to meet ordinary emergencies until the 1941 new-crop sugars become available. It is the domestic sugar industry which is the protective insurance policy.

One buys fire insurance year in and year out, even though no fire occurs. Often when the fire-insurance premium becomes due, the insured hesitates to pay the premium. It seems so unnecessary because there has been no loss by fire. But good common sense and business judgment establish the value of fire insurance on the basis of the law of averages. The same reasoning is applicable to any nation protecting itself against a shortage of essential foods, both in the volume of supply and in the price of the food. There is no necessity for any elaboration of this discussion, as the facts are clear and the conclusions inescapable with respect to the value and importance of the domestic sugar industry within the United States.

Freedom and Security

EXTENSION OF REMARKS

OF

HON. J. W. ROBINSON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

EDITORIAL BY DR. J. W. AIRD

Mr. ROBINSON of Utah. Mr. Speaker, under leave to extend my remarks, I am including an editorial written by Dr. J. W. Aird and published in the Utah Valley News, a newspaper published at Provo, Utah.

For a number of years Dr. Aird has been one of the outstanding physicians and surgeons in the State of Utah, but, notwithstanding his busy life in his chosen profession, he has written a number of forward and thoughtful articles on our economic problems.

The editorial follows:

(By Dr. J. W. Aird)

There are two things that are uppermost in the minds and hearts of the civilized world today, namely, freedom and security.

There is unlimited talk and much concern about our freedom, but comparatively little is said about our security. The reason for this, no doubt, is due to the fact that most of us sense that there is a real threat to our liberty, while it is the minority who sense that there is a threat to our security.

The fact, however, is that as social and economical conditions exist today there is no security for any of us, even the most wealthy. Therefore our great concern should be to arrange for our security. If people become dependent, they automatically lose their freedom. Our craving for security is much stronger than our craving for freedom. The reason why dictators flourish and attain power is that they offer security. People are willing to sacrifice their freedom for security with the hope that sooner or later they will regain their freedom. This has been demonstrated very recently in France.

Our Constitution is supposed to guarantee life, liberty, and the pursuit of happiness; but, as I view it, it is very evident that we cannot guarantee liberty unless we guarantee security, as liberty is entirely dependent upon security. Therefore our Constitution should guarantee security as well as life, liberty, and the pursuit of happiness.

The names of the statesmen or leaders who can secure freedom, together with social and economical security to the human race, will go down in history for unknown ages to come.

The world as we see it today—half slave and half free—cannot long endure. The world has become too small for that. Social and economic intercourse between nations, together with our dependence upon each other for a normal and decent existence, calls for a similar order the world over. Therefore, either slavery or freedom must prevail. My judgment is that it will not be slavery, providing the free nations will, in the meantime, establish economic and social security for their citizens.

The fact that the desire for security is greater than the desire for freedom should give us our cue, as it were, to at once arrange for security, so that we may maintain our democratic form of government and freedom.

In the Salt Lake Tribune of March 20, and again on March 29, 1941, there appeared two splendid articles written by Dorothy Thompson, dealing with this subject. I hope they were read by millions of people.

Miss Thompson, and in fact the whole world—thinking world—realize that a new order must be established. The new social and economic order she is looking forward to, can only be one of two types. It must be either the one she refers to as "the one we have already mentally rejected"—the one the dictators are now fighting for—or it must be one similar to the one I have envisioned. No doubt Miss Thompson has envisioned a similar order.

The new order I have envisioned is one that retains our democratic form of government and freedom, coupled with some technique of government that will insure social and economic security to each and every citizen. The security must be one that insures a decent living to all. We already have democracy and freedom. It remains for us to supply the security. If that were supplied there would be no citizen but that would fight to the bitter end to preserve it.

Such an order we have not, so far, mentally rejected; nor must we reject it either mentally or in fact; for if we do there is nothing left for us but dictatorship, which can mean nothing but depriving us of our freedom and subjecting us to slavery with all its attending misery for some years to come.

It is a splendid feeling to know that force cannot govern our thoughts and reasoning powers, even though it may govern our actions for a time.

Surely all thinking people recognize that a new order is in the making and that it must come. If this be true, why do we not set about to see that this new order is one that will retain our democratic form of government and freedom, coupled with some technique of government that will insure economic and social security to all? This can be done by the adoption of some such plan as outlined in a booklet entitled "A Plan To End Widespread Unemployment and To Care for the Unemployed and Unemployables." I postulate that our present Security Act falls far short of accomplishing the desired end.

However, I think the reasons are as Miss Thompson has so well stated. She says, "I am sure that the basis of our fear is our reluctance to acknowledge the necessity of a change" (although we all sense it is approaching) "and our reluctance to plan that such a change shall come about by a clear-eyed act of our democratic will, rather than through chaos and destruction."

Think it over.

We Do Not Want Another A. E. F.

EXTENSION OF REMARKS
OF
HON. LEWIS D. THILL
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

EDITORIAL FROM THE MILWAUKEE SENTINEL

Mr. THILL. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Milwaukee Sentinel:

[From the Milwaukee Sentinel of April 22, 1941]

A "FEELER"—SECRETARY STIMSON HINTS AT FOREIGN SERVICE

Coming events cast their A. E. F.'s before. Secretary of War Stimson said before the Senate committee investigating defense contracts:

"Our forces must be prepared for the possibilities of war in many and varied terrains, it being quite uncertain in what part of North, South, or Central America, or even possibly other regions, it ultimately may be necessary to use them in the defense of this country and its possessions."

Note that the Secretary says "possibly other regions."

"Other regions" than "North, South, or Central America" means either Europe, Asia, or Africa.

What Secretary Stimson seems plainly to hint at is Europe or Africa.

To send an American Army to England or to the continent of Europe would be a violation of the solemn pledges made by President Roosevelt to the American people in the last campaign that no American soldiers would be sent to fight on foreign fields.

But less than 3 months after the inauguration of the President, his Secretary of War says that it is possible that our forces will be sent overseas.

This plainly is against the wishes of at least 90 percent of the American people.

The American people gladly acquiesced in the administration's selectee act—an act by which millions of our young men were to be trained for 1 year to be soldiers.

They approved because they believed the word of President Roosevelt that this was to be a defense army—

That it was to be used only to defend the United States and its territories against aggression—

That it was an army for America and not to be used in foreign wars not of our fomenting.

But this promise apparently is to go into the same wastebasket that already contains mounds of the administrations' promises made to the American people in 1932, 1936, and 1940.

It is true that "circumstances alter cases." But nothing has occurred between November 1940, and April 1941, that would cause us to send an army to Europe or to Africa.

It would merely add to the slaughter over there and would in no way materially help England.

Secretary Stimson put out a "feeler."

That "feeler" may develop into a fact.

That fact will be the sending of hundreds of thousands, maybe millions, of American soldiers to graves in Europe or to the bottom of the sea.

England has repeatedly said that she does not need more manpower.

We are aiding her in her fight against Hitlers' hordes in a rational way.

To send an army abroad, therefore, would be worse than a blunder—it would be a crime—a crime against our sons and brothers and their mothers.

War Veterans' Hospital at Aspinwall, Pa.

EXTENSION OF REMARKS
OF
HON. SAMUEL A. WEISS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

Mr. WEISS. Mr. Speaker, I ask permission and the consent of the House to extend my remarks in the RECORD with reference to the War Veterans' Hospital at Aspinwall, Pa.

Accompanied by John T. Walsh, former inspector general of the V. F. W. of the State of Pennsylvania, McKeesport, Pa.; Myrtle Byers, past commander of the Ladies' Auxiliary of the State of Pennsylvania; Mrs. Marie Cothery, past commander of the ladies' auxiliary; Corp. Carl A. Everett, V. F. W. Post No. 514, McKeesport, Pa.; Mrs. Kane, officer of the Ladies' Auxiliary of the V. F. W., McKeesport, Pa.; Gerald Firth, president of the Firth-Stirling Steel Co., McKeesport, Pa.; and Howard McDevitt, past commander of the V. F. W., McKeesport, Pa.; I toured the War Veterans' Hospital on Friday, April 11, 1941. I am now firmly convinced that no undertaking of the United States Government deserves more commendation than the construction of this splendid institution at Aspinwall, Pa.

The first impression one gets is that they have highly competent administrative leadership in the persons of Dr. Robert C. Cook, hospital manager; Dr. K. A. Carroll, head of the medical staff; assisted by Dr. Miller and a group of splendid and cooperative physicians and medical men, all distinguished physicians who served in the last World War and who know the problems of the veterans. This is one of the prime requisites of any successful administration, and it is quite evident after discussing the affairs of the hospital with these distinguished leaders.

I was extremely impressed with the cleanliness of the hospital. After traveling from one building to another and through every subway and passageway, I found the hospital to be spotless. The employees are efficient and very cordial, and I discovered that all foods, especially the meats, to be of the highest grade and character that could be purchased. Everything was kept in a most sanitary condition. They have a splendidly managed and conducted bakery, expert dieticians, and every convenience required in any hospital to give to the inmates and the veterans of the last World War all necessary services, which Congress by the act of 1925 and subsequent amendments thereto intended to give to the veterans.

Last, but not least, I interviewed dozens of veterans, many of whom are suffering from severe injuries, wounds, and gases of the last World War. In the spirit of humanity, they admit that the United States Government is attempting to make life pleasant and less burdensome for them, and that it is actually trying to rehabilitate them so that they can go out into a very competitive world at least in an improved physical condition.

Above all, the veterans, in my brief interview, had nothing but praise for both Dr. Robert C. Cook and Dr. K. A. Carroll for the splendid human treatment accorded them. The World War Veterans' Administration must be complimented for the leadership chosen to conduct with humanity and efficiency this splendid institution.

From the records at this hospital as of April 1, 1941, there were 760 inmates, though the capacity of the hospital is in excess of 1,000. It is my earnest wish that every Member of Congress, at some time or other, visit the veterans' hospital in Aspinwall, Pa., or any other veterans' hospital similarly conducted. I am certain each Congressman will be seriously impressed with the Government's tremendous task and the splendid manner in which it is attempting to rehabilitate the war veterans through highly efficient personnel and in maintaining a thoroughly equipped modern institution.

The hospital in Aspinwall, Pa., is a monument to the World War Veterans' Administration, and I know of no private hospital anywhere in this land that can excel the veterans' hospital in Aspinwall, Pa.

Will Rogers Warned Against Involvement in Europe's Affairs

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1941

QUOTATION FROM SAYINGS OF THE LATE WILL ROGERS

Mr. SHAFER of Michigan. Mr. Speaker, under permission to extend my remarks I include a few words of wisdom from a collection of quotations of the late Will Rogers:

Europe tells us they want our moral leadership and moral responsibility and tells us we're so big, and so strong, and so wonderful, and so marvelous. But they're the same folks that call us Uncle Shylock and money grabbers and blatant and ill-mannered, and all the time talkin' about how we won the war. I don't see how them two ideas work out together. I think we should be sympathetic toward European nations and all that, but we don't have to marry Europe. And when the country finds itself married to Europe there ain't none of this divorce in Reno by noon. Say, listen, you're tied up and goin' to find it hard to break loose. And then they'd sue us for nonsupport.

Anthony Foucher

EXTENSION OF REMARKS

OF

HON. CHARLES A. HALLECK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

Mr. HALLECK. Mr. Speaker, may I call the attention of the membership of this body to the fact that on July 22 of this year the people of Indiana, and especially those of the Catholic faith, will pay tribute to the memory of one who is entitled to recognition for what he did for the advancement of religion and education among the pioneers who developed the Indiana Northwest Territory. That man was Anthony Foucher.

Anthony Foucher was born at what is now the city of La Fayette, in the State of Indiana, on July 22, 1741, and appears to have been the first white child born in that territory, of which history has record, who later entered the sacred ministry. He was ordained to the priesthood at Quebec, Canada, on October 22, 1774, and those who have made a study of his life state that he had the distinction of being the first American-born person to be so ordained west of the Alleghenies. In this connection a letter received from Msgr. Paul Bernier, chancelor of the archbishopric of Quebec to the La Fayette Deanery Union of Holy Name Societies, at La Fayette, Ind., will be of interest. Following is a copy of the letter as translated from the French:

BISHOP OF QUEBEC,
THE CHANCELOR,
Quebec, November 25, 1940.

LA FAYETTE DISTRICT DEANERY,
The United Holy Name Society,
La Fayette, Ind.

REVEREND FATHER: I am very happy to give a reply to the letter which you addressed, on November 20, to His Eminence the Cardinal Archbishop of Quebec.

According to our registers of ordination, the Abbé Anthony Foucher (or Fouché) was born "at the Post of the Weas in the land of the Illinois," July 22, 1741, of the legitimate marriage of John Baptist Fouché and Mary Louise Lefebvre.

He received tonsure in the Chapel or Church of the Seminary of Quebec on the Ember Saturday before Trinity Sunday, June 2, 1773, and received the four minor orders at the same time.

He was promoted to the subdeaconate October 24, 1773, to the deaconate May 17, 1774, and finally to the priesthood October 30, 1774.

I believe that you are not interested in anything besides the possession of an authentic copy of these different acts of ordination, all of which are signed with the hand of Msgr. John Oliver Briand, bishop of Quebec. These you will find enclosed.

Msgr. Cyprian Tanguay, in his General Report of the Canadian Clergy (Montreal, E. Senecal & Son, 1893), mentions the following:

"Foucher, Anthony, born at the Post of the Weas, State of Illinois, July 22, 1741, son of John Baptist Foucher and Mary Louise Lefebvre; ordained October 30, 1774; 1778, curé of St. Henry of Mascouche; 1795, of St. Anne of Pocatiére; 1806, of Lachenaie; he died at Lachenaie, June 1, 1812, at the age of 71 years, and was buried at St. Henry of Mascouche on the third of the same month."

I cannot at present verify in the archives everything recorded by Monsignor Tanguay. But if the matter interests you I could make the desired researches.

Please believe in my devoted respects in Our Saviour.

PAUL BERNIER, *Pretre.*
(Msgr.) PAUL BERNIER,
Chancelor of the Archbishopric of Quebec.

As a tribute to this early native, the members of the La Fayette Deanery Union of Holy Name Societies, I am informed, are making plans to observe the bicentenary of his birth with fitting ceremony in the Purdue University field house on June 29, 1941. They also contemplate the erection of a monument to his memory in the nature of a religious foundation near the place of his birth. Dignitaries in high administrative offices of both State and Nation, as well as hierarchy, will be invited as guests for the occasion. It is also suggested that the clergy of the La Fayette deanery plans to erect a tablet at Fort Ouiatanon, the Post of the Weas, which was his actual birthplace.

Fox Hunting on Kings Mountain

EXTENSION OF REMARKS

OF

HON. JAMES P. RICHARDS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

CORRESPONDENCE BETWEEN HON. JAMES P. RICHARDS, OF SOUTH CAROLINA, AND NEWTON B. DRURY

Mr. RICHARDS. Mr. Speaker, under leave to extend my remarks, I am placing in the RECORD copies of correspondence between Hon. Newton B. Drury, Director, National Park Service, and myself in connection with the proposed order prohibiting fox hunting in the Kings Mountain Military National Park, York County, S. C.:

WASHINGTON, D. C., *April 4, 1941.*

Hon. NEWTON B. DRURY,
Director, National Park Service, Department of the Interior, Washington, D. C.

DEAR MR. DRURY: Following up my personal conversation with you and the filing with you on my part of an oral protest against an alleged move by officials of the Kings Mountain National Military Park, York County, S. C., to prohibit fox hunting in that area, to impound any hounds found hunting there, and to prosecute the owners of the hounds criminally, I submit this letter as an additional protest against such action if same is seriously contemplated.

Now, having done some fox hunting myself, knowing something of the nature of the fox hunter, and being a lover of the old hound dog as one of our country's finest institutions, I am very much concerned about this report because, if it is true, I can readily see that another battle of Kings Mountain is in the making and that, in all probability, the old battle would prove to be a pink tea compared to this one. The old battle was fought for liberty, and this one, too, would be fought, as the Constitution says, for "life, liberty, and the pursuit of happiness."

Mr. Director, please tell me, pray, what harm could a red fox chase do to the Kings Mountain Military Park? No guns are used on a fox hunt, no visitor to the park would be hurt or disturbed, no vegetation would be destroyed, not even a flower; the red fox does not even climb a tree—he goes in the ground when hard pressed.

The people around Kings Mountain are imbued with the same love of liberty that the pioneers believed in and fought for during the Revolutionary period. The Battle of Kings Mountain would never have been won if it had not been for the fact that Sevier, Campbell, Shelby, Williams, and Cleveland were hard-riding, hard-fighting huntsmen, who, I am informed and believe, were fox hunters themselves. The love of the chase, long hours spent in the saddle, intimate knowledge of woods and paths and the self-reliance bred only in God's great open spaces were the main factors in their being able to catch up with Ferguson at Kings Mountain and destroy him.

Now a new generation has come and the bones of the patriots who fought and died at this historic spot have long ago crumbled into dust. That fight for freedom was heard around the world and the citizens of the Kings Mountain area have rejoiced with us that, at long last, proper recognition has been given by a grateful government to the men who fought and died there that liberty might live. The old pines towering over the landscape there today, whose whisperings mingle with the murmurings of the spirits of the departed, will inform you, Mr. Director, if you listen, that the warrior dead always welcome the music of the hounds echoing up the mountain side.

For generations many people in this area have been fox hunters. I don't know whether you know much about fox hunting, but, if you have never heard a pack of dogs in full cry behind the fox, you still have something to live for. I heard the great military band that played at Kings Mountain when that park was dedicated by President Hoover, I heard there a splendid string band on another celebrated occasion, but I venture to say that no note of music was ever wafted through the trees there to excell in sweetness the melodious voices of fox hounds eagerly bent on the chase. There is something about this melody that, once it gets you, always holds you and no other music can take its place. That's what makes the fox hunter a good citizen. Love of good music, love of liberty, love of the chase and competition, and love of the trees and the flowers and the fields and all growing things, blended together, usually go to make up a pretty good type of humanity. If you ever have the chance, take in a fox hunt; get up early on a cold, crisp morning, about 2 hours before day, get a good cup of coffee, listen to your crony blow his fox horn, get on a horse and ride down the country road looking up at the stars, turn your head and listen for the voice of old Thunder or Ring striking a trail over the hill; you will really know then what this country means to you, because you are close to the things that make it great.

Many a fox chase has taken place around Kings Mountain long before the park was established there. For a hundred years or more that section has been the habitat of the red fox, to the joy of the hunter and breeder of good hound dogs. I might say that there are two types of fox in our neck of the woods—red fox and gray fox. The two do not get along very well together and therefore do not breed well in the same area. The red fox usually selects his place of abode and multiplies there year after year, and often he drives the gray fox out. Now you might ask, why do the hunters have to run foxes in the Kings Mountain Military Park itself, as there are plenty of foxes in other

sections of that county? That is very true—there are gray foxes there, too, but the gray fox does not run very far, usually in a 1- or 2-mile radius. But the red fox—you just don't know how far he is going to run—that's what makes a red-fox race something to remember. He sometimes runs 20 miles on a dead stretch, and, if the dogs push him too closely, he often heads for the battle-ground area and one of his old dens there. Even the best pack does not always catch him. So you can see, even though the hunter does not select the Kings Mountain area as the territory for his hunt, very often his dogs follow the fox into this area, as they have been doing for decades. Now, it appears that some military park official is going to catch these dogs, or shoot them, and criminally prosecute the owner for hunting on this Government property, when the owner could not help it. Is it any wonder, then, that the fox hunters are up in arms?

The average fox hunter doesn't care as much as most other citizens about earthly luxuries. As a rule, he has no fine automobile and doesn't care much about fine clothes. He doesn't care much about picture shows and the music of fine orchestras. He has not so much of the worldly goods, but his pack of hound dogs and the music that they give are the apple of his eye. The average fox hunter is usually a good family man and, though he may not admit it, he is usually dominated by his wife, except when it comes to his dogs; then, he asserts himself. Now, the wife doesn't care much about hound dogs. They are not pretty to look at and they lie around the house and eat a good bit of bread that she thinks should go for food for the children. The fox hunter keeps his counsel, won't enter into any argument with his wife about the dogs, but he keeps them just the same; he believes in peace, but not at any price. When he gets up early in the morning and blows his horn and goes out to the chase, maybe for all day, he knows he's going to get a verbal lashing when he gets home, but he keeps his dogs just the same. You can see that if a man is willing to invite the wrath of his wife by keeping hound dogs, he is not likely to sympathize much with a governmental order calculated to deprive him of his main pleasure in life.

Now, I know something about foxes and something about dogs. The old hound dogs I used to own didn't lay much store by pedigree, nor, so far as I know, did they belong to any particular strain; sometimes we didn't even know who their pappy was, but they were good runners just the same and had something to do with proving, to my satisfaction at least, that heredity is not everything. But in late years two breeds of dogs have come to the front in the Kings Mountain community. One strain is known as the July dog, and the other is the Walker dog. Men have been known to fight about the relative merits of these two strains. I am not going to get involved in that, because I know that the scars of an argument over the relative merits of hound dogs often remain, and I have too many constituents on each side of the question. My old friend, Uncle Dan Lattimore, of Hickory Grove, says the July dog is the best, but somehow or other most of the people in York County cling to the Walkers. My father and uncle in Kershaw County, both fox hunters for 50 years now, like the Walkers but don't go in for strains much; they just believe in hound dogs of any kind if they can run and carry a sweet tongue. My friends, Solicitor W. G. Finley and Dr. C. H. Douglas, of York, seem to be leaders of the Walker-dog band wagon in York County. In fact, they had one old prize hound dog—confidentially, I never saw him run and doubt if he was any good—that won several medals in national competition and is the grandpappy or great-grandpappy of a good part of the Walker dogs within miles of Kings Mountain. Now, the Walker dog is pretty good at running red foxes. They pack close together, and they stick on a long race, and they love to run around Kings Mountain. If the proposed order stopping fox hunting goes into effect, what are the hunters in that section going to do? Are they going to kill their dogs because they are afraid they will run across the Kings Mountain area? Are they going to keep them shut up to get fat and lazy? Or must they dispose of them to lucky hunters in other sections of the country, where there is no national park to rob the fox hunter of his chief pleasure in life? Or must they degenerate into just rabbit hunters because a rabbit runs only a few hundred yards from where you jump him?

I beseech you, therefore, Mr. Director, to relieve the fox hunters of York County from this dread threat. When you do, you strike a lick for freedom, the fox hunter, and the hound dog of America—the old red fox himself does not care much, because he usually gets away anyway to run again another day.

If, on the other hand, you determine that this order must go through, then I can only say with Madame Roland before the guillotine: "O Liberty, Liberty, how many crimes are committed in thy name!"

Very sincerely,

J. P. RICHARDS, M. C.

DEPARTMENT OF THE INTERIOR,
NATIONAL PARK SERVICE,
Washington, April 14, 1941.

Hon. J. P. RICHARDS,
House of Representatives.

MY DEAR MR. RICHARDS: Referring to your letter of April 4 and our telephone conversation regarding the hunting of foxes in the neighborhood of Kings Mountain National Military Park, the National Park Service certainly does not want to impose unreasonable restrictions.

We have no desire to penalize hunters who, after starting a fox at a distance from the park, are led by the course of the fox to enter the area. We have requested our field officers to look into the situation to determine if important values of the park might be endangered by fox hunting. We fully understand that the foxes are not killed; but we want to check the possibility as to whether deer and wild turkeys might not be discouraged from frequenting the area as a result of the fox hunting.

It is expected that the investigation can be made within a few weeks, and we will communicate with you further when the report is received. You may be sure that we do not intend to be unreasonable or arbitrary, and I hope that satisfactory arrangements can be worked out.

Sincerely yours,

NEWTON B. DRURY,
Director.

Canada Will Build Ships for Us While Our Facilities Remain Idle

---

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

Mr. PITTENGER. Mr. Speaker, I was startled to read in today's newspapers an item quoting Secretary of the Navy Knox as being in favor of a program whereby the United States will have Canadian shipbuilding companies build vessels in that country instead of the United States. I hope this report is not correct. On the Great Lakes we have idle yards and we have shipbuilding facilities which ought to be put to work. We have unemployed people and certainly the first duty of our Government is to make it possible for its own citizens to be furnished with jobs.

In spite of this situation, Mr. Knox is supposed to have said at a press conference that such a program would relieve our facilities and would help secure more vessels of a smaller type for Great Britain.

Specifically, he said:

> We would be very glad to have this work done in Canada.

He then commented upon the fact that this would solve the exchange problem between Canada and this country.

Mr. Speaker, so far as I am concerned, this proposed program does not make sense and ought to have vigorous opposition from Congress. Not only has the proposed decentralization of industry become a dream, if this announced policy of the Navy is true; but it becomes to my mind a huge joke on the people of the United States. If this Government is to finance the building of boats for Great Britain, then we ought to be able to depend upon administration officials to give American workmen an opportunity to work and American businessmen an opportunity to do the work.

No Member of Congress has been more cooperative than I have been in connection with the national-defense program. My cooperation, however, stops when I face this nonsensical problem and policy. I think it time for Congress to serve notice on every agency of the Government that there will be no more appropriations if money is to be expended in this way.

In connection with funds which have already been appropriated, I think emergency legislation should be passed for the protection of our people against outrageous and ludicrous schemes which entirely ignore the fact that we are building primarily for national defense. We do not know what world developments will come or how quickly they will come which will make national defense a paramount question in the United States. We do know that one way to prepare for national defense is to increase our shipbuilding facilities here at home rather than in some other country. I think some of the legislation we have already passed, and this is in connection with appropriations, should be modified and changed so that a committee of Congress may have something to say about how this money is to be spent. If by chance the time should come when this country faces danger, it strikes me that I would be remiss in my duty now in not pointing out the fact that additional shipyards in the United States would be needed, and now is the time to build them and to make use of facilities already existing. I believe this article in the Times-Herald for today is worthy of the serious consideration of every Member of Congress. I

do not believe the time has come for any foreign government to modify or shape our national-defense program so that it becomes of subordinate consequence.

There is too much talk in some of the departments about building small boats, for example, on the Great Lakes, and not enough action. Then, to add insult to injury, this suggestion that the Great Lakes have a part in the shipbuilding program is apparently to be disregarded, and the boats are to be built in Canada.

Federal Reclamation and Water Conservation Programs

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1941

STATEMENT OF HON. USHER L. BURDICK, OF NORTH DAKOTA, ON DEPARTMENT OF THE INTERIOR APPROPRIATION

Mr. BURDICK. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement I made before the House subcommittee on the Department of the Interior appropriation bill in behalf of Federal reclamation and water-conservation programs:

Mr. Chairman, a year ago I appeared before your committee to urge inclusion of an appropriation for continuance of the Great Plains water-conservation program designed to rehabilitate drought-stricken areas in North Dakota and other States. Today I am here to support the estimate in the present bill of $3,500,000 recommended by the Budget Bureau; also to urge that the amount be increased so that these projects can be advanced not only in the Great Plains but that the reclamation program be speeded up in other States to the westward, where population pressure is severe due to migrations from the drought regions.

At the same time more money is necessary to provide for investigation of water resources in the Western States. The Government is committed to a policy of irrigation development, because this is the only way to stabilize these arid regions, and the Bureau of Reclamation should have adequate funds for surveys so that no money will be wasted and every dollar may bring the maximum return.

A third item which concerns North Dakota is the proposed appropriation in the pending bill to bring Fort Peck power to our State. It is good news that this work is to be started. That power is needed for irrigation pumping from the Missouri River for the Buford-Trenton project, under construction, and for other projects we hope to see constructed, so that we can utilize water that is now wasting away to the sea.

The gentleman from Pennsylvania [Mr. RICH], at the hearing in February 1940, inquired how many families would be supported by the projects proposed for North Dakota under the Great Plains program. I gave him a preliminary figure of 82 on the Buford-Trenton project, but I am now informed I was far too low. The Farm Security Administration, which is cooperating in the settlement of this project, estimated that the 13,400 acres being put under ditches will rehabilitate 150 families within the project and will stabilize conditions for 115 additional families in the range area nearby.

When you realize that these 265 families to be benefited will for the most part be taken off the relief rolls, and that work on a permanent improvement for 300 laborers for more than 3 years will be provided, you get some idea of the widespread benefits that will follow this program. Compare the overall cost of the Buford-Trenton project of $1,500,000 with the average drain per worker in North Dakota on the Federal Treasury through the Work Projects Administration and its predecessors during the last 7 years. The amount has totaled from $5,000 to $6,000 for each worker or head of a family. The cost for supporting 265 families for 7 years without contributing to a permanent solution of their problem is just about equivalent to the total cost of the Buford-Trenton project.

You will note, of course, that of the $1,500,000 to be invested in the Buford-Trenton project, $630,000 is to be repaid by the water-users who will be made self-sustaining. The remainder of the cost is represented by contributions of W. P. A. labor, which otherwise would be paid for work of a less constructive nature.

There is no more effective way by which we can combat the long-time effect of drought, which continues despite the improved climatic conditions in some parts of North Dakota. For each 100,000 acres, to be irrigated under this program, we can rehabilitate 1,800 families who otherwise will have to leave the State and become a burden on areas to the westward. We can give employment during construction on permanent work for the wage earners of an equal number of families. For every irrigated acre in the cow country, from which I come, we can stabilize from 20 to 30 acres through provision of winter feed for the livestock industry.

The members of this committee from the Pacific coast know what it means for families from the Great Plains to come into their communities destitute and seeking work or a place to settle. California, I am told, has more than 40,000 families from the Great Plains country. Of these nearly 2,000 were from North Dakota. The Pacific Northwest received an even larger number from my State, the records show.

North Dakota has 10,000 fewer farms than it had in 1929 and 5,000,000 less acres in cultivation. I need not point out what the loss in buying power for the manufactured products of the Midwest, East, and South is represented in these figures.

Since there are no defense industries in my area, the people are dependent on agriculture, and permanent agriculture in western North Dakota is dependent on irrigation. This program must go on.

The only Federal reclamation project now operating in the State is the part of the lower Yellowstone development in McKenzie County of 19,000 acres.

Under construction is the Buford-Trenton project of 13,400 acres in Williams County, under the Great Plains program, which will rehabilitate 150 families within the area and stabilize 115 more in the surrounding range. It will cost $1,500,000, of which $630,000 is reimbursable by water-users and the remainder is contributed by W. P. A. It will give employment to 337 workers for more than 3 years.

Authorized is the Bismarck project of 4,800 acres in Burleigh County. It is designed to stabilize about 90 families. It will cost $590,000, of which $250,000 is reimbursable by water users. The remainder will be contributed by W. P. A. through employment of 300 workers for 2 years.

The Department of the Interior appropriation bill, now before the committee, provides for appropriations of $62,800,000 for the fiscal year 1942, compared with a total of $78,614,000 appropriated for 1941. Specific items mentioned are:

For investigations, $500,000, compared with $625,000 last year.

For water conservation and utility projects, $3,500,000, the same amount as provided last year, compared with $5,000,000 in 1940.

For Fort Peck power system, $500,000 to begin construction of transmission line to western North Dakota.

There is only one issue raised concerning this entire appropriation of $3,500,000, and that issue is this: Help the people in the Dust Bowl to help themselves. As a matter of bookkeeping, it is good business, because every family that can be connected with one of these irrigation projects must produce two results: First, the Government will be repaid their investment from the project itself; and, secondly, the family will be removed from the relief rolls.

Suppose we reverse this proposal and do not appropriate money for the investigation and the establishment of these irrigation projects. This would mean that on the debit side of the ledger there would be a large amount of public money expended for the maintenance of these families with no items on the credit side of the ledger.

As I recall it, the cost of maintaining a family per year in the Dust Bowl is about $750. On the Buford-Trenton project alone with 150 families reestablished means a saving of $112,000 annually.

This should be obviously apparent to anyone that it is good business to help the people to help themselves.

Davy Jones' Locker, Eh?

EXTENSION OF REMARKS

OF

HON. LUTHER PATRICK

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1941

Mr. PATRICK. Mr. Speaker, I arise today to have a few words with this House regarding whether or not we should undertake to deliver our merchandise to our embattled friends across the Atlantic by convoy. We have called upon American labor and American manufacturers to turn out vast armament production with the purpose to deliver it into the hands of those who fight against the new order that has declared war on democracy. That it is a world movement no man can deny. Neither can it be denied that its world-wide threat is daily becoming more menacing. We wonder why the European nations that could have been banded together to defeat Germany have each stood back so Germany could schedule them and bowl them over one at a time, and while we are filled with this wonder we are according them the same accommodation. Here we stand with the opportunity of a century—the opportunity to deliver supplies while it is not yet too late—to deliver supplies that may be used by the forces that are fighting a battle that we must fight if these

forces lose, whether we shall be brought to fight it on the battlefield or otherwise we have been fully and properly warned as to what confronts us in the event the Axis Powers win the conflict now being waged in Europe. None but the willfully blind can fail to see the truth written across the dark clouds.

The news from Europe is so bad today we do not like to read it, but we do not change matters by turning our head away from the news. The bloody march continues, and we are fools if we do not accept the fact that every advance of that march brings closer to us that ruthless menace. Surely we are by now fully aware of the spirit of the movement. Have we not heard war declared on democracy? Wherever the German language may be interpreted, have we not heard the statement that democracy is outmoded, unworkable, and must be discarded from the earth? Have we not heard the voice of the Axis Powers denouncing us and confidently stating that our hour will come and we shall be spoken to, and not with words? The success of rolling mechanical divisions, supported by fanatic and highly trained soldiers, has increased the arrogance of that spirit.

It is true the Germans cannot win the war by merely winning in the Balkans, but the success they are having there makes the already increasing danger to us greater. It is not a matter of helping England or of helping any, but is a matter of sane and timely defense for the United States of America. We have already recognized this and have put our hand to the plow—but how firmly? Does Uncle Sam mean business?

What are we doing? We are turning things inside out around here at home. We voted seven billions at one swoop—seven billions dedicated to all-out aid, aid to the cause that must not fail if our democracy is to be kept secure. Now it appears that the U-boat menace is sinking bottoms faster than the Allies can replace them. Open shipping will not offer any degree of assurance of satisfactory delivery. What about it? Davy Jones' locker is no place for the essence of the sweat, toil, sacrifice, and results of this all-out-aid program that we have so earnestly set ourselves to carry out. Certainly America has not snapped into it to see the fruits of its labor, sacrifice, and prayer strewn along the bottom of the deep sea. It is but a matter of simple and plain logic, reasoning from syllogism to conclusion. And the conclusion is inescapable. We must see that this vast wealth of fighting stuff, this stuff from the arsenal of the world, gets across the North Atlantic. Unless safer shipments are found, that means convoy—nothing less. It is our natural job, and the sooner we face it the better off we will be in this world. To quibble is to waste valuable time and bring the arrogance of the new order nearer to our door. We must deliver it into the hands of the Allies while they still have the strength to strike heavy blows. To do otherwise will be too late. To those who shout, "To convoy means war," I want to state that if anything can save us from war, it is quick, effective delivery of what we have announced that we have and will have to deliver. I thank you.

Senator Wheeler's Message

EDITORIAL FROM THE CHICAGO TRIBUNE

Mr. SHAFER of Michigan. Mr. Speaker, under permission to extend my remarks, I include an editorial from the Chicago Tribune:

[From the Chicago Tribune]

SENATOR WHEELER'S MESSAGE

The success which has attended Senator WHEELER's speech-making tour on behalf of America First is easily explained. He is telling his audiences something which they have been waiting long to hear from their public men.

Mr. WHEELER is not anti-British or pro-Hitler. As he told his Detroit audience, he has only admiration for the wholehearted patriotism of the British. He wishes that American public officials were equally devoted to the welfare of their Nation and their people. If our policies were as rationally related to our interests as British policies are to British interests our Government would not be rushing toward a war which was started without consulting us and the aims of which have never been stated except in the vaguest terms.

The success thus far of the propaganda for war can be explained in large part by the fact that the people of this country have been distracted by an administration which for 8 years has been inventing and promoting emergencies and crises. The consequence of all this effort to frighten the American people has been to shake their confidence in free government, in a free economy, and more especially in themselves. They have been told so often that they are the miserable victims of circumstances beyond their control that many of them have come to believe it. Eight years of agitation against constitutional restraints, 8 years of financial irresponsibility, 8 years of promoted unrest, have left their mark. Courage, confidence, and buoyancy have been replaced by timidity and dread. Ours is the strongest country in the world but its affairs are being conducted as if it were weak and dependent.

Divisive forces have been encouraged for the sake of political advantage. In a country such as this, in which only the Indians are more than a few hundred years removed from a foreign attachment, the folly of promoting hyphenism ought to be manifest. To the extent that it succeeds it can only transplant to our shores the age-old feuds which periodically rip Europe to pieces. Yet in official opinion today those who climb into the imperial bed to bundle with Britannia are the best Americans. Such men as Colonel Lindbergh, who first exposed the strength of the German air force and who now demonstrates that America has nothing to fear from any nation or any combination of nations, are reviled by the bundlers as "fifth columnists" and defeatists.

This county has been weakened also by the encouragement which official Washington has given to the spread of communism in this country. The people have seen the pictures of rioters armed with baseball bats and lengths of iron pipe which were being used to crack the skulls of men who wished to work on armament orders. News of the destruction of intricate and costly machinery has become commonplace. Public officials have accepted such incidents as if they were inevitable. The fact is that these acts of violence in the armament industries have taken place because the administration has deliberately encouraged Communists to gain control of great armies of workmen. Official Washington and official Moscow have chosen opposite sides in the war, but the Communists here are now so strongly entrenched in the labor movement and in the Government that our Government, even if it had the courage to do so, could not easily free American labor from the control which has been fastened upon it.

The American people have been waiting long for a leadership which will tell them that their country can be strong and that divisive forces should not be allowed to weaken it, and at the same time to betray it into war. Senator WHEELER, as a spokesman for the America First Committee, is performing a most useful service. The enthusiasm with which he is being greeted wherever he goes is evidence that there is need in this country for a pro-American movement dedicated to the preservation of our peace, our independence, and our liberties.

Proposed Plans To Have Canada Build Ships for the United States

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1941

Mr. PITTENGER. Mr. Speaker, yesterday I called the attention of the House to an announcement by Secretary of the Navy Knox of a new plan in connection with the policy of aiding Britain. As I understand Secretary Knox's statements to the press, he would have this Government order a small type of boat built in Canadian shipyards. This Government would then purchase those boats out of money appropriated by Congress, and then, under the lend-lease bill, would work out a procedure to transfer such boats to Great Britain. I have given some thought to where such developments might lead us. In another newspaper item, Mr. Knox is quoted as saying the British need long range anti-aircraft guns. This newspaper article by inference would indicate that probably this country would engage Canadian factories in the manufacture of such a gun which would in turn be purchased by the United States and paid for out of funds appropriated by Congress, and then, under the

lend-lease law, delivery would be made to Great Britain. I may not be correct about this, but there would appear to be just as much reason for such procedure as there would be in connection with the building of ships. By the same analogy, it would be logical to have Canada expand her facilities for building airplanes or erect new factories and then sell the planes to the United States and pay for the same out of money appropriated by Congress and then transfer the same to Great Britain. I could suggest several other types of war materials where the same procedure could be followed.

It seems to me that Congress ought to indicate its opposition to any such a program. Materials that are to be transferred under the lend-lease bill ought to be made in the United States. This would furnish employment to idle shipbuilding facilities on the Great Lakes. Of course, these shipbuilding facilities for small craft ought to be utilized by Government officials who are building ships, and I do not care by what name those officials are designated, or what agency they represent.

As I pointed out yesterday, entirely apart from the wrongful effects of this proposed plan to have Canada manufacture goods for the United States, there is a national-defense angle involved. At the same time that we are aiding Great Britain, we should look to the future of our own national defense. This means that we should be ready to use our own shipyards in an emergency. We should build those shipyards now, just as we are building powder factories and other national-defense industries.

In this discussion, I bear no ill will toward Canada, our good neighbor to the north. I have high admiration for those people and for the fine spirit of loyalty which they possess. But our first duty is to look well to our own national-defense problems and program.

Yesterday's newspapers also announced that the British shipping interests were going to abandon the use of convoys and construct a new type of boat which could carry foodstuffs and other materials across the Atlantic singly. In other words, these boats would travel alone. The Great Lakes can furnish ample facilities for the construction of such boats, and it ought to be done in this region.

Fiftieth Anniversary of College of the Ozarks, Clarksville, Ark.

EXTENSION OF REMARKS

OF

HON. DAVID D. TERRY

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1941

ADDRESS BY HON. W. F. NORRELL, OF ARKANSAS

Mr. TERRY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Hon. W. F. NORRELL, of Arkansas, on the occasion of the fiftieth anniversary of the College of the Ozarks, at Clarksville, Ark., on April 16, 1941, at which time he was given the honorary degree of doctor of laws:

Mr. President, members of the faculty, board of trustees, fellow students, and friends of the College of the Ozarks, may I first have the privilege and honor of conveying to you my very sincere thanks for extending me the opportunity of once again visiting with you, for the invitation you so graciously extended me to visit this great educational institution, for the chance of renewing friendships and reviving fond sentiments in connection with my school work here, and for the very great honor that you do me by bestowing upon me the degree of doctor of laws. For all these things I am truly grateful, and that gratitude shall continue so long as God permits me to live. Within these sacred walls a few years ago I was a registered student, I sat at the feet of our great, efficient, and consecrated faculty. No better teachers ever graced any college than these. I am glad that it was my privilege to attend this church college. May I say I am glad that I attended a small college, as this, because in a small college there is something to which an individual may belong. It gives him a permanent mooring that is lacking on metropolitan sidewalks or in the universities of enormous enrollments. There is something real American about the small colleges. We need not feel that our college or other small church colleges may soon vanish from these United States, because they are destined to continue to be the backbone of education in America, and they shall stand as a guide post in the future for educational institutions.

Someone has asked the question, What is missing in the liberal education of our day? The answer is religion. The church college is an institution of the Bible. America must thrive as long as her pulpits, press, schools, and colleges are free, and her church colleges are a part of that freedom and an arm of that Christianity so essential to our Government.

Church-related colleges need not make apologies for their existence in this modern changing America. These colleges are not necessarily of today, and of yesterday, in their origin or in their services to God and country; they are ancient and honorable.

We are all, during these times very gravely concerned about the future of our country, whether or not our Government can survive, when practically all the rest of the world is waging such an aggressive warfare upon our form of government. Can it be said the country is looking to Congress to lead this Nation through the storms and to preserve our democratic form of government? There is an agency that is more potent than Congress. Education has been, in a practical and modern society alike, an important instrument in the transmission of culture, political, and otherwise.

Russia is directing her program of education for the specific purpose of creating a new collective social order. More recently, Italy and Germany have consciously and deliberately controlled education, in creating a new social order and a new civilization, and while the totalitarian States and proponents of the political philosophy of dictatorship have been advocating totalitarianism, we still claim that we must not advocate democracy in our schools. Thus while education, in a democratic society, aims to develop the individual in his relationships to the groups so that the welfare of society as a whole may be advanced, we are told in effect that it is pedagogically incorrect to use the steps necessary to achieve our goal. If our form of government is to continue our schools must play an increasing and important part in securing its preservation. We ought to equip our students with ideas, attitudes, and habits which will enable them to solve the problems of modern life in a democratic way and by democratic means. Has the American school failed in its important task of developing a citizenry adequately trained to live and perpetuate a democracy? Theories opposed in spirit to the nature of democracy are finding supporters among the very people trained in our so-called democratic schools. Since the success of democracy depends ultimately upon the morality of its citizens, it is here the church-related colleges can and do make an important contribution to the preservation of democracy. In developing character, the church-related college supplies the very lifeblood of democracy, nourishes it, and sustains it. Democratic behavior is moral behavior.

The Declaration of Independence which concisely expresses the spirit of democracy in America, contains in essence the basic ethical and moral principles which must become the reasoned convictions of the masses of intelligent men and women if democracy is to live, "We hold these truths to be self-evident; that all men are created equal, that they are endowed with certain inalienable rights; that amongst these are life, liberty, and the pursuit of happiness; that to secure these rights, governments are instituted among men deriving their just powers from the consent of the governed."

Ours is a great government made so by our pioneer Christian fathers of the ages, acquiring their original basic ideas from the first house constructed on American soil, on the coast of Virginia, used by our forefathers as a place of worship and learning. Although we have grown in strength as a nation, we must continue these same high ideals and principles, if we are to be sustained in the future.

Four hundred years ago, proud Spain was the undisputed monarch of all Europe and none dared dispute her sway. Not even today is there a country so extensive or possessing such supremacy as was true of the great empire of Charles V. It was but yesterday that you and I saw Spain sink into national suicide. Not in 100 years will Spain emerge from her present condition. It is fearful enough to see a government disintegrate down but it is even more alarming to behold ideals and religious convictions, that have been held as sacred and eternal, disappear almost overnight.

In 1914 the great Russian Empire was devoutly a religious country, holding to the philosophy of the Greek Catholic Church. Every competent visitor to Russia testified that the Russians were unusually religious people. Not 30 years have elapsed but in this short period of time we have seen the largest nation on earth forget religion, abolish church-supported schools, and her citizens become infidels.

We have seen Germany, the home and birthplace of the great modern universities, the leaders in inventions and chemistry, turn from a fairly liberal monarchy to a form of nazi-ism, which seeks to make its subjects slaves to the state and deprive them of all individual rights, including the right to worship the God of their choice.

We have seen artistic and musical Italy suddenly shift from an easygoing nation into an intense regimentation of extremely brutal fascism.

Time forbids a continuation of this thought, but from the four corners of the earth come corroborating evidence that changes are taking place all around us. Why do I bring these things up? It is because we need to revalue our own form of government; we need to analyze our own national philosophy. If other countries are suffering disastrous changes, we also may suffer from them. Is

American democracy in danger? My answer is, "It can happen here."

Where should the private denominational school come into the picture as a defender of American democracy? Due to the decline of religious training in the home, it is more and more being left to the denominational or church schools to give to the individuals the fundamental concepts of democracy.

To be brief, our citizens are the product of the school, and the school therefore is the one institution that we must rely on for the maintenance of our institutions. May I quote Professor Einstein, who was exiled from Germany because of his convictions: "Being a lover of freedom, when the revolution came in Germany, I looked to the universities to defend it, knowing that they had always boasted of their devotion to the cause of the truth; but no, the universities were immediately silenced. Then I looked to the individual writers who as literary guides of Germany had written much and often concerning the place of freedom in modern life, but they, too, were mute. Only the church stood squarely across the path of Hitler's campaign for suppressing truth. I never had any great interest in the church before, but now I feel a great affection and admiration because the church alone has had the courage and persistence to stand for intellectual truth and moral freedom."

What Einstein has found true in Germany has been found true in other countries. Whenever it has been in the interest of those in charge of governmental framework to change its form and deprive men of religious liberty and other essentials of democracy, they found it necessary to oppose the church and the church schools.

This college for the past 50 years has played its part in the work of church colleges throughout this Nation in maintaining our form of government and religion. It has lived one-third the life of our great Nation, and its influence radiates throughout these United States, and I know that its former students have taken their places in our democratic religious society and that they have exerted every effort to sustain the standards of this great religious educational institution, and that I bespeak their sentiment today when I say that this college is sacred to us. Its walls, is faculty, its students, and the very soil on which we now stand shall always be honored and held sacred in the memory of all who have gone this way before.

H. R. 968

EXTENSION OF REMARKS

OF

HON. MICHAEL J. BRADLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

LETTERS OF HON. HAROLD D. COOLEY, OF NORTH CAROLINA, AND HON. CHARLES R. CLASON, OF MASSACHUSETTS

Mr. BRADLEY of Pennsylvania. Mr. Speaker, under the unanimous consent granted to extend my remarks and to include certain letters, I am placing in the RECORD communications from my Democratic colleague from North Carolina, the Honorable HAROLD D. COOLEY, and from my Republican colleague from Massachusetts, the Honorable CLARENCE R. CLASON.

The letters follow:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., April 1, 1941.

Hon. MICHAEL J. BRADLEY,
205 House Office Building,
Washington, D. C.

MY DEAR COLLEAGUE: I just want to congratulate and commend you upon the splendid speech you made in opposition to the Fulmer net weight bill, H. R. 968. You made a fine and forceful argument which actually assured the defeat of the measure.

I am convinced that the bill, if enacted, would have completely paralyzed industries now engaged in manufacturing jute bagging which for more than a hundred years has been used by cotton farmers and even in my district, by closing a small jute bagging factory, it would have taken away the jobs of approximately 600 breadwinners. The proponents of the measure were apparently perfectly willing to sacrifice the entire industry, but, thanks to you and the others who helped lead the fight, the proposal has now been defeated. The manufacturers and employees of your district should be, and I feel sure that they will be, deeply grateful to you for your courageous and effective efforts in their behalf.

With cordial good wishes and kind personal regards, I am,

Sincerely yours,

HAROLD D. COOLEY.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., April 2, 1941.

Hon. MICHAEL J. BRADLEY,
House of Representatives,
Washington, D. C.

MY DEAR COLLEAGUE: I certainly want to thank you for the most effective work you did this week in connection with the defeat of the Fulmer bill to require cotton wrapping on baled cotton. I know that if it had not been for the very active part which you played the bill would undoubtedly have passed.

This is not the first time I have had your splendid cooperation in matters affecting the jute industry and the many workers employed in it. It is always a pleasure to work with you, for I have found that your aid is always extremely valuable.

Had the Fulmer bill passed, the jobs of many hundreds in the jute industry would have been lost. It must be a source of great satisfaction to you, as it is to me, to have saved the livelihood of a great many people.

With kind personal regards, I am,

Very sincerely yours,

CHARLES R. CLASON.

Guaranty of Life-Insurance Policies

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1941

Mr. PATMAN. Mr. Speaker, the bill providing for guaranty of insurance policies has been tentatively prepared and will be introduced in a few days.

TRUST FUND

The bill proposes to create a trust fund, to be known as the insurance reserve fund, in the amount of $100,000,000, which is to be available to guarantee the reserves of legal reserve life insurance companies. The fund is to be created through a loan from the Treasury in the amount of $100,000,000. This loan is to bear interest at the prevailing rate of interest for Government obligations and is to be repaid out of amounts collected through a semiannual assessment on premiums collected by participating companies after provision is made for maintaining the fund at a level of $100,000,000.

F. D. I. C. TO ADMINISTER

The fund is to be administered by the Federal Deposit Insurance Corporation as trustee and is to be invested by the Corporation. A departure is made from existing practice in permitting the investment, with certain limitations, of this fund in high-grade industrial securities, including preferred and common stock.

VOLUNTARY

The benefits of the fund are to be made available to life-insurance companies who voluntarily apply for participation and who meet certain qualifications relating to the solvency of the company.

ASSESSMENTS

Each participating company will be subject to a semiannual assessment of one-tenth of 1 percent of the total amount of premiums collected during the preceding semiannual period. The Corporation is given power to enforce the collection of any assessment which becomes due. Any participating company may withdraw, or, if the Corporation finds that the practices of the company are unsound, it may cancel the certificate after complying with a specified procedure. The guaranteed status of a participating company will continue for a period of 2 years after withdrawal or cancelation of the certificate except where the withdrawing company provides for the reinsurance of all its risks in another guaranteed company.

EXAMINATIONS

There is conferred upon the Corporation such additional powers, including the power to make examinations and require reports and to act as receiver, as are necessary to enable it to perform the functions conferred upon it by the bill. No attempt is made to amend the bankruptcy laws, but rather a method of cooperation with the States in handling the receivership of guaranteed companies is proposed.

RESERVES TO BE GUARANTEED

The bill proposes to guarantee the reserve behind life-insurance policies—including those life-insurance policies having disability and accidental-death provisions—annuities, and certain supplementary contracts not involving life contingencies. The amount of the reserve of any policy, annuity, or contract which is guaranteed is determined by the amount of the reserve which the company is required to keep with respect to such policy, annuity, or contract under the laws of all the States in which it operates or by the amount of reserves specified in the contract itself, whichever is the greater. The maximum amount of the reserve guaranteed, however, is limited to $5,000, except

in the case of a group policy where the reserve may greatly exceed $5,000, but in which case the equity of any participating certificate in such policy will, under existing practice, seldom, if ever, approach that amount.

INDIVIDUAL POLICIES NOT GUARANTEED

No attempt is made to guarantee any individual policy. Because of the numerous types of policies, methods of payment, and other variable factors in life-insurance policies and annuities, it was thought infeasible to base the amount of the guaranty upon face values. The only constant factor behind all policies being reserves, this factor is used to determine the amount guaranteed.

HOW LIABILITY DETERMINED

The guaranty is to be made good upon the participating company's going into receivership under State law. The Corporation will then determine, in cooperation with the receiver, the liability of the Corporation as guarantor, and upon the presentation to the Corporation by the receiver of a plan for the reorganization, reinsurance, or liquidation of the guaranteed company which is approved by the Corporation, the Corporation shall, if such plan provides a method by which the amounts paid by the Corporation will be used to make good the terms of the guaranty, including the $5,000 limitation, pay to the State receiver the amount of the guaranty.

SIMILAR TO INSURANCE OF BANK DEPOSITS

The plan, in general, attempts to apply the principles applicable to the insurance of bank deposits to insurance reserves and other contracts closely approximating bank deposits. The powers conferred upon the Corporation under the bill closely follow those which the Corporation has with respect to the insurance of bank deposits. The guaranteed fund for insurance policies is to be administered separately, however, from any other funds which the Corporation may have on hand.

Manganese Iron Ore Available in Minnesota

EXTENSION OF REMARKS

OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1941

RESOLUTION OF THE MINNESOTA STATE LEGISLATURE

Mr. O'HARA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following concurrent resolution of the Legislature of the State of Minnesota:

Resolution 4

Concurrent resolution calling attention to the supply available in Minnesota of manganese iron ore

Whereas Minnesota possesses the only large source of manganese iron ore, which is so vitally needed in the development of the national defense in the present hour of prophesied national danger of invasion; and

Whereas other States of the Union are far ahead of Minnesota in the expansion of their industries and defense facilities; and

Whereas the Federal Government is spending billions of dollars in the way of loans, grants, and other assistance necessary to the upbuilding and expansion of wartime industries, all located away from our State and placing our State at a disadvantage in the national-defense program; and

Whereas money is now being expended in Brazil to secure manganese so vitally needed in our national defense, thereby making necessary the transportation of such manganese over hazardous ocean routes; and

Whereas the development of a manganese plant in Minnesota would release these badly needed merchant ships for other necessary purposes; and

Whereas it has been conclusively proven that manganese can be produced in Minnesota at a cost comparing favorably with other sources of manganese: Now, therefore, be it

Resolved by the House of Representatives of the State of Minnesota (the Senate concurring), That this situation be called to the attention of the various Government officials who are engaged in the work of advancing the national-defense program; be it further

Resolved, That the secretary of state be instructed to forward copies of this resolution to each of the Senators and Representatives from the State of Minnesota to the Congress of the United States; to Hon. Donald M. Nelson, at the division office of Production Management, in the Munitions Building, at Washington, D. C.; to Judge Patterson, Under Secretary of War, at the Army Building, in Washington, D. C.; to Under Secretary of the Navy Forrestal, at the Navy Building, in Washington, D. C.; and to Mr. Miller, of the Minnesota Resource Commission.

LAWRENCE M. HALL,
Speaker of the House of Representatives.
C. ELMER ANDERSON,
President of the Senate.

Passed the house of representatives the 28th day of March 1941.

HARRY L. ALLEN,
Chief Clerk, House of Representatives.

Passed the senate the 17th day of April 1941.

H. Y. TORREY,
Secretary of the Senate.

Approved, April 21, 1941.

HAROLD E. STASSEN,
Governor of the State of Minnesota.

Filed April 21, 1941.

MIKE HOLM,
Secretary of the State of Minnesota.

The Danger of War

EXTENSION OF REMARKS

OF

HON. BARTEL J. JONKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1941

TELEGRAM OF MICHIGAN CITIZENS PROTESTING AGAINST WAR

Mr. JONKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram to President Roosevelt:

GRAND RAPIDS, MICH., *April 21, 1941.*

The Honorable FRANKLIN D. ROOSEVELT,
President of the United States,
Washington, D. C.:

Referring to your statement that the American people failed to realize the danger of immediate war, the undersigned, native-born Americans, all of Christian faith, are sufficiently intelligent to realize this danger, also to realize who is responsible for it, but still hope that you will not plunge our country into a war not of our making and to keep the solemn pledge you made to us before being elected as our President.

M. G. Llafet, Tilleda Shaffer, Evalyn Hansen, B. T. Schall, L. B. McCourt, J. H. Zoerhof, Gerrit Schuur, Wayne Leak, Edward Rusche, E. Jenkins, Margaret Hughes, Jayne Sobczak, Kay McIntyre, G. Honholt, Fred Kuemmerle, Norma Paesens, Helen Kurths, Stanley J. Piskun, Chester Carlson, M. S. Bonney, Pearl Rietsma, R. R. Drake, Patricia Putra, L. A. Spind', George B. Smith, B. J. Frenzer, Pearl Horan, Martha Dros, E. H. Gorsuch, F. F. Slack.

Redistricting in Massachusetts

EXTENSION OF REMARKS

OF

HON. JOSEPH E. CASEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1941

ARTICLE FROM THE WORCESTER (MASS.) TELEGRAM

Mr. CASEY of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Worcester (Mass.) Telegram of April 23, 1941:

[From the Worcester (Mass.) Telegram of April 23, 1941]

REDISTRICTING PLAN DENOUNCED—CONGRESSMAN MCCORMACK CHARGES PROPOSAL BEFORE STATE LEGISLATIVE GROUP WOULD SLASH DEMOCRATIC HOUSE SEATS FROM 6 TO 2

WASHINGTON, April 22.—Massachusetts Democrats raised a storm of protest tonight against a proposal for redistricting the State which Representative MCCORMACK (Democrat of Massachusetts) said would cut Democratic House seats from 6 to 2.

Referring to a plan he said was submitted to a special Massachusetts legislative committee considering redistricting and the elimination of 1 of the existing 15 districts, the House majority leader declared:

"They have carved up the districts of Democratic Congressmen FLAHERTY, HEALEY, and CONNERY so as to put the three of them into one district. That is a diabolical political plot."

CONFER WITH BURKE

MCCORMACK's statement was issued after a conference of the six Bay State House Democrats with State Democratic Chairman William H. Burke, Jr.

The plan they said was being considered by the Republican-controlled legislative committee, if approved, would force HEALEY, CONNERY, and FLAHERTY to run in the same district if they sought reelection in the district where they resided.

WOULD ELIMINATE TWO

By placing ward 4, of Somerville, HEALEY's residence, and ward 6, of Lynn, CONNERY's

home, in the same district with FLAHERTY, at least two sitting Democrats would be eliminated.

As outlined by MCCORMACK, the plan would leave the First and Second Congressional Districts held by Republicans TREADWAY and CLASON, respectively, unchanged.

The plan would add to FLAHERTY's present district wards 1 to 5 in Somerville, Revere, Winthrop, Nahant, and 28,123 of the population of the lower part of Lynn. This would bring to 338,028 the number of residents in his district.

AVERAGE 308,337

The preliminary study the Congressmen saw estimated the average number of seats for each district would be 308,337.

The only change in MCCORMACK's district would be giving him the whole of ward 8 in Boston, making the district one of 313,244 population.

ELIOT (Democrat, Massachusetts) would have 292,832 population, with the entire city of Cambridge and with Belmont added to the district in place of Lincoln, Weston, and Wellesley.

MCCORMACK asserted the plan, if enacted into law, should be called "an act to prevent the reelection of four sitting Democrats and to so divide the State as to assure the election of State Senator Angier L. Goodwin, president of the senate, to Congress."

"GOODWIN DISTRICT"

The proposed "Goodwin district" would split Lawrence, giving 44,323 of its population to the new district with Representative ROGERS (Republican, Massachusetts) taking the northern half of the city. Other communities from the Healey and Connery districts would be Andover, Reading, North Reading, Lynnfield, Wakefield, Stoneham, Saugus, Melrose, Medford, Malden, Everett, and wards 6 and 7 of Somerville, with a total population for the district of 331,507.

But MCCORMACK declared the plan did not represent the views of the Republican Members of Congress and said, "The people of Massachusetts, in any event, will deeply resent such a vicious gerrymandering of the State.

STATE 50–50

"It constitutes the intention on the part of certain Republican leaders to limit Democratic representation in Congress to two Members, despite the fact the State as a whole is about 50–50 on a congressional vote. This, in effect, will deprive hundreds of thousands of voters throughout the State from being represented as they desire in Washington."

The only seats the Democrats believed they could hold under the proposal were those of MCCORMACK and FLAHERTY, while the changes in other districts were believed sufficient to elect Republicans.

CASEY'S PROPOSED DISTRICT

CASEY's proposed new district, the Congressman said, went Republican by 15,000 votes last year, as did the district planned for ELIOT.

CASEY's new district would have the following cities and towns: Ashley, Townsend, Boxboro, Stow, Hudson, Marlboro, Maynard, Sudbury, Framingham, Lincoln, Wayland, Natick, Waltham, Weston, Dover, Needham, Wellesley, Harvard, Bolton, Berlin, Clinton, Lancaster, Lunenberg, Princeton, Fitchburg, Lecminster, Sterling, Ashburnham, Westminster, Winchendon, Gardner, Hubbardston, Rutland, Templeton, Oakham, Phillipston, Petersham, Barre, Hardwick, New Braintree, Ware, Brookfield, East Brookfield, West Brookfield, North Brookfield, and Warren, with a population of 304,179.

OTHER DIVISIONS

In Representative TINKHAM'S (Republican, Massachusetts) district, ward 22 of Boston, in the Brighton section, would be added.

Representative GIFFORD (Republican, Massachusetts) would have added to his district the city of Brockton, now represented by Representative WIGGLESWORTH (Republican, Massachusetts), and would lose Cohasset, Bridgewater, and Hingham to Representative MARTIN (Republican, Massachusetts), House minority leader.

MARTIN'S AREA

MARTIN's proposed district would run for the first time to the ocean. He also would get Weymouth, Holbrook, Avon, Stoughton, Bridgewater, Middleboro, Lakeville, Dartmouth, and Hull from the present Gifford and Wigglesworth districts.

The Thirteenth District, that of WIGGLESWORTH, would run from Quincy to Southbridge, taking in Dudley, Webster, Douglas, Northbridge, Uxbridge, Millville, Bellingham, Milford, Hopedale, Medway, Millis, Medfield, Norfolk, and Wrentham.

Dropping Brockton and Natick, WIGGLESWORTH's district would keep only Quincy and seven towns from the original district.

MRS. ROGERS' DISTRICT

Mrs. ROGERS, who has protested against losing Melrose, residence of Goodwin, and adding the northern part of Lawrence, would get upper Lawrence and drop Melrose.

She also would lose Belmont and would have added to her district Pepperell, Shirley, and Methuen.

BATES (Republican, Massachusetts) would have his district extended to the entire city of Salem, Peabody, and a large part of Lynn, giving him a population of 331,918.

HOLMES (Republican, Massachusetts) would pick up 13 towns, 11 from CASEY, and lose 5 in the lower end of the present district to WIGGLESWORTH, giving HOLMES 292,817 persons to represent.

New Tax Proposals

EXTENSION OF REMARKS

OF

HON. ALLEN T. TREADWAY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1941

EDITORIAL FROM THE WASHINGTON POST

Mr. TREADWAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post for today:

[From the Washington Post of April 24, 1941]

NEW TAX PROPOSALS

In view of the enormous volume of defense expenditures to which we are committed, the Treasury's proposal to raise $3,600,000,000 additional from new taxes can be regarded only as an essential safeguard against inflationary types of deficit financing. The Nation must be prepared to shoulder a greatly increased burden of taxation to maintain the Government credit on a sound basis and to enforce economy upon the civilian population. However, the Government should see to it that the new taxes do not bear with undue weight upon any particular class of our people, or relieve other groups from assuming a fair share of the burden.

The program which the Treasury has outlined to the House Ways and Means Committee appears to be open to criticism on both counts. It would drastically increase the income taxes payable by individuals in the low and middle taxable brackets, while permitting the great body of our citizens either to escape payment of income taxes entirely or else to turn over a negligible percentage of their income to the tax collector. The Treasury also proposes to extract additional sums from already heavily taxed industrial corporations without relating the amount of the imposition to the profitability of their undertakings. As we have often stated, the income tax as applied to corporations is basically defective in that it fails to graduate taxes with reference to rates of profit. Some highly profitable corporations—small as well as large—could afford to pay a good deal more to the Treasury. Others in receipt of large absolute returns may have poor earning records in relation to the amount of invested capital. The proposed surtax levy of 6 percent, which follows the usual pattern, is said to be designed to reach income from investments in Federal securities exempt from normal taxes. This tax, together with recommended increases in the excess-profits taxes, would add nearly $1,000,000,000 to the tax bill of industry without provision for needed adjustments along the lines indicated.

Undoubtedly individuals in the lower and middle income brackets ought to pay much higher taxes than they now do. Analysis of income-tax returns shows that little additional revenue can be obtained by jacking up the excessively high rates in the topmost brackets. It would, however, be very questionable procedure suddenly to raise the taxes of the lowest taxable income groups to over six times present amounts in some cases, while leaving untouched incomes below the present exemption limit. Of course, it may be said with truth that an American in moderate circumstances is lucky by comparison with an Englishman in similar circumstances. An English family with two children—even before the last increase in rates—paid approximately $1,200 on an income of $5,000. But we should not overlook the fact that the British rely much more heavily than we do upon income taxation as a source of revenue.

The further recommendation to boost excises on a limited number of articles would not produce revenues such as could be realized from some kind of general sales taxation. Nor can such levies act as a brake upon consumption in the way that a general sales tax would. The great weakness of the Treasury program lies in its avoidance of taxes that would tap new sources of revenue. What we should do is to spread the burden over a wider area instead of merely putting new taxes atop of present ones—taxes, moreover, that act to some extent as a deterrent to savings and a brake upon industrial enterprise.

Americanism in an Hour of Crisis

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1941

ADDRESS OF JAMES M. BULLMAN, WINNER OF THE SOUTH CAROLINA INTERCOLLEGIATE ORATORY CONTEST

Mr. BRYSON. Mr. Speaker, I am indeed proud of the young man who has been declared this year's winner of the

South Carolina intercollegiate oratory contest, for he is both a constituent and neighbor of mine. This champion is a student at Furman University, Greenville, S. C. The excellence of young James Bullman's theme and style of expression commends the reading of his speech by every Member of this House. I request unanimous consent for the insertion of this speech in the CONGRESSIONAL RECORD.

The address follows:

I realize that most people think of such subjects as "true democracy," "our great American Constitution," and others of a more or less patriotic nature as being literally worn threadbare and only fit for some stuffshirt orator to recite on the Fourth of July. Nevertheless, I stand here today to declare that I am of the firm conviction that never before in the history of these United States has there been greater need for our Government to be defended than during this present hour; for this is certainly a time when democracy is on the defensive and when its enemies are rampant on every hand.

With any kind of government there is to be found difficulty of some nature. And even though we delight in praising with the powers of our fullest expression the glories of American democracy, yet we must face squarely the fact that there are snares within the principles of its operation.

In the charter of our Government there are enshrined certain liberties inalienably extended to all. Among these is the right to free speech, which allows a man to stand up and proclaim freely his philosophy in spite of powers and principalities. Now, this liberty, along with others, is often abused; and particularly so during the past few years, for much talk has abounded throughout this Nation that is diametrically opposed to our form of government. The question is—and it is a most important question—for the future of all that America embodies may be decided by it, "what is to be done when these liberties are used in a manner which is destructive to the stability of our Government?" When such privileges as free speech are used by the sworn enemies of our Constitution to strike at the very fundamentals of democracy, what should be done? If they be prevented from speaking, it means the abandonment of one of the rights essential to the life of democracy; whereas, if they be allowed to continue, it means that democracy is being dealt sledge-hammer blows with its own weapons. Truly, it seems that either alternative is defeating to the maintenance of our democratic way of life. It is a problem of fearful magnitude.

In order to arrive at an answer to this vital question it is first necessary to survey briefly the extent of growth of un-American activities in this country.

In recent years undermining doctrines have developed with such immensity that no one even remotely familiar with the facts can deny that the permanence of American democracy is seriously endangered. It is shocking to think of how the germ of communism, taking root in godless, heathen Russia not much more than 20 years ago, has stretched its contaminating tentacles across the broad expanse of the Atlantic Ocean to bring so many of our American institutions under the clutches of its octopus grasp. It is equally terrifying to contemplate how the Nazi swastika, the emblem of a despotic Germany, has cast its dreaded shadow upon the helpless millions of Europe and now begins to shed the darkness of its fearful form upon our peaceful shores, threatening to extinguish the glorious light of freedom which has shown forth in undiminished splendor for over 150 years.

An idea of the emergency of the situation can be gained from the fact that there are actually more Communists in New York city today than there were in all of Russia in 1918 when the powerful Czarist regime was overthrown. It is the Communists who are especially active in this country as they work in a seemingly untiring manner, by visiting hospitals, prisons, and even religious societies, where they pass out their corrupt literature as well as resort to other means for implanting their un-American program in the minds of our citizens. One of the most deadly means for the advancement of communism is that of taking children whose parents are too poor to support them to health camps, where their growing minds are fitted into the mold of poisoning Russian influence. More than that, many of our northern colleges and universities have been found upon Government inspection to be rotten to the core with undemocratic infections. Also numerous colleges, as well as high schools, of the Southland have been found to be greatly subjected to such influence. And when the German-American Bund, an organization of avowed Nazi affiliation, is allowed to have its thousands of members of what is virtually an army train unhindered within the borders of our country, it's time for something to be done.

In view of these facts, what should be the proper American attitude toward them? Of course, it could be reasoned that to deny anyone such privileges as free speech and other liberties granted by our Constitution is but to rob this Government of its very essentials. Yet just because there is such a thing as free speech doesn't mean that one has a right to get up and speak slanderously of another without being subject to punishment by law. If this be true in regard to individuals, why should one be allowed to speak slanderously of our Government with such perfect freedom? Why should the very liberty which our Constitution grants be used as an agency to promote the program of Hitler and Stalin in America? Certainly it isn't undemocratic to protect the principles of democracy, and even if it were undemocratic it still shouldn't endanger the stability of democracy, for in time of war we would resort to a dictatorship anyway. England today, although fighting to defend its democracy, has temporarily adopted a dictatorship to do this.

How on earth can we expect democracy to grow if we allow it to become so weak that it can't protect itself? The whole thing is but a question of self-preservation, and why we should allow this country to hang itself on the noose of its own rope just doesn't make sense.

Certainly to use force against extreme un-American activities is in accordance with that which is democratic, for when anyone takes the foundation stones which make up the bulwark of our Government and starts hurling them at its very structure, then it's time to resort to drastic measures. If these un-American agitators like the Governments of Russia and Germany so well, then why not send them back over there where they will get all of them that they can hold? Better than that, it would be the greatest blessing to America for every last one of these Russian and German propagandists who menace our Constitution to be banished, starting tomorrow morning, to the great Sahara Desert, where the wind shall bury them beneath 10 feet of sand and where not one passing caravan for the next 500 years will bring back one miserable bone of their carcasses.

In the center of Furman's campus there stands a memorial for which that university has a just right to be proud. It is a monument to the heroism of its men during the last great war. As did many others, in that hour when their country called they answered in a united body. And I know that should a foreign force today launch an attack upon these shores that there isn't any loyal American but who wouldn't rise up and defend with all his might the freedom of this Nation. But today there is within our own gates an enemy that is just as dangerous as an invading army, and we are asleep—asleep as was Samson of old, who, while slumbering unconcerned, was having the very source of his strength severed from him. And unless we beware, soon we, too, like Samson, will be grinding helplessly in the enemies' prison house.

It was on a dark night in the War of 1812 when Francis Scott Key peered into the blackness of the distant scene of battle, wondering if that blessed flag of this Nation still waved amid the shot and shell of the foe, that he asked that classic question, "Oh, say, does that Star-Spangled banner yet wave?"

And today, as we view the growing opposition surrounding democracy on every hand, still we can gladly say that the old red, white, and blue banner continues to wave above the White House dome, although some would like to see it torn from its honored position and have the flag of Moscow or the swastika of Berlin unfurled in its place.

Yes; it still waves, and by the grace of God and by the combined strength of the red-blooded manhood and the red-blooded womanhood of America it will keep on waving, and not one stripe will lose its luster and not one star will have its brightness to fade.

Let us keep it waving, so that this will always be "the land of the free and the home of the brave."

And Now More Taxes

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1941

EDITORIAL FROM WASHINGTON DAILY NEWS

Mr. SHAFER of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

[From the Washington Daily News]

AND NOW MORE TAXES

Those loud cries of anticipatory anguish are from people who had thought the big national-defense and aid-to-the-Allies program wasn't going to cost anybody anything. They have just read the new tax proposals.

Income-tax payers, of course, are the ones who feel the pain most, for come next March 15 they will have to meet the tax collector face to face and lay their money on the line—some of them five or six times as much as they paid last March 15.

Yet some of the most drastic new taxes proposed are hidden excises on certain goods and services and will come indirectly out of the pockets of all the people who buy those goods and services, regardless of whether they are fortunate enough to have incomes in the taxable brackets. This is known as painless taxation, because the people who pay never see the tax collector. They're just charged higher prices. In our opinion these consumption taxes are far less justified than the levies on incomes.

After all, income-tax payers belong to a select group in this country. They number around 6,000,000 now, and with their families represent about one-sixth of the population. Whatever they pay, they're still better off than

the other five-sixths. What right have they to complain of higher taxes?

Indeed, when our Government needs revenue so desperately, what right has any American to complain of higher taxes—anyone who stays at home, enjoys a civilian life easier than the rigors of camp life, and has security provided by young men drafted into military service at $21 and $30 a month?

But it seems to us our income-tax structure, which is supposed to be the backbone of the Federal revenue system, rests upon too narrow a base. Those who already pay income taxes should be required to pay more. But in seeking still more revenue, why not also reduce the exemptions to bring a much larger number of citizens into the select group of income taxpayers, and take from each according to his ability to pay?

Even if exemptions were so lowered as to double the number of income taxpayers, the select and fortunate group enjoying the privilege of personal contact with Federal tax collectors would still represent only the economic upper one-third of the population.

If this is not done, it will be because the Congressmen who are always voting appropriations, and the politicians of the executive departments in Washington who do the spending, are afraid to let such a large number of voters find out how much their Government and defense cost.

Organized Labor and the Defense Program

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1941

Mr. BURDICK. Mr. Speaker, there is much discussion in the cloakrooms and on the floor of Congress expressing sharp criticism against organized labor for holding up defense production. No doubt legislation will be introduced to line labor up and prevent workers from suggesting better conditions and better wages. If the stoppage of defense production can be fastened upon labor, such legislation will, in all probability, pass.

In charging labor with the slowness of defense production, it remains for Members of Congress to carry on some investigations of their own to see who is at fault. So far as I have been able, thus far, to get the facts, I can state definitely that strikes in organized labor are insignificant compared to other causes blocking defense production. Contracts for defense production, as a rule, are given to large corporations, and these, in turn, will not let the smaller corporations in on the contracts.

Pearson and Allen's column in the Times-Herald for March 17 contains this startling statement:

> The cold facts are that although 200,000 firms are available for defense contracts, 90 percent of the orders awarded during the last half of 1940 went to 600 large firms. One hundred and fourteen of these got 95 percent of all contracts over $100,000, amounting to $6,668,800,000.
>
> Despite the frantic pleas of defense officials for speed, a number of these orders have clauses forbidding subcontracting without permission of the primary contractor.

These facts prove that 199,400 corporations capable of turning out defense materials have no chance to do so, and another 486 firms are getting only small drips in orders, and 114 firms are trying to hog the whole defense program. It is estimated on reliable authority that at least 50 percent of machine tools in the country are either idle or working less than 8 hours per day.

Here are some facts found in the statistics of the Bureau of Internal Revenue:

> Ownership of corporate assets: Of all corporations reporting from every part of the Nation, one-tenth of 1 percent of them owned 52 percent of the assets of all of them.
>
> And to clinch the point: Of all corporations reporting, less than 5 percent of them owned 87 percent of all the assets of all of them.
>
> Income and profits of corporations: Of all the corporations reporting from every part of the country, one-tenth of 1 percent of them earned 50 percent of the net income of all of them.
>
> And to clinch the point: Of all the manufacturing corporations reporting, less than 4 percent of them earned 84 percent of all the net profits of all of them.

If the "big boys" are to have their own way in this matter—and it appears likely that they will—half of the potential machine production in the United States will not be utilized.

Just compare this strangulation of our potential productive power with the damage that may be caused by a few strikes. The fact is the "big boys" know that they are at fault for the belated progress in defense production, and that it is not due, except in a slight degree, to strikes. This being the situation, it is obvious to the most prejudiced against organized labor that labor alone cannot be charged with delaying defense.

The real fault lies with the privileges granted to large corporations who want to hog it all. In order for these few corporations to hog it all, a strike in one of these plants is labeled as a plan of the workers to hamstring production. What about the labor in the idle plants? If all of our potential production plants were in operation and had contracts to fill, the few strikes here and there would not affect, in any perceptible degree, the output of defense production.

If all laborers are to be summarily dealt with by a law of Congress, it will fall upon 95 percent of honest, loyal American citizens, who have a right to protect their own interests. The number of laborers in the United States who deliberately intend, by their action, to hamstring production, is extremely small and those cases are being dealt with by organized labor itself.

If we intend to have a united front in this country, organized labor, as a body, must be given the protection to which they are entitled under the law. To now slap the whole organization in the face, when neither the organization is at fault nor the actual number of strikes is responsible alone for the slowness of production, would be an act which would spread disunion among a whole people who should be united.

Constant reference is made to the fact that labor is regimented in Germany, and there are no strikes; that production of war materials goes forward without a hitch. That may be one side of the situation, but what about the other side? The capitalist is also regimented, and if that were all, the capitalist would not fare so bad, but at the first sign of disagreement with the war policies, the capitalist is sent to a concentration camp, his property confiscated, and in many instances his life is snuffed out either through neglect, sickness, or other means of liquidation.

If we are to copy Germany with respect to labor, why not go the whole way and regiment capital. If the people of this country know what they are doing—and sometimes they do not—we will keep our American way of operation and treat both capital and labor justly. That is the duty of this Government in our present situation—demand that labor and capital shall operate together, fairly, justly, and for the common good of the Nation.

There should be a wider distribution of war contracts to the end that all of our productive capacity may be utilized—a handful of men should not control our production and, above all things, these men should be prevented from repeating the war profits of the first World War. A fair distribution of the common efforts of capital and labor will do two important things at this critical time. It will prevent strikes and prevent a few men from reaping unconscionable profits from a situation which the people cannot now avoid.

Why I Favor the Overton Formula, With the Amendment Suggested by President Franklin Delano Roosevelt, As the Fiscal Policy for the District of Columbia

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1941

REPORT BY THE SUBCOMMITTEE ON PUBLIC HEALTH, HOSPITALS, AND CHARITIES OF THE COMMITTEE ON THE DISTRICT OF COLUMBIA

Mr. D'ALESANDRO. Mr. Speaker, as chairman of the special subcommittee on public health, hospitals, and charities of the District of Columbia to investigate the public-welfare institutions, I am happy today because the District of Columbia Committee adopted a favorable report which will take care of not only all of the welfare institutions that are badly in need of improvements but also the central library, sewer system, Gallinger Hospital, Georgetown Hospital, health centers, public-welfare center, which would

be a combination of the various institutions, such as Blue Plains, and so forth, improvement in the tuberculosis sanatorium, incinerator, new west wing of the Municipal Center, consolidation of the old eight-room schools, some of which are now over 70 years old, Wilson Teachers College, Abbott Vocational School, and the water supply.

I understand the Federal contribution would be approximately $9,300,000, or about 21 percent of the general fund, but the amendment suggested by President Roosevelt provides that out of the total amount appropriated by the regular annual District of Columbia appropriation bill for each fiscal year, there shall be made available for capital expenditures an amount at least equal to the amount herein required to be appropriated by such bill as the annual payment of the United States for such fiscal year.

The following is a report of our investigation of the institutions of the Board of Public Welfare, which will show the need of this legislation, and, therefore, I respectfully ask the Members of the House to act favorably on H. R. 3490, with the amendment suggested by President Roosevelt.

INVESTIGATIONS OF INSTITUTIONS OF THE BOARD OF PUBLIC WELFARE

(House of Representatives, Subcommittee on Public Health, Hospitals, and Charities of the Committee on the District of Columbia, Washington, D. C., Friday, March 8, 1940)

The Subcommittee on Public Health, Hospitals, and Charities of the Committee on the District of Columbia respectfully present the following report to the Committee on the District of Columbia:

Mrs. Franklin Delano Roosevelt on January 26 and 31, 1940, made a statement in the newspapers that she visited Blue Plains Home for the Aged and the Infirm and the Receiving Home for Children and she reported the conditions to be shocking.

The acting chairman of the subcommittee introduced House Resolution 370, which reads as follows:

"RESOLUTION

"Whereas Mrs. Franklin D. Roosevelt, on a recent visit to the Home for the Aged and Infirm, at Blue Plains, D. C., found conditions at the institution to be shocking; and

"Whereas no steps have yet been taken looking toward a correction of the conditions complained of by Mrs. Roosevelt: Therefore be it

"*Resolved*, That the House direct its Legislative Committee on District of Columbia affairs or a proper subcommittee thereof, to make a thorough investigation to find out the exact nature of the conditions existing at the institution, and what remedial steps should be taken; and also whether the District Commissioners, the Board of Public Welfare, which has immediate jurisdiction over the institution, or the Congress of the United States, is responsible for the conditions complained of by Mrs. Roosevelt."

At the request of the chairman of the House Committee on the District of Columbia and the members of that committee, Hon. THOMAS D'ALESANDRO, Jr., was named acting chairman.

The acting chairman immediately called a meeting of the subcommittee and asked Dr. Tenerowicz to make an inspection of the institutions. The acting chairman immediately made a visit to Blue Plains and the Receiving Home for Children and asked Dr. Tenerowicz to do likewise the following day, which he did. After making one visit to Blue Plains the acting chairman made a second visit with Dr. Lynne A. Fullerton, who was asked to testify before the subcommittee.

On January 31 the acting chairman wrote the following letter to Mrs. Franklin D. Roosevelt:

JANUARY 31, 1940.

MRS. FRANKLIN D. ROOSEVELT,
The White House, Washington, D. C.

MY DEAR MRS. ROOSEVELT: As a member of the District of Columbia Committee of the House of Representatives, I have been keenly interested in your recent visits to the institutions of the city. I was particularly amazed at the horrible conditions that you discovered at the Home for the Aged and Infirm at Blue Plains.

It caused me such concern that I believed it my duty to introduce a resolution in the House of Representatives calling for a congressional investigation of the existing conditions.

Shortly thereafter I was appointed acting chairman of the Public Health Subcommittee of the District of Columbia Committee for the investigation. Coincident with my appointment I learned that you visited other District institutions and found that situations existed that should be rectified.

In order that I may proceed in this investigation in the most orderly and efficient manner, I am asking that you will do this subcommittee the great honor of appearing as the first witness.

I believe that in the interest of selecting a time that might be agreeable to you and not interfere with your daily tasks, Saturday evening would be a convenient time.

My interest in having you appear as the first witness is simply that since your visits brought the matter to the attention of Congress, I believe that your suggestions for bettering conditions at these institutions would be of great value to the subcommittee, and in turn to Congress, in their consideration of any remedy that might be suggested.

Therefore, in view of these circumstances, I await your pleasure in calling the subcommittee for your appearance.

Sincerely yours,
THOMAS D'ALESANDRO, Jr., M. C.,
Third District, Maryland.

The following reply was received:

"THE WHITE HOUSE,
"*Washington, February 1, 1940.*

"MY DEAR MR. D'ALESANDRO: I have your letter of January 31, and I deeply regret that I cannot be present on Saturday evening as I am leaving tonight for New York City and Hyde Park.

"Do you think the whole group would care to come to tea with me next Wednesday at 5:30 at the White House?

"If so, I will ask the District Commissioners, Mr. Bondy, and the Director of the Budget. By that time you may have seen some of the institutions, and I would suggest if you are planning to visit any of them, that you do not announce it beforehand.

"I shall be back in Washington late on Sunday night and here in the White House on Monday.

"Very sincerely yours,
"ELEANOR ROOSEVELT."

This invitation was accepted and on Wednesday, February 7, 1940, Mrs. Roosevelt received the three Commissioners, Hon. Melvin C. Hazen, Hon. George C. Allen, and Col. David McCoach, Jr.; the Director of the Budget, Hon. Harold Smith; Mr. Frederick W. McReynolds, chairman of the Board of Public Welfare; Mr. Robert E. Bondy, director, Board of Public Welfare; Judge Fay L. Bentley, judge of the juvenile court; and Hon. Thomas D'Alesandro, Jr., acting chairman of the Subcommittee on Public Health, Hospitals, and Charities of the Committee on the District of Columbia.

At that meeting Mrs. Roosevelt agreed to testify before the subcommittee.

After the conference at the White House the acting chairman announced that there would be a thorough investigation of all the institutions under the Board of Public Welfare in the District of Columbia.

The first witness was Mrs. Franklin Delano Roosevelt. Then there was Dr. Lynne A. Fullerton, from the United States Public Health Service; Mr. Robert E. Bondy, Director of the Board of Public Welfare, District of Columbia; Frederick W. McReynolds, chairman of the Board of Public Welfare, District of Columbia; a report of Congressman Rudolph G. Tenerowicz, a member of the committee, who resigned; Dr. Arthur N. Meloy, physician, Home for Aged and Infirm, Blue Plains; Frank B. Haskell, superintendent, Home for Aged and Infirm, Blue Plains; Judge Fay L. Bentley, judge of the juvenile court; Miss Elsa Castendyck, Director of Division of Delinquency, Children's Bureau, Department of Labor; Mr. Grady Leonard, superintendent; and Mrs. Grady Leonard, Receiving Home for Children; and Mrs. Spencer Gordon, chairman, Child Welfare Committee, Board of Public Welfare of the District of Columbia.

Following the last public hearing the acting chairman accompanied by Robert E. Bondy, Director of Public Welfare, visited the following institutions:

The District of Columbia Reformatory at Lorton, Va.; the District of Columbia Workhouse at Occoquan, Va.; the District of Columbia jail; the National Training School for Girls; the Industrial Home School; the District Training School at Laurel, Md.; and the Industrial Home School for Colored.

At each institution the superintendent and staff were interviewed and the respective institutions inspected to determine the program, the needs, and the conditions prevailing.

During the investigation the acting chairman received many letters of inquiry and complaints. Matters in those communications affecting the care of inmates in the various institutions are being cared for through arrangement with the Director of Public Welfare.

Various organizations have supplied the subcommittee with ample reports and suggestions and have throughout the investigation emphasized their desire to be helpful.

The investigation has revealed that shocking conditions exist at many points and at most institutions conditions were found that call for correction.

In connection with each institution the subcommittee found that recommendations to the Board of Commissioners by the Board of Public Welfare have generally been reduced, both for personal service and maintenance and capital outlay.

In some instances some Budget estimates were further reduced by the Bureau of the Budget and in many instances the final appropriations, approved by the Congress, represented further reductions.

The net result over the years has been that the needs of the institutions as recommended by their superintendents and by the Board of Public Welfare have not been met.

The committee found that the Members of Congress and the Board of Commissioners over a long period of years have rarely visited these institutions and therefore have not become directly acquainted with the conditions and needs at the institutions.

Generally speaking, the staffs at the institutions are not adequate in number to render good service; the maintenance funds are inadequate, and funds for repair and building extensions have not been sufficient to keep pace with the growth of the National Capital and the needs of the inmates. Within the funds that are available the superintendents of the institutions have been rendering notable service.

The investigation discloses that the Board of Public Welfare has been aware of the unsatisfactory conditions and has repeatedly made recommendations in its annual budget requests to meet these needs of staff, maintenance, and buildings.

The committee further have found that various studies and surveys by experts have

been made and the findings calling for improved service presented to the Board of Public Welfare and the Board of Commissioners.

It is clear, therefore, that the mounting needs of the welfare institutions of the District of Columbia have been known to public welfare officials and that recommendations to meet them have been made.

Instead of more surveys the welfare institutions of the Nation's Capital can be brought to a basis of adequate care and service if the Members of the Senate and House would visit these institutions and see the human needs of additional facilities which are necessary to adequately take care of each institution.

It seems to the committee that Washington should set an example for the Nation in providing proper care for the aged and infirm, children and adult delinquents, the feeble-minded, and others requiring institutional care.

Model welfare institutions in the Nation's Capital would serve to raise the standard of similar institutions throughout the Nation.

The committee feel that Robert E. Bondy, the Director of Public Welfare since September 16, 1939, inherited the heavy burden of the Public Welfare program that is behind the times. He has visited each institution with the committee and in his testimony before the committee and in other connections has demonstrated that he knows the needs and the conditions of each institution and is well qualified to administer the broad program of public welfare.

The committee present the following findings of needs at the various institutions:

HOME FOR THE AGED AND INFIRM (BLUE PLAINS)

1. The committee requested the Board of Commissioners and the Director of Public Welfare to make a survey to determine whether the best possible medical care is being given within the existing funds, whether any inmates in the institution should be transferred for care in other institutions, and whether persons handling food may be diseased and thereby endangering the health of other inmates. The committee asked that within present resources everything possible be done to improve the feeding of the inmates and their general care. The committee after making these suggestions returned to Blue Plains and found progress being made in these matters.

2. The committee feels that the condition of the buildings at Blue Plains are horrible and suggests that a 5-year building plan be adopted because of the lack of adequate facilities.

3. The committee commends for attention recommendations in the report of Dr. Lynne A. Fullerton on medical care, including the need for a full-time medical officer, for graduate-nurse service, for an adequate staff of orderlies in the infirmary, and adequate medical supplies and equipment. Adequate medical care at the institution would also include a working arrangement with Gallinger Hospital and other local institutions. Medical care of inmates requires a well-equipped infirmary.

4. More adequate provision for food, clothing, medical supplies, and furnishings were indicated as needed.

5. The institution should in general be used for the care of aged persons who cannot be cared for in family homes. Provisions for chronics, convalescents, acute medical and surgical cases, mental cases, and epileptics should be made in other institutions.

RECEIVING HOME FOR CHILDREN

1. Every effort should be made through child-welfare service and adequate public assistance to keep families together and prevent circumstances arising that cause delinquency and neglect.

2. The committee suggests that through close cooperation between the police department and the juvenile court the number of delinquent boys and girls held for court action can be reduced.

3. Dependent children and those coming before the police or other agencies because of neglect in their homes should receive temporary care in special foster-family homes until suitable plans in the interest of the child can be made. Such children should not be placed in the Receiving Home for Children, where they will be forced to associate with delinquent boys and girls.

4. Delinquent children held for court action should have temporary care in a modern receiving home for children. The present institution is entirely inadequate and unsuited for that purpose. It is clearly a makeshift. A new institution providing proper segregation, medical-care facilities, play and activity facilities, and adequate provision for food and clothing, with a suitable staff, should be provided.

INDUSTRIAL HOME SCHOOL

1. The Board of Public Welfare is now studying plans for the future of the Industrial Home School, including a proper location and type. Until these plans are decided upon, the present institution should be kept in reasonably adequate repair. The present institution is old and the buildings have been allowed to deteriorate unduly. Some equipment is needed.

INDUSTRIAL HOME SCHOOL FOR COLORED

1. This institution is of the cottage type. Its principal needs are: An educational building for educational and recreational purposes, and educational staff provision for school and shop instruction.

2. There is no District of Columbia industrial home school for colored girls. The committee suggests that the Board of Public Welfare study this matter and make appropriate recommendations.

DISTRICT TRAINING SCHOOL AT LAUREL, MD.

1. This is the only institution for the care of feeble-minded in the District of Columbia. In addition to the approximately 600 inmates at the institution, the committee find that there are about 450 additional feeble-minded in the District of Columbia who should have institutional care at the District Training School, but for whom facilities at the school do not exist. The committee believe there is an urgent need that should be met during the next 5 years for the provision of additional buildings and staff facilities to care for these feeble-minded persons. An institution should be built to care for 1,200 inmates. Most of these 450 feeble-minded in the District of Columbia will profit by training and be capable of rehabilitation and return to the community. An adequate institution will make possible segregation of ages, sexes, race, and mental ability.

2. As the District Training School is a training and educational institution primarily, a suitable school building should be provided to replace the inadequate basement and other rooms now used for class and occupational and shop instructions.

3. Additional building requirements during the coming 5-year period should include a laundry building, adequate water supply, and an employees' residence building. Provisions for landscaping and road building should be made.

The institution is now understaffed. Additions are needed in medical officers, parole officers, matrons, and certain other personnel.

NATIONAL TRAINING SCHOOL FOR GIRLS

1. The present appropriation limiting expenditures to $500 per inmate annually places a premium on delinquency as it forces the maintenance of the institution's population at a minimum figure rather than permitting parole and rehabilitation into the community. The committee believes that the limitation should be lifted.

2. As the purpose of the institution is to train delinquent girls to life in a community, provision should be made for a parole service.

3. More adequate provision should be made for the maintenance items of food, clothing, repairs, and general maintenance.

4. Provisions are needed for teachers for academic and vocational instruction as well as for engineer and watchman services.

5. The Board of Public Welfare should continue its study of the proper location and type of institution for a National Training School for Girls.

6. The committee suggests that the Board of Public Welfare consider the cottage type of institution in a suburban location.

PENAL INSTITUTIONS

1. The committee is impressed with the well-planned and farsighted administration of the District of Columbia penal institutions. The personnel, maintenance, and buildings planned are well mapped out in advance.

2. Personnel is the primary problem. Additions have been made but additional requirements exist to assure safe custody, complete classification, industrial and educational programs, and proper medical and nursing care.

3. At the workhouse and reformatory regular annual provisions should be made for buildings to relieve present overcrowding, to complete the women's division building facilities, to replace the temporary infirmary building at the workhouse, and to carry out certain other features of the existing building program. Building construction should go forward regularly but gradually so that the services of the inmates may be utilized in construction work.

4. In the plans for completion of the building program at the jail the committee strongly recommends that provision be made for hospital facilities at the jail to be operated in conjunction with the staff at Gallinger Hospital.

Respectfully submitted.

National Pension Act

EXTENSION OF REMARKS
OF
HON. JOSEPH E. CASEY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1941

ADDRESS OF WILLIAM H. McMASTERS, PRESIDENT OF NATIONAL OLD AGE PENSIONS, INC.

Mr. CASEY of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks, analyzing the tax proposal in National Pension Act (H. R. 4013) filed by me on March 14, which were part of an address delivered by William H. McMasters, president of National Old

Age Pensions, Inc., before Somerville, Mass., pension group No. 4, at their regular weekly meeting in American Legion Hall on Tuesday, April 22. The remarks of Mr. McMasters touch on the present tax situation of our National Government, and are as follows:

It is interesting to note the many suggestions that are being offered along the lines of national taxation. H. R. 4013, National Pension Act, filed by Congressman CASEY of Massachusetts a month ago, will meet the present taxation emergency better than any proposal so far offered. In this plan to raise the revenue to make our national-pension program self-sustaining, it says in section 2: "There is hereby levied a tax of 2 percent upon the gross dollar value of all business transactions consummated for profit within the United States."

With that inclusive provision as our tax base, I am confident that the turn-over in business on which taxes are to be levied will produce approximately $1,000,000,000 per month. I stress the fact that it is far easier to collect $1,000,000,000 per month than it would be to collect $12,000,000,000 per year. At the present time, I doubt if more than 6,000,000 persons, of those over 60 years of age, will come under the provisions of the national-pension system that the act will set up. Our maximum calls for only $75 per month per annuitant, and the total requirement will be $450,000,000 per month. This will leave a tax surplus of $550,000,000 per month to be added to the general funds of the Treasury.

To many persons these figures may appear fantastic, but they are only fantastic when considered in terms of a long-departed political economy. In the light of the economy of today in our country, they are far more rational than a tax base of 1 percent of that total would have seemed to the economists of a few decades ago. Under the needs of the hour, a great nation goes forward. Taxes and progress go hand in hand. Our real problem is to equalize the national-taxation program. If we can maintain equity through an absolute balance, the productive forces of our society can carry the load and never know it. That is why this proposed act does not try to favor one income group or productive force as against another. Every transaction, whether wholesale or retail, whether initial or final, is used as a means of collecting revenue.

When the entire economic system is used to defray its own cost of maintenance, there is developed a perfect balance as evenly distributed as the universal pressure of air or the pull of gravitation itself. The whole question comes on a proper legal translation of five simple words, introduced for the first time in a national tax proposal. These words are, "business transactions consummated for profit" and briefly I wish to offer my interpretation. Immediately we eliminate every religious activity, fraternal and cooperative activity, inheritances or any transaction that is governmental in character. It must be a transaction of a business character in which a gain or profit or advantage is secured by both parties because of the exchange in values.

The need for national production to apply part of its increase of wealth to the general and safe conduct of its continued existence is one of the incidents of the economic world in which we live. It is about time that we establish a tax system that leaves the entire economic structure in a perfect balance. Under H. R. 4013, the proposal will not only meet the national pension requirements and thus add greatly to the morale of our people, but it will furnish practically all the revenue needed to carry out the defense program of the Nation. I hope to see this measure considered by the Ways and Means Committee of the Congress very soon.

Speak for Us, Mr. President

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1941

Mr. MUNDT. Mr. Speaker, in these trying times, with intolerance, passion, and hysteria filling the columns of so many newspaper commentators and editors in the metropolitan press, it is my conviction that we would all be better off if we would take a little time out each day to read the more measured statements appearing in the religious papers and magazines of this Christian, peaceful Nation.

To the eternal credit of the churches of America and their outstanding leaders it should be noted that the Christian leadership of this country is dedicating its efforts to the preservation of our American peace and our ordered way of life on this hemisphere. If this courageous patriotism and constructive Christianity continues to dominate the religious leadership of this country, I am convinced that after the ordeal in Asia, Africa, and Europe is over the church of the world will find new strength and hope from the fact that in this country the light of sanity and reason, the hope of brotherhood and peace, have been held aloft by Christian leaders and will be ready at the first sign of peace to mend the wounds and temper the passions of the victims of this awful war.

ROY L. SMITH PETITIONS THE PRESIDENT

Under leave granted me by the House, I am attaching to these remarks an editorial from the latest issue of the Christian Advocate, outstanding religious publication of the Methodist Church. In this editorial Roy L. Smith calls upon the President to assume a world leadership for better living such as came from the mind and heart of Woodrow Wilson when he proposed his famous 14 points as a basis for the termination of one war and the elimination of future wars. The repudiation of those 14 points planted the first seeds of the power politics which today has given rise to the dictatorships and military machines which have brought havoc to the homes of innocent people in more than half the nations of the world. The time is once again at hand when some inspired world figure can immortalize his name and serve humanity by proposing a public formula for a peace without vengeance and a world without either oppression or suppression.

Mr. Speaker, whether the wars now raging in three foreign continents raining down upon the British Isles from the air last another month or another decade, they must be finally closed at a meeting around a conference table and not at the point of a gun on a bloody battlefield. A formula for peace and sanity and economic order must follow the war and it is easier now for minds to meet in the development of such a formula than after destruction and exhaustion have taken further tolls. Woodrow Wilson's 14 points went far toward hurrying the termination of the World War by creating objectives for which men in all countries were seeking. If some world force today could offer the people of every land a formula for permanent peace, for freedom from want, for a self-determining mode of life, no man can predict how early a war-weary world might advance its desire to save its sons from further slaughter and its civilization from additional wreckage to the point where it would prove a more forceful impulse than desire for aggression or ambition for a total victory over a completely conquered and prostrate adversary. It seems apparent that a first step toward peace must be a program offering all those whom we would deter from further fighting a basis for future living which will appeal to them so compellingly that the war leaders will be forced to heed the heart-sent pleas which the people of the world will send out for a cessation of the fighting.

WHAT WOULD YOU HAVE FOLLOW THE FIGHTING?

Neither this country nor any other nation or influence in the war or out of it can effectuate a peace until and unless we have in mind what we would write in a document to end the war. This time the world must win the peace, since it is already obvious that no belligerent in it will win this terribly destructive war. Here America has a chance to serve the people of every country in the world; here we have an opportunity, through our constructive thinking and our vast influence, to work out the outline of a permanent peace which will have no vanquished victims, but which will have hopeful people in every land eager to lay down their arms and to pick up the implements of Christian brotherhood again. Roy Smith rightfully presents a thrilling challenge to our President. It is to be hoped that along with our necessary and desirable defense activities to make this country invincible to foreign attack, we can also put to work another segment of our national brain power forging practical suggestions based on equity and justice with which to appeal to the people of every fighting land and every conquered nation that through this course and through our cooperation in helping to develop it there lies more hope and happiness for each of them than could come to any of them by following this war to its ultimate conclusion amidst the crimson ruins of a civilization which too long refrained from revealing its answer to the question, "What would you have follow the fighting?"

Mr. Speaker, I hope that all America will join with Roy Smith in his petition to the President. I fervently pray that the President will exercise his vast influence, now, to set in motion the formation of a plan of peace which will offer an appealing answer from the standpoint of all warring nations to the greatest unanswered question of the century: What would you have follow the fighting?

[From the Christian Advocate]

SPEAK FOR US, MR. PRESIDENT

The people of the world are, without a single exception, desperately concerned in the

outcome of the wars that are waging everywhere. Confused thinking, bewildered peoples, conflicting claims, and poison propaganda combine to harry the souls of men.

In the midst of World War I, an American President, Woodrow Wilson, cleared the air and simplified the issue by the announcement of his 14 points which were adopted by the Allies as the essential statement of their war aims. The fact that those 14 points were largely ignored at the Versailles conferences is responsible, in considerable part, for the bitterness that developed later and for the present world tragedy.

If President Wilson's leadership had been followed at that time, as he expressed himself in the 14 points, we would have had an entirely different world. But the failure to follow that declaration of principles did not, in the least, invalidate the righteousness of their position.

In this dire moment of conflict the world is in need of another such statement which shall become the basis of an enduring and just peace. We know of no other living human being who is in such a position to make such a statement as President Franklin D. Roosevelt. The United States of America is not yet officially at war. This fact makes it possible for our President to make a declaration of our aims, which will be free from the questions that would arise if we were to be an actual participant. His strategic position is unrivaled. He is in a position to render a service to the people of the world which no other living man can render. His great skill in expressive speech and his relation to the conflict make it possible for him to serve humanity as can no other man of his generation.

Such a statement, conceivably, might bring about an end of hostilities, a result devoutly to be prayed for. But at least it would serve as a declaration in behalf of the conscience of the American people who desire nothing more, and nothing better, than to live at peace with all men in the full enjoyment of the rights with which they have been endowed by their Creator. The Christian Advocate believes that President Roosevelt has an opportunity never before granted to any man, within easy reach.

GENERAL JOHNSON ASKS THE QUESTION, TOO

In conclusion, Mr. Speaker, just in case that there be war-minded people in our land or obdurate skeptics who see no end for any war but complete victory for the one and total collapse for the other, let me point out that Roy L. Smith is not alone in his plea that President Roosevelt or some other outstanding figure of the current world scene rise to the greatest challenge ever to confront living men and exercise his powers to bring an ordered peace out of what threatens to be an all-out catastrophe for all the nations in the war. Roy Smith has but put into public print what is echoed in the hearts of millions of Americans and Europeans, Asiatics and Africans, people throughout the world. Let those who would toss his suggestion aside as but the well-intentioned dreaming of a man of God read the following quotation from Gen. Hugh Johnson's syndicated column printed in the Washington Daily News of today. I quote the words of General Johnson which appear as part of his description of the world-wide havoc being wrought by the bombing and counter-bombing of civilian populations and historic cities:

Is there nowhere on earth any disciple of the Prince of Compassion sufficiently impartial to be accepted with confidence on both sides as a mediator in this kind of prehistoric slaughter of innocent noncombatants? Couldn't both sides agree not to attack nonmilitary objectives? And couldn't some neutral arbiter—the Pope, for instance—be accepted as an observer and guarantor of the good faith of both?

Mr. Speaker, from Roy L. Smith, the preacher, and Hugh S. Johnson, the hard-boiled military man, comes a startling similarity of suggestion. We have in this country today an organization openly asking America to send its sons to fight and die on foreign battlefields in another expeditionary force which this time might be spread over three continents abroad. It is asking for the immediate use of American convoys while very properly and honestly stating, "this means war." Since President Roosevelt's public statement that "convoys mean shooting and shooting means war," in fact, few, if any, men in responsible positions any longer attempt to deceive the people by classifying convoys as a step short of war—it is almost universally agreed today that convoys by American ships would also mean sending transports of American boys to enter the shambles of three-dimensional fighting on the battlefields of foreign soil and seas.

WE WON A WAR BUT SATAN WON THE PEACE

However, Mr. Speaker, those who are frantically using every device from intimidation to invention to push this country into war omit a most significant segment in their program. They, too, even though they would shove us into the fighting, do not propose an answer to the question "What would you have follow the fighting?" Their only answer, if they answer at all, is "We must win the war." But America won a war on foreign battlefields a quarter of a century ago, but America and all the world lost the peace. The war to end war became a war to precede a mightier and an uglier war, and the war to make the world safe for democracy became a war to nourish nazi-ism and conceive communism. Yes, Mr. Speaker, trading American lives for a peace without promise may be a tradesman's notion of good economics, but it can scarcely serve again to provide good ethics as a basis for our national policy.

If America went to war tomorrow, and won the war the following day, Mr. Speaker, what would we put in a treaty of peace to prevent a recurrence of the wickedness and tyranny which has given rise to the conflict? Until the answer to that question is before us let us make certain to keep out of the fighting and let us continue to prepare this hemisphere to be sure that the pattern of friendly peaceful living which we have here is not sacrificed or stultified through failure to preserve what we have by seeking to solve a riddle which we do not comprehend.

The United States and the World Situation

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Friday, April 25, 1941

ADDRESS BY HON. CORDELL HULL

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD the address delivered by Hon. Cordell Hull, Secretary of State and president of the American Society of International Law, to the members of that society, on the occasion of its thirty-fifth annual meeting at the Carlton Hotel, Washington, D. C., on April 24, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow members and guests of the American Society of International Law, on the occasion of this our thirty-fifth annual meeting I shall undertake to discuss briefly certain acute phases of the world situation which are of vital interest to all of us.

We are in the midst of desperately serious days which involve all peoples and all nations. Unfortunately, many people fail to grasp the nature of this world-wide crisis and its meaning to our country.

Too many people assume that the present struggle is merely an ordinary regional war, and that when it comes to an end the side which is victorious will collect indemnities but otherwise leave the defeated nations more or less as they were before the conflict began. This assumption would prove entirely erroneous should the aggressor powers be the winners. As waged by them this is not an ordinary war; it is a war of assault by these would-be conquerors, employing every method of barbarism, upon nations which cling to their right to live in freedom and which are resisting in self-defense.

The would-be conquerors propose to take unto themselves every part of every conquered nation: the territory, the sovereignty, the possessions of every such nation. They propose to make the people of each conquered nation into serfs; to extinguish their liberties, their rights, their law, and their religion. They systematically uproot everything that is high and fine in life.

Such is the movement which is extending rapidly throughout the world.

If experience shows anything, it shows that no nation anywhere has the slightest reason to feel that it will be exempted from attack by the invader any more than in a town overrun by bandits the wealthiest citizen might expect to be free from attack.

Every thinking man can answer the question for himself by simply calling the roll of the wretched victims of world aggression who are now in a condition of semislavery and whose every hope of again enjoying the blessings of civilization depends only on the defeat or failure of the movement of conquest. So it is in Austria, Czechoslovakia, Poland, Norway, Denmark, Holland, Belgium, Albania, Luxemburg, France, Rumania, Hungary, Bulgaria, Yugoslavia. Many right-thinking people have not been able to conceive that this

would happen. To them it has seemed incredible. Yet the physical facts are now before our very eyes, and the agony of the period through which the world is passing is marked by the most terrible events. As the armies of invasion move on they bring with them blasted houses, families driven out to starve, civilian dead in the fields. When fighting is over the administration of the invader offers no relief. Homes are plundered; families are separated; churches are closed; food is denied; semislavery is introduced. Military frightfulness is merely replaced by civilian terror. Every resource of organized fiendishness is set to work to subjugate and cow the individual and to use the conquered territory as a springboard for new aggressions.

The conclusion is plain. Now, after some 15 nations have lost everything that makes life worth living, it is high time that the remaining free countries should arm to the fullest extent and in the briefest time humanly possible and act for their self-preservation.

Some among us, doubtless with the best of intentions, still contend that our country need not resist until armed forces of an invader shall have crossed the boundary line of this hemisphere. But this merely means that there would be no resistance by the hemisphere, including the United States, until the invading countries had acquired complete control of the other four continents and of the high seas, and thus had obtained every possible strategic advantage, reducing us to the corresponding disadvantage of a severely handicapped defense. This is an utterly short-sighted and extremely dangerous view.

Events have shown beyond possible question that the safety of this hemisphere and of this country calls for resistance wherever resistance will be most effective. In my judgment, our safety and security require that, in accordance with the declared policy of the legislative and executive branches of the Government, aid must be supplied without hesitation to Great Britain and those other countries that are resisting the sweep of the general conflagration. This policy means, in practical application, that such aid must reach its destination in the shortest of time and in maximum quantity. So ways must be found to do this.

You and I are familiar with the questions sometimes raised when we speak of aid to other nations. Why, it is asked, should we interest ourselves in the defense of other countries? Surely the answer is terribly clear.

Those nations that are making resistance are primarily seeking to save themselves, their homes, and their liberties. Great Britain, for instance, is acting primarily for her own safety. The United States, both in its direct defense effort and in the aid which it extends to the resisting nations, is likewise acting primarily for its own safety. As safety for the nations that are offering resistance means security for us, aid to them is an essential part of our own defense. Every new conquest makes available to the aggressor greater resources for use against the remaining free peoples. Our aid to the resisting nations is not the mere crusading of a world benefactor. It is based on the definite knowledge that every free nation anywhere is a bastion of strength to all the remaining free peoples everywhere.

Sometimes the same confusion of thought is expressed in a different question. Why, it is asked, should we care who wins? Is not this merely the traditional and recurrent struggle for power? Does it make any difference to America? What difference does it make to America?

It makes a fateful difference. In a world which was, in the main, devoted to the cause of peace and in which no nation had designs upon the Western Hemisphere, we could, perhaps, take a detached attitude. But evidence has been piling up over several years which makes it perfectly plain that one group of powers actually does have designs both upon the New World and upon the principles, the possessions, and the way of life that are ours. All the military movements and official acts and utterances of these powers have confirmed the knowledge that we, too, are included in their plans for world domination. Our freedom and our wealth inevitably make us magnets for their machine of force.

Yes; it makes a difference who wins—the difference whether we stand with our backs to the wall with the other four continents against us and the high seas lost, alone defending the last free territories on earth—or whether we keep our place in an orderly world.

Again, it is asked, how are we in danger? Are not these idle fears? Since one warring nation cannot successfully invade Britain across 20 miles of the English Channel how can any nation invade us from across 3,000 miles of the Atlantic?

The reason why the English Channel has not been successfully crossed is that the British have maintained control of that Channel. Forty million determined Britons in a heroic resistance have converted their island into a huge armed base out of which proceeds a steady stream of sea and air power. It is not water that bars the way. It is the resolute determination of British sea power and British arms. Were the control of the seas by the resisting nations lost, the Atlantic would no longer be an obstacle—rather, it would become a broad highway for a conqueror moving westward. Our protection would be enormously lessened.

Those Americans who, in effect, are saying that a British defeat would not matter to us, signally overlook the fact that the resulting delivery of the high seas to the invader would create colossal danger to our own national defense and security. The breadth of the sea may give us a little time. It does not give us safety. Safety can only come from our ability, in conjunction with other peace-loving nations, to prevent any aggressor from attaining control of the high seas.

Some, hoping that this crisis may end, ask whether some sort of peace cannot be made—a peace which will end the struggle in Europe and which will permit us to resume our normal life. I wish this were possible. But one obstinate fact stands in the way. One of the contending groups not only does not wish peace, as we understand peace, but literally does not believe in peace. That group uses the word, it is true—as it was used by the aggressor at the time of the Munich arrangement in 1938. Peace to that group is merely a convenient cloak for a continuing undeclared undercover war, as France and many other nations to their misery have discovered. Behind the deceptive protection of the word "peace" the rulers of that group accumulate vast striking forces. They infiltrate shock troops disguised as peaceful travelers and businessmen. They set up organizations for spying, sabotage, and propaganda. They endeavor to sow hatred and discord. They use every tool of economic attack, of bribery, of corruption, and local disturbance to weaken the countries with which they are at "peace," until a military movement can easily complete the task of subjugation. That kind of peace is nothing more than a trap—a trap into which many nations fell in earlier phases of this movement for world conquest when its true nature was not understood. Indeed the dictator nations make no secret of their plans. They scornfully state their ideas, arrogantly confident that the law-abiding nations will not take them seriously—until it is too late successfully to resist them.

Finally, there are those who sometimes wonder whether aid to freedom-loving nations, and a vigorous policy of defending our interests will not irritate some aggressor into attacking us. This theory assumes that a lawless invader will become irritated if its intended victim dares to defend itself at the most effective stage. Under this theory, the only way to avoid giving such irritation is to submit.

No nation is going to attack us merely because it is our policy to defend ourselves. Neither, for that matter, are any aggressors going to let us alone merely because we attempt to placate them. In the philosophy of the conquerors, an attack is justified whenever and wherever it looks easy and convenient and serves their purposes. There is no possible safeguarding our security, except by solid strength, placed when and where it is most effective.

The best, indeed the only way, of allaying the fears and doubts and questions of those who are in anxiety is for us, 130,000,000 of Americans, to rise in our might and proceed as one man in the Herculean task of equipping this Nation to the fullest for its self-defense. These preparations should not be for a month, or for a year, but they must continue as long as our safety is threatened.

The countries that have set about to impose their rule upon the world have turned their backs upon all the ordinary peacetime ways of work and living. They dreamed of force, they have created force, and they are now using it to the full. In their preparations and in their warfare they have demanded everything of their peoples. Ordinary family life, leisure, personal enjoyment, pursuit of private interest—all of these have been swept aside. Everything has been given over to the creation and use to the utmost of force.

For us, the task of safeguarding our security requires the full, continuous, patriotically inspired effort of each and every one of us. The energies of those who control the operation of our factories and their machines, together with the labor of those who make and operate the machines, must be devoted to the attainment of maximum production. Each and all must work with a sense that what they do or do not do is important in determining whether this country shall be secure. Every part of our vast productive machine that can serve to produce military supplies must be put to that purpose. The desire to continue ordinary ways of business must yield to the needs of the crisis. Individuals and groups have no right at this time to think or act primarily in terms of their personal interest to the detriment of the general national good.

What we do in the production of the fighting instruments needed by ourselves and by the free countries of the world now becomes a measure of our intelligence.

There are those who are too easily discouraged when the news is temporarily unfavorable. Powerful propaganda machines endeavor to spread that discouragement. It is not the tradition of those who love liberty to yield to discouragement. That is not the American tradition. Our country owes its place in history to the fact that the people become more resolute and determined as danger and difficulty increase.

There can be no temporizing with lawlessness or with disregard for the elemental rights of nations and peoples.

Although the task is huge, though time is pressing, and though the struggle may continue for a long time, I am confident that at the end there will come a better day. We are at work not only at the task of insuring our own safety but also at the task of creating ultimate conditions of peace with justice. We can help to lay a firm foundation for the independence, the security, and the returning prosperity of the members of the family of nations. I have absolute faith in the ultimate triumph of the principles of humanity, translated into law and order, by which freedom and justice and security will again prevail.

America and the World Situation

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, April 25, 1941

ADDRESS BY HON. FRANK KNOX

Mr. LUCAS. Mr. President, last evening in the city of New York the Honorable Frank Knox, Secretary of the Navy, delivered a very unusual and most interesting address before the Bureau of Advertising of the American Newspaper Publishers Association. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Toastmaster, ladies, and gentlemen, I feel a very natural gratification over the opportunity to address you. My satisfaction flows not alone from the honor you have done me but because of the opportunity which this rostrum affords for a frank discussion of the situation which confronts us all. If I could have my choice among all the audiences which might be assembled, I should have unhesitatingly chosen this audience for what I have to say. Of course, that feeling is a very natural one for me, since I am a member of the same profession as yours, and hold that the free press of America, which you represent, wields a greater influence upon our national destiny than any other single agency in our complex modern society.

Having thus made confession of my sense of indebtedness to you for this opportunity, may I express also the deep sense of personal responsibility I feel in coming before you, as a lifelong member of your profession, who for the moment is charged with a grave public responsibility. This sense of gravity is increased when I remember that my official responsibility has to do with the maintenance and swift enlargement of the Nation's first line of defense in a world devastated by war—war whose dark shadows gather in threatening clouds upon our horizons.

From me, my fellow craftsmen, you have a right to expect utter frankness; and from me, as Secretary of the Navy, engaged in constructing the greatest Navy the world has ever seen, you have a right to expect the sober truth.

OPPOSED TO CENSORSHIP

Because I am a newspaperman as well as a public official, may I say that I have a very lively interest in the establishment and maintenance of the friendliest and frankest possible relationship between the Navy and the press. As a newspaperman, who has known no other occupation, and who feels a great sense of pride in his profession, I am utterly and unreservedly opposed to any form of compulsory censorship, especially in time of peace. In time of war, necessarily, there must be certain vital military information which no loyal and patriotic newspaperman would want to publish anyway, withheld from publication; but even in time of war, with this single qualification, I am opposed to censorship.

I believe the end desired can be achieved by a purely voluntary cooperation between the War and Navy Departments and the newspapers. To the establishment of such a relationship, I am already bending my efforts and shall continue to do so as long as I continue to serve as your Secretary of the Navy. In a democracy, in time of grave national peril, unity is imperative. You do not achieve unity, whether in the field of labor, of capital, or of public relations, when you resort to compulsion. Unity may be achieved only through the processes of mutual understanding and close cooperation.

While the relationship which should exist between those charged with the national defense and the various organs of publicity is of the gravest importance, I would turn your thoughts tonight to a far graver question. I am going to ask you to survey with me the world situation. If our survey is to be of use, it must be utterly realistic and objective. It should savor neither of destructive pessimism nor blind, unreasoning optimism. When grave danger threatens to all that we cherish, we can afford to indulge in neither wishful thinking nor in cowardly defeatism.

As Secretary of the Navy, of course, I do have access to intimate details of information, from all parts of the world, that are not available to all, but this larger and more intimate knowledge in nowise changes the general aspect of the world situation as it is set forth daily in your publication and mine.

ENCIRCLED BY ENEMIES

What we all see is an America which is gradually becoming encircled by military powers whose ideals, institutions, and methods are all of them irreconcilably antagonistic to our ideals, institutions, and methods. These same powers have also openly and repeatedly proclaimed themselves our enemies, and these openly avowed enemies have joined themselves together in a pact which they do not hesitate to say is aimed at us, and at us alone.

The only reason that this hostile pact, admittedly aimed at us, has not resulted in open warfare upon us has been because it does not suit the present purpose of these powers to engage in war with us. Whenever, in the judgment of the Axis Powers, it better suits their purpose to begin hostilities, hostilities will begin, and nothing that we can do, save prostrating ourselves in abject surrender, will change this.

For months there has been almost complete suspension of all direct contact between the United States and all of Europe, save Britain alone. Across the course of the ships that ply this single route have been flung an enlarged fleet, no one knows how numerous, of submarines—submarines which, due to scientific discoveries, are vastly more effective than they were in the last war. The seagoing range of these submarines has been immensely increased, and the field of their activity steadily expands westward, far over the line which divides the Atlantic between Europe and America.

Possession of convenient bases on the French coast has added a whole fleet of surface raiders—ships of high speed and some of them of great gun power—which prey disastrously upon the commerce between Britain and America. Finally, from bases in northern Norway and western France huge fleets of heavy bombers circle back and forth to add terror from the skies to the dangers that lurk along the sea lanes leading to a beleaguered England. Steadily the toll of lost ships mounts far faster than replacements can be made.

To the southwest of conquered Europe lies the Mediterranean, an accustomed highway for our ocean commerce in times of peace. Today the Mediterranean is forbidden waters. On its bosom ply only the craft that carry supplies to fighting armies, and the British and Italian men-of-war who fight for its control. Gone is all of our contact with the nations that border that sea.

The great continent of Africa, itself a field for contending armies, offers no ports for our merchantmen's trade. Its western coast, which thrusts itself half way across the Southern Atlantic, affording an excellent base for operations against the southern half of the Western Hemisphere, is denied our commerce. Whether we swing eastward around the Cape of Good Hope or to the westward through the Straits of Magellan, we find enemy raider-infested seas. At the end of our journey, go we westward or eastward, we encounter an Axis partner who openly proclaims he entered that partnership in an effort to prevent us from interfering with their policies of ruthless military aggression.

The latest link in this chain of encirclement that is being forged by the Axis powers, is the recently announced agreement between Russia and Japan.

Russia was not in any peril of attack by Japan. Japan not only has her hands full, and more than full, in her attempt to subjugate southern China by force of arms, but her aspirations are not northward. They are southward. Japan imperatively needed assurance that she would not be attacked in the north while she was pressing her designs in the south. Just how much assurance Japan feels that her Manchukuo border is safe, I do not know, but whatever that assurance may be it enhances the likilihood of an expansion of hostilities by Japan into a region which is one of the sources of critical war materials for both Great Britain and ourselves. The conclusion of this pact is certain to strengthen the hand of the war party in Japan.

Japan's promise, on the other hand, not to help Hitler if Hitler should attack Russia, is an empty promise. Japan could not help Russia in Europe if she wanted to, and Hitler does not need the help of Japan for such a purpose.

The end, therefore, of this deal between Russia and Japan which tightens the circle around us, leaves Russia quite as likely an object of attack by Hitler as she was before the deal was made, and leaves Japan free from any Russian interference in the Far East. Summed up in military terms, the Russo-Japanese agreement makes Japan more secure as she pursues her dream of domination of all Eastern Asia and leaves Russia no stronger in the event of an attempted Nazi seizure of the Ukraine.

NAZI DOMINATION SEEN AIM

Thus, everywhere as we estimate the situation the world around, the pressure on us grows—through Libya; through Egypt and the Suez; through Yugoslavia and across to the sea; from the western coast of Africa to South America; through the Pacific to the Dutch Netherlands, and, most vital of all, across the broad North Atlantic from German bases in France and Norway now to Greenland, German strategy—world strategy, carefully planned and efficiently executed—is becoming clearer each day. German aspirations for world dominion can no longer be mistaken. The jaws of the Nazi trap are closing.

How long will we remain bemused and stupified while the Axis Powers press their plans for our isolation and ultimate defeat? Wherein lies the difference between what Germany has done to her earlier victims and what she is doing to us? First, the bland and hypocritical assurance that she has no hostile plans. That is what she told Poland when she signed the Polish nonaggression pact. Then, the organization of a skillfully integrated information service that would lay bare our weaknesses, our internal divisions, and our vulnerable spots just as she did in France; and then, the organization of her

"fifth column," not yet loosed to the maximum but sufficiently active to warn us unmistakably of their presence, just as she did in Norway. Next, a steady encirclement and seizure of vantage points from which to launch her attack, just exactly as she has just done in Yugoslavia. Why, we even emulate the Axis victims in our psychology. We think we can escape while all the rest of the world suffers. We keep alive a wretched partisanship when a united patriotism should characterize our thinking. We refuse to believe that the Axis Powers even intend to attack us, or could be successful if they did. We refuse to face the realities of the situation in South America, the protection of which from successful invasion is a primary condition of our defense.

In that great region to the south of us, readily available as a base for an attack upon us, there is neither the military nor naval power to resist against invasion. In our fatuous complacency we ignore that in the present economic set-up, the tug of self-interest comes from Europe and not from North America. We fail to give due consideration to the size and significance of the subversive, pro-Nazi elements in many of the countries in that region—subversive elements that would speedily promote revolutionary chaos to the advantage of the Axis itself.

Many of us fail to face what it will mean to our security if the Axis Powers once gained a foothold close to our borders. We ignore what that might mean to the safety of the Panama Canal, the most vital line of communication under the American flag. Too few of us realize, and still fewer acknowledge, the size of the disaster to American hemispheric safety if Germany, already the conqueror of France, should establish herself in Dakar, a French colonial possession. From there, with her surface ships, submarines, and long-range bombers, a victorious Germany could substantially cut us off from all commerce with South America and make of the Monroe Doctrine a scrap of paper.

Finally, some of the very blind among us refuse to see what will be the inevitable result if the final link in the chain of our encirclement is forged and the battle of the Atlantic is lost and England succumbs, with her fleet sunk or captured.

This is but a partial, withal a brutally blunt, summary of the strategy of encirclement of which we are the victims.

Before we attempt an inventory of the measures we could take to meet this growing menace, this obvious encirclement, let us thoroughly digest this fact: Suppose this should happen—that our encirclement and isolation was complete and England had fallen, we then will be given but two choices—the choice of surrender or the choice of fighting. We won't surrender and we will fight. No one who knows about America and Americans doubts that. Consequently, we must fight ultimately unless we find and put into effect measures that will enable Britain to win without our fighting.

COURSE ALREADY OUTLINED

We have already gone far in this direction. We have declared that the fight that England is making is our fight. We have likewise affirmed that the enemies she is fighting are our enemies. We have denounced, without reserve, Axis aggression, Axis faithlessness to treaties, Axis brutal and murderous disregard of international good faith, and we have said, with an overwhelming public approval of this statement, that we are in the fight to stay until victory for human liberty, for justice, and for good faith is won.

We have made our productive facilities available to those who are fighting the Axis. We have loaned them much of our military equipment, although we had insufficient for our own defense. We have passed the lease-lend bill and appropriated $7,000,000,000 to implement that bill by an almost unanimous vote of our Congress. We have opened up our yards and docks for the repair of British men-of-war and merchantmen. We have assumed protection of Greenland. We have removed restrictions on American flagships sailing to zones where fighting is so that we might relieve Britain of the burden of supplying the armies fighting in that theater.

We have gone a long way, and all of it with the support of an overwhelming public opinion. Incidentally, the latest test of public opinion discloses the American Nation to be approximately 70 percent for aid to Britain even at the risk of war.

Having gone thus far, we cannot break down. There is no retracing our steps. We have committed ourselves in this world struggle. If we should attempt to back down now, England would go down to catastrophic defeat and we would face a world-wide victorious Germany and her allies whom we should have to fight alone.

We have declared that the aggressor nations must not be permitted to win. We have irrevocably committed ourselves to see that that is prevented. We have put all of our resources into the scales to bring defeat to those who would rule the world by force. We have acknowledged that our destiny just as much as the destiny of the British Empire and the ultimate destiny of the conquered peoples of the Low Countries of Scandinavia, of France, and of the Balkans are at stake.

Having gone thus far, we can only go on.

Hitler cannot allow our war supplies and food to reach England—he will be defeated if they do. We cannot allow our goods to be sunk in the Atlantic—we shall be beaten if they do. We must make our promise good to give aid to Britain. We must see the job through. All of this is needed for our own safety and our future security. This is our fight. The American people have recognized the catastrophic quality of a totalitarian victory and by overwhelming majority they have endorsed every step along the progress we have made to our present posture.

Proclaiming, as we do, our faith in the ultimate victory of the good over evil, our devotion to the cause of human liberty, our century and a half of the pursuit of justice between men on terms of equality, we can no longer occupy the immoral and craven position of asking others to make all the sacrifice for this victory which we recognize as so essential to us. Our manhood and our self-respect demand that we shall assume our part of the burden.

The Merchant Marine

EXTENSION OF REMARKS

OF

HON. GEORGE L. RADCLIFFE

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Friday, April 25, 1941

RADIO ADDRESS BY HON. GEORGE L. RADCLIFFE, OF MARYLAND

Mr. RADCLIFFE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by me on April 7, 1941, on the subject of the merchant marine.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

For a few minutes I want to discuss several aspects of our merchant marine. What do we mean by our merchant marine? There probably are more opinions as to what it is than there were colors to Joseph's coat. Possibly no definition of the term would be quite satisfactory but I will refer to a few aspects of it. For instance, we know, naturally, that our merchant marine concerns primarily methods of transportation by water—not by land. We know it embraces really more than ships—the small ones as well as big ones. In its largest sense it includes men, organizations, policies, activities, and the many other elements which make the industry function.

The word "merchant" in the term "merchant marine" is somewhat misleading. The operations of the merchant marine are not, as we know, necessarily restricted to merchants and merchandising. Naturally, nearly every kind of industry might at times function with it.

Ordinarily, ships of a merchant marine are engaged in private commerce, but they may be used to help battleships or other forms of armed agencies whether on land, on water, or in the air. The merchant marine has duties, very important, in connection with our defense program. It is an invaluable adjunct in time of war. A navy, and often an army or air force would be practically impotent if it did not have as handmaidens, auxiliary vessels to carry troops, fuel, ammunition, and various other materials, and to assist in many other ways.

The United States approaches our present problem in ship construction and operation with historical precedents and helpful traditions in spite of serious mistakes at times. The history of our shipping is an interesting one.

The first immigrants to this country came by water. They were to a very considerable extent, especially in colonial days, a seafaring people. The water in many parts of the country in colonial United States was the chief means of transportation. This fact helped greatly in the development of our country in colonial days and in the conduct of the Revolutionary War. In the War of 1812 our Navy played a role much more effective than our Army. The people of Maryland furnished at least half of the American ships which fought in that war and as large a percentage of their crews. While Napoleon, like Hitler, was planning to invade England, his brother, Jerome Bonaparte, great grandfather of Charles J. Bonaparte, once Secretary of our Navy, married Betsy, the daughter of William Patterson, a big shipowner of Baltimore, whose operations carried him to the four corners of the earth.

Following the War of 1812 there was a dramatic and glorious development of our shipping. This was so in New England and along the Atlantic coast. The Baltimore clipper sailing vessels became known all over the world. *Anne McKim*, most famous of Baltimore clippers, had a world-wide reputation for speed, beauty, and efficiency which was richly deserved.

In those days there seemed to be no limit to the opportunities offered to American shipping industry, inland and on the seas. Canals were being built and soon in time began the industry of the great railroads.

This is not the place to dwell upon the glories of American shipping or the decline which came to it. Our shipping became relatively unimportant. Our exports and imports were more and more in foreign bottoms.

The World War brought us sharply to the realization of our grave lack of necessary ships. The necessity of building ships as

quickly as possible was acutely obvious. The result was a tremendous stimulation in the building of ships in America, mainly by the Federal Government, but from this program with all its energy, not a single new ship of ours reached the other side before the armistice. Vessels built in this country for the Allies did, but the vessels undertaken in the huge expansion program of the Emergency Fleet Corporation, did not.

After the World War our American shipping again began to fall into relative insignificance but later events demanded we again build ships. We did not ignore that need until the present war in Europe began. Before that we had taken steps to increase the number of American built and owned ships. For instance, in 1936 we passed legislation which launched us again upon a shipbuilding program.

In doing so we realized difficulties arising from the fact that other nations could construct and operate ships cheaper than we could. We tried then to solve this problem by providing for grants of money from the Federal Government to equalize the differences in cost of production and operation. This act of 1936 stated that this merchant marine, while providing shipping service on trade routes essential to our foreign commerce, should be "capable of serving as a naval and military auxiliary in time of war of national emergency."

The Maritime Commission, created by that act, has reestablished our merchant fleet on a solid basis. There had been no new dry cargo ships built for foreign trade since 1922 until the *Donald McKay*, the Commission's first freighter, was launched at Chester, Pa., in April 1939.

Shipbuilding in the United States had reached a low ebb and there were only six building yards capable of constructing merchant ships. By 1941 the Maritime Commission had increased the merchant shipbuilding yards from 6 to 16. Instead of being located within a small area on the northeast Atlantic coast, these yards were spread over three coasts, the Atlantic, the Gulf, and the Pacific. In the Commission's long-range building program for the twin purposes of commerce and defense, 196 vessels have been started. Of those, 102 have been launched and all but 29 of those 102 completed, delivered, and now in operation.

These vessels are considered by naval architects and marine experts the finest of their type ever built. They have become well known everywhere, as the C-types; the C-1, a small but efficient freighter; the C-2, a medium-sized fast freighter with extraordinarily economical engines; and the C-3, the large, fast freight ship which also has been designed for carrying passengers.

Twenty-seven of these new vessels built by the Commission have already become naval auxiliaries. They have been acquired by the Navy for such diverse purposes as ammunition carriers, seaplane tenders, submarine tenders, and supply and repair vessels. Among the finest of the group are 12 19-knot tankers, the fastest of their kind in the world today. These ships were undertaken by the Commission at a time when normal, commercial tanker speeds were 10 to 11 knots. With the cooperation of the Standard Oil Co. of New Jersey these 12 ships were built and every one is now serving our naval forces.

To a battle fleet, tankers are a symbol of freedom of action. They mean that the fighting vessels will not be tied to their land bases. These 12 tankers will carry more than 72,000,000 gallons of oil at a speed which will enable them to keep up with the battle fleet. On the basis of the rate of fuel consumption of the battleship, they will enable vessels of our fighting fleet to steam a total of more than 800,000 nautical miles without putting in at a naval base.

The quickness with which these vessels were built and converted into naval auxiliaries testifies to the careful planning of the Maritime Commission's program. A complete understanding was had with the Navy Department from the inception of original building-plan basis of cooperation. Fortunately President Roosevelt appointed Rear Admiral Emory S. Land, former Chief Constructor of the Navy, as chairman of the Maritime Commission in 1938. That appointment has been a most fortunate one. Admiral Land and his associates on the Commission are justifying fully the confidence placed in them.

Designs for vessels were made with Navy needs in mind and were approved by the Navy. Gun locations, accessibility of cargo space and compartmentation were all planned for Navy use. The care which went into this designing and building is proving itself entirely warranted.

Also the value and the necessity of freighters and tankers to maintain the foreign commerce of the United States is beyond question. This fact has been demonstrated over and over again in normal peaceful times. It is being doubly proven at present when our American ships are bringing in load after load of rubber, tin, manganese, and other raw materials, which are being converted into instrumentalities of defense.

As chairman of the Merchant Marine Committee of the Senate Commerce Committee, I am in close touch with developments in the Commission's building program.. Recently the Commerce Committee of the Senate reported favorably on legislation which will further facilitate the building of first-class naval auxiliaries. That committee and the Maritime Commission believe in competitive bidding. However, The Army and Navy now want the negotiated-bid system for quick deliveries. The Maritime Commission has asked for similar authority and will doubtless get it, which will be used only when competitive bidding is apparently not feasible or sufficiently expeditious.

The United States is in a position to make effective use of sea power. Our battleships are supported by one of the largest merchant fleets in the world. This fleet aggregates more than 7,000,000 tons. More than 1,200 ships are engaged largely in domestic commerce. The American people more than any other people in the world use ships to transport goods from one portion of their country to another. The fleet of American ships sailing in foreign trade is also substantial. More than 300 vessels of various types are carrying the burdens of foreign commerce of the United States.

The United States in many respects is as well equipped as any other country to be self-sufficient. Some commodities essential to us must, however, be imported. No nation has ever really thrived which did not engage regularly in foreign trade. No isolationist today is going to claim that we can forego foreign trade without serious danger of stagnation.

In addition to our heavy imports, an important export movement is in our defense program. The Army has advised the Maritime Commission that more than one and one-half million tons of supplies must be moved to Army bases such as the Canal Zone, Puerto Rico, Hawaii, and the Philippines. The Navy lists more than 500,000 tons to be transported to naval bases. It is the job of our merchant marine to see that all of these materials are carried and carried quickly.

The Maritime Commission, which is operating the preference or priority system for ship cargoes, knows what must be moved for the Army, for the Navy, and for the Office of Production Management which is coordinating the needs of the defense-production program.

The Office of Production Management has determined the amount of imports which must be made during the calendar year 1941. Its list includes such obvious items as manganese and tungsten, also other items not generally realized as vital in the national emergency as for instance, teakwood for the decks of naval vessels, tanning materials, pulpwood for newsprint, sugar, and coffee.

The amounts of these and other important defense materials have been totalled and for the year 1941 reach the astonishing figure of more than 19,000,000 tons. On the basis of the average capacity of a freight ships, this represents approximately 2,500 shiploads of material which must be brought in during the calendar year from overseas.

Although we are not convoying our ships or sending them into war areas, we are exporting many articles of various kinds to certain nations, especially to Great Britain and its allies but these articles are carried in ships other than those belonging to the United States or its citizens.

The scope of war activities, ever broadening, is stressing the necessity for the use of materials which were practically unknown to warfare years ago. So the interpretation as to what is contraband of war has broadened so much that it includes now almost all kinds of fuels, metals, crops, manufactured or mechanized products, and other commodities of countless varieties.

Even before Mahan wrote his immortal book on the subject, it was realized that sea power is a controlling factor in the life of a nation. It is almost indispensable to the existence of a nation which is not an inland one, and all inland nations suffer for lack of its own channels for water transportation. The inability of Germany and her allies to use the seas freely during the World War was a grave and never-ending menace to them. Today, Germany, although having conquered much of Continental Europe is seriously restricted because of her very limited use of the Atlantic Ocean and the Mediterranean Sea. Although possessing the western coastline of Continental Europe, Germany is encountering trouble in efforts to secure certain metals or other commodities which she could easily get if the oceans were open to her. She suffers from a lack of prevailing sea power.

Sea power has a dual nature; it consists of war vessels which seize and hold the power; and merchant vessels which use the power. Yet the sea power of the battleship and airplane would be useless if not accompanied by the sea power of the merchant fleet. The effectiveness of British resistance in this war has lain largely in its ability to use successfully the seas as a source of strength.

We have, as you know, transferred ships to Great Britain and her allies. More than 200 American ships with a gross tonnage of more than 750,000 have gone to them. These ships have been of priceless value to the British in her efforts to keep sea lanes open. Five millions of tons of shipping through hostile sinkings have occurred it is said.

The additional number which may be transferred is a matter for the President to determine under the terms of the so-called lease-lend bill.

The 3,000 or more miles of water which separate us from the continents of Europe and Asia have been and will remain invaluable in helping to protect us from aggression. However, everyone knows that certain modern methods of warfare, as exemplified by the airplane and the submarine, have lessened materially the security which these oceans afford us. We have recently acquired naval and aviation bases, in some cases hundreds of miles from the boundaries of the United States. Modern methods of defense require

such stations. To safeguard our own shores we must go many miles beyond them to secure and use naval and aviation bases. Do not forget, however, that these naval and aviation bases would be of little use to us if the oceans of the world were dominated by a combination of naval powers hostile to us. It is needless to add also that the Monroe Doctrine in its friendly developments of cooperation among the republics of North and South America would be outmoded.

The vessels now in the American merchant marine are being used steadily. Likewise, there are reservoirs of ships such as those in use in coastwise and intercoastal trade which could be tapped in case of need.

The 212 ships announced by the President are in addition to the 200 emergency ships already under construction, the 60 ships now building in American yards for the British, and the 124 vessels of the Maritime Commission's regular long-range program.

Our Government has undertaken the building of 300 simple, slow, but efficient freighters. They have been called "ugly ducklings." The name is certainly not flattering but these ducklings will doubtless do their job well. These ships will cost considerably less than the ships of the Government's regular long-range building program. They will be capable of mass production on a prefabrication basis.

Engines, machinery, navigation, equipment, and supplies will be acquired from plants all over the country. These will be shipped to the building yards at tidewater and there assembled. Seven new shipyards are now being built to assemble these parts into finished ships. The Maritime Commission is handling this program which is going ahead steadily.

As far as possible new facilities will be created and materials for the ships acquired without interference with defense production for the Army and Navy. Ships will be built at Baltimore in a new shipyard on Curtis Bay. They will also be constructed in Wilmington, N. C., in Mobile, New Orleans, and Houston; likewise on the Pacific coast in Portland and Los Angeles. In every case these new shipyards will be sponsored by existing well-established shipbuilding organizations. This arrangement justifies confidence as to rapid construction and workmanlike product.

One hundred and twelve of these newly authorized ships are to be of the "ugly duckling" type and the remainder of standard designs of the Maritime Commission, including C-type cargo ships and tankers. This will be done by expanding existing yards on all three coasts. This means a shipbuilding program of great magnitude. But it is a program which our experts in the Commission are confident can be accomplished.

What about the operations of the vessels which this country owns? Are they being used in the interest of the United States as a whole rather than that of a few shipowners? The answer undoubtedly is "yes." Shipowners of the United States have voluntarily coordinated the operations of their vessels through the Maritime Commission which has created a Division of Emergency Shipping headed by experienced ship operators, to see that American vessels are used with the highest efficiency obtainable.

In normal times American ship lines operate as individual business enterprises. They carry cargo available on their own trade route only. As a result ships are not always used to capacity in normal times. Nowadays ships are being rerouted and reassigned to carry strategic materials to this country and supplies to our defense bases.

As an example, ships bring copper ore from the west coast of South America to the port of Baltimore. Then they used to discharge and return in ballast to Chile. In normal times this would be a shipping operation sufficient to meet cargo conditions. Recently the Maritime Commission arranged for certain ore carriers, instead of returning in ballast after discharging their cargo, to proceed from Baltimore to New York and there take on a load of supplies and equipment for our enlarged Army posts in the Canal Zone. After delivering these materials in the Canal Zone, the vessels again go to the west coast of South America to pick up copper ore.

By this means the carrying value of those ships to the country has been almost doubled. It is believed that this voluntary cooperation between the shipowners and the Government will be sufficient to insure suitable and adequate movement of the materials which are essential to our defense program.

Strikes by labor have not seriously interfered with the construction of our ships. It is imperative in our defense program that such delays should not occur. Occasionally sabotage is suggested as a danger to our shipbuilding and ship-operating activities. We know that such crimes would anger the American people as few other offenses could do and would meet with summary and severe punishment.

You will recall that the President of the United States, in a recent speech, quoted certain well-known lines from Longfellow, which begin:

"Thou, too, sail on, O Ship of State!
Sail on, O Union, strong and great!"

He was using the word "Ship," of course, in a figurative sense as referring to this Government of ours and these United States. Especially in these days it is pertinent to emphasize the vital importance of "Ship" in its material or normal sense. We have the need to strive for peace—to take such steps by way of preparedness as seem possible to protect this country from the horrors of war on this continent. We are creating a big army and providing military training for civilians. We are building ships of war. We are developing an airplane industry immeasurably greater than was contemplated even a year or so ago. We are trying to do effectively the things in industry which are needed to meet dislocations in our agricultural, industrial, and general economic life caused by war conditions.

We have the will and the purpose to try to reckon with the harrowing conditions existing in the world by taking such steps as seem necessary for our welfare. Our efforts will be grossly inadequate if we do not have suitable and adequate facilities for transportation and defense upon the water. Our "Ship of State" cannot "sail on" unless we have in addition to many other things, necessary vessels and other craft of wood and steel.

Award Dinner of National Traffic Safety Contest

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, April 25, 1941

ADDRESS BY HON. HAROLD H. BURTON, OF OHIO

Mr. REYNOLDS. Mr. President, several evenings ago I was a guest at the Mayflower Hotel at the annual convention of the National Safety Council. At that time it was my privilege and pleasure to listen to a most able address delivered by our colleague the Senator from Ohio [Mr. BURTON] which provided me with much information regarding the Nation's Capital and the general traffic situation in America. I requested permission of him to ask the Senate that this very excellent and timely address be printed in the Appendix of the CONGRESSIONAL RECORD. I now make that request.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Never before has traffic safety been so vital to the welfare of our Nation.

Every community represented here feels the steadily increasing traffic.

The Nation is on the march. Our battle of production and transportation is reaching our highways. Our traffic problems are part of our defense program. The casualties suffered are as tragic and real as any on a battlefield.

The responsibility for meeting the rising traffic problem of today falls upon public officials and safety leaders, such as are met here. You and they must lead the way to traffic safety.

The protection of life and property on American streets and highways has become primarily an official function. It is an especial privilege to meet with you as the leaders in this field of human and governmental endeavor and to congratulate you upon your work, well done in 1940.

The problem of 1941 is even more grave. Many cities already have seen its effect in increased fatality records in the first few weeks of the year. It is my deep conviction as a public official, speaking to other public officials, and based upon my experience of 5 years as mayor of Cleveland, that if you but lead the way the people will be willing and glad to support every intelligent traffic-safety effort. They are more anxious to do it than most of us even yet imagine.

As I was reminded when asked to speak here tonight, it was my privilege in this room two years ago to receive the National Safety Council's award for the city of Cleveland. One year ago that award again went to Cleveland.

It is a privilege to join here tonight in recognizing the progress of the city of Washington, and to congratulate it upon winning first place in 1940. At the same time, on behalf of the city of Cleveland, I wish also to express appreciation of the honorable mention it received from the National Safety Council for its continued safety program in 1940.

I have been asked to say a word as to how the program of strict enforcement and of emphasis on traffic safety was received in Cleveland, and especially to comment as to whether or not there was a hostile reaction to traffic arrests and insistence upon payment of traffic fines.

It is my pleasure to report that the people of Cleveland responded cordially and enthusiastically to these policies, as being policies for their benefit. Public sentiment at every point has sustained the traffic safety program. The people have made the program their own. They have taken pride in it. The public relations bureau of the Division of Police of Cleveland has been a most important factor in bringing about this cooperation.

In Cleveland an overwhelming majority of the people have shown themselves to be strongly in favor of and proud of steps taken to reduce fatalities, to reduce injuries, to secure reduction of liability insurance premiums, to improve traffic facilities, to improve the standards of driving, to better the safety records of public utility and commercial vehicles in competition with one another, to establish safety records for the respective wards of the city in competition with one another,

and to improve the fairness and the universal enforcement of the law against all offenders without favoritism.

Among the greatest influences moving the American public are those to protect their children and aged from injury * * * to earn deserved recognition in competition between groups or wards or cities * * * to receive cash dividends for civic virtue in the form of reduced insurance premiums, and to know that the law is enforced with even-handed justice for the benefit of all, with privileges to none.

Insofar as public approval of a city administration at the polls may measure approval of any one of the many policies which jointly make up the record of a city administration, I am glad to testify that the vote in our municipal elections reflected strong support for, rather than opposition to, the traffic-safety program that had won national recognition.

It is especially fitting that we congratulate Washington upon winning first place in its division. And, with your indulgence, I should like to devote most of my remaining remarks to the conditions, and how we all can derive universal Nation-wide benefit from the traffic needs of Washington.

I do this with full appreciation of the remarkably fine achievements of the grand award winners among both States and cities who perhaps can lay claim to even greater prestige than Washington. But I select Washington for three reasons:

First. Because we all have a share in it and a pride in it as our Capital;

Second. Because it is facing extraordinary increases in its volume of traffic; and

Third. Because with proper Federal understanding of the opportunity, I believe it can become a traffic-demonstration city of great value to all of us as well as to itself.

It is the natural traffic-safety capital of America. Its recent traffic achievements provide an extraordinary opportunity to make it a primary national asset to the cause of traffic safety.

All Americans take a deep, natural interest in Washington. They feel differently toward it than toward any other city. It is exclusively their National Capital. The want it to be the incarnation of their ideals. They want it to be the most perfect city in the world. The beauty of its public buildings, memorials, and parks is an inspiration to all Americans.

The interest and pride of the Nation in Washington, however, is not limited to its public buildings, memorials, and parks, or even to the Federal Government as administered there. The interest and pride of the Nation extends to the whole city, because it is distinctively the Nation's own Capital City.

In contrast to every State capital, and, as far as I know, in contrast to every other national capital, the city of Washington has been created by and is governed by its National Government. To a degree greater than is generally understood the people of America for 150 years, through their National Government, have created, planned, developed, and governed the entire community of Washington. The National Government has direct responsibility not only for the Federal buildings and Federal business in Washington, but also for the local government and welfare of the people living there, down to and including the traffic regulations and stop lights on the street corners.

As a technical legal matter, there is no city of Washington. Washington is merely an appropriate and convenient name for the community that occupies the District of Columbia. The Constitution of the United States provides that: "The Congress shall have power * * * To exercise exclusively legislation in all cases whatsoever, over such District (not exceeding 10 miles square) as may, by cession of particular States, and the acceptance of Congress, become the seat of the Government of the United States * * *" (art. I, sec. 8, clause 17).

Today the District of Columbia consists of about 70 square miles, of which about 10 are under water. This area was ceded to the Federal Government by the State of Maryland.

It is independent of any State or local government. It is controlled entirely by Federal legislation. Washington is the eleventh city in the United States in population and it is the center of a metropolitan area of about 1,000,000 people. It is about the size of Pittsburgh.

Residents of the District do not vote for either Federal or local officials.

The executive authority of the District is vested in three Commissioners. These are appointed by the President of the United States. One must be an officer of the Corps of Engineers of the United States Army, who is detailed to that duty by the President. They have broad administrative powers. The legislative authority, however, remains in the Congress of the United States, which operates largely upon the recommendations of the Senate and House of Representatives Committees on the District of Columbia.

The judges of the local courts, even of the police court, having jurisdiction over traffic violations, are appointed by the President of the United States.

There is no State or county government. The District of Columbia exercises, itself, the functions usually found in State, county, and city governments, including the government of the schools.

The funds for the government of the District are appropriated and its taxes are imposed by Congress with the approval of the President.

Recognizing the large amount of tax-free land owned and occupied by the Federal Government, and recognizing the countless ways in which the life of the community is adjusted to serve the Federal Government, the Congress appropriates, in its discretion, a sum from national taxation to help meet the needs of the District.

The District is almost exclusively a residential community. There are substantially no manufacturing industries within or near it. The principal employments of its residents are those of service in Federal departments and those relating to the care of transient visitors. These activities have developed large commercial enterprises well suited to a metropolitan community of substantially a million people. These characteristics also produce a high proportion of motor vehicles in relation to the residential population.

This presents a completely unique situation on traffic control. Although traffic safety in Washington, as everywhere else, is a vital concern of the permanent residents of Washington, who are subjected daily to its risks as motorists and pedestrians, the ultimate legal responsibility for its regulation rests not upon them, but rather, in the last analysis, upon the people of the United States as a whole, speaking through their Congress and their President.

This unique relationship has certain advantages and disadvantages. It also suggests an extraordinary and appropriate opportunity to make of Washington a unique national asset in the cause of traffic safety—both for its own benefit and that of the Nation.

Consideration is being given to various measures that may grant to local residents a more direct share in the responsibility for the government of the District. Whatever decisions are reached on those proposals will not affect my suggestions of this evening.

I wish to capitalize upon the additional opportunity which exists in Washington to make use of the advantages of Federal interest in the city, whatever may be the form of the local government.

As it stands today, the Federal Government not only has the opportunity to render a great national service here, but because of its complete control of local governmental policies, it has a full responsibility of deciding whether or not to act.

Among the special advantages which Washington enjoys from the traffic standpoint are the following:

First. Washington is by far the largest planned city in America. While its outlying neighborhoods have grown up in an irregular manner, not unlike those of other cities, its central area is an outstanding example of carefully thought-out long-term planning. The Nation and the community are indebted beyond measure to President George Washington and Maj. Pierre Charles L'Enfant, and to their successors, who appropriately located the future points of interest, provided for extensive parks and ornamental spaces, for regular city blocks, and for broad avenues connecting all important parts and entrances to the city.

Second. Washington has benefited from continuing programs of planned development. While Washington has suffered from time to time from failure to carry on a continuing plan of development, it has had in recent years the benefit of highly competent advisers especially assigned to its planning. The result has been the restriction of maximum heights of buildings in proportion to the width of adjacent streets; competent approval of the design of monuments, governmental buildings, and even of private structures adjacent to certain governmental areas; the establishment of zoning regulations; and the recent preparation of regional plans for the metropolitan areas surrounding the original city.

Third. Washington has a radial system of avenues, with many circles and squares at intersections. These were inserted as contributions to the beauty and accessibility of the city. They have helped to handle efficiently a far greater volume of traffic at far greater speeds than was anticipated. While they probably postponed the crisis in traffic in Washington, yet they have not been able to prevent congestion under modern conditions.

Fourth. Washington has an unusual concentration of administrative, legislative, and judicial control in the hands of a single system. This is in contrast to the usual separation of these functions between the State, county, city, and school governments. On the other hand, this consolidated control has been placed in the hands of the Federal Government, which, in turn, has so many other interests that it is difficult to secure sustained personal attention to the traffic and many other local needs of the District by the Federal officials having final jurisdiction over these questions. The District administration also is complicated by the fact that the National Capital Parks Service of the Department of the Interior rather than the Commissioners of the District has sole jurisdiction over all parks and reservations in the District, even in the center of the city and however small.

Fifth. Washington has separated its government from local politics and elections. This has been done, however, by placing the ultimate control in the hands of elected Federal officials who are elected and who will be reelected or defeated on issues having no relation to the District and by the votes of people knowing nothing of the needs of the District.

Sixth. Washington, theoretically, has available the relatively unlimited Federal resources for financing its needs. This is in sharp contrast with the rigid legal limitations usually restricting municipal, county, and State financing. Here again, however, a lack of personal familiarity by the Congress with the

local needs of the District has largely destroyed the apparent high value of this relation to the Federal Treasury.

Seventh. Washington has good weather. Washington generally is free from the hazards of extended severe winter weather, coupled with those of steep and icy streets. Washington does, however, have highly changeable weather, probably resulting in a more general attempt to drive in dangerous weather than is the case in cities where such conditions are long continued.

Because of such advantages there has been some suggestion that Washington should be an utopia of local self-government and traffic regulation. Such a suggestion comes readily from a casual consideration of its broad, straight streets, its freedom from the political pressures of local politics, and its apparent access to Federal financial resources. This, however, is the same kind of observation that makes a neighbor's field look greener than one's own, because the neighbor's field is seen only from the side and at a distance, while one's own is seen from the very midst of its imperfections. In fact, Washington faces such handicaps in its traffic regulation that its success in winning first place among the large cities in the national traffic safety contest is a substantial tribute to the District officials who made this possible.

It is the very presence of certain handicaps in Washington, coupled with opportunities for overcoming them, that makes Washington so valuable as a point of national demonstration.

Some of the special difficulties facing traffic in Washington are the following:

First. The many broad avenues intersecting the entire city diagonally to an unusual degree create many acute angles and other intersection difficulties. These call for unusual engineering solutions in the form of circles, special routing, traffic lights, underpasses, improved street lighting, and pedestrian regulation. For example, at Dupont Circle, in a crowded apartment-house area, there are 10 street entrances or exits from a single traffic circle, to say nothing of the presence of street cars swinging to the left against the normal flow of motor traffic.

Second. Many of the monumental parks and squares cause unnecessary congestion, requiring special treatment.

Third. Public transportation: The streets carry street cars, busses, and great numbers of taxicabs. The proper regulation of the fares, competition, speed, and safety standards of these vehicles is a major necessity.

Fourth. The beautiful trees heavily lining the sides of certain avenues increase the street lighting problem, especially in the summer. The breadth of the avenues themselves also make this problem one of especial importance, plus the fact that there is a large Negro population which increases the hazards from poor lighting.

Fifth. Parking is difficult. Much of the city was built with no provision for parking on private property and without space for later construction of garages. The width of some streets has permitted unusual freedom of parking, but the increasing use of apartment houses and automobiles and the need of parking near points of public assembly or of employment call for constructive planning to meet this need.

Sixth. Diplomatic immunities exist to an exceptional degree. Certain treaties exempt persons connected with foreign embassies or legations from prosecution, in the usual manner, even for traffic violations. Related to the problems of diplomatic immunities is that arising from the great number of public officials in Washington, engaged in important public business and who, in the interests of the public, need every possible privilege to permit them to carry out their governmental assignments quickly.

Seventh. Washington has concentrated rush hours. While Washington does not have an industrial population creating congestion during changes of industrial shifts, it has an extraordinarily large number of Government office employees, creating congestion when going to or returning from their offices. It is an ideal place to test the efficiency of staggering office hours, as has been recently ordered.

Eighth. Washington is full of transients. These include not only tourists driving through the city, but many people who come for a few days or months on official business from all parts of the Nation or world. They bring with them their local driving habits and have little opportunity to learn Washington rules. Out of about 250,000 motor vehicles on the streets of the District each day, over 80,000 are from the adjoining States outside of the District, and about 9,000 others are from more distant places. This makes it especially necessary in Washington that every traffic solution be as obvious and easily understood as possible.

Ninth. Freeways: While freeways would be a welcome solution of many traffic problems in such a community, the structure of the city, the absence of undeveloped areas, and the wide distribution of the many points of interest of business make it especially difficult to establish freeways. This calls for a high degree of engineering skill in developing such freeways as are possible and for careful routing of one-way traffic.

Tenth. Public interest: One of the greatest difficulties in meeting traffic problems in Washington has been that of maintaining a keen continuous public interest in safety standards and in carrying on a continuous public educational program. This difficulty is due, in part, to the many visitors who do not feel responsible for community standards; in part to public officials who regard themselves as entitled to special traffic privileges; and to the difficulty of securing public attention to matters of local concern in a community that is engrossed in the consideration of international and national events.

Washington thus presents traffic problems common to the Nation, but in many ways, under conditions making them especially difficult of solution. The successful solution of them in Washington, under these circumstances, would all the more readily point the way to their easier solution elsewhere.

There is also a natural incentive from the point of view of national interest and national pride for the Nation to insist upon the best solution of these problems in Washington, so that the Nation may find in such solutions a reflection of the Nation's best thought and experience.

The natural opportunity for experimentation and demonstration at the Nation's Capital, if properly seized upon, will attract the Nation's best traffic engineering skill. The opportunity for national demonstration also justifies the expenditure of whatever funds may be needed to concentrate such experience in something in the nature of a national traffic research bureau dealing with concrete problems of the District. The present highway planning survey being conducted in cooperation with the United States Public Roads Administration by District authorities covering highway planning, parking, and traffic within the District of Columbia is a step in this direction.

The availability of adequate Federal resources would make possible not only research into but demonstration of the most modern engineering solutions. In view of the resulting savings to numberless local communities, the result should be one of widespread constructive economy.

The National Capital is the natural place not only for such leadership to originate for the benefit of the Nation but also a natural place from which to distribute information of the progress made. Not only is Washington easily publicized because of wide interest in the Nation's Capital but there are constantly gathered there leaders of thought who naturally assume leadership in transmitting to their home communities their personal experiences with the handling of traffic in Washington.

Safety of traffic enters so much into the personal life of nearly everyone that it is certain that progress in highway planning, street ligting, traffic engineering, traffic routing, policing, etc., will be reported from Washington quickly throughout the Nation.

The presence in Washington of numerous public agencies having a related interest in road traffic, such as the Public Roads Administration, Highway Research Board, National Park Service, and many others, again suggests the reasonableness of making Washington and its environs a national center of traffic study and demonstration.

While there are special difficulties in developing and sustaining a general program of public traffic education in Washington, these very difficulties emphasize the need for special study of such a program. No safety program can reach full success without the constant and cooperative effort of all the people concerned to promote public safety.

A safety minded community, with a marked interest in safety, extending from the highest official to the neediest pedestrian and the smallest school child, is the best guaranty of safety. Where there are many strangers, the local residents need all the more to set them a good example and to find means of calling the safety program to their attention.

As possibly offsetting this handicap of strangers, Washington offers one opportunity for an educational program that exceeds anything like it in any other city of America. This is the opportunity for a constant, cordial, well-planned safety education campaign, under the leadership of the President, among the Federal employees who make up such a large part of the Washington population. The value of such a program to the employees themselves as well as to the community, is clear.

With all these elements in mind, there is an extraordinary opportunity now open to the people of the city of Washington, to the Nation, and to the National Safety Council which springs from the award that Washington has earned for itself and is receiving tonight. Having attained in 1940 first rank among the large cities of the Nation, Washington has a priceless opportunity to capitalize upon the psychology involved in winning this rank. Attainment of this rating is one of the greatest single encouragements for continued safety practice and advancement that can come to any community.

This award should be the occasion in Washington, as well as in every other winning city, for an immediate and enlarged educational safety campaign. It also should be the occasion for the Federal Government and the National Safety Council to recognize this excellent start made by the people and officials of the District, toward realizing upon the natural opportunity for Washington to become the traffic safety capital of America.

Traffic safety is an administrative, rather than a legislative, problem. There is no law that can be passed to solve it fully or permanently. It is, however, a subject of great public concern. Improved roads and increased traffic safety mean large public dividends in lives saved, tragic injuries avoided, property damage prevented, liability-insurance premiums reduced, and time saved in countless ways. Improved and safe highways, inside, between, and arcund cities are important both for commerce and for na-

tional defense. Improved traffic safety is a public service that is economical, valuable, and popular.

Speaking concretely, I venture to suggest that the National Safety Council would be well justified in assigning to a special committee, familiar both with the national and the local aspects of the problem, the responsibility of submitting a recommendation to the President and Congress of the United States and to the Commissioners of the District of Columbia, a thoroughgoing and continuing study and control of the traffic of Washington. This would develop here, solutions of immediate value to the people of Washington, of immediate value to the Federal officials and employees serving in Washington, of immediate value to every tourist and visitor to Washington, and of ultimate value to every metropolitan city in America.

It would be the duty of such committee of the National Safety Council, in the preparation of its report, to consult with all Federal and District officials concerned and, if some such plan be found feasible, to recommend not merely its objectives, but the necessary form of organization needed to make it effective as a continuing governmental agency.

The officials of Washington, by winning first place in the National Traffic Safety Contest among the large cities of America, have earned the right to be recognized as competent to serve the Nation, as well as the District. The officials of the Nation will do well to seize this opportunity to develop a new plan of constructive value in this field of traffic safety which involves the finances, the safety and the lives of the people of all America.

Now, as never before, America needs leadership in its effort to increase traffic safety. You who are here tonight have demonstrated your leadership in this field. America is grateful not only for your service but for the examples you have set. Civic agencies, State and local governmental officials, and as I have suggested tonight, the Federal Government itself, will do well to follow your example. Traffic safety is an everlasting economic and human responsibility of great local and national concern.

The Congressional Mail Bag

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Friday, April 25, 1941

RADIO DISCUSSION BY A GROUP OF SENATORS AND REPRESENTATIVES

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the radio discussion participated in by a group of Senators and Representatives on April 24, 1941. The discussion was held in connection with the program, Congressional Mail Bag, devoted to a discussion of congressional problems.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

[Speakers: Senator Styles Bridges, of New Hampshire; Senator Clyde Herring, of Iowa; Representative James Wadsworth, of New York; Representative Harry B. Coffee of Nebraska, and Royce Powell, Committee of Americans]

ANNOUNCER. In these times of world-wide stress and pressing domestic problems, what are Mr. and Mrs. America thinking? What better way to find out, than to see what they are writing to their Senators and Representatives in Washington? The National Broadcasting Co. brings you a program presented by the Committee of Americans which has been interpreting public opinion since 1935 based on canvasses of hundreds of thousands of its members. Tonight the Committee of Americans will open the Congressional mailbag to obtain a picture of what the folks back home are thinking—as mirrored in their letters to the Seventy-seventh Congress. Presiding over the letter opening is Mr. Royce Powell, of the Committee of Americans.

Mr. POWELL. This is Royce Powell in Washington, about to open the Congressional Mailbag. Tonight we have with us four Members of the Seventy-seventh Congress who will tell you about their daily mail and answer—I hope—a few questions. With us here in the studio are Senator STYLES BRIDGES, Republican of New Hampshire; Representative HARRY B. COFFEE, Democrat of Nebraska; Representative JAMES W. WADSWORTH, Republican of New York State, and Senator CLYDE L. HERRING, of Iowa. Before going any further, I would like to ask one of these gentlemen his opinion about this mail from back home. Mr. WADSWORTH, you've served in both Houses of Congress and over a period of some 20 years do you not consider the Congressman's daily mail a pretty good barometer of the public temper?

Mr. WADSWORTH. I do, indeed, Mr. Powell, These letters are of vital importance to Congress as a guide to the people's wishes even though these wishes may vary with the sectional interests of the part of the country from which they come. Of course, there is a part of our mail which obviously has taken longer to write than we will take to read it. But I will have something to say about that later, if I may.

Mr. POWELL. Thank you, Congressman WADSWORTH. And now for the opening of the Congressional Mail Bag. We will pick at random from typical letters recently received on Capitol Hill from the States of New Hampshire, New York, Nebraska, and Iowa. Senator BRIDGES, what are New Englanders from your State writing to you about?

Senator BRIDGES. My mail varies, like that of my colleagues in both Houses and of both parties, with the changing news front. Right now people back home are extremely concerned with the strike situation in defense plants. Secondly, I would say their interest has to do with the mounting costs of the emergency, and thirdly, with matters that peculiarly affect our part of the country.

Mr. POWELL. Such as—?

Senator BRIDGES. Well, such as, the proposed development of the St. Lawrence waterway and power development. First, let me read you a few excerpts from the mail dealing with the labor situation. Here's a typical, hand-written letter from a small businessman with two sons registered under the draft. I quote: "It is with very righteous indignation that I ask you gentlemen of Congress to see to it that there are no more strikes in plants which are engaged upon Government orders for munitions * * * more needed now than soldiers."

Mr. POWELL. If I may break in a second, Senator BRIDGES, I would like to ask whether the bulk of your mail in this line is mainly from men or women?

Senator BRIDGES. Probably 60 percent is from men. However, women are becoming increasingly vocal politically in matters that affect the general welfare. Here, for instance, is a letter from a mother who feels very seriously about the strike situation because she herself is making immediate sacrifices and ready to make more when the pay-up day comes along. It's a bit long. Shall I read it, Mr. Powell?

Mr. POWELL. Please do, Senator.

Senator BRIDGES. This letter is from a woman back home whose son has just been drafted. I quote:

"DEAR SENATOR BRIDGES: As one of the folks back home, I am writing to tell you that I feel terrible about the strikes that are going on all over the country.

"If there is a national emergency—and I guess there must be, because one of my boys has already been called into the Army and another one expects to go in a few weeks—I think that the men who run the factories and the workingmen of the country should get together and cooperate. My boy is serving his country as a soldier for a dollar a day, while the men who are supposed to be building the guns and airplanes and ships that the United States needs so badly are getting a dollar an hour, and I don't think they are being patriotic when they go out on needless strikes. I think something should be done to stop them from putting us all in danger like that, because when they stop working it means we have to wait that much longer before we will be safe, and it's going to be long enough as it is.

"The people back here are pretty sick of seeing labor racketeers and Communists and Nazis doing everything they can to make a mess of the defense program. We think it's time something was done about it and an end put to all of these strikes."

Mr. POWELL. That's quite a letter, Senator BRIDGES. Would you say it's typical? That is, is it representative of New England public opinion?

Senator BRIDGES. I would say so emphatically. Also, I happen to know the town where this woman lives and a little about her.

Mr. POWELL. Incidentally, have you answered the letter, Senator?

Senator BRIDGES. No; but I'm going to right now, and I hope the writer is listening in. My answer is that I agree with her, generally speaking, * * * that in this troubled time when we have such need for national unity and for hard work on the part of every person, cooperation between management and labor is highly essential. If we are going to be strong enough to defend ourselves against the dictator outlaw nations, then it is absolutely necessary that our defense program be pushed forward without interruption by uncalled-for strikes or any other cause. In answering this woman's letter on the strike problem, I should like to make myself thoroughly clear and state that we on Capitol Hill have no quarrel with the large rank and file of workingmen and employers who are real Americans. But something has got to be done to get rid of the fifth columnists who are seeking to deny us security today and over the years by bringing about some of these unwarranted strikes in the principal defense industries of the country.

Mr. POWELL. Thank you, Senator BRIDGES. If I may interrupt for a moment I would like

to ask a Midwest Democrat, Representative COFFEE, whether his mail, like the New England Senator's, is equally denunciatory of strikes.

Mr. COFFEE. Yes; it is and presently I would like to read you some excerpts from it.

Mr. POWELL. Very good, Mr. COFFEE. And while we are on the subject, I would just briefly like to ask Democratic Senator HERRING, of Iowa, and Republican Congressman WADSWORTH, of New York, whether their mails also reflect an impatience on the part of the public with the strike situation. Senator HERRING, what do you find?

Senator HERRING. Mr. Powell, the majority of those writing to me express a growing resentment at the number of strikes in defense industries, particularly those strikes which have been called over purely jurisdictional matters, or where the labor-union officials have attempted to turn the defense industries into collection agencies for union dues.

The demands for wage increases are no doubt in some instances just, but for the most part the people of Iowa feel that this is a crisis in which all of us not only should be willing, but should be required to make some sacrifices. They realize that every wage increase means an additional burden upon the taxpayers, which is no more fair to them than it is to the boys whom we are asking to accept $30 per month for the time spent in military training under the selective service. The greatest tragedy of the whole situation lies in the loss of man-hours, which cannot be retrieved, and which it is now clear was the very extravagance primarily responsible for the downfall of France and the inadequate preparedness of Great Britain.

The people of Iowa are determined that we shall not make the same tragic blunder.

Mr. POWELL. And Mr. WADSWORTH, what say your constituents?

Mr. WADSWORTH. I won't go into it in any detail but I must say that a few misguided people must have misinterpreted the old proverb about "striking" while the iron is hot. And if you don't think so, you ought to read a few hot letters from some cool young men who have joined the "Union," but not the union we hear so much about.

Mr. POWELL. Well, gentlemen, you may be of opposite parties and from various parts of the country, but apparently you represent a unanimity of opinion. We will want to hear more about this, but first I want to ask Senator BRIDGES another question, and it has to do with what the Senator described as matters which peculiarly affect certain sectional interests. In this connection, Senator, you mentioned the perennially proposed St. Lawrence waterway and power project.

Senator BRIDGES. Yes; I did. But I would like to say this proposal for developing a series of canals and channels from the Great Lakes through the St. Lawrence River to the sea only seems sectional. Its fulfillment would have a far-reaching national consequence, although the people up my way, naturally, view it from the standpoint of local interest. Here is a letter typical of the feeling against the proposed St. Lawrence waterway. It is from a worker in a railroad roundhouse and it contains a very amusing postscript. Perhaps I should read that part first. After urging me to vote against any appropriation for the project, this railroad worker says, and I quote: "Say, incidentally, what ever became of the Florida ship canal?" Now, shall I read the full letter?

Mr. POWELL. By all means, Senator.

Senator BRIDGES. "Dear Senator BRIDGES: I don't often write to our Congressmen and Senators, but, frankly, Senator, I'm kind of steamed up about this St. Lawrence waterway and power project that the President is trying to push through.

"You know what the story is as well as I do. The President has always wanted that project put through; and even though the people don't want it and the Congress wouldn't approve the treaty a few years ago, he seems bound to keep on trying.

"He says it would mean a lot to the ordinary people. He's right. Take me, for instance. I'm an ordinary citizen; I work in a railroad roundhouse. We've been having a pretty hard time, but things look a little brighter now, and I don't want any more hardships like the St. Lawrence waterway put on the railroads. It would put me and thousands more like me out of work; and, frankly, Senator, we ordinary people don't like the relief rolls. Another thing, Senator, the St. Lawrence waterway and power project just can't take that national-defense label. That wouldn't make sense. It won't be finished till 1947 or 1948."

I acknowledged this letter and told the man I agreed with his protest. But I would like to add something to my letter. It is this: If the St. Lawrence project should be completed at the taxpayers expense, thousands of workers throughout the United States employed by established transportation system and shipyards would lose their jobs. The seaway would be used almost exclusively by vessels flying foreign flags and manned by alien seamen. Wages that are today being paid to American workmen would be paid to foreign labor and would be spent for the upkeep of foreign homes. We have enough unemployment in normal times without spending the taxpayers' money to throw more men out of work. We have reason to believe that if the project were to be approved the cost would be about a billion dollars before the job would be fully completed. There is no need for such an expenditure, for our established ports have the capacity necessary for the defense program, and the existing electric companies are expanding to meet the demands of the present emergency and the future.

Mr. POWELL. But do you agree with the letter writer that the proposed waterway does not come under a defense classification?

Senator BRIDGES. I most certainly do because I doubt whether it could be finished and in operation before 1948. Further, it is just another step toward the elimination of private enterprise. This is a very troubled time through which we are passing, and we need to concentrate all available men and materials and money upon the building of ships and guns and tanks and airplanes. Those are the materials we would need if attacked and those are the materials that Great Britain and her allies need in defending themselves against the dictator outlaw nations.

Mr. POWELL. Thank you, Senator BRIDGES. We have just dipped into the mail of Senator BRIDGES, of New Hampshire, and heard his comments upon it. Let us now open the mail bag from Nebraska, and hear from Representative HARRY B. COFFEE. You said awhile ago, Mr. COFFEE, that your part of the country is as resentful of heedless strikes as are the people in New England.

Mr. COFFEE of Nebraska. That is correct, Mr. Powell. While I represent a large agricultural district and most of the mail concerns the farm problem, it is now very evident that the rural areas are growing extremely bitter toward the labor racketeers. Here are a few excerpts from letters taken at random from my files.

This one is from Chadron, Nebr.: "Can national unity be achieved by asking part of the Nation's population to shoulder all the sacrifices by permitting another segment to fatten off those sacrifices, to grow and entrench their positions at the cost of national safety by the use of strikes in defense industries?"

Here is another from Sidney, Nebr.: "How much longer do we Americans have to wait until Congress eliminates this communistic control of our rearmament program?"

This next comes from Mitchell, Nebr.: "The people in this country are very much burned up about the way some labor agitators are slowing up war-material production. We realize there is not much that you men representing rural areas can do about it."

A letter from Omaha states: "Most people are convinced that the rank and file of union men are not in favor of this practice, but, of course, it is a field day for the organizers and racketeers many of whom are not citizens of the United States. Many are 'fifth columnists'." This correspondent suggests Congress enact legislation requiring a cooling-off period of 30 days before any strike can be called in any defense industry.

I quote from this letter from Alliance, Nebr.: "Are grossest selfishness and greed to dominate the union leaders while the rest of the country is making the supreme effort for the Nation's welfare? Must the people and the Government stand helpless before a small group of disloyal men? Let us keep the union if we can—but let us keep America first.

Mr. POWELL. One of your correspondents urged that Congress enact legislation requiring a cooling-off period of 30 days before it would be permissible to call a strike. Does not that refer to the Vinson bill, Mr. COFFEE?

Mr. COFFEE. Yes; the Vinson bill will come before the House, I expect, next week, and I predict its passage in the House.

Mr. POWELL. Do you consider this a drastic bill, Mr. COFFEE?

Mr. COFFEE. No. It is merely a step in that direction. Recently, the chairman of the Judiciary Committee, HATTON SUMNERS, wrote the Secretaries of Labor, War, Navy, and the Attorney General, asking what new legislation, if any, was needed to cope with the strike situation in our defense industries. Surprisingly enough, the replies were that no new legislation was needed.

Mr. POWELL. In face of this, what is Congress likely to do, Mr. COFFEE?

Mr. COFFEE. Aside from action on the Vinson bill, Congress may defer taking any drastic action until the executive departments, which must administer and enforce the laws, recommend some remedial legislation, or—and I emphasize this—until it is evident they are unable to cope with the situation. And if and when Congress does take severe action it will know the public is solidly behind it. The people of this country are not in any mood to temporize with either racketeers or profiteers. They are willing to pay the price for national defense but they want to know they are getting national defense for their money.

Mr. POWELL. Do you believe, as some of your people back home have stated, that the Communists are to a large degree to blame for present labor unrest?

Mr. COFFEE. Yes; the Communists are the best organized of any of the subversive elements in this country. They have wormed their way into key positions, especially in the C. I. O. unions, in our national-defense industries. I am fearful if we don't find a way soon to stop these communistic labor racketeers, we may lose our democracy at home while trying to preserve it abroad. The rank and file of organized labor are loyal and patriotic citizens, and it is up to them to purge their own organizations of communistic labor leaders if they want to avoid drastic labor legislation.

Mr. POWELL. Thank you, Mr. Coffee; that was very interesting. What else are people concerned about out your way in connection with the defense picture?

Mr. COFFEE. Well, as much as Nebraskans are committed to our huge defense program, they are fearful of our getting into war through the convoying of vessels into the war zone. I would say 95 percent of my letters protest against convoying British ships.

Mr. POWELL. And what answer do you make to these convoy protests?

Mr. COFFEE. My position and blanket answer is that I am definitely opposed to the

use of American vessels as convoys. In my opinion it will be the final step involving this Nation in the war.

Mr. POWELL. Mr. Coffee, I understand you are a member of the House Agricultural Committee and that you were recently elected head of the so-called sugar bloc in the House.

Mr. COFFEE. That is correct, Mr. Powell.

Mr. POWELL. Well, in that connection do you get any mail from consumers who a short while ago feared a sugar shortage?

Mr. COFFEE. Yes; but mostly these letters are not from my district of the West.

Mr. POWELL. That's all right. Let's hear about it anyway.

Mr. COFFEE. Here in the East I find the consumers are apparently very fearful that we may have a sugar shortage with runaway prices similar to what happened in the World War days when sugar sold for 25 cents a pound. There can be little justification for these fears at the present time. We are not as dependent for our supply on offshore areas now as we were during the last war. At present the domestic sugar-beet processors have on hand several hundred thousand tons of beet sugar that was produced in excess of their market quota under the law.

Mr. POWELL. Thank you, Mr. COFFEE. In other words, as long as we have coffee, we'll have sugar.

Mr. COFFEE. If you mean that impersonally; yes. But the important thing to remember is that, given the opportunity, the beet-sugar grower of America can stave off any emergency that may confront the consumer.

Mr. POWELL. And now what about the mail from New York State. I would like to call on Representative JAMES W. WADSWORTH.

If you were summarizing your most recent mail, what would you say was a predominant note in it?

Mr. WADSWORTH. Well, Mr. Powell, I would say the mail, despite reflecting a belief in spending for defense, also reflects an intelligent concern about the fiscal policies of the Government. And apparently the public no longer regards finance and taxes as a dry, dull subject. A great many writers view with general alarm the piling up of our huge national debt.

Mr. POWELL. But that doesn't mean——

Mr. WADSWORTH. No; it doesn't. Mind you, these people are not opposed, as I said, to the national-defense program—in fact all of them support it—but they think it is being very unwisely financed. They express their dread that when this international situation is cleaned up our debt will be so great, and the dislocation of industry so severe, that we shall plunge into a terrible economic collapse.

Mr. POWELL. How do these writers think such a depression can be averted, or, let's say, cushioned?

Mr. WADSWORTH. They are very realistic. They urge more taxing and less borrowing. They admit that heavier taxes are going to be tough on everybody, but they insist that it would be better for us to suffer the hardship for the present than to pursue a course which will bring a gigantic catastrophe later on. Many correspondents propose new or altered methods of taxation.

Mr. POWELL. Are any of the writers at all specific?

Mr. WADSWORTH. Some of them; yes. Here's a letter that reminds me that Canada, which, considering her population and wealth, is carrying on a wartime expenditure far in excess, proportionately, than is the United States in its defense program—that Canada is raising 60 percent of the cost by taxation, where we are raising only about 50 percent of expenditures through taxes.

Mr. POWELL. In other words, there seems to be a tendency on the part of many to say, "Let's have the bad news now and not live in a fool's paradise." Well, it looks as though the so-called bad news has been handed out.

Mr. WADSWORTH. Yes, Mr. Powell; the announcement of the Treasury that we will have to raise three and a half billion dollars in new taxes is part of the day of reckoning.

Mr. POWELL. How do you think the public will take it?

Mr. WADSWORTH. Judging from my mail, and that of my colleagues, the country at large will not whimper. But the people will watch to see how it is spent. Americans are not pinchpenny but they have a critical facility of asking, "Why." I, consequently, must agree with Senator BRIDGES about the spending of a billion dollars or a half-billion on any doubtful and nonessential project such as the St. Lawrence waterway. When this measure gets to Congress, I predict a flood of mail that will wash this administration "pet" into limbo.

Mr. POWELL. That's very interesting, Mr. WADSWORTH. Incidentally, could you tell us something about the volumes of mail received by you and your colleagues?

Mr. WADSWORTH. You mean in general or at the present time?

Mr. POWELL. Well, both ways.

Mr. WADSWORTH. Actually the total amount of mail, in volume and weight, received by any of us on the Hill is staggering. Right now, in comparison to the lend-lease days, the volume of letters has fallen off considerably.

Mr. POWELL. I suppose the next peak will develop when the new Revenue Act for 1941 gets into the news.

Mr. WADSWORTH. I wouldn't wonder. But between these peaks and valleys of real earnest letter writing on the part of our constituents back home, there is constant and enormous flood of pamphlets, bulletins, and all sorts of printed matter. We get marked copies of magazines of every kind and description, marked copies of daily newspapers and weekly newspapers. A very large number of civic, industrial, professional, scientific, and labor organizations put out publications of their own. We even get mimeographed copies of circular letters. We get bound volumes on economic, social, and military questions, most of them 200 pages in length.

Mr. POWELL. I would rather suppose, Mr. WADSWORTH, this would require a little reading between the lines.

Mr. WADSWORTH. Indeed it does. If I should do nothing but read for 24 hours a day, I could not hope to keep up with this mass of literature. But the mail which we can identify as coming from back home gets our first attention.

Mr. POWELL. Mr. Wadsworth, while it is true that you represent a rural district in western New York, not directly interested in the problems of industry and finance, perhaps you get something in the mail about those things, not only from your district but from other parts of the country. How about it?

Mr. WADSWORTH. Yes; the fact is, I have even invited correspondence on this subject of late and it is coming in heavily. You see, one of our troubles for the past 6 or 7 years has been that new capital is not flowing into industry. When industry does not expand, unemployment increases. There is a tremendous sum of idle money piled up in the banks, money belonging to depositors. It is obvious that if it could be put to work in industry we would not have as many idle men. Idle men and idle money go together. So I have had correspondence with a great many people who have had experience in trying to finance the expansion of industry through sale of securities.

Mr. POWELL. May we assume, Mr. Wadsworth, that this correspondence is partly responsible for the new legislation which you have drawn up calling for modification of the procedures of the Securities and Exchange Commission * * * that is, the S. E. C.?

Mr. WADSWORTH. Yes, Mr. Powell. The information I have gotten through this correspondence has led me to propose some amendments to the securities laws to make it easier, especially to the small manufacturer, to arrange for the selling of his securities to the public. This correspondence has convinced me that in some respects our security laws are far too severe, and that some of the regulations of the Securities and Exchange Commission impose such a heavy expense upon these businesses that they simply do not attempt to look for the idle dollars.

Mr. POWELL. You might say, then, Mr. Wadsworth, that these dollars have been scared out of their cents or something.

Mr. WADSWORTH. I wouldn't know about that, Mr. Powell, but these dollars which should have been productive have gone into hiding, and I am hoping that we can relieve the situation with appropriate legislation without in any way opening up the door to fraudulent practices. To my mind this whole incident, which grew out of letter writing between the people and their chosen representatives, demonstrates how valuable well-considered letters can be.

Mr. POWELL. Well, thank you, Mr. WADSWORTH, for it appears from Nation-wide newspaper comment that your proposed legislation affecting the S. E. C. will have far-reaching consequences. And now to hear from Senator CLYDE HERRING, a Democrat, of Iowa, and former Governor of that State. Senator HERRING, when you look into your daily mail, what do you see?

Senator HERRING. When I look into my daily mail I do not see a United States mailbag or a rural free delivery box or even a mail carrier making his faithful rounds. Rather I see in my daily mail the earnest, sincere faces of the men and the women who open their hearts to me and strive to be helpful by their counsel and their willingness to serve in this critical emergency.

They realize that upon these shores democracy has reared the great tabernacle of the faiths of all humanity—faith in God, faith in liberty and freedom and justice, faith in the ability of the people to govern themselves.

They recognize that there are forces unloosed in the Old World which seek to make of God a fugitive, and which would, if they could, destroy freedom's last citadel. Instead of striving to create and perpetuate the values which civilization has prized, these forces of evil seek to reduce to rubble, not alone the historic landmarks which have stood through the centuries but they seek to destroy the very soul of humanity itself and the principles of godliness and justice upon which our institutions of democracy and freedom are so surely founded.

They know the forces of democracy are striving against unparalleled odds to hold the line in Europe, whilst we in the United States endeavor to create an arsenal sufficiently great to provide for their needs, as well as our own.

The majority of my people, viewing the world situation realistically, have taken a new resolve that our Democracy shall stand.

My mail reflects an almost complete unanimity among the people of Iowa in support of our defense program. They are aware that our efforts to prepare should have been started 2 or 3 years ago. They want it carried forward with the utmost dispatch and cooperation.

The following excerpt from the letter of an Iowa packer is typical, and I may add, most encouraging:

"It is hardly necessary for the writer to state that he is a keen admirer of the stand you are taking on international affairs and only wishes your attitude were unanimous in the Congress."

Mr. POWELL. But tell me, Senator HERRING, what do your people write you about convoying?

Senator HERRING. Mr. Powell, the opinion is divided, as is to be expected. The majority

I believe favor action consonant with the demands of the situation. A representative view is expressed by a lawyer from Mason City:

"In my way of looking at things, we should be sufficiently realistic not to deceive ourselves into thinking that we can avoid the effects of the gigantic struggle going on in the world by attempting to shut ourselves up behind a wall of isolation. So far as my own attitude is concerned, I look at the question in this way. Since we have adopted the policy that the safety of America requires the success of the British and other peoples fighting nazi-ism, we may well, because of the necessities requiring America to be protected, ultimately have to use our naval, military, and air strength to insure the defeat of the Nazis. If that means war, we should have, as Americans, the same courage that other generations in the past have had when they faced the same issues."

Mr. POWELL. Well, no one can say that this mid-westerner is an isolationist.

Senator HERRING. Our people on the whole are practical. They are not going to appropriate vast sums of money to provide war materials for the nations fighting to hold back the forces which threaten to engulf us, without having the wisdom and courage to meet the question of how to get the material over there, if that becomes necessary. At the present time, grave as is the news, I do not believe that convoying is required, but no one can say what may be demanded of us tomorrow.

Mr. POWELL. What is the attitude of your boys toward the draft?

Senator HERRING. Naturally, at first there were some protests and objections, particularly from young men who were just starting in what they hoped would be their life's career, but when it became evident that the act was to be fairly and justly applied to all who came within its terms, this opposition disappeared, and many have written me asking assistance to be placed in the service; particularly is that true of those who have served as Reserve officers or who have previously served in the National Guard. It is difficult to explain to these men who are physically qualified, trained, and experienced why Army regulations will not permit them to again take up service for their country. The following letter from a young lawyer in Des Moines is typical:

"I have repeatedly attempted to renew my commission in the Cavalry Reserve so that I could be receiving training for the mobilization which without doubt will be coming within a very short time."

This young man, like my own sons and countless others, stands ready to do his part. They are not unmindful either of the enormous sacrifices which they may ultimately be called upon to make.

Mr. POWELL. From what you say, Senator HERRING, I would gather that Iowa's young men are ready for whatever comes.

Senator HERRING. Yes, my mail reveals that the patriotic spirit of the people of Iowa is such that we could, if desired, recruit a voluntary Army.

The people of Iowa realize that only through complete national unity and unprecedented cooperation in every phase of our national life can we hope to meet the forces which threaten us with destruction.

They have implicit faith in our ability to meet this crisis, but they entertain no illusions. They recognize that the greatest weapon in Hitler's hands is the unity of the German people—obtained by duress to be sure, but nevertheless effective.

They realized that we must have complete national unity, arrived at by common consent, if this Nation and its free institutions are to survive. They are determined that unity shall prevail and that this democracy shall be preserved.

Mr. POWELL. Senator HERRING, from what your mail has to tell, I would say that the Middle West is thoroughly aroused about this country's peril.

Senator HERRING. It certainly is and should be.

Mr. POWELL. Senator BRIDGES, you indicate you would like the floor. We recognize the gentleman from New Hampshire.

Senator BRIDGES. Mr. Powell, I would like to turn this forum about face for a moment and ask you a question.

Mr. POWELL. O. K., Senator; fire away.

Senator BRIDGES. While we on Capitol Hill are thoroughly familiar with the good work of the Committee of Americans in spreading the gospel of prudent spending and taxation, how does the committee feel about the present big spending program?

Mr. POWELL. Senator, the committee is 100 percent for the defense program but it is also in accord with the general tenor of the mail here this evening, namely, that we have billions for defense but not one cent for frills.

The Chair recognizes the gentleman from Iowa, Senator HERRING.

Senator HERRING. May I take this occasion to express to you, Mr. Powell, my thanks for the outstanding work which the Committee of Americans has undertaken in bringing about a clearer understanding and a greater appreciation of our Democratic institutions of free government.

Mr. POWELL. That is very kind of you, Senator. And on behalf of the committee's chairman, Dean Roscoe Pound, its president, Berkley Thomas, and their associates, I wish to thank all of you here tonight for making possible this unique program, the Congressional Mailbag.

There being no further business before the Senate and House, the Congressional Mailbag stands adjourned. Good night all.

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1941

Mr. LAMBERTSON. Mr. Speaker, the fellow who invented "all aid short of war" had less than a woman's accuracy for distance.

There will be no slackening of the flow of supplies to Great Britain.—F. D. R. That must mean convoys.

For us to enter this war over there now would be to gamble the life of America on a bet that England will win.

It took George Washington 8 years to get us out of the British Empire. Now, after another 8 years we are nearly back in.

Shakespeare and Hitler had birthdays this week. Is the pen mightier than the sword? We still think so, in the long run.

As the coal strike is allowed to thicken, the morale of the people is lowered to where they are wondering if we could whip even the Portuguese.

The Vinson cooling-off bill to regulate labor will be frozen in the Capitol before it gets hot enough to get to the White House.

In the old days when breaking wild horses from Wyoming it was common to put buckshot fishline sinkers in their ears when they balked. A thought for some similar treatment of defense strike leaders.

At a recent departmental birthday banquet the British Jack was displayed between two of the Stars and Stripes as they closed with the national anthem. The usual soprano of my Mrs. choked.

Lincoln said, "That part of the earth's surface which is owned and inhabited by the United States is well adapted to be the home of one national family and is not well adapted for two or more."

The Lewis and Clark Expedition

EXTENSION OF REMARKS

OF

HON. JOHN THOMAS

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Friday, April 25, 1941

ARTICLE BY RICHARD L. NEUBERGER

Mr. THOMAS of Idaho. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Richard L. Neuberger entitled "Our Greatest Exploration," published in the Reader's Digest. The article gives a splendid account of the Lewis and Clark expedition, which secured the Northwest country for the United States.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Reader's Digest]

OUR GREATEST EXPLORATION

(Condensed from the American Legion magazine)

(By Richard L. Neuberger)

From St. Louis, the edge of American civilization, Sgt. John Ordway, of the United States Army, wrote to his father and mother in New Hampshire: "Honored parents, I am now on an expedition to the westward with Captain Lewis and Lieutenant Clark, who are appointed by President Jefferson to go through the interior of North America. We are to ascend the Missouri River and then go by land to the great western ocean."

A courier went through the camp collecting such messages from men who were not sure they would ever be heard from again. Then, late on the rainy afternoon of May 14, 1804, the 29 members of the party embarked in 2 long, trim rowboats and a 55-foot bargelike bateau. They were voyaging into the unknown.

At St. Louis geography ended and myth began. The Indians whispered of the Shining or Rocky Mountains that scraped the sky. Was this merely one of their legends? Jefferson, when Minister to France, had heard mariners who sailed with Captain Cook on his Pacific voyages describe evergreen forests as boundless as the oceans and peaks high as the Alps, to be seen on America's western shore. Were their tales true? Jefferson's lively imagination had been fired and thenceforward he dreamed of sending brave men to "explore the great wilderness beyond the Mississippi and form a line of communication from sea to sea."

As soon as his envoys had bought from Napoleon for $15,000,000 the million square miles of territory that France claimed on the sundown side of the Mississippi, Jefferson asked Congress for $2,500 to finance its exploration. "And let us search out even that which lies beyond," he urged.

To lead the expedition the President selected his private secretary, 29-year-old Meriwether Lewis, believing that this young Army captain had a determination that nothing could conquer. Such a man was needed; there might be more than dangers of the wilderness to face and temptation: to turn back might be many. A race for empire was in prospect, for the British were talking of sending men to hoist the Union Jack at the mouth of the Columbia.

Jefferson suggested that Lewis select an alternative commander and Lewis named his best friend, William Clark, a 34-year-old artillery lieutenant.

They were in strong contrast. Lewis's thin countenance, with defiant jaw and slate-gray eyes, had an eagle-like intensity. He was taciturn, almost gloomy. Clark, red-headed, red-faced, was never stern or silent. His cheerful chatter often had revived the spirits of troops weary on the march. He liked to dodge officers' mess to eat with the men; he hailed colonels and corporals alike by their first names. He got along with Indians better than anyone else in the Army, possibly because he treated them as equals.

Clark went from post to post on the frontier, asking picked men if they wanted to plant their country's flag on the western ocean. Lewis arranged for supplies, which included presents for the Indians—mirrors, red cloth, needles, beads, calico shirts.

Men picked for the journey were enlisted in the Army at $10 a month for privates, $15 for the three sergeants, $80 each for Lewis and Clark, and as a bonus they were promised parcels of land. Whether any of them would survive to enjoy these rewards was doubtful. Their eventual destination was so indefinite that Jefferson gave them papers bespeaking the good offices of "our consuls in Batavia, in Java, and at the Cape of Good Hope."

As they rowed up the sluggish Missouri, under the flag with 15 stars, the party was a cross section of the expanding Nation. The oldest was Patrick Gass, 33; the youngest, John Colter, was 16. Alongside Kentuckians chosen for their woodcraft, were hunters from Virginia, farmers from Vermont, carpenters from Pennsylvania. There were Irishmen, Scots, Dutchmen, and Frenchmen. Near Lieutenant Clark in the first boat crouched his brawny Negro servant, York.

The explorers had not gone far before they realized that the map the President had supplied was useless; it did not even indicate the correct direction of the river. All they could do was to follow the Missouri to its source. From there dead reckoning might take them to the sea.

For the first few months it was an idyllic journey—comfortable camps at night, days uneventful save for sightseeing. By firelight the two leaders worked painstakingly on their journals, for the President and Congress wanted complete reports on plants, trees, beasts, birds, and Indians. One evening Lewis wrote: "In addition to the common deer, which were in great abundance, we saw goats, elk, buffalo, antelope, blacktailed deer and large wolves." They counted 52 herds of bison in one day.

Three months out of St. Louis, the adventurers had voyaged 850 miles and were not far from what is now Sioux City in Iowa. The going got harder. The clumsy bateau repeatedly lurched aground on sandbars. One man collapsed from sunstroke. Sgt. Charles Floyd died of colic in the choking heat of an August afternoon. They buried him on a high bluff, the first American soldier to die west of the Mississippi. The boats went on, the men silent, Lewis wrapped in thought. A man dead, many sick, the real perils just begun.

That night, instead of appointing a new sergeant, Lewis told the men themselves to elect a successor to Floyd. Amid much oratory three soldiers were nominated. Grizzled Patrick Gass was chosen. Next morning the party took to the boats with renewed zeal; Lewis had turned the men's minds from brooding over the loss of their companion.

Misadventures multiplied. Nineteen-year-old George Shannon, on scout duty, got lost and almost starved. A riverbank crumbled and nearly destroyed the precious supplies. Lewis, habitually scouting ahead, had several narrow escapes from stampeding buffalo.

Most of the Indians they met were friendly, grunting with pleasure over trinkets and delighted with whisky dealt out in judicious doses. Whenever possible, chiefs of nearby tribes were summoned to pow-wows under a sailcloth canopy, the flag flying, and told about the Great White Father in Washington to whom they now owed loyalty. Council Bluffs takes its name from one of these pow-wows.

A lazy half-breed, Toussaint Charbonneau, interpreted. The party had picked him up along the route. With him was his 19-year-old Indian wife, Sacajawea, slender in figure, with long braids and dark eyes. Six years before she had been stolen from the Shoshones by marauding braves, and Charbonneau had won her in a gambling bout. A woman on the expedition? Lewis and Clark had hesitated, but they desperately needed Charbonneau. Besides, Sacajawea's tribe was said to dwell beyond the high mountains. Maybe this Indian girl would know the way.

Meadows and prairies gave way to rolling hills, the hills stiffened into plateaus. But the horizons still were land. Where did it end? Where was the western ocean?

The first heavy snows fell in November, trapping the party near the site of Bismarck, N. Dak. In the half year they had made 1,600 miles, all up the Missouri. A few traders had been thus far, but no white man had ever gone farther. They built a stockade, calling it Fort Mandan for the friendly Mandan Indians, and here during the long, dreary winter a baby boy was born to Sacajawea.

April 7, 1805, the last ice having drifted down the river, Fort Mandan was left behind. So was the bateau, too big for the narrowing Missouri and no longer needed for the dwindling supplies. Six canoes made of buffalo hides and willow branches took its place.

The country grew wilder, the landscape less hospitable. Mosquitoes and gnats were a curse. Buffalo were scarce and, without buffalo hide for patching, clothes and moccasins began to shred.

But the ragged frontiersmen now were unlocking the secrets of the continent. They came upon huge, ferocious grizzly bears that it took half a dozen musket balls to kill. They spent weeks of back-breaking toil portaging goods and boats past thundering cataracts which they called the Great Falls of the Missouri. And on May 26, a Sunday, Lewis, who had been scouting ahead as usual, came back to camp excited. He had glimpsed majestic mountains.

Independence Day, 1805, was celebrated at the foot of the Rockies, 2,500 miles and 14 months from St. Louis. Wistfully they drank the last of their brandy. Other supplies, too, were running low. Lewis wrote in his journal: "We all believe that we are about to enter upon the most perilous part of our voyage."

Only the Indian girl, her baby strapped to her back, had the vaguest notion where they were. From out of the memories of her childhood Sacajawea recognized a creek at which her people had collected clay for painting their war parties. When the dwindling Missouri abruptly forked into three branches her memory again helped. She sent them up the swiftest fork, which they named Jefferson River.

The stream twisted through a labyrinth of volcanic walls at which it clawed with white-capped talons. Sometimes the boats upset and their loads were swept downstream. The men waded through the glacier-fed water, pulling their leaky craft on long ropes, for they could not walk on the steep banks. "The men by being constantly wet are becoming more feeble," the captain noted. Sharp stones cut to pieces what remained of their moccasins and drops of blood flecked the stream. They had journeyed as close to the crest of the continent as water would take them. Wherever they looked the skyline was a jagged row of pinnacles, "mountains piled on mountains," such peaks as Americans never had seen. Each ridge surmounted brought a glimpse of a ridge higher still. Eventually they reached the region where now Montana joins Idaho, where the Rockies and the Bitter Root Mountains run parallel in a vast maze. Lewis sent scouts scattering to find some way across. They came back baffled, four of them nursing injuries from falls.

By now Lewis realized that he must find the Shoshones or give up the expedition. His fatigued men could not drag themselves over those summits, let alone carry burdens; they must have horses. Rations were low and they could not survive a Rocky Mountain winter. Soon the snows would start and it would be too late even to go back. They had not seen an Indian for 4 months though Sacajawea insisted that she twice had seen the smoke signals of her people.

Lewis chose three men and pushed on ahead. Every morning when they broke camp they left beads and mirrors as tokens of friendliness to any Indians who might stumble onto the dead fires. At last, ragged and exhausted, they crawled to the top of a high ridge and looked down the Pacific slope of the Rockies. Here, on the Continental Divide, they unfurled the flag. They had two pounds of flour left.

As Chief Cameahwait and 60 mounted Shoshone braves jogged over the crest of Lemhi Pass late in the afternoon of August 13, they saw tottering toward them a tall, ragged stranger with pale skin. In his right hand he carried a cloth of red, white, and blue. Half a hundred paces to the rear were 3 other strangers with long black sticks.

"Tabba bone (white man)," the hollow-eyed stranger said.

"Ah hi e (I am much pleased)," the young chief replied gravely. There on the roof of the continent the feathered savage and the Virginia gentleman embraced and slapped each other on the back.

Game had been scarce that year, and the Shoshones were hungry, yet they shared with the white men. The captain's pulse quickened when the chief offered him roast salmon—salmon from the sea.

Lewis bartered ornaments, coats, blankets, and knives for 38 horses, which were sent back to bring up the main party. A dramatic incident marked the reunion of the two parties. Sacajawea, meeting Cameahwait, greeted him with affectionate cries. They were brother and sister. Nevertheless, when the party went on, Sacajawea chose to stick with her husband rather than return to her people.

A withered old Shoshone, whom Clark christened Toby, volunteered to act as guide. He was not much help. They wandered in the Bitter Root Range like men in a rock-bound fortress, while snow began to plug the passes. Provisions ran out. They had to kill some of the horses, which were starving, too, with ground bare of fodder. One day there

was only a brace of pheasants for 32 mouths to eat. They scraped the bed of Hungry Creek for crawfish; they grubbed for roots. One wretched night they ate a timber wolf Lewis shot. Lewis gave up his mount to one of the men and struggled ahead on foot. A horse loaded with winter coats slipped, screamed in terror, and vanished over a precipice.

Finally they reached open country. They looked like skeletons, and now even the inexorable driver, Lewis, collapsed. While he lay ill beside the Clearwater River, the others trimmed pine logs and burned out the cores to shape rude canoes. The work was hard for exhausted men and it went slowly.

In the canoes they floated down the Clearwater and into the Snake, at the spot where Lewiston, Idaho, stands. They paddled down the Snake and about the middle of October came to a mighty river which surged out of the north and bent westward. This was the Columbia, the "Great River Oregon," which for two generations adventurous souls had dreamed of exploring.

For three weeks more they stroked the bulky canoes between mountains and grassy meadows and fir forests. One quiet night a soldier heard a far-off roar. Soon long swells rolled up the river from downstream. Gulls flew overhead. The water was full of salmon. There was a tang of salt in the air.

Fog cloaked the Columbia on the morning of November 7, 1805, but around noon it cleared and in the distance a wide expanse of tossing breakers was visible. For a moment the men looked out to sea in silence. Then they cheered. In his queerly spelled diary Clark scrawled: "Ocian in view! Oh, the joy! We are in view of the ocian, that great ocian which we have been so long anxious to see!"

For the first time Americans had spanned the continent they would one day inhabit from coast to coast. On that lonely shore, the flag flapping at his back, Captain Lewis thanked the soldiers in behalf of President Jefferson. They had reached their goal ahead of any nation with rival ambitions, covering 4,100 adventurous miles in a year and a half. Just 125 years later one could board a plane at St. Louis after daybreak and be in Portland before dark.

Near present-day Astoria the expedition built a stockade, Fort Clatsop, that sheltered them during the second winter, and in the bark of a tall pine that overlooked the sea Lieutenant Clark carved this record:

Wm. Clark December 3d
1805 by land from the U.
States in 1804 & 5

Late in March of 1806 the expedition began the long trek homeward. It required only a third of the time consumed in traveling west, for now they had landmarks. Again Sacajawea was invaluable, riding at the head of the column with Lewis, unerringly pointing the way. "She has equal fortitude and resolution with any member of the party," Lewis wrote. They arrived in St. Louis on September 23, 1806, 6 months to the day after abandoning Fort Clatsop.

The Nation had given them up for dead. They had been gone 2 years and 4 months. Cheering crowds escorted them through St. Louis. Jefferson wrote his congratulations and triumphantly informed Congress of the expedition's success. They had traveled 8,000 miles through the wilderness, had reached their objective and returned, had lost only one man. People were amazed by the information brought back: Fierce bears which weighed 1,000 pounds, mountain ranges three times as lofty as the Alleghenies, buffalo herds measured by horizons, wild sheep with horns shaped like cornucopias, goats that leaped from crag to crag. The New York Gazette predicted that the region would probably never be traveled through again, but President Jefferson visioned "a great, free, and independent empire on the Columbia River."

The Lewis and Clark Expedition still stands as the most important ever undertaken by the United States, clinching our title not only to the vast Louisiana Territory but later to the Oregon lands as well.

Lewis was appointed Governor of Louisiana and Clark was named Indian agent for the region and promoted to the rank of brigadier general. Lewis, always a lonely man, was unhappy in political office. In the autumn of 1809, on his way to Washington to answer criticism of his administrative methods, he stopped for a night at an inn near Nashville, Tenn. Shortly after midnight a pistol shot waked the household, and the tavern-keeper found the 35-year-old explorer on the floor with a gaping wound in his side. He died at dawn. Jefferson, stunned with grief, always believed the captain had committed suicide. Tennessee folk maintained that he had been murdered. The mystery has never been satisfactorily solved.

Not far from where Lewis died a granite shaft stands, graven with the words of the President who sent him westward:

"His courage was undaunted. His firmness and perseverence yielded to nothing but impossibility."

Trees overhang the grave, and on stormy nights the wind roars through them like breakers crashing on the Pacific's distant shore.

Hemisphere Solidarity

EXTENSION OF REMARKS
OF
HON. ROBERT R. REYNOLDS
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Friday, April 25, 1941

EDITORIAL FROM WILMINGTON (N. C.) DAILY NEWS

Mr. REYNOLDS. Mr. President, I wish to call the attention of the Members of this body to an editorial entitled "Hemisphere Solidarity," which I clipped several evenings ago from the editorial columns of the Wilmington Daily News, a newspaper published in my State at Wilmington, N. C., and edited by Mr. Rye Page. The editorial relates to that most important subject in which we are all vitally interested, namely, the subject of bringing about American solidarity among the peoples of North, South, and Central America.

In that connection, Mr. President, several afternoons ago I had the pleasure and honor of meeting for the first time Mr. Nelson Rockefeller, who was designated by the President to bring about, as far as possible, friendly relations between the 125,000,000 people to the south of the Rio Grande and the population of our country. I was tremendously impressed by Mr. Rockefeller. I had heard many complimentary things concerning the work he is doing for my Government. Therefore I was more than happy to have the opportunity of meeting him; and I wish publicly to congratulate our Government upon having in its service a young man of his type and energy, who seems to be thoroughly familiar with the problems with which we in the Western Hemisphere are confronted.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Wilmington (N. C.) Daily News]

HEMISPHERE SOLIDARITY

Practical evidence of a new hemisphere solidarity has been given by two events in 48 hours. Conclusion of negotiations for a defense agreement between Mexico and the United States providing for reciprocal use of air fields and bases is, of course, a matter of major importance. It opens up for American military planes a land route from this country to the Panama Canal with the right to use Mexican fields for repairs and refueling. This will be a great convenience in getting short-range interceptor and pursuit planes to the vital Canal area in time of emergency.

At the same time the action which numerous countries in Central and South America have taken against German and Italian shipping in their harbors offers additional evidence that these countries are acting in close concord with the United States.

All of these nations have the same interest in seizing vessels in their harbors as the United States. They are short of shipping, as we are, and could make good use of idle vessels. And the constant possibility of sabotage has made the ships a potential and in some cases an immediate menace to port facilities.

But it was no easy matter for these countries, almost powerless in a military sense, to risk an affront to Germany and Italy. Many of the nations, in addition, have large and influential Nazi and Fascist population groups. It is only lately, under American encouragement, that an attempt has been made to throw off the economic domination which the Axis has exerted.

The mere fact that so many of these countries are now following American leadership and looking to this country to set the example is an encouraging fact. Since we have made ourselves responsible for their defense there is every reason we should expect cooperation. But it is only by slow steps and under the pressure of events abroad that we are gradually attaining the kind of solidarity which will make that defense a feasible undertaking.

Editorial from Labor

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Friday, April 25, 1941

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD an editorial appearing in the April 22 edition of Labor entitled "This Will Make You Feel Better."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THIS WILL MAKE YOU FEEL BETTER

If you are inclined to think the world is going on the rocks and the human race is reverting to savagery, read the following:

Two years ago in Philadelphia, Benjamin Mason, a Negro on relief, and his wife, Pearl,

scraped together $2.50 and bought a ticket in the Irish Sweepstakes. They won a prize of $150,000. Of course, they were flabbergasted by this good luck, but what do you think they did with the money?

They invested $100,000 in a slum-clearance project, the first of its kind to be privately financed in the vicinity of Philadelphia, and borrowed an additional $50,000. This week the building was completed, and tenants began moving in. There are 50 apartments, modern in every way, including air conditioning; in addition there are lawns and a fountain, play rooms in the basement for children, a gymnasium and bowling alley, a reception hall for social affairs and a chapel for religious services. Rents are $30 a month for three-room apartments and $39 for five rooms.

It's a good business proposition says the Philadelphia Housing Authority, and Mason remarks: "I am glad to be able to do something for my people."

That he has the "right stuff" in him is demonstrated by the fact that as soon as the money came in from Ireland, Mason returned to Uncle Sam the $3,000 he had received as relief.

Yes; the world is in a bad way, but the situation isn't hopless so long as among us are men like Mason, whatever their race or color may be.

Propaganda, Then and Now

EXTENSION OF REMARKS

OF

HON. JOHN THOMAS

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Friday, April 25, 1941

ARTICLE BY VARDIS FISHER

Mr. THOMAS of Idaho. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Vardis Fisher, published in the April 20 edition of the Idaho Sunday Statesman, entitled "Propaganda, Then and Now."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Idaho Sunday Statesman of April 20, 1941]

PROPAGANDA, THEN AND NOW

(By Vardis Fisher)

The past week has seen events which seem to have amazed official Washington; and two glib, pontificating "experts" whom I heard on the Chicago Round Table just after Germany invaded Yugoslavia must be silent today. It appears that the English can make the Italians run, but that Churchill's boys are also good at long-distance sprinting when the Germans get after them. It should at last be clear to our war enthusiasts that the Germans have a war machine led by ruthless and very competent gents who know exactly what they're doing. Our President has given a pledge to destroy Hitler. In the last week I hope he has been looking at his hole card.

It seems, too, that this Nation, according to the polls, is ready to be taxed senseless, but is not ready to fight. The President's job now is to get it ready. Propaganda will do that job. In the last war propaganda for American consumption would have outraged the intelligence of an Australian bushman, but we swallowed it by the yard. The Germans were represented to us in the news and cartoons as ogres and ghouls and fiends. We were told that they had committed every atrocity that history has recorded. They despoiled everybody except the great-grandmothers, they lopped the arms off children for the sadistic fun of it, and they fried their enemies to render out the lard. There was nothing the paid liars could think of that was not spread across the front pages.

We learned afterward that we had been infamously duped, and propaganda today is, in consequence, much subtler. They can't tell us now that the enemy is melting the fat of Belgian kidneys to lubricate their war machine. We're too smart to believe that, but we're not smart enough to see through the more sophisticated hokum they're giving us. Still, even though the propaganda is pretty adroit and sly this time, much of it is as easy to read as the wrinkles in an old face.

Let's start off with that paragon of blood and sweat and tears named Winston Churchill. He is, in plain truth, the mouthpiece and right-hand Johnny of that gang of parasitic and fox-chasing Tories who rule England and are asking us to keep England safe for the foxes. On the basis of his utterances in the past, he has no more sympathy for democracy than I have for communism; but right now he is blessing it and leading it toward kindly light because he knows that Americans love democracy next to chewing gum. His tall, gaunt, and cold-blooded "yes man" over here—the fox-hunting Lord Halifax—was recently given a big spread in the New York Times. He was quoted as saying: "We say that we are fighting for freedom and democracy." Well, he just about has to say that if he wants our help. He also said that India "has grown in an atmosphere of freedom and has developed the principle and practice of self-government." He expects everybody to believe that who knows nothing about India, and I suppose everybody will.

What did Churchill and Halifax say before they needed our help? What did they do? Why, bless you, his lordship, known as Lord Irwin when he was Viceroy of India, so enthusiastically approved an atmosphere of freedom in that land that he threw a hundred thousand Indians into jail at one time; and of the Lord's devotion to democracy, Churchill had this to say January 30, 1931: "This Viceroy has had to enact more repressive measures and inflict more punishments and make greater curtailments of liberty and imprison more thousands of people than has ever happened before in India."

Churchill didn't like Halifax in those days but don't think he was mad because democracy was having a tough time in India. On December 12, 1930, he had said: "The truth is that Ghandi-ism and all it stands for will, sooner or later, have to be grappled with and finally crushed. It is no use trying to satisfy a tiger by feeding him cat's meat."

Poor Ghandi! What a ferocious and devouring tiger he is and has been. But what Mr. Churchill really had in mind was England's investment of $7,800,000,000 in India, and the dividends of $900,000,000 sent back home to the fox hunters. Sir James Grigg, a member of the Government of India, has recently said that the average per capita income in India today is a daily wage of from a penny to a penny and a quarter. It is well known to those who know anything about India that there are tens of thousands of slaves who toil on an average of 12 years to get out of a debt imposed on them by their enslavers, and earn for themselves about 9 cents a year in pound exchange.

When I looked at the Christian kindliness in Lord Halifax's face and then read of his profound and passionate interest in democracy, I just broke down and bawled. When, further down the column, I came upon his brave words that India has for years grown in an atmosphere of freedom and has developed the practice of self-government, I could have hugged Winnie Churchill for sending so noble a man to enlist our aid. I should have known long ago that Ghandi, sitting around in a bed sheet and living on a handful of nothing, was hiding a man-eating tiger behind that saintly mien. I should have realized that a man isn't worth his salt if he can't learn the principles of democracy on a cent and a quarter a day.

My cynical soul told me that when President Roosevelt broke all precedents and sailed out to meet Halifax he could have achieved the immortality he craves if he had thrown the gaunt hypocrite into the sea. But that is no way to feel. We'll never get into the war unless we believe that Halifax is a living, breathing symbol of democracy and loves democracy next to foxes and wants to take our timid and deluded hands and lead us to Europe and show us how beautifully English democracy has worked in India. Next time I hear Halifax's honest old voice over the radio I'll probably go over and yank that loin cloth off Ghandi and tell the fraud he'll have to stop eating altogether because England has no cat meat to spare.

In the Statesman the other day there appeared a cartoon showing the enemy as a gorilla-like monster with gore dripping from his whiskers and his opponents as frightened little fellows waving banners of charity and peace and good will toward men. One of them looked like a Serb who had decided to stop kicking the Croats around. But most of our propaganda is not like that. We have sensibilities, and though we don't mind being fooled, we're like a homely woman on whom a Romeo is breathing ardent love: It must be plausible and it must sound nice.

Personally, I'm going for Time and Life in a big way—because, in their pro-war attiture, their propaganda is so craftily hidden. Luce does a long editorial in Life, telling us that our President is a man of destiny and that it's time we became the godfather and big brother, as well as the banker, of every nation in the world. A couple of weeks later, the letters column contains about 15 resounding shouts of approval and not a single dissent. Time does it with a little more finesse. It runs three well-written letters asking for armed intervention, and follows with an illiterate one in opposition. You just have to admire propaganda as cunning as that.

Or take that half-witted book by a crackpot. I mean the one called Germany Must Perish in which an incredible zany proposes the emasculation of the whole German race. Time gave that book nearly two columns. Time pointed out that the gentleman is "not afraid," is "no Nazi," and worked so hard getting his masterpiece in the mails that he "cut his hands with twine." In the letters columns a woman has since protested all the space given to that "mephitic" book, and Time replies editorially that it was news. I suppose Time means that all lunacy is news in a nation getting ready for war.

And I like, too, the President's finesse as a propagandist. He does a nice slick job of it. Have you forgotten his terrifying picture of us on an island "a helpless nightmare of a people without freedom, a people lodged in prison, handcuffed, hungry, and fed through the bars every day by the contemptuous unpitying masters of other continents"? More recently he did even better. "Never in all history," he said, "have Americans faced a task so well worth while. May it be said of us in the days to come that our children and our children's children rise up and call us blessed."

My cynical mind tells me that Lincoln's job was just a shade worthier than the preservation of the fox-hunting estates of English Tories. But I'll not quibble. The propaganda this time is as slippery as elm bark, but I think it will do the trick. I think we need only another six months of it to change the

Gallup and other polls. And I wonder if historians, digging the whole thing out, will ever come upon the illiterate letter in Time. "Any nation which declares war on any other country does not deserve help England would never have declared war on Germany if they had not expected France to do the dirty fighting for them now let England finish it."

Foreign Affairs

EXTENSION OF REMARKS

OF

HON. WILLIAM H. SMATHERS

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, April 25, 1941

LETTER FROM DE WITT D. BARLOW

Mr. SMATHERS. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD a letter from Mr. De Witt D. Barlow, of Plainfield, N. J. The letter is self-explanatory.

It amazes me to find from this letter that one of my Senate colleagues is endeavoring to stir up in my State of New Jersey a Lindbergh "invincible Nazi" viewpoint, which does not exist in New Jersey.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NEW YORK, *April 18, 1941.*

Hon. WILLIAM H. SMATHERS,
United States Senate,
Washington, D. C.

MY DEAR SENATOR: I am in receipt of a letter from Senator NYE, in which he enclosed a reprint of Colonel Lindbergh's letter published recently in Collier's. The Senator asks me to write to you on the subject.

I am totally opposed to Colonel Lindbergh's and Senator NYE's point of view. The issues in this war are, as far as I am concerned, not economic. I do not want to live in a world dominated by Nazis, and it is my hope that the civilized world will band together to destroy them. Colonel Lindbergh's facts are inaccurate, but, even were they not, I would not concur in his reasoning for the reason stated in this letter, that I prefer to be guided by principle and not expediency.

Yours sincerely,

DE WITT D. BARLOW.

People Over 45 and Physically Handicapped Receiving More Consideration for Government Employment

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1941

LETTERS FROM WM. C. HULL, EXECUTIVE ASSISTANT OF THE CIVIL SERVICE COMMISSION

Mr. BECKWORTH. Mr. Speaker, I wish to revise and extend my remarks and include therein two letters I have recently received from Mr. William C. Hull, the Executive Assistant of the Civil Service Commission. One of the letters pertains to the policy of the Civil Service Commission relative to employing those people who are physically handicapped, and the other letter pertains to the policy of the Civil Service Commission in regard to employing those people who are 45 years of age or older.

For years people who have reached 45 years of age and people who are physically handicapped have found, when seeking employment either with the Government or with industry, many obstacles to their receiving employment. Few of the barriers to the employment of those 45 years old or older and the physically handicapped have been removed heretofore; however, quoting a part of one of the letters—

In order to meet the emergency employment needs created by the national-defense program, the Commission has, in a number of recent instances, secured the concurrence of appointing officials in advancing the maximum age limit beyond the normal point.

The very fact that the maximum age limit has been and is being materially advanced by the authorities of our Government in order to obtain needed people is evidence that a great reservoir of employable people has, to a certain extent, been unutilized. This is true, in my opinion, despite the fact that we are all aware of the great and added responsibilities which usually devolve on the shoulders of people over 45 and people physically handicapped. Parents at 45 years of age generally find, because of the need of funds with which to send their children to school and because of other expenses attendant thereto, that the need of a reasonable income is perhaps more pronounced than ever. In the case of the physically handicapped, frequently not only the handicapped person himself, but his relatives have expended much money to sustain his life, to rehabilitate him physically, or to prepare him to make a living. How disappointing as well as often disastrous it is for these two classes of people to find themselves unable to procure work.

I have always contended that a man or woman has not outlived his or her usefulness when he or she reaches 45 years of age, and I have never been able to agree that one who is physically handicapped is without the realm of usefulness.

The contents of both letters I am putting in the RECORD are encouraging and tend to justify and substantiate the desire of many of us to see more liberality and generosity characterize the consideration of the applications of those who are just as anxious to be self-supporting as are the young and physically strong. The man who has the will to work should be encouraged by his government and its policy, and in my opinion the two letters to which I refer lend some encouragement. Let us trust that this evidence of relaxation of rigid regulations heretofore characteristic of the Government in employing people over 45 and people physically handicapped is the forerunner of other fair and favorable relaxation of regulations which have mitigated against these two groups who are anxious to be self-sustaining.

The letters follow:

CIVIL SERVICE COMMISSION,
Washington, D. C., March 29, 1941.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR MR. BECKWORTH: I have your letter of March 4 in which you express your interest in the extent to which those who are physically handicapped can qualify for civil-service employment.

The field of Federal employment is a broad one, with a large proportion of jobs of the office type, such as clerk, typist, or professional or scientific work. To these examinations the handicapped are freely admitted, persons who have lost an eye or a limb, or who must use crutches, cane, or braces to enable them to replace lost function, etc. The duties of the position sought determine the type of defect which may be regarded as acceptable. For example, a person who has lost a leg or has atrophy of the leg or legs as a sequel to disease, necessitating the use of cane or crutches, is admitted to desk-duty positions generally but cannot properly be admitted to an examination for a position as messenger, guard, or laborer, or to positions where the duties involve continuous walking or standing. There are many examinations to which a person with but one eye is admitted, but for the position of operator of a motor vehicle or for duties of a police character this defect would not be acceptable. For technical, professional, or scientific office or laboratory positions the physical standard applied is a liberal one. For trades or laboring positions the nature of the defect and the degree of disability govern the action.

The Commission does not have available for distribution a list of positions for which crippled persons, persons with one arm, persons with one leg, and persons with vision in only one eye, can qualify. In passing on cases of persons who suffer from crippling conditions, the Commission studies them individually, taking into consideration the nature and severity of the condition and the duties of the position. The person must be able to perform the duties of the position and must not be an undue hazard under the employees' compensation and disability retirement statutes.

The enclosed Form 2313 will also show that the basic physical requirements are low and will for appropriate positions admit cripples, the deaf, or persons who have lost one eye.

The enclosed Forms 1786 and 1786a show the many examinations to which the deaf and the hard of hearing are admitted. The Commission for many years has cooperated with the United States Bureau of Education in its work of rehabilitation and has offered, when "rehabilitory" training of a person is under consideration, to give suggestions as to whether an individual with the proposed training, considered in connection with the stated disability, would be admissible to an examination for a similar type of duty in the classified civil service. Rehabilitation from a disability may be accomplished by the efforts of the individual or through some established agency, and equal consideration is given to persons who have been rehabilitated under either method.

With respect to persons who are handicapped by blindness, the problem is a more difficult one, as there are few positions in the classified service where a person who requires the services of someone else to assist him in performing the duties of a clerk or similar position can be employed. Three examinations open to blind persons have been conducted by the Commission in recent years, and announcements of the examinations for assistant clerk-stenographer (for the blind) and rehabilitation specialist for the visually handicapped are enclosed. The register of eligibles established from the examination for administrative officer has expired and announcements of this examination are not available for distribution.

This Commission, under the authority conveyed by the civil-service laws and rules, can

go so far as to admit the handicapped person to a competitive examination. The individual must pass all the tests as to education and experience, or in assembled examinations the written tests, in competition with others who are entitled to enter the examination chosen. He must secure a relative rating in the competition sufficiently high to entitle him to be certified to an appointing officer as one of the highest three eligibles who from their relative standings in the examination must be considered in filling an existing vacancy. The appointing officer to whom the three names are certified has by law the right of choice among the three and is not required to give his reasons for exercising this choice (with an exception as to persons entitled to preference by reason of military service). Thus the admission to competition is only one step toward the securing of a position, but the Commission has taken this step whenever it is consistent with the considerations stated above, the employing officers being consulted before the physical standards are established.

In private employment there are elements which are not present in Federal or other governmental employments where the salaries or wages for positions are fixed. The private employer is not required by law to appoint through competition between all citizens and can therefore permit sympathy to dictate a selection. An individual who, because of orthopedic defect or general physical frailty, can only partly perform the work of a position, may be employed on a part-time basis, or possibly for work to be performed at home, or he can be employed at a reduced compensation in proportion to the output. In the Federal service under classification acts the compensation is fixed on a basis of a normal performance of duties, and the appointing officer must have regard to this in making selections of persons to do his work.

If any of your constitutents who are interested in employment in the classified civil service are physically handicapped, the Commission will endeavor to advise if there are examinations for which they may be considered so far as their handicap is concerned if they will inform the Commission of the nature of their handicap, the extent to which it is disabling, and will refer to any education or experience which they may have acquired.

There are a great many physically handicapped persons employed in the classified civil service, especially in Washington, D. C. No census has been made on this matter nor would one be accurate, as it would hardly be practicable to persuade many of the employees to state their defect and any returns would therefore be an understatement of the situation.

Sincerely yours,

WM. C. HULL,
Executive Assistant.

CIVIL SERVICE COMMISSION,
Washington, D. C., April 21, 1941.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR MR. BECKWORTH: The Commission is glad to have your letter of April 2, requesting information concerning maximum age limits. I believe it may be of interest, in this connection, to explain in some detail the Commission's general authority and present policy with respect to examination age limits.

The problem of determining suitable maximum age limits for admission to competitive examinations involves the consideration, and if possible, the reconciliation, of many diverse and sometimes conflicting interests. Under existing practice, age limits are determined in accordance with section 4 of civil-service rule V, which provides in part that: "The Commission may, with the approval of the proper appointing officer, change by regulation the existing age limits for entrance to the examinations under these rules, * * *." It is evident that, under this provision, the Commission shares concurrently with the department or agency affected, the determination of examination age limits. Within its authority, the Commission has been guided in establishing maximum age limits for admission to examinations for positions in the classified service by the policy laid down in the Retirement Act of 1920.

This statute specifies retirement ages for three groups of positions respectively at 70, 65, and 62 years. It further provides that in order to be eligible for retirement at such ages, the employee concerned must have had at least 15 years of Government service. It is apparent that, in establishing the retirement ages mentioned for the several groups of positions, the statute expresses a policy as to the maximum age at which employees in such groups should be retained in the service. Such retirement ages, coupled with the requirement of 15 years of service for eligibility for retirement benefits, clearly contemplate that, except in very unusual circumstances, only those persons who are able to serve 15 years prior to reaching the retirement age should be admitted into the service. In conformity with this legislative policy, the Commission generally has established, in concurrence with the agencies affected, maximum age limits at fifteen years below the applicable retirement age, with an addition in certain cases of 2 years to allow for holding and rating the examination and a reasonable period of eligibility on the resulting register.

The Commission is fully aware of the employment problems of older workers throughout the country, and is in entire sympathy with all feasible means of alleviating their difficulties. Thus, the Commission has, within the limits of its authority, endeavored for many years to establish examination age limits at the highest level consistent with statutory policy, the necessity for effective performance of the duties involved, and the general efficiency of the Federal service, with which, of course, the entire country is vitally concerned.

In order to meet the emergency employment needs created by the national-defense program the Commission has, in a number of recent instances, secured the concurrence of appointing officials in advancing the maximum-age limit beyond the normal point, 15 to 17 years below the applicable retirement age. In these cases the Commission has believed the considerations previously mentioned to be outweighed by the pressing demands of the defense program. For example, the Commission's policy has been to extend maximum age limits for any of the skilled trades or occupations in which shortages exist, and in which an extension of age limitations would possibly make available a reserve of skilled workers between the maximum age limits normally prescribed and the retirement age. Shipfitters, loftsmen, coppersmiths, machinists, toolmakers, and instrument makers are among the large number of positions in the artisan class for which the maximum age has been extended to 62 years, the retirement age for mechanics in the naval establishments. Coincidentally with the extension of the age limitations the Commission has directed modifications in the physical standards formerly required, in recognition of the definite relation between advancing age and the appearance of physical impairments. It was realized that in a very large proportion of the cases affected by raising age limits the services of many persons would be lost to the service if there was not a corresponding adjustment in physical standards.

The extension of the maximum age limitations has not been confined to the artisan class of workers. Among the professional and subprofessional positions for which advanced age limits have recently been established may be mentioned the following: Assistant to principal naval architect, and marine engineer, 70 years; inspector of engineering materials, and inspector of ship construction, 65 years; marine surveyor, radiosonde technician, and professional engineer positions of various grades and options, 60 years. Further, the Commission has given authorization to its district managers, where a shortage of defense employees is anticipated, to extend the maximum age beyond the customary limitation, in any case in which such an extension would not contravene administrative regulations of the department concerned, with respect to age limits. In cases of this nature it is necessary, as I have previously explained, that concurrence of the department be obtained. I am enclosing two of the Commission's forms which will give more detailed indication of the extent to which age limits have been raised during the present emergency.

In considering the subject of examination age limits, it may be further observed that such limits are in nearly all cases waived for persons entitled to military preference, and that in any event a distinction must be made between entrance into the service and retention therein. In the classified service there is in no sense discrimination against older employees through their discharge in later years as is sometimes the case in private industry. On the contrary, under the Retirement Act, the Congress has provided an orderly means for the compensation of employees who have reached the retirement age.

I believe you will agree that the policies outlined above provide in full measure for consideration of the interest of both the older members of the population, and the national welfare during the present emergency. I can assure you that the Commission, within the limits of its authority, will continue to establish maximum age limits at the highest feasible levels.

Your interest in the Commission's problems, and your courtesy in extending an opportunity for comment are greatly appreciated.

By direction of the Commission.

Very respectfully,

WM. C. HULL,
Executive Assistant.

Keep America Out of War

EXTENSION OF REMARKS
OF
HON. JAMES F. O'CONNOR
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1941

LETTERS FROM CONSTITUENTS

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

PORTAGE, MONT., *April 21, 1941.*

MR. JAMES F. O'CONNOR,
House Office Building,
Washington, D. C.

DEAR MR. O'CONNOR: I wish to inform you that here is one more opposed to convoying material to Europe with our boats and boys. If we were going to war why didn't we declare war. No! The people were not ready for war and they still are not. Industry is so desirous of profit that they won't let the working man have a living wage increase when his cost of living goes up. We cannot produce with conflicting conditions of this kind existing. We are striving to retain democracy, not to bring profit to the man that owns stock in war-defense industry. Let's steer clear of war until things are clear as to where we are going to fight and for what purpose.

I also ask you to vote for the income certificate bill for agriculture. If Congress fails to appropriate parity payments some of these days we'll be hungry and hungry people are hard to control.

Sincerely,

MELVIN E. GOOD.

PORTAGE, MONT.,
April 20, 1941.

Mr. JAMES F. O'CONNOR,
House Office Building, Washington, D. C.

DEAR MR. O'CONNOR: I feel it is my duty, as a citizen, to write you regarding the problem confronting us today, namely, our entry into this European war.

Do you feel we are well enough prepared to take an active part?

If we should enter and win (?) how could we handle the subdued countries, when we have such a perplexing problem of trying to make our present system work for the good of all?

Have we any plan of defense or attack? We went blindly into the last war. It seems that lesson should teach us our place is at home spending our time getting our people more thoroughly educated so our democracy will work.

Can we afford, at this time, to sacrifice our young men for a cause (which the radio and newspapers) seem to think is a just one?

Senator TOBEY's anticonvoy bill and the resolution by Senator NYE, both seem gravely important measures for your consideration.

We feel sure you will keep faith with the millions of common working people, and do all you can to keep our boys at home.

Very truly yours,

MRS. MELVIN GOOD.

Say Good-bye to Your Boots

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1941

EDITORIAL FROM THE CHICAGO TRIBUNE

Mr. SHAFER of Michigan. Mr. Speaker, under permission to extend my remarks, I include the following editorial from the Chicago Tribune:

[From the Chicago Tribune]

SAY GOOD-BYE TO YOUR BOOTS

Mr. Morgenthau of the Treasury is giving the American citizens a preview of what is to come. The other day one of the New Deal congressional leaders said that the new taxes would lift the people out of their boots. Mr. Morgenthau's preview would indicate that the boots will be taken away along with the shirt. The Secretary of the Treasury seemed almost happy about it. The taxes, he said, would be the greatest ever imposed in America and as a proud American he added that they might be the greatest ever imposed in the world.

Pay day is coming after 8 years of peacetime spending in an idiot's paradise of funny money and funny ideas about debts and deficits. Upon a mountain of peacetime debts is piled a mountain of war debts, and the period of the idiot's delight has come to an end. Everybody will now turn his pockets inside out and hand the contents over to the internal-revenue collector.

Mr. Morgenthau hopes everybody will be very glad to increase the Government's take out of his earnings and it is forecast that every method known to the tax collector will be employed.

The high-bracket taxpayers have become accustomed to giving up the larger share of what they take in. Mr. Morgenthau will not be able to get very much more out of them. Even if he took everything they earned he wouldn't get far in meeting his bills. He will put the squeeze on the fellow of average means and upon the wage earner. The little taste of high taxes contained in the current year's boost was known to be nothing at all, and even the new taxes which are to lift the citizen out of his boots will be only a sample of what is yet to come.

Before the New Deal and the New Deal's war are liquidated the American people will know what it is to pay for reckless government. Their purchasing power will be diminished and their economists tell them that they will be in unexpected luck if prices do not skyrocket on them. With budgets reduced by Government exactions they may find themselves giving up habits, commodities, and articles which they have been accustomed to enjoy as a matter of course. The American standard of living will come down to a new low level as American taxes go to a new high.

Importance of Federal Reclamation Program

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1941

STATEMENT BY HON. COMPTON I. WHITE, OF IDAHO

Mr. WHITE. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit the following statement made before the subcommittee of the Committee on Appropriations on the subject of irrigation and reclamation, as follows:

Before discussing individual appropriations, in which I am interested, I desire to call the attention of the committee to two important phases of the Federal reclamation program. As chairman of the House Committee on Irrigation and Reclamation, I have given some study to the significance of the reclamation developments from a national standpoint under both normal and emergency conditions. The stabilizing influence of these projects on the West, their contribution to the national welfare, and the groundwork they lay for the future security of the growing population of the West should not be overlooked.

But in view of the emergency that confronts the country, it is of vital moment that we also consider what this program, if adequately financed, will contribute to the national defense through power for industries and food for our armed forces and the Nation at large.

From surveys made by the Idaho State Planning Board of incoming and outgoing shipments from the Boise project in my State of Idaho, where more than 300,000 acres are watered by the Federal program, and other authentic information, I am able to summarize certain facts as follows:

1. Federal reclamation projects as a whole have created and maintain a market worth a quarter of a billion dollars annually to the manufacturers and farmers east of the Rocky Mountains.

2. For every dollar's worth of farm products shipped eastward from the Boise project, a typical development located west of the Great Divide, there is received $6.50 worth of manufactured products and food supplies from the Middle West, the East, and the South.

3. The facts are against suggestions that Federal reclamation creates competition for the farmers of other sections of the country. In 1939, out of 10,000 carloads of agricultural products shipped from the Boise project, only 134 carried wheat and corn. Most of these, along with 65 percent of the outgoing products, went to Pacific coast and Intermountain points. Shipped eastward were potatoes, lettuce, onions, and some fruits which can be marketed in eastern areas only when the farms near the great producing centers are not in season. High freight rates must be paid on east-bound shipments.

4. While the outgoing farm products from a typical project like Boise have an average value of $400 to $500 a carload, the incoming shipments of automobiles, machinery, household equipment, electrical supplies, etc., from east of the Rockies range in value from $2,000 to $3,000 a carload.

5. You are familiar with the fact, no doubt, that no tobacco is produced on irrigated land. Cotton is grown on only a few projects to the southward. The amount of wheat and corn produced on all irrigated land in the West would not be sufficient for the needs of the immediate areas, based on the average per capita consumption of these commodities.

6. A few years ago a detailed survey of purchases by settlers on the Boise project showed that 75 cents out of every dollar they received was expended for commodities produced east of the Rocky Mountains. About 70 percent of the incoming shipments to the Boise project, so far as value is concerned, originate in the Middle West, East, and South.

7. To illustrate that the figures from the Boise project are not that of an isolated development, well-authenticated reports show that on the Salt River project in Arizona, 80 percent of the wholesale purchases was of commodities originating east of the Rocky Mountains. The Washington State Planning Board reports that more than 50 percent of the income of the settlers in the Yakima Valley goes for commodities produced or processed in the East.

By way of illustration, I may point out that in 1939, the industries of Ohio shipped 130 carloads of manufactures material to stations on the Boise project. The Pennsylvania factories dispatched about 74 carloads of machinery and other supplies. New York State sent us 63 carloads. From Oklahoma we received more than 50 carloads of oils and miscellaneoues products. As the purchasing power originating on the Boise project is about 5 percent of the total resulting from reclamation developments, multiplication of these figures gives you some idea of the value of the markets created by this Federal policy.

Compare this market with our foreign trade. Its value exceeds that of the Nation's normal foreign trade with more than any of 50 nations, including any in Latin America.

So much for the normal commercial value of Federal reclamation.

A sound logical expansion of the Federal program on a much more effective scale than is proposed in the appropriations outlined in the pending bill will produce national benefits commensurate with the additional investment the Federal Government makes. Since the census figures show that the West is increasing in population at a rate twice the national average, the normal demand for irrigated land is increasing.

We know that the national-defense industries located in the industrial centers cannot furnish employment for the thousands of unskilled wage earners among the migrant

families from the Great Plains and elsewhere who know nothing but farming. We also know that when the surge of national-defense employment is ended that the demand for farm land in the irrigated West will be even greater.

The expenditures from the Federal Treasury for relief in the 17 western States of more than two and a half billion dollars in 7 years are significant. We know this huge outlay has been due in a large part to the inability of the West to settle any considerable part of the migrant farm families who have moved into the region in the last 10 years on land where they could become self-sustaining.

Whatever may come, the conclusion is inescapable that Federal reclamation must move forward at a faster pace.

I am sure I need not remind this committee of what happened during World War I. Our vast agricultural resources proved inadequate to meet the country's needs just as we are finding it necessary to expand our industrial machinery in order to provide arms and ammunition and ships in the present emergency. We also know that the private utilities were unable to furnish the country with all the electric power needed 23 years ago.

If we are in for a war or for an emergency as great as the strenuous preparations we are making for national defense indicate, then we must look to our sources of food supplies. It is only through adequate provision for maintenance of irrigation water supplies that we can assure the country of the contribution to which it will look to the West to make.

And in speaking of Federal irrigation or reclamation developments that can be brought about by adequate appropriations, I have in mind three types of projects, each of which is vital in its respective field. On many of these projects the power to be brought in is vital to the national defense.

First. The maintenance of established agricultural areas through supplemental water supplies that can be provided through speeding the construction of such projects as the Central Valley in California, the Colorado-Big Thompson in Colorado, Provo River in Utah, and the Anderson Ranch development of the Boise project in my own State of Idaho. A logical expansion of this type of project would include the badly needed Grand Valley project on the Upper Snake River to insure better power and water supplies for southeastern and southern Idaho.

Second. The completion of projects under construction that will provide opportunities for the settlement of newcomers to the West and for the younger generation already there who are seeking irrigated farms of their own. I mention projects like Grand Coulee in the Columbia Basin, the Payette division of the Boise project, the Deschutes project in Oregon, and the Tucumcari project in New Mexico.

Third. Sufficient reimbursable funds to permit the Bureau of Reclamation to advance the construction of water-conservation projects, with the cooperation of the Work Projects Administration and the Civilian Conservation Corps. These small projects are designed to rehabilitate established agricultural areas where drought or water shortages not only threaten the stability of farmers and townspeople dependent on agriculture in the area, but may drive them to join the migrants already in the West.

Still another phase of this situation has to do with the appropriation of adequate funds for surveys and investigations by the Bureau of Reclamation. If we are to have projects ready for the employment of hundreds of thousands of industrial workers who will be out of jobs when the present defense activity recedes, the Bureau must have a backlog of projects ready for presentation to the Congress. Thorough investigations of the water resources of the 17 Western States cannot be made with the limited funds that have been at the disposal of the Bureau in the past.

In this connection, I believe the Bureau of Reclamation should be provided with funds to investigate the possibility of reclaiming cut-over lands which have rich soil and are capable of being converted into productive farms. Expansion of irrigation and the utilization of the cut-over lands, wherever found feasible, should go hand in hand.

Now as to the specific items in which my district is interested:

Payette division of the Boise project: The half-million dollars provided for principally continuing construction of the irrigation system will not permit advancing work on Cascade Dam as rapidly as needed. The entire 52,000 acres in this division can be settled as soon as water is available. At the rate appropriations are proposed in this bill, it will be 6 years before all of the land will be available for settlement.

We should have at least $1,500,000 for the Cascade Reservoir for fiscal year 1942 in order that construction may be completed in the shortest possible time.

The Cascade Reservoir will store more water than required for the Payette Division of the Boise project. This surplus will be later allocated by the Secretary of the Interior for irrigation of adjacent lands. Commissioner Page has therefore suggested that the following language be inserted in the appropriation item for the Payette division of the Boise project:

"Provided, that such part of the storage capacity of the Cascade Reservoir, and the costs thereof, shall be reserved for other irrigation or power developments in and adjacent to the Boise project, as shall be determined by the Secretary of the Interior."

Anderson Ranch (Arrowrock division, Boise project): If we are to maintain production on a long-established area to afford purchasing power in peacetime and additional food in emergencies, supplementary water must be provided for 160,000 acres in the Arrowrock division of the Boise project. This reservoir will also make possible the installation of a power plant to produce 20,000 kilowatts of power badly needed for irrigation pumping and commercial purposes.

Investigations and surveys: $500,000 has been proposed by the Bureau of the Budget for this purpose. This is entirely too small an item to cover the needs of the 17 States of the arid and semiarid region. The Bureau of Reclamation estimates that not less than $1,500,000 is necessary to carry on this work and prepare reclamation projects to be included "in the shelf of projects" which President Roosevelt has stated must be ready for construction when the peak of the defense program has been passed.

Water conservation and utility projects: When you consider that more than 300,000 families were driven from the Great Plains in the last 10 years by drought and that half of these migrated westward, you can get some idea of the importance of anchoring farm families in their present locations. At least $6,000,000 in reimbursable funds is necessary annually for these projects. Idaho needs 15 of these projects and an allotment of at least $500,000 for construction of small reservoir projects during the fiscal year 1942.

The pending Department of the Interior appropriation bill carries a total of $62,800,000 for Bureau of Reclamation construction compared with $78,614,000 appropriated by the last Congress.

The principal reduction is $11,000,000 in the appropriation for Grand Coulee.

The amount for investigations and surveys is reduced from $625,000 to $500,000.

The appropriation of $3,500,000 for water conservation and utility projects is the same as last year.

Idaho items are as follows:

Minidoka power plant: $50,000 to complete work in connection with an additional unit which will increase the capacity of the plant to 16,000 kilovolt-amperes. The original cost of this unit was estimated at $500,000, but certain additional work was necessary.

Boise project, Payette division: The appropriation of $500,000 will make a total of $5,334,000 provided for the development which will cost $8,847,000. It will irrigate about 52,000 acres and provide farmsteads for 800 to 1,000 families.

Boise-Arrowrock division (Anderson Ranch Reservoir): This development is to provide supplemental water for 160,000 acres already irrigated in the Boise project. It will provide flood control and 20,000 kilowatts of electric power. The $750,000 carried in this bill will make a total of $1,500,000 provided for the project which will cost $13,100,000. Of the construction costs, $5,050,000 has been allocated to flood control; $3,400,000 to power development; and $4,650,000 to irrigation. The irrigation costs will be repaid by the irrigation districts of the Boise project.

Student Peace Meetings

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1941

ADDRESS BY HON. VITO MARCANTONIO

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks, I include herein my speech recorded for the occasion of the student peace meetings held throughout the country on Wednesday, April 23, 1941:

I greet the students of America on this occasion on which they have met to speak out for peace and freedom. It is encouraging to know that the students of these United States have refused to sacrifice their right to talk as free men and free women today in exchange for the unenviable privilege of whining as slaves tomorrow. It is heartening to know that the students of America are uniting and fighting not only for the freedom of their universities but for the peace and freedom of our Nation.

Those of us who are engaged in the struggle to pull America out of war and to preserve and extend our democracy are not appeasers nor the spokesmen for any foreign group or capital. We take orders neither from Moscow, Berlin, Rome, Downing Street, or, specifically, from Wall Street. In a sense, however, we do take orders. In fact, we follow dictates, the dictates of a conscience which exists in the unity of the masses of the American people. Those who have been following a course of plunging our country into war cannot say the same. They are taking orders. They are following the dictates of a new axis, the Wall Street-Downing Street Axis, an axis which had been entered into secretly, without the knowledge or consent of the American people, prior to the beginning of the second World War, and which was partly reduced to writing by the lease-lend bill—this axis, like the Rome-Berlin-Tokyo Axis is an axis for empire, profits, more profits and more exploitation of more people. Due to the weakness of Downing Street, Wall Street has become the senior partner in this new imperialist axis. We who believe in freedom repudiate both of these axes, for both are repugnant to every concept of our American way of life. We refuse appeasement to both the Hitler-Rome-Tokyo-Berlin Axis and the Roosevelt-Churchill-Wall Street-Downing Street Axis. We repudiate both and we unite to struggle for the defeat of both. We the people shall live up to that trust which the great tradition for peace and

freedom have reposed in us. You the students of America will not fail.

The spokesmen for the Wall Street-Downing Street axis have found in the people of the United States a formidable, uncompromising and historical resistance to this war. Therefore, their conspiracy to ensnare the people of the United States into the orbit of imperialist war had to be and has been marked by fraud and deception from its very beginning. It has been carried on by fraud and deception, and now they are seeking to complete it by fraud and deception. The history of this conspiracy is the history of a crime. Every step in this conspiracy has been sold to the American people as an overt act for peace when in reality it was a covert act for war. A program of $40,000,000,000 for war armaments was launched on our country as a national defense in June 1940 as defense against invasion. In December, in January, and in March of this year, the President dropped the mask of national defense against invasion, and brazenly admitted that these armaments were to constitute our Nation into an arsenal, an arsenal for one side as against the other, an arsenal as carried out in the lease-lend bill, not for democracy, but for imperialism—thereby from a standpoint of armaments, deliberately placing our country into war. Fifty destroyers were transferred by an intellectually dishonest opinion of the Attorney General, also in the name of national defense, despite the fact that now we know that this step technically further plunged us into war. In September conscription was given to the American people under the guise of peacetime training for America's youth. Today we learn that not a single person in the War Department or in the camps has the temerity to repeat such a falsehood, for it is universally accepted that our boys are being trained for war. The people of these United States were forced to go through a Presidential election which was a fraud and a mockery of democratic government, perpetrated by the selfsame Wall Street-Downing Street axis, its agents, and its dupes. The President was given an opponent who offered him no opposition to his war program, neither on conscription nor on aid to Britain short of war, which incidentally has only shortened the distance between war and peace.

Despite the crafty character of this plot, both candidates were compelled to pledge to keep America out of this war, due again to the resistance of the American people against participation in this imperialist holocaust. Yet despite this preelection pledge to keep us out of war, the President in his address to the Jackson Day diners and to the Washington correspondents, not only incited for a legislative lynching of the Bill of Rights and for the persecution of those who are genuinely opposed to both axes in their fight for peace, but said that we must win this war. Today the curtain is lifting and in the corridors of Congress and throughout Washington we are told that we are in war, that we must win this war, and that we must support every action toward making this war a success. This is the new line of the Wall Street-Downing Street axis, its agents, and its dupes. In America, people today ask whose war is it, this war that the President said we must win. It is the President's war, it is the war of the Morgans and the Du Ponts, of the economic royalists, and of the enemies of democracy. It is not a war of the American people. This war, the President's war, the economic royalists war, the Wall Street-Downing Street-axis war, is an undeclared war, without the consent of the American people. It is the duty of every patriotic American not to support this war, but to repudiate it, not to plunge further into it, by convoys or by other stealthy means, but to pull our Government out of it.

America's democracy can be saved and will be saved, against Hitler's Rome-Tokyo-Berlin Axis, as well as against the Wall Street-Downing Street Axis, its agents and its dupes. This will be and must be done by collaborating with the democratic people throughout the world, by feeding the 52,000,000 shrunken bellies of America, by making our democracy live, by bringing it to every home, farm, mill, factory, school, and university, by abolishing the poll tax, and guaranteeing in practice the Bill of Rights, for everybody in America, including political minorities; to see to it that no exceptions shall be placed in the proposition of our Declaration of Independence that all men are created equal. Let us fight for these things, not by becoming the victims of either one of the two axes, not by plunging further into this war, but by getting our Government out of this war and staying out of this war. Let us have faith in the masses of America. Not the economic royalists, not the agents and dupes of the Wall Street-Downing Street axis, not seduced labor leaders, and not the President will save America. The American masses will save America. They saved our Nation in 1776. They defended and extended its democracy in 1860, and they will save America, its peace, its freedom, and its institutions in 1941.

Huey Pierce Long

REMARKS

OF

HON. NEWT V. MILLS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1941

Mr. MILLS of Louisiana. Mr. Speaker, we hope in dedicating the statue of Huey P. Long to this and the generations yet to come to play a little part by showing our appreciation of a beloved Louisianian who gave the entirety of his life to his country, that others may live in more abundance.

His life story is fantastic, for it seems incredible that any man could have accomplished so much in the few years allotted him, however, in Louisiana may be found monuments practically in every community that keeps the memory of Huey burning in the hearts of his countrymen.

His keen perception of human nature, his shrewd understanding of psychology, and his impeccable politeness sometimes caused his antagonists, and even his supporters, to lose sight of the steely strength, the fixity of purpose, and the daring which won for him so many objectives. Of no man could it more truly be said that even those who vied with him in debate or in political strategy felt naught but the highest admiration for his attainments. He was a man of brilliant parts and one of the most eloquent orators of his generation. I have heard him speak upon almost every kind of an occasion and he never failed to captivate his audience. He possessed one of the most exact and copious vocabularies of any political leader and his language was chaste and beautiful; however, shortly before his death he gave a better characterization of himself, which follows:

Mr. President, I am not undertaking to answer the charge that I am ignorant. It is true. I am an ignorant man. I have had no college education. I have not even had a high-school education. But the thing that takes me far in politics is that I do not have to color what comes into my mind and into my heart. I say it unvarnished. I have not colored my own. I know when I am right in my own conscience. I do not talk one way in the cloakroom and another way out here. I do not talk one way back there in the hills of Louisiana and another way here in the Senate. I have one language. Ignorant as it is, it is the universal language of the sphere in which I operate. Its simplicity gains pardon for my lack of letters and education.

Without regard to geographical location, I believe the Nation recognized Huey P. Long as a great humanitarian and that he possessed a keen mind which was always his chief weapon. I think we will all admit the Nation lost a profound philosopher and statesman, as he was gentle, kindly, and beloved by all those who intimately knew him and we say: It is true others have come since he has gone, but he cannot be held responsible for what they have done. So peace to his soul and expanding glory to his influence and to his memory among all the millions in America who admired and knew him. Louisianian, O Louisianian, the champion of the poor, we knew you for the love of the underprivileged and remember the poem you so loved.

Out of the night that covers me,
Black as the pit from pole to pole,
I thank whatever gods may be
For my unconquerable soul.
In the fell clutch of circumstance,
I have not winced nor cried aloud;
Beneath the bludgeoning of chance
My head is bloody but unbowed.
It matters not how strait the gate,
How charged with punishments the scroll,
I am the master of my fate:
I am the captain of my soul.

Our friend was more than a Republican or a Democrat—he was a leader, and injured innocence always resorted by giving him confidence. Huey had known the bitter sorrows that come to men, but his fine optimism could not be crushed. Disappointments only whetted his determination to achieve. Delays only strengthened his patience. Opposition only refined his courage. Is it any wonder Louisiana loved him so?

His useful life, his interest in the poor have identified him among the immortal statesmen who have boldly proclaimed the true object of life is to live for others.

As shadows cast by cloud and sun
Flit o'er the summer grass,
So, in Thy sight, Almighty One,
Earth's generations pass;
And as the years, and endless host,
Come swiftly pressing on,
The brightest names that earth can boast
Just glisten and are gone.

Convoys to England

EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1941

ASSOCIATED PRESS ARTICLE

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD.

I include the following Associated Press report from Montgomery, Ala.:

LABOR NOT APPREHENSIVE ON CONVOYS, GREEN SAYS

(By the Associated Press)

MONTGOMERY, ALA., April 22.—William Green, president of the American Federation of Labor, said today labor is not apprehensive regarding the possibility of United States convoys to England because President Roosevelt gave assurance they wouldn't be used.

The lease-lend bill, Mr. Green said, had the support of the A. F. of L., and while it was pending Mr. Roosevelt gave the Nation assurance that convoys would not be used.

Referring to the Vinson labor regulation bill now pending as bad, Mr. Green said its passage would create discontent and rebellion among men now in a fine frame of mind.

Ireland's Neutrality—Why Should Ireland Suffer at the Hands of the Roosevelt Administration Just Because England Continues To Dominate Our Foreign Policies and Relations?

EXTENSION OF REMARKS

OF

HON. MARTIN L. SWEENEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1941

LETTER FROM JOHN O'CONNOR, OF NEW YORK, FORMER CHAIRMAN OF THE RULES COMMITTEE OF THE HOUSE, TO A PROMINENT CITIZEN OF NEW YORK, WILLIAM GRIFFIN, EDITOR AND PUBLISHER OF THE NEW YORK ENQUIRER

Mr. SWEENEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very timely and interesting letter written by the Honorable John J. O'Connor, our former colleague, and former chairman of the Rules Committee of the House of Representatives, touching upon the relations of the United States, England, and Ireland.

The excerpts from a recent radio broadcast by Prime Minister Eamon de Valera in his address to the people of the United States, which Mr. O'Connor includes in his letter, gives a conclusive answer to those warmongers who, without justification, criticize the Irish Free State for failure to turn over certain strategic sea bases in Ireland recently restored to that country after centuries of illegal control by England.

From the best of my information, there are at least 60 Members of the present House of Representatives and 12 Members of the United States Senate who are of the first, second, or third generation of Irish-born parents. There are many more Members of the present Congress from Scotch and Welsh parents, who know what democracy means better than the aggressor nations. Many of these public servants voted for the lend-lease bill to aid Great Britain in the present crisis. No one questions their American patriotism, but it remains to be seen what their actions will be in coming to the assistance of the Irish nation, whose contribution of blood and treasure to the creation of our Republic is not excelled by any nation on God's earth.

The letter follows:

WASHINGTON, *D. C., April 17, 1941.*

Since when did it come about that the sole concern of our people is for Dear Old Mother England to the neglect of all the other "mother" countries, which have contributed so much to our own land?

Specifically, I have in mind the outrageous treatment now being accorded Ireland at the hands of the administration, which is wholly subservient to Downing Street.

For some time Ireland has been beseeching the United States to sell it food, and a slight amount of munitions, to prevent its people, your relatives and mine, from starving. Eire is not asking for the lend or lease or gift of anything. She is willing to pay for everything she can get, but the English Foreign Office and the English Embassy in Washington have turned thumbs down on the plea—while Winston Churchill, who told you frankly about what he thought of America butting into the last World War, is all thumbs up—whistling in the dark to keep his courage, but ready at any moment to make a separate peace with Germany and toss overboard all England's allies, including the "all-outers" in the United States.

Prime Minister Eamon de Valera, in a recent broadcast to the people of the United States of America, said:

"When the present war broke out, agreements were made with Great Britain of mutual advantage in regard to the purchase of foreign exchange and the chartering of ships whereby Ireland could look ahead to receiving a reasonable supply of the commodities she was likely to need. The reserves we had accumulated and the supplies we received under these agreements enabled us to come through the first 18 months of the war without any very grave dislocation of our economic life. It is only within the last couple of months that serious shortages have begun to be felt. Both sides, in blockading each other, were blockading us, and first imports of petrol, then tea and coal, began successively to diminish to the point when rationing became necessary—rationing which is almost certain to become more and more severe as time goes on.

"A shortage of wheat is, however, our principal cause of concern. We have been endeavoring with intensifying effort to get our acreage under wheat doubled so as to meet our full requirements, but the weather has not favored late sowing of winter wheat and it is almost certain that we cannot now make up for the shortage by a sufficient increase of spring wheat. We are, then, in grave danger of being short of our bread supply, which will be a grievous hardship to children and the poor unless we can import sufficient wheat to fill the gap. That is a very considerable quantity, many tens of thousands of tons. It is to try to arrange for this import and for the import of some other essential raw materials that Mr. Aiken, our Minister for Coordination of Defensive Measures, has left for the United States. I am confident that all old friends there will give him whatever aid lies in their power.

"We seek only facilities to purchase. We shall pay for what we receive. We are, as is well known, a creditor country. The excess produce which we have sent to Britain over years has resulted in our building up in that country claims entitling us to goods from her in return amounting to some two or three hundred million pounds sterling, say $1,000,000,000 to $1,500,000,000.

"These claims are, owing to the war, not now to any substantial extent realizable in dollars. Temporary dollar credits may accordingly have to be arranged.

"Some American publicists have said they fear our country may be used as a base of attack against Britain. We have pledged ourselves that this shall not be. We are determined that no one of the belligerents shall use the territory of our State as a basis of attack upon another. For us to permit such things to be done would be to involve ourselves in the war.

"Last summer, when it seemed that we might be in special danger, we called for volunteers for our defense forces. Within 3 months 200,000 of our men, the equivalent of some 8,000,000 men of the population of the United States, answered the call. They are not unarmed, but we want to arm them with the most modern and best weapons available.

"Part of Mr. Aiken's mission is to purchase, if possible, such weapons in the United States. All who would render services to Ireland will help him.

"It has taken an effort of centuries to win back the independence we have got. We are determined it shall not be lost again."

The Honorable Frank Aiken is now in the United States but there is a feeling around Washington that he may be hoodwinked, by jovial conferences at the State Department and lunches at the White House, into falling into the trap deliberately planned for him of agreeing to a quid pro quo, the surrendering of part of Eire to the British Empire for bases, to fight Germany now—and the Irish later.

Shades of those martyrs of Easter Monday, just 25 years ago, who fell before the British firing squads that Ireland might be free. Is this galaxy of Irish patriots looking down on what is going on today, with hardly a protest from their kinfolk in America?

What are they thinking?

Thomas J. Clarke, the fighting patriot, who had known the squalor of English jails for 15 years; Thomas MacDonagh, the scholar; Padriac H. Pearse, the renowned writer; Eamonn Ceannt, of The Volunteers; James Connolly, the champion of labor, who, although wounded, was strapped to a chair and placed before the firing squad; Joseph Plunkett, the diplomat.

Speaking now for them and their colleagues, who faced the British firing squad, is the young troop commander of that historic revolution, Eamon de Valera, the last man to surrender at Ringside, Dublin. Luckily for the Irish and for the world, he has survived the British sentence to death and its commutation to penal servitude for life.

Just recently it was brought to my personal attention that a group of New York citizens, interested in saving Ireland from starvation, proposed to purchase a ship to carry foodstuffs—no munitions or contraband of war—to Ireland.

Because England still claims control of the seas, nothing can move out of our ports, at least headed East, without England's permission. For some time they required a navicert, a document certified by the British Embassy, before an American ship could sail from an American port, bound for Europe. Now it is a warranty that must be obtained. In this particular instance, no warranty has been issued, despite the vehement intercession of a distinguished United States Senator who championed the lease-lend bill. The only interest evidenced by the British Embassy was in trying to find out the name of the ship so it might be bought by the British Government for its own purposes of conveying munitions.

That English policy of letting every other nation starve was settled long ago by England's adamant refusal to let ex-President Hoover and his committee transport food to starving Belgium, Holland, and France, even though Germany agreed to permit the foodstuffs to reach their intended recipients.

Just who is running this world of ours?

If France alone had been fighting Germany, would we ever have had all this hullabaloo about all-out aid to France?

If the present situation were reversed and we were alone fighting Germany, would we be getting all-out aid from the British Isles? History records quite the opposite on every similar occasion. England always aided our enemy.

I dare to ask these questions, despite my every hour wish for the defeat of Hitler and his ilk and everything they stand for, because I am concerned first with the welfare of my own country, the United States; but if we are going to violate all our traditions of not sticking our nose into foreign affairs, we ought to play the game fair and see that every nation gets a fair break, including Ireland.

It remains to be seen what our Representatives and Senators in Congress who voted for the lend-lease bill, especially those from our big cities, will do about this touching appeal of Eire.

Bainbridge Area Farmer and His Problem

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1941

EDITORIAL FROM THE BAINBRIDGE (N. Y.) NEWS

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bainbridge (N. Y.) News:

[From the Bainbridge (N. Y.) News]

BAINBRIDGE AREA FARMER AND HIS PROBLEM

The Bainbridge area and similar rural sections throughout the State have suddenly been brought face to face with a problem which must be solved and solved quickly. Ever since the national-defense program started factories humming, the shortage of farm labor has increased alarmingly until now it is a real problem—a problem acute to the point of gravity.

Only too evident in this section is the fact that farm workers are quitting their jobs to accept positions in plants engaged in national-defense work. Perhaps the outstanding example in this vicinity is the huge and still-expanding Scintilla plant at Sidney. Considering their action in an unprejudiced light, we can easily detect the element of logicalness which leads to the farmhand's eventual decision. The farmers are unable to prevent this wholesale evacuation for they cannot possibly compete with the factories either in wages or hours of labor. To add to the farmer's problem, the capable men who do not yield to the lure of quick money in industrial plants are demanding higher wages. However, the crowning blow to the hapless farmer is the gradual increase in farm-production costs. Feed prices are up, farm machinery and other equipment prices are advancing, and it is inevitable that taxes in general will soar. Bainbridge area farmers have joined in the general head scratching over this problem of producing milk with present milk-production costs, selling at present prices, and still remaining solvent.

It is now apparent that the only hope the farmer has of keeping out of the red is by obtaining a substantial increase in the selling price of his milk.

A mass meeting to which every farmer in Delaware County, regardless of creamery or organization affiliations, will be invited is to be held in Delhi or Walton in the near future. This mass meeting will constitute an effort to coordinate Delaware County dairymen in a united drive to obtain a better price for milk. Bainbridge area farmers hear with interest of the ringing speech delivered recently by John V. Johnson, of Oneonta, editor of the Dairy Farmer union paper, as he told county union members they could choose to ride along with the slow workings of the Federal milk marketing order or they could unite and demand a higher price for May and June milk. Mr. Johnson said "Demanding a better price for milk is a serious decision to make, but when you do demand that price back it up with everything the threat implies. If the farmer says, 'Pay or else,' and they don't pay, we will have the worst fight ever seen in this milk shed."

Until the price of milk is increased there appears to be little chance of alleviating the farmer's problem of labor shortage caused by factory appeal and selective service. It is interesting to note in today's news the shortcuts to save time and labor that the farmers have adopted. One farmer, instead of plowing his old cabbage fields before sowing oats, merely harrowed deeply with a three-section spring-tooth harrow. The harrow stirs the soil to a depth of 4 or 5 inches and the grain drill can do a good job of covering. Many dairymen plan to put hay in the silo when weather is unfavorable for hay making. Others are repairing machinery to insure its usefulness for the coming season and some are purchasing new machinery, but for the most part purchase of new farm equipment this year is expected to dip sharply.

Area farmers are lime conscious this spring for orders to date are far in excess of orders of last year at this time. Possibly a careful consideration of the farm labor shortage has influenced them to use what help is now available to apply lime before the rush of other work. Prices for superphosphate and other fertilizing materials this year are relatively cheap but it is very probable that the labor shortage; rather than the lower price, is responsible for the early purchasing.

We have briefly reviewed the present problem of the Bainbridge area farmer and the highlights of the situation that we have mentioned are probably very similar throughout the State.

In searching for a solution to the present problem we have developed the theory that agricultural and milk prices must follow current trends. Our farmer cannot be expected to adhere to an outdated price structure when costs of all kinds are soaring.

Increased Taxation

EXTENSION OF REMARKS

OF

HON. VANCE PLAUCHÉ

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1941

EDITORIAL FROM THE LAKE CHARLES (LA.) AMERICAN PRESS

Mr. PLAUCHÉ. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial written by Hon. Frank Smith, editor of the Lake Charles (La.) American Press:

[From the Lake Charles (La.) American Press]

TAXES WANTED

Congressmen are in a very unusual position with regards to the enactment of tax bills. Possibly never in the history of our Nation have the people seen so clearly the need for increased taxation and have been as willing to pay higher levies.

Everyone is conscious of the fact that our national debt is already very huge. The people know, too, that the defense spending is going to raise the debt sharply even if there are more taxes levied, and they realize that if our national credit is to be maintained we must make a greater effort to pay as we go. The majority of people fear a period of rapid inflation which they know is possible if our national debt gets so high it is uncontrollable. Citizens remember what happened in Germany and France after the last war, and they want none of it. They don't want their savings swept away by inflation.

In consequence, the taxpayers are actually anxious to see Congress enact tax measures that will hold the national debt within limits that can be controlled.

Greater Reclamation Development Is Essential to Idaho's Future Growth

EXTENSION OF REMARKS

OF

HON. HENRY C. DWORSHAK

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1941

STATEMENT BY HON. HENRY C. DWORSHAK, OF IDAHO

Mr. DWORSHAK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement which I made on April 18, 1941, before the House committee considering appropriations for the Department of the Interior for the fiscal year ending June 30, 1942:

Mr. DWORSHAK. Gentlemen of the committee, it is a real pleasure to appear before you to make a brief presentation in the interest of Idaho reclamation. I say that advisedly because I realize, as was intimated a few moments ago by several members of the committee, you are all sympathetic and friendly toward reclamation development in the arid States of the West. And I regret my colleague, BOB RICH, is not present because I wanted to refer briefly to the statement he made on the floor of the House about 3 weeks ago during a debate on a certain appropriation bill.

We all recall that Mr. RICH has been somewhat opposed to some of the appropriations which have been recommended by your committee in the past. But he stated at that time that, because of the huge appropriations being made which were not reimbursable, he had changed his mind in regard to reclamation; and was willing to admit now that, if we are to expend these huge sums in our country and elsewhere, possibly reclamation should be deserving of greater consideration, because the Government has a good chance of recovering practically all of the money

appropriated and expended in behalf of the reclamation projects. I wanted to say that particularly for the benefit of the committee, because I believe that it is a significant statement in view of the attitude of Congressman RICH in the past years.

Mr. LEAVY. Mr. DWORSHAK, I want to ask you if it is your deliberate and considered judgment that these reclamation projects now under way and those that are feasible and in immediate prospect should not be carried forward at the most rapid rate consistent with sound construction and sound economy, rather than carried out over a period of 20 or 30 years, as they will have to be if we limit it by taking money only from the revolving fund?

Mr. DWORSHAK. I should say that is true, particularly in view of the crucial situation confronting our country; and, because of the recent expediting of construction of multiple-use projects in the Northwest, there is an extremely urgent need for additional sources of power. And I believe also that, because of the influx of people into the northwestern area—and I speak specifically of the Northwest because that is the area in which I live, representing the State of Idaho—it is essential that we provide facilities for the building up of homes, rather than continuing the policy of spending huge sums for relief which is temporary in nature.

I have resided on one of the outstanding Federal reclamation projects of Idaho during the past 17 years, so I am thoroughly conversant with the benefits and with the contribution which reclamation makes to the development and the building up of the arid sections of the United States.

In urging this committee to give most serious consideration to proposing substantial increases for certain items in the Bureau of Reclamation section of the Interior Department appropriation bill, attention is directed to certain outstanding facts:

POPULATION INCREASING

First. The population of the 11 States of the Mountain and Pacific group, which are almost wholly dependent on irrigation, increased more than 14 percent in the 1930–40 decade. Idaho gained 17.6 percent.

Second. The uprooting of more than 300,000 farm and other families in the Great Plains, and the migration of more than half of them westward, contributed largely to Federal relief costs, which in 7 years exceeded two and one-half billion dollars in the 17 arid and semiarid States.

Third. Records show that a large part of the Federal relief outlay was due to the migration into the State of more than 20,000 families. Only a few of these were settled where they could become self-sustaining; some moved on to add to the problems of other States in the Pacific Northwest or to California. Those remaining are seeking to eke out a precarious existence by limited farm work available, but are to a great extent still dependent on relief.

Fourth. National-defense activities have not reduced unemployment in Idaho.

Fifth. The Federal Power Commission has reported a prospective shortage of power in the Idaho-Utah area. It is only through advancing Federal reclamation projects with multiple purposes that this shortage can be met. At the same time, we can provide supplemental water supplies for irrigation and flood control.

PERMANENT RELIEF

With this factual showing, the need for Federal reclamation developments in Idaho would seem to require no emphasis. The need is there to give employment in lieu of relief expenditures on far less permanent activities; it is there to provide opportunities for settlement where newcomers to the State who are qualified can become self-supporting; it is needed so that our irrigated farms can be in a position to contribute to the food supplies of the country in the national emergency with which we are confronted.

When I appeared before your committee last year, attention was directed to the fact that, out of nearly half a billion dollars expended for reclamation in the last 8 years, only a few million dollars—less than 2 percent—have been spent in Idaho. Yet this State and its increasing population are almost wholly dependent on irrigation.

I now suggest that, instead of merely scratching the surface by Federal relief work, some of the W. P. A. funds be put to work on water-conservation projects, and Federal relief funds spent on irrigation.

Specific suggestions I have for the consideration of the committee may be summarized thus:

The three Idaho items in the pending bill are all right as far as they go. Of course, there will be no objection to the $50,000 provided for completion of the additional unit to the Minidoka power plant. The $500,000 for the Payette Division of the Boise project will not advance that development as rapidly as the land is needed; and the $750,000 for the Anderson Ranch reservoir of the Boise project will not permit work on this unit to go forward and will not bring supplemental water, flood control, or power as quickly as all three of these developments are needed.

SURVEYS ARE NEEDED

Attention is directed to the item of $500,000 for general surveys and investigations by the Bureau of Reclamation. The meagerness of funds for this purpose over a long period of years has hampered the Bureau in making an inventory of water resources and in presenting worthy projects to the Congress. Not less than a million dollars a year is adequate for this purpose.

The limitation of $3,500,000 on the small projects under the water conservation and utility program should be removed and at least $5,000,000 provided for this purpose. There are 14 projects of this type that can qualify under this program and every other State in the West doubtless has many sections where this type of development is needed.

There is one project in my district which has long been planned and which will fill a critical need. I refer to the Grand Valley project on the Upper Snake River in eastern Idaho. Investigations by the Bureau of Reclamation have demonstrated the feasibility of this undertaking. It is needed to provide supplemental water for established agricultural areas that are the support of a large part of the population of southeastern Idaho. It is needed for flood control; and the power development, when brought in, will meet a threatened deficiency in electric-generating capacity that the Federal Power Commission has reported is already imminent in the Utah-Idaho area. Last month the Grand Valley project was approved by the army engineers' board. Not only is there an urgent demand for power in eastern Idaho, but electricity is also required for the development of the vast phosphate deposits in that area. Idaho has the largest deposits of phosphates of any State, and the early development of this resource is of vital concern to the Nation.

GRAND VALLEY RESERVOIR

The following preliminary estimates of this project have been prepared by the Bureau of Reclamation:

Physical features of dam: Location: About 50 miles east of Idaho Falls on the South Fork of the Snake River. Type: Rolled earth embankment with rock fill at downstream toe. Height above stream bed: 260 feet. Crest length: Approximately 2,400 feet. Grand Valley Reservoir: Total capacity: 1,420,000 acre-feet. Active capacity: 1,300,000 acre-feet. Storage allocation: Top, 500,000 acre-feet, primarily for flood control; intermediate, 800,000 acre-feet, primarily for irrigation; bottom, 120,000 acre-feet, dead storage for maintaining power head. Surface area: 16,450 acres. Power plant: Location: Downstream toe of dam. Capacity: 30,000 kilowatts. Transmission line: Location: Plant to Grace, Idaho, for power distribution in the Salt Lake region. Length: 85 miles. Capacity: 132,000 volts.

Estimated costs

Dam and reservoir	$18,125,000
Power plant and transmission line	2,811,000
Channel rectification	734,000
Total	$21,670,000

	Allocation of costs	*Annual benefits*
Flood control	$8,165,000	$355,000
Irrigation	7,794,000	400,000
Power	5,711,000	410,000

CONTRACT NOT COMPLETE

On July 15, 1935, the Fremont-Madison Irrigation District (composed of 41 canal companies) and the United States executed a contract to provide supplemental water for farms on the North Fork of the Snake River. Principal features of the project include the Island Park Dam and Reservoir; the Cross Cut Canal and Diversion Dam near Chester, Idaho; and the Grassy Lake Dam and Reservoir. These developments have been completed, but there remains the Teton and Squirrel Meadows unit, which should receive consideration in order to complete this contract with water districts on the North Fork of the Snake River.

Idaho has not participated greatly in the national-defense program, but as one of the outstanding agricultural States of the Union, it is deserving of consideration which will permit it to develop its resources to the fullest possible extent in order to make its vital contribution to the present crisis as an unfailing reservoir of foodstuffs and electrical energy. Because of the limited reclamation development during the past decade, Idaho is deserving of more generous treatment at the present time, and I urge your committee to give careful consideration to the presentation which I have made today.

Foreign Affairs

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1941

EDITORIAL FROM THE MILWAUKEE POST

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Post of April 23, 1941:

[From the Milwaukee Post of April 23, 1941]

SENATOR WHEELER CHOOSES TO IGNORE

Yesterday morning a representative of the Post delivered directly to Senator Wheeler the following letter:

"DEAR SENATOR: Will you be good enough, during your address tonight, to make answer to the following questions:

"1. On which side are your sympathies in the present world war?

"2. Do you think England can win the war without all-out aid from America?

"3. Do you believe the United States faces no military danger if Hitler becomes dominant in the Old World?

"4. What would it mean to our democracy if totalitarian Hitler has Europe conquered?

"5. If you favor a negotiated peace, what assurance have you in Hitler's past conduct that he will carry out the terms of that peace?

"6. What should be the American policy toward Hitler if he rejects your suggested peace proposal?

"Respectfully

"MILWAUKEE POST."

At his meeting in the auditorium, Senator Wheeler failed to answer a single one of those questions.

Had Senator WHEELER taken up all or even any one of those questions, he would have delivered a far better address than he did, more in line with the questions and fears that are in the minds of the American people, and less like a soap-box oration to catch the popular ear by the turn of a phrase or the utterance of a jibe. As it was, Mr. WHEELER's address was in no wise different from those he had been delivering in the other cities of the country, and a keen disappointment to the thousands of people, whatever their reasons for being there, who made up his splendid audience. He refused utterly to come to grips with the major questions besetting the American mind.

What Senator WHEELER failed to recognise, and so omitted from consideration in his address, is that while some Americans can complacently meet to listen to digs aimed at the head of an administration struggling with an international problem of greatest moment to the safety and the security of our Nation, Herr Hitler and his Nazi legions are digging deeper and deeper into the vitals of Europe until they and their known anti-democratic ideology will have a continent at their command and be on a fair start toward the "world order" which they have openly and avowedly set as their objective.

Nor is Senator WHEELER even fair in his assaults. There is no war party in America, no matter how often the Senator repeats the phrase. And certainly the President is no warmonger. There is a strong recognition of our danger should a different idea of government by force of arms prevail in the world. And all that sincere Americans want is to see that that does not happen.

Nor does that mean that any American thinks more of Britain than he does of the United States. Not even Senator WHEELER can make that stick. All he can honestly say is that Americans think more of Britain than they do of Hitler. Is Senator WHEELER ready to say that he does not? How much sooner that will have come than was supposed?

Nor can the Senator invoke the name of the elder La Follette and 1917. He does not know how the senior La Follette would have reacted in 1941. Knowing that American and his love of liberty and his hate of oppression there is good ground for feeling that if alive he would not now be doing a Wheeler with an amalgam of different interests on the platforms of the country. And if Senator WHEELER still has any doubts he might look at Senator NORRIS.

Neither is there any historical accuracy in Senator WHEELER's "No nation can depend on some other country," citing the small nations dependent on France. Since when can any nation hope to withstand the combined opposition of a group of nations, in subjection or in free alliance? Does America want that cost? Is Senator WHEELER ready to vote it?

No, Senator WHEELER did not make any converts last night. It wasn't the well-reasoned address grounded on honest assumptions and proving our fears to be without base. Senator WHEELER has delivered his long speech, but our fears remain. "We are still going to defend the United States, no matter who wins the war in Europe," said the Senator. Of course, we will. But there will be no need for it if Hitler does not win.

National Defense: Its Necessity, Our Policy and Spiritual Values

EXTENSION OF REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1941

ADDRESS BY HON. LUTHER A. JOHNSON OF TEXAS

Mr. LUTHER A. JOHNSON. Mr. Speaker, under leave granted, I submit herewith copy of a speech delivered by me in Corsicana, Tex., on the evening of April 20, 1941, at the opening of the Fifteenth Annual Convention of the East Texas Chamber of Commerce.

The theme of the convention was "National Defense," and the theme of the session at which I spoke was "Spiritual Values in National Defense."

At the time of its delivery, the speech was broadcast by station KAND, Corsicana, Tex., and station KGKO, Fort Worth, Tex.

The speech follows:

It is good to be home again in the bluebonnet season, to breathe the pure Texas air, to bask in its balmy sunshine, and inhale the fragrance of its flowers. Only one who has been absent and returns can enjoy and appreciate to the full the beauty and glory of Texas in the springtime.

Since the adoption of the twenty-first amendment to the Constitution of the United States, which eliminated the adjournment of Congress on March 4 in alternate years theretofore prevailing, my congressional duties have kept me almost constantly and continuously in Washington and this is my first glimpse of Texas at this season for a number of years.

I am indebted to the program committee of East Texas Chamber of Commerce for inviting me to address this mass meeting at their fifteenth annual convention. That the convention was to be held in my home city, and that its theme was to be national defense were two of the impelling reasons of my acceptance. One reason being based on sentiment, and the other occasioned by the grave emergency now confronting our country and about which I wanted to talk face to face with those whom I represent in Congress, and also others who live in the great empire of Texas where patriotism and unalloyed Americanism still lives and moves and has its being.

It is appropriate that this meeting should be held on Sunday night for nothing is more sacred than the preservation and well being of our country. The churches of Corsicana are to be commended for canceling their night services and joining in this patriotic mass meeting held on the eve preceding the one hundred and fifth anniversary of the Battle of San Jacinto.

I am advised that the theme of this evening's session is "Spiritual values in national defense," and I hope that I may be pardoned if I may be permitted to discuss the need of national defense and the policy of national defense of our Government at this time as a prelude to and a part of the spiritual values of national defense, since all are related, and the significance and importance of one cannot be understood without knowledge of the other.

WARS IN EUROPE AND ASIA THREATEN OUR SAFETY

National defense in any of its phases cannot be discussed or intelligently considered without full knowledge of the actual facts and conditions confronting our country at this time. For as Grover Cleveland once said, "It is a condition and not a theory that confronts us."

Ignorance of these facts and conditions, in my judgment, is responsible for much of the loose talk, reckless and undeserved criticism of our Government, all of which is calculated to promote disunity and inspire a lack of faith of the citizen in his government.

Our country is in danger. To those who do not agree with that statement it is a waste of time to talk about the necessity of national defense. Those who think that the war in Europe and in Asia is just another one of those so-called boundary disputes, just an effort of some country to correct an injustice growing out of another war; that the prevailing wars and those fomenting and directing them have no designs upon America, and that their outcome will not affect America regardless of who wins—those who entertain such views have not been thinking or have been listening to the sophistry of some of the short-sighted critics whose hatred of the President of the United States and of England has obscured their judgment and beclouded their vision.

A few days after I had spoken in Congress on the lend-lease bill, in which I sought, as I thought, in a calm and dispassionate manner, to clearly and accurately present the facts concerning the danger to our country; facts which I had learned from an extensive hearing before the Foreign Affairs Committee of those favoring and opposing the bill, and also in executive session, information of a confidential nature from the Chief of Staff of the Army, and the Chief of Naval Operations, the Secretary of the Navy, the Secretary of War, and the Secretary of State. I had a letter from some woman in a Midwestern State who said that she had read my hysterical speech, in which I had tried to frighten the American people and that she was ashamed of me. The poor, deluded soul, whose only knowledge of existing conditions was likely based on some radio speech which she had heard, did not realize that she was putting her judgment against the military and naval experts of our own country, who are charged with its defense and whose knowledge is based upon information gleaned from many official sources and the accuracy of which could not be challenged.

Yes, America is in danger. War is raging now on every continent of the earth, save the Americas and Australia. These are not isolated and detached wars, but are inspired and carried on by a combination of the Axis Powers of Germany, Italy, and Japan, whose declared and avowed determination is the destruction of all democracies and the subjugation and domination of the world. Germany has the mightiest and most powerful army and military machine the world has ever known, and the head of this Axis Power is as cruel, as despotic, and as ambitious as any ruler ever recorded in the annals of history. Supplementing the view of my woman correspondent, I was surprised to read in the Dallas News in its department Letters From Readers a few days ago a Texas man, who said "Our fear of Hitler is purely the result of political trickery; he has no notion of attacking us at any time." Since there may be others who think that I am hysterical, and that political trickery is responsible for statements concerning our danger, let me read you statements made last year by Hitler and also his Minister of Agriculture as to their aims regarding America and the world:

STATEMENT BY HITLER'S MINISTER OF AGRICULTURE AS TO HIS AIMS IN CONQUERING THE WORLD

In May 1940, a group of leading Nazis were called together in Germany to hear a speech made at Hitler's instance by Walter Darre, Reichminister of Agriculture in the Hitler government. He said to them, among other things:

"We are going to win this war, and here are our aims."

He forecast the invasion of the Low Countries and the penetration of the Balkans.

"It will then be our duty," he said, "to organize economically the territories gained, which gradually will be included in the German area."

"Before autumn," he said, "we shall be the absolute masters of two continents, with the exception of Soviet Russia."

He went on further to say: "We shall introduce into our new living space completely new methods. All soil and industrial property of inhabitants of non-German origin will be confiscated without exception and distributed primarily among the worthy members of the party and soldiers who were accorded honors for bravery in this war. Thus a new aristocracy of German masters (Herrenvolk) will be created. This aristocracy will have slaves assigned to it, these slaves to be their property and to consist of landless, non-German nationals.

"Please do not interpret the word 'slaves' as a parable or as a rhetorical term. We actually have in mind a modern form of medieval slavery which we must and will introduce because we urgently need it in order to fulfill our great task. These slaves will by no means be denied the blessings of illiteracy; higher education will, in future, be reserved only for the German population of Europe.

"We have selected this form of slavery for several reasons."

Continues Herr Darre:

"The most important is that we are abolishing the gold standard and replacing it by work. This work must be as cheap as possible in order that our economic conquest may spread extensively and rapidly. Our future generation must, even in peacetime, be educated in such a manner that, in case of necessity, they may be fit to defend strongly and energetically what we acquired."

Then Reichminister Darre expanded mentally and geographically, as follows:

"I have been asked about my opinion of America, especially the United States, and the danger of this pseudo-democratic Republic's possible attempts to hinder us in our historical development.* * * We Germans have accounts which must be settled with this country. In this war, not to mention the last war, the United States holds all the gold of Europe, which was and indisputably is our property, Germany being the successive state of subjugated nations. The gold alone is practically of no value to us, but the insulting fact that something which God intended for us which we were robbed of and which is intentionally withheld from us must not remain unpunished.

The United States also will be forced by Germany to complete and final capitulation. Our superior industrial products will be sold at very low prices to the whole world and will cause the United States to have not 7,000,000 but 30,000,000 to 40,000,000 unemployed. Mr. Roosevelt will then beg the Fuehrer on his knees to purchase from the United States not manufactured products but raw materials at prices which we shall dictate. The United States is at present so demoralized and so corrupted that, like France and England, it need not be taken into consideration as a military adversary."

Speaking of the kind of slavery they intend to impose, Darre said this:

"Here, too, the form of slavery mentioned above will prove its worth. German masters, accustomed to command and, in case of necessity to strike inconsiderately where striking is necessary, will be fine pillars to uphold Germany's rule of the world."

I wish to quote here from Hitler himself, as set forth in a book by Rauschning, entitled "Voice of Destruction":

"We shall soon have an S. A. in America"—Says Hitler—

"We shall train our youth. We shall have men which degenerate Yankeedom will not be able to challenge. National socialism alone is destined to liberate the American people from their ruling clique and give them back the means of becoming a great nation."

These statements emanate from Adolph Hitler, of whom it is said, he never kept a promise; and never failed to execute, or tried to execute a threat.

OUR ISOLATION WILL NOT SAVE US

Well, there is another group of critics whom I would term the complacent type, who think that regardless of the aims of the Axis Powers that our isolation insures our safety. That all that we have to do is to stay out of Europe, attend to our own business, and all will be well. That the Atlantic and Pacific Oceans are complete barriers for our defense. They tell us very glibly that if England, separated by only 20 miles of water from the Continent, has not yet been taken, why should we fear. England, thank God, has not yet been conquered, due to her indomitable spirit, but the English people have suffered death and destruction from air raids and bombing, such as no other people have ever endured. These critics forget that aviation has reduced the size of the world and made the oceans only ponds. Would they be willing to suffer bombings in the air? New York is only 13 air hours from Berlin, only 12 from Paris, only 11 from London; 8 hours from the Azores and 8 hours from Iceland. Seattle, Wash., is only 16 air hours from Tokyo. They forget that South America, which under the Monroe Doctrine and also under conventions had between our Government and the other 20 American Republics, we are pledged to their safety, as well as our own, to defend, are vulnerable to attack from within and without. Brazil is only 6 air hours from the west shores of Africa, where Germans are now being mobilized, and within many of these South American countries Germans and "fifth columnists" are already active and spending large sums of money in propaganda in support of the Axis Powers. As someone has well said, Hitler has already invaded South America.

OUR OWN DEFENSE REQUIRES IMMEDITE AID TO ENGLAND

The third and last group of critics which I shall mention are those who concede our danger but condemn our policy of giving aid to England and other democracies under the so-called lease-lend bill. Let us analyze briefly the position of these three groups of critics, remembering that it is easy to criticize and those who know the least are sometimes the most critical and the most vocal in their criticisms. No. 1: No danger: Hitler likes us and has no designs upon us; No. 2: We are too far removed, and no one can harm us; and now I come to that group, who admitting our danger, claim that we are not concerned about what is happening in the rest of the world until we are actually attacked. International hijackers can kill and murder, that we are not our brother's keeper, and that our best bet is figuratively speaking, "load up old betsy, keep our powder dry, and stay home and wait for the hijackers to come after us." They contend that it is a matter of supreme indifference to us who rules in the rest of the world or what happens, so that it is not happening on this hemisphere. Let me say in reply that we have learned from history that our country is concerned, and vitally concerned, about what is going on in the rest of the world.

During the last World War, even before our participation in it, I recall having said there is no spot in the world where you can go to escape this war and its effects. It reaches unto the uttermost parts of the earth.

War between major countries, or any war that assumes world-wide proportions, upsets not only the countries involved but the peace of the world, the commerce of the world, the transportation of the world, and the security and safety of all countries.

This war is different from the last. The Kaiser had no designs on the United States. Unlike Hitler, he had made no threats to conquer the world. But today we have a ruler like Napoleon, who not only dreams of world conquest but plans for world conquest, and is already carrying those plans into execution, having already conquered practically all of the countries of Europe, and we know from his own declarations that the subjugation of Europe will not satisfy his lust for power.

So what are we to do? Sit down and watch him kill and conquer all of his other victims, when we know that we are next?

Suppose in the early days of Texas, in the San Jacinto period, a settlement of colonists should have received word that a neighbor colony situated only 11 hours distant (the air distance between London and New York) was being attacked by a tribe of savage Indians, and an appeal was made for guns and ammunition with which to repel the attack? Do you think the reply would have gone back, "No; we are not getting mixed up in anybody else's fight. We will do nothing until they attack us."

Would that have been the spirit of those sturdy pioneers who carved out this great empire, and by their suffering and their sacrifices, built the civilization which we now enjoy?

Those early Texans never turned a deaf ear to the cry of humanity, but even had they been cold and cynical, actuated by sordid selfishness, they would have known as practical men, that if they could supply the weapons enabling their neighbors to defeat the Indians, it would inure to their safety. Indians killed innocent women and children. So does Hitler. And the Indians were no more treacherous and perfidious than Hitler in breaking treaties and agreements solemnly made and entered into.

Looking at our own situation at this time, in purely a cold-blooded and selfish way, we are vitally concerned that England shall not fall. We are menaced both from the Atlantic and the Pacific. We have a one-ocean Navy with two oceans and two continents to defend; while we are building a two-ocean Navy, it will be 1946 before it is ready. So long as the British Navy is undestroyed and uncaptured, it will guard the Atlantic and we can keep the major portion of our Navy in the Pacific as we are now doing, but if the British Navy is destroyed or captured, then our situation becomes immediately grave and critical. If England wins, we will not be attacked, but, even if she should fall, which God grant that she may not, by helping her to stand we will have gained precious time in preparing for our own defense.

Secretary Hughes once said: "The Monroe Doctrine rests upon the right of every sovereign state to protect itself by preventing a condition of affairs in which it will be too late to protect itself." That is the basis of our right in passing the lend-lease bill, and I think the Congress of the United States acted wisely and with prudence, and based upon the necessity of our own self-defense in enacting that legislation.

Two serious and perplexing problems have arisen since the passage of that act which handicaps its effectiveness. Strikes in national-defense industries and the sinking of ships carrying defense articles to England

and other democracies, both of which threaten, if not stopped, to nullify that law by slowing down production until it is too late, and by sending to the bottom of the ocean the munitions and planes we have decreed shall be sent.

Both of these constitute a menace to our national defense and must be stopped. Strikes in national industries affect not only aid to Britain, but also the production of defense articles for our Army and Navy.

The strike situation seems to be clearing, but steps must be taken, either by consent agreements, executive, or legislative action, to prevent further slowdowns in the national-defense industries. If drastic action is required, I am ready to support it. Munitions are as essential as men, and if the youth of America can be drafted to fight, means must be devised to draft both industry and labor, if required, to equip these men for the defense of their country.

The defense of America is paramount in importance to the rights of any individual or any group of individuals, be they capitalists or laborers.

Likewise the defense of America is paramount in importance to the will of any submarine commander, or the will of any dictator of any nation or group of nations.

Under international law, the high seas belong to all countries alike, and our ships have the right, under international law, to sail the seven seas and carry such cargoes as they will to any country, whether at war or peace, except where an effective blockade has been established by a belligerent.

By our neutrality law, which is a domestic law, self-imposed, concerning which no other country has any voice whatsoever, we have forbidden our ships to carry passengers or any articles or materials to any country theretofore designated by the President as being in a state of war. We can repeal that law at any time that we like without the consent of any other nation on earth, and then our own ships would be as they are now, free under international law to go where they will and carry such cargoes as they please.

But without repealing that law the President of the United States, under the Constitution, as the Commander in Chief of the Army and Navy, has the right, without authorization of Congress, to use all or any part of our Navy in accompanying or convoying ships when he deems it necessary for the defense of our country. The President is hesitant to exercise this power unless it is absolutely necessary so to do and until all other means have failed, but if the time comes, and it may, that that is the only way to secure the transportation of planes and munitions we are sending to England for their defense and our defense, I believe that he will and should take this step. I believe furthermore the American people will follow the leadership of the President of the United States. He does not want war. The American people do not want war, but I think that they prefer the preservation of America at any cost rather than peace at any price. Let not our fear of war jeopardize or deter us from taking every step necessary for our preservation as a nation in this the most critical period of its history.

We believe that everything we hold dear is threatened. We feel the dangers to our civilization, to our way of life, to our cherished liberty. We prate a good deal about democracy and freedom and our inalienable rights—we did not buy them, we did not fight for them—others did that; others were willing to fight and suffer and die. We inherited them; you and I got them very cheap. So cheaply did we get them that some of us hold them cheaply now. Too great a price has been paid for them, and they are too precious to lose now.

But let us not deceive ourselves—we must make America strong. It is not enough to sing God Bless America. It is not enough to build a two-ocean navy, to spend billions for munitions and planes and ships, and to train millions of our young men in the art of modern war. That is not enough. As was said recently by one of America's leading divines:

"To do that and that only, would be like insulating the roof of your house, buttressing the walls against the winds outside, making your windows and doors secure, building up your fences, and making strong your gables, when all the time termites were eating away your foundation."

This Nation will never be strong until she strengthens her foundations, until she makes strong her spiritual and moral forces. There is where rearmament must begin. The character and moral fiber of our soldiers are more important than the type of gun and the military training we give them. We must make sure that the men of Yankeedom are not degenerate as charged by Hitler. They must be strong physically and mentally. They must be well trained and armed with the most modern equipment, but, over and beyond that, they must have character and an indomitable will to win, which only comes when their lives are grounded in the moral and spiritual forces that make men strong.

The old saying that man's extremity is God's opportunity is again being revealed as true. In this perhaps the darkest hour in the world's history, more and more men, like David of old, are looking unto the hills from which cometh their help. They are thinking of things eternal and spiritual.

Recently in Washington at the National Press Club, it was my privilege to hear 5 radio commentators who had just returned from the battle fronts in Europe and Asia in an open forum where they answered questions asked them. One of them, a young man of about 25 years (Ben Robinson, of South Carolina) was at Dunkerque and witnessed the evacuation of 300,000 British soldiers, one of the most marvelous feats of all times, and I asked him to tell us about it and he said, "God saved those men," and the moderator smilingly said, you mean, "God and ships," and he says, "No, I speak reverently. No one who has been through what I have, would speak lightly of the Deity. I mean what I say, God saved that British Army. For 2 days the English Channel, ordinarily the roughest and most turbulent body of water, was as smooth as a lake, and even the skiffs and rowboats that came from England to transport these men, sailed in safety." A few weeks later I heard an address by Lord Halifax, and he told of a prayer service held in Westminster Cathedral in London 5 days before the evacuation which was attended by the King and a vast multitude, and he said at that time it was thought that not more than 50,000 of these men could be evacuated, and that the prayers of the British people were answered when 5 days later 300,000 were saved.

The churches of America and other moral and spiritual agencies have resting upon them a tremendous responsibility. We must have unity among all classes, churchmen and nonchurchmen alike, and I appeal to Protestants, Catholics, and Jews, and all who believe in God and derive their inspiration from religion, to work against subversive forces that would array class against class, race against race, or religion against religion. In this crisis we must all be one against Hitlerism in all its forms.

America needs, as never before in its history, a reawakening of patriotic devotion, of unity, and religious fervor.

We need to turn reverently to the faith of our fathers—the faith that has never failed us in the 165 years of our Nation's history.

The greatest enemy of mankind has always been fear, and fear is one of Hitler's favorite weapons. The only antidote for fear is faith, which we need now.

Faith in ourselves, faith in our country, faith in our God. If these abide America will survive. If they vanish America is lost. God bless and save America.

Latin-American Relations—Some Further Observations on a Realistic Modus Vivendi Between Brazil and the United States

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1941

Mr. COFFEE of Washington. Mr. Speaker, as the strategic key to the Western Hemisphere, Brazil is not merely our most exposed flank. She is also a vast potential frontier for cooperative development by American capital and commerce. This cooperative development and defense must be a popular, democratic movement involving the peoples, economies, and governments of this country and Brazil. In the forefront are the Inter-American Development Council and the Office for Coordination of Commercial and Cultural Relations between the American Republics, under Nelson A. Rockefeller.

BRAZILIAN-AMERICAN PARTNERSHIP FOR HEMISPHERE DEMOCRACY AND DEFENSE

Brazil is the part of the New World most open to German penetration—economic and propagandist—and to Nazi blockade or invasion. Vast, disorganized, and illiterate, Brazil is vulnerable to Nazi-fomented civil war. She lacks the transportation, industrial, and military means to defend herself in a world where no nation so rich in little-developed lands and resources can afford to be weak.

UNITED STATES SECURITY AT STAKE

If Hitler wins Europe and Africa, and the war news indicates this may happen much sooner than was anticipated, German penetration of Brazil will inevitably menace our security. Nazi economic and military control of South America would be terrible and a dilemma costly to us—costly not only in commerce but in terms of armaments and possible war to prevent our being isolated and threatened in our own hemisphere. This danger to American and Brazilian security colors every phase of our relations. I have already discussed certain aspects in my speech Brazil, Our Most Exposed Flank, in the Appendix of the CONGRESSIONAL RECORD, page 1171.

More immediately, this Government must try to head off any German effort to create civil war in strategic southern Brazil. We cannot afford to divert the ships and arms, so desperately needed by Britain, to Brazil. The idea of sending part of the United States Army, Navy, and Air Corps to Brazil is unpleasant. We can obviate the need of doing so by acting now.

Brazil has about 5,000,000 healthy, literate, and vigorous Italians and Germans concentrated in her dominant southern states. They may outnumber non-Fascist Brazilians able to participate in mechanized war. The million Germans are tough. They own and can use guns and motor vehicles. Most other Brazilians are easy-going and have little talent for war. Some 70 percent of them are illiterate, undernourished, and physically unfit. The Brazilian Army and air force are small and lack sufficient equipment.

Another immediate concern, as Duncan Aikman has just said in three articles in the newspaper PM, is the need to put first problems first. We must concentrate on things which cannot wait if we are to keep Brazil on our side, namely, help Brazil with her economic difficulties of huge agricultural surpluses and her need for certain shipping and production priorities from us. Essential trade goods must keep moving between the United States and Brazil if they are to be linked by mutual self-interest. It is a terribly tough problem that faces Nelson Rockefeller and he needs wide help and encouragement.

What are some of the other basic things we should do about Brazil, our best friend in Latin America?

WE MUST WIN BRAZIL TO THE DEMOCRATIC CAUSE

Possibly the quickest and cheapest tactic is to sell Brazil's generals and ruling class the idea that the Anglo-American, democratic cause is best, and cannot lose even if the war ends in a stalemate, with Hitler in control of Europe and Africa. We had better move fast to persuade the influential military bureaucracy and certain powerful businessmen and coffee and cotton planters that, despite a partial German victory, we and the British group of nations can continue to be Brazil's best customer and supplier of her needs. We must convince those who own, operate, and defend Brazil that their best interests lie with us.

The United States must quickly convert the Vargas regime to a belief in the possibility and advisability of hemisphere cooperation in democracy, defense, and trade. The Brazilians are worrying about German submarines, raiders, and bombers cutting Brazil off from our ports by dominating the 1,600-mile "strait" between the bulge of Brazil and west Africa. Presumably there will be talk of United States "protective custody" for Dakar, French West Africa's other ports, and the Portuguese Atlantic isles if Germany starts to move on Portugal and through North Africa toward the Atlantic. These may be the next moves in the chess game for Brazil, the key to Latin America.

THE UNITED STATES MUST HELP BRAZIL

Brazil can be made defensible and our security strengthened only if we help Brazil build railroads, highways, schools, hospitals, and factories. This is an expensive and long-range program, but it can and must be started now. Only if Brazil feels that she is to be aided cooperatively and fairly will she be won to the American way and the Anglo-Saxon side. Only as Brazilians gain better standards of living and overcome disunity, illiteracy, and ill health can they attain democracy. The cooperation we seek of Brazil in forging hemisphere solidarity and defense will come more quickly if we now announce that after the war there is to be no imperialism in the New World.

Brazilian-American partnership is so vital to both, that even at the risk of overcomplexity we must not neglect any possible channel of cultural exchange and understanding. For example, Brazil and the United States, as the two most populous nations of this half of the globe, have the largest number of Catholics. Also, we have between us nearly 30,000,000 citizens of Negro and part African ancestry. The long article on Brazil by Charles A. Gauld in the Negro History Bulletin for February 1941 lists ways in which Brazilian-American relations can be augmented among Negroes and Catholics. Our two countries have much to teach each other. Our cultural and commercial interchange must be a balanced, two-way process.

Invaluable prestige can be gained by the United States and for democracy by wise use of the press, books, and the radio to tell Brazilians in Portuguese of the problems, progress, and reforms of this country. As Prof. W. R. Sharp has lately written, German news stories and radio propaganda may sharply increase if Hitler seems to be winning. We must face this issue and insist that our case reach the Brazilian people and not merely a small urban group.

BRAZIL NEEDS DEMOCRACY

We must sell Brazil on democracy. It can be argued that with so many problems, Brazil cannot get democracy for decades. Nevertheless, the number two New World nation should be helped and encouraged to strive for democracy as her best defense against fascism—internal and external.

If the ignorant and poverty-stricken majority of Brazil's 43,000,000 people know we are honestly helping them, they will be more inclined to resist fascism. Brazil badly needs to be opened up by roads so her people can become unified and ship out their products and buy from us.

DEMOCRATIC UNITED STATES-BRAZILIAN COOPERATION AND LABOR

This can only come under a post-war system of democratic partnership between us, free of exploitation and imperialism. Only thus can we together defend the Americas. United States loans, both private and governmental, and American firms investing in Brazil's economic future must keep clearly in mind the rights and welfare of Brazilian labor. It is labor which will be producing goods and guns for defense. It is Brazilian workingmen, rural and urban, who may yet be called on to do the fighting and dying if war crosses the narrow South Atlantic and imperils freedom—ours as well as Brazil's.

LABOR MORALE IS VITAL

The importance of labor morale to hemisphere defense cannot be overemphasized. The morale of workers, Brazilian and American, must be preserved at all cost—even at the sacrifice of corporation profits. This continent cannot be kept free for democracy by big business alone. It will most certainly be defended by the Brazilian and United States working people if their way of life is made worth defending, but not otherwise. The fall of France shows what happens to the strongest armies and forts when the morale of the people is destroyed, along with their liberties and stake in the economic system.

MAKE PAN-AMERICANISM A POPULAR MOVEMENT

Brazilian-American partnership must not be an artificial process confined to officials and businessmen. To be broadly effective, it must be made a democratic, popular movement. It should reach the working people, not with words, but with concrete plans and benefits.

War and fascism cannot prevail against nations where democracy works.

SUCCESS DEPENDS ON UNITED STATES SINCERITY

Brazil may hesitate to cast in its lot with the United States if the liberties and standard of living of our workers are sacrificed in the name of profits and defense. If that happens, Brazil will know we are entering a period of exploitation at home and of imperialism in Hispanic America. And if that occurs, the ruling class and their Army relatives may choose totalitarianism for Brazil and economic deals with Germany.

Brazil and Spanish America took the "good neighbor" policy and democracy of the United States seriously only when we won labor rights and basic social and economic reforms under the leadership of Franklin D. Roosevelt. Brazilian confidence in us will slip the minute these reforms go. It will increase if we show a desire to help Brazil win some of the same reforms, and if we help Mexico consolidate Cárdenas' gains.

Another immediate concern of the American republics is to prepare for the impacts of the war and aftermath of war. The economic front must be built up through markets, new industries, arrangements now to grant Brazil priorities in goods and shipping to prevent immediate and grave economic dislocations. Mordecai Ezekiel recently elaborated on these factors in international conciliation. He further believes there is a strong need for a whole series of social programs to increase Brazilian productivity through health and education.

Brazil's pro-Axis minority of planters, merchants, and officers fears Germany is going to win. A semicolonial nation dependent on selling its tropical, agricultural, and raw products to manufacturing countries cannot afford lightly to take sides against a possibly victorious Germany, which would rival us as the world's premier industrial country and market for Brazil. Then Brazil would be faced with choosing between cynical and ruthless totalitarian trade and penetration and what we might offer in commerce and aid. A triumphant Germany could exert terrific political and economic pressure on Brazil.

The Office of Coordination should lose no time in putting such trained observers and specialists as we have to work studying every phase of United States-Brazilian trade and solidarity. We must prepare for the Nazi impact. Yet the fellowships and grants of the State Department and foundations are still being given to persons uninterested in this crisis and denied to intellectually alive liberals keenly interested in hemisphere democracy and defense. Who is responsible for this? It is up to Mr. Rockefeller's agency and committees to correct it.

OUR RESPONSIBILITY AND OPPORTUNITY

At this time, as J. I. B. McCulloch states, it is both startling and chastening to see how we have fallen heir to the cultural, commercial, and military influence of Europe in Latin America. Our businessmen, professors, bankers, and defense missions have a unique opportunity. It is to be hoped the Congress will appropriate more generously for the inter-American program of the Office of Coordination than it did for the Department of State.

This Republic has assumed an enormous responsibility. As Librarian of Congress MacLeish has warned, we cannot afford to fail. We must try to solve first problems first in trade and economics. And we should try to carry out a sound program of labor and cultural relations. This may cost us five or six million dollars now. But it may save us vast sums later, along with our very security. Therefore let us establish firmly a true partnership for defense and democracy between the two biggest countries in the Americas.

Reduction on Nondefense Expenditures

EXTENSION OF REMARKS

OF

HON. ALLEN T. TREADWAY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1941

Mr. TREADWAY. Mr. Speaker, on yesterday the Secretary of the Treasury appeared before the Ways and Means Committee and proposed an increase of three and one-half billions in Federal taxes to meet, in part, at least, the heavy obligations under the national-defense program. It is estimated that existing taxes will yield approximately nine billions in the fiscal year beginning next July 1, whereas expenditures are estimated at nineteen billions. The Secretary feels that we should pay currently at least two-thirds of our total expenditures, or approximately twelve and one-half billions. To do this will necessitate increasing existing revenues by three and one-half billions.

It requires no great stretch of the imagination to realize that this is going to mean an extremely heavy burden upon all of our people. Taxes will have to be increased very sharply, all along the line. The people will of necessity be required to forego many things they now enjoy in order to have sufficient funds to meet the increase in taxation which is contemplated. I am sure they will do it willingly, so long as they know that by so doing they are helping to make America strong, both from the military and fiscal standpoints. However, they have a right to expect that if they are to be called upon to "tighten their belts," the civil agencies of the Government should be required to do likewise.

Secretary Morgenthau, in his testimony before the committee yesterday, recommended a reexamination of our nondefense expenditures, and suggested that we could easily save $1,000,000,000 by so doing. I am glad to commend the Secretary for this recommendation, which is in accord with what I have long been urging. At the present time, there is pending before the Rules Committee a resolution which I introduced in behalf of my Republican colleagues on the Ways and Means Committee, calling for the creation of a joint fiscal committee of the Congress, to be composed of members of the revenue raising and appropriation committees of both branches, which would be charged with the duty of coordinating Federal revenues and expenditures.

It seems to me that until we set up some such a committee to go into the whole fiscal program of the Government and lay down a broad general policy regarding the amount of money we are going to spend and how we are going to pay the bill, we will not be able to take any effective action to put the Nation on a sound basis financially. Unfortunately, I have not been able to secure action upon my resolution, but I may say that I have had a very favorable response from the country. The people are demanding that the nonessential and nonmilitary functions of the Government be curtailed, and under the rules of this body the duty to take action along that line rests with the Committee on Appropriations.

I am sure I speak the sentiment of the great majority of the members of the Ways and Means Committee when I say that we are insistent that an economy program be instituted in connection with any revenue bill which we may report out. We do not think it is fair to the taxpayers of this country to continually call upon them for more and more taxes when neither the administration nor the Congress has made any substantial effort whatever to reduce nonmilitary expenditures.

Whether my resolution is adopted or not, there is nothing to prevent the Ways and Means Committee and the Appropriations Committee from having a joint meeting to thresh out this problem and come to some agreement. The Ways and Means Committee is powerless to act on appropriation matters, and any item we might include in the tax bill calling for a reduction of expenditures could be eliminated from the bill on a point of order. Of course there is a method by which it could be done, namely, by securing a rule from the Rules Committee making the appropriation item in order, but I am sure the Ways and Means Committee does not wish in any such manner to infringe upon the jurisdiction of the Appropriations Committee. It would be much better if the Appropriations Committee would act on its own initiative, and I hope that some tangible results will occur within a short time—at least by the time the revenue bill is ready.

The time has come for action. There has been much talk in this House about the necessity for economy, but like criticisms that are made of the weather, nothing is ever done about it. When the people are staggering under the tax load which must inevitably be imposed, the bitter pill they will have to swallow will taste much sweeter to them if they know that the Government itself is cooperating by reducing expenditures. Otherwise, they may reasonably feel resentful.

Federal Reclamation Program

EXTENSION OF REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1941

STATEMENT BY HON. WALTER M. PIERCE, OF OREGON

Mr. PIERCE. Mr. Speaker, under leave to extend my remarks in the RECORD. I include the following statement made by me in support of Federal reclamation program before House subcommittee on Department of the Interior appropriation bill:

I have frequently heard the question asked: "Why construct more reclamation projects in the West when we have a surplus of agricultural commodities?"

About the best answer is the record, and I want to cite the experience of Malheur County, in my district in Oregon. The Owyhee and the Vale projects, completed in the last few years, have provided successful farm homes for 2,000 families, most of whom came from the Great Plains drought areas. Without the opportunities for settlement on the irrigated land provided by these projects, they would have joined the never-ending stream of migrants who are wandering through the West seeking chances for a fresh start in life, with many landing on the W. P. A. in the big cities.

Malheur County is an outstanding example of the value of Federal reclamation in providing homes for newcomers to the West. From 1930 to 1940 the population of the county increased from 11,269 to 19,766, a gain of more than 75 percent.

There can be no doubt but that the construction of the Vale and Owyhee projects contributed to the growth of the county's population and that as time goes on these 2,000 farms will create an ever-increasing purchasing power. They will require machinery and other manufactured products from the Middle West and East, and their crops will be consumed by the expanding population of the West.

With the example of what reclamation development has done for Malheur County, there is every reason to urge prompt completion of the Deschutes project in Deschutes and Jefferson Counties, where 50,000 acres to be irrigated will provide settlement opportunities for 1,000 families. Long-continued droughts have had a depressing effect on the population of Jefferson County, which showed a loss of 11 percent in its population from 1930 to 1940. On the other hand, a population pressure has been built up in Deschutes County, partly in anticipation of irrigated land being made available for settlement. This county showed an increase in its population of more than 25 percent in the last decade.

The Deschutes project will cost about $8,400,000, of which $2,000,000 will be represented by contributions of labor by the Civilian Conservation Corps, which has been doing excellent work on the project. Unless the allowance of $400,000 in the current appropriation bill is increased, $4,394,000 worth of work will have to await future appropriations. We are asking that the appropriations for the Deschutes project be raised to $600,000, an increase of $200,000.

At this rate, $400,000 annually, it will take more than 10 years to complete the Deschutes project. In all frankness it may be asked, Is it good business to string out this construction work for another decade and deprive hundreds of worthy families of an opportunity to become self-sustaining?

Another feature of this appropriation bill relating to reclamation projects is the allowance for the water-conservation and utilization program. The small projects this program is designed to reach carry a particular appeal because they are designed to rehabilitate established communities in danger of contributing farm families to the migrations which are already a big and expensive problem for the country. It is well that this program is being applied not only to the Great Plains but to intermountain areas. Two projects of this type in my district are tentatively listed for consideration under the program. They are the Crooked River development in Crook County and the Clear Creek in Wasco County.

The point that must be made in connection with these projects is that the proposed appropriation of $3,500,000 of reimbursable funds for this program is not sufficient. The amount should be increased to at least $5,000,000.

I hope the reduction in the appropriation for Grand Coulee Dam will not delay the installation of generators which will be badly needed to supply national-defense industries in the Northwest with electric power. For years I have urged the necessity for speeding the completion of projects like Bonneville and Grand Coulee and of adequate transmission-line facilities despite the opposition of the private utilities. The judgment of those of us who have been on the firing line—I refer to the gentleman from Washington [Mr. LEAVY]—is now being fully justified. I feel the more confident in urging today that the reclamation program, which will be implemented by the appropriation now under consideration, be given the impetus it requires if its splendid work is to reap the best results.

APPROPRIATIONS FOR BONNEVILLE POWER PROJECT

I seek your indulgence again for time to speak briefly on the Bonneville items now before you. Your good judgment on previous occasions should not be passed over without appropriate comment. When I first appeared before you 4 years ago, the opposition was crying, "there will be no market for Bonneville power." They were asking that appropriations be curtailed. A few of us, like you, who were familiar with such matters, saw otherwise. Your past actions in providing transmission facilities have been a lifesaver in these critical times.

It takes a kilowatt operating for 1 year continuously to produce 1,000 pounds of light metal required for the essential air arm of our defense. In 1940, about 415,000 kilowatts of electric capacity were at work in the United States producing light metals. Reliable estimates show that Hitler has and has taken over in seized territories, about 1,000,000 kilowatts of such capacity. This shows that our light-metal production needs considerable augmentation if we are to have adequate defense.

Let us now measure what your previous Bonneville appropriations have accomplished. In early summer of this year Bonneville power will be producing at the approximate rate of 225,000,000 pounds of light metal per year. This is 54.5 percent of the rate that the entire country was producing last year. It will approximate one-third of such metal required for our air, Army, and Navy defense plans. You know as well as I do that it takes 2 to 3 years to construct such facilities. Therefore it is evident that your early foresight has accelerated this component of the defense program by at least 2 years. This, I contend, is a worth-while accomplishment made possible by the exercise of rare judgment when so many of our people were being misled by false prophets.

Today Bonneville has executed contracts for 279,000 kilowatts, with at least 225,000 kilowatts going into defense. More will follow, as the economics of the situation will require the utilization of the last drop of such available low-cost energy. The modern metallurgical processes require large amounts of current, with delivered costs below 3 mills.

I covered this general situation in a speech on the floor of the House, Friday, March 3, 1939. In this speech I pointed out the power shortages during the last war and by analysis I demonstrated 2 years ago that the defense power reserves on the Columbia should be 250,000 kilowatts. Today, through your efforts, we see 225,000 kilowatts of such capacity at work for the most essential part of our defense program. The exercise of such foresight merits the fullest commendation when so many doubting Thomases were willing to throw rocks at those who could interpret and use power statistics. A great deal of credit is also due to the Budget Bureau and the early few of the Bonneville staff for line locations and estimates that placed these initial facilities in strategic positions, so important at this time. Larger possibilities lie ahead and I trust that the two great plants will secure the heaviest industries as close to the busbar as is physically possible, with due consideration being given to mature sources and transportation. Such an approach will not only build up a great region but will turn out to be good business. I have stressed passing the benefits of this Federal construction as widely as is economically possible, but have also realized the industrial and defense possibilities and necessities, as is evidenced by my presentation before the Rivers and Harbors Committee in 1937 and my speech of March 3, 1939.

Bonneville items appear before you in two estimates. The first is the regular estimate sent up with the printed Budget and amounting to $12,958,500. The second estimate is a supplemental sent to Congress in early March. After Senate action on the supplemental, the residue items amounting to $9,900,000 are now before you. I need not go into the details, as full justifications have been presented by the administration. However, it should be noted that approximately 96 percent of the regular estimate and 87 percent of the supplemental estimate cover facilities absolutely needed to meet defense-load requirements. These large percentages also cover construction that fits into the general scheme of wider distribution. The remaining 4 percent of the total amount in the regular appropriation and 13 percent of the supplemental estimates will provide facilities to meet the preferential loads designated in the organic act, such as rural loads and service to public bodies. These small residual amounts will provide lines into territories which will later develop worth-while defense industries.

Last year and the year before, I presented justifications for the Pendleton line. This line is now under construction and will serve an airport and an ammunition dump. There is one particular item to which I wish to call your attention, and that is the Pendleton-La Grande line. It is not detailed in the regular Budget submission but the Administrator has included it in his justifications for the $1,500,000 feeder-line item of the first estimate. La Grande is in Union County, Oreg. The county last November voted to go to public power and to negotiate for the purchase of the lines of the private company. This line is needed to serve a territory which has decided by a fair referendum to become a customer of Bonneville Act, and I trust that your committee will see fit to specify this line in your committee report. It will be a comparatively small item, in the neighborhood of $350,000 and will be amortized, thus paying its way.

I make this suggestion so that the farmers, who to date have had the least benefits, will know that Congress is considering their expressed wishes and well-being in this large defense program. The people in the Deschutes Valley have similarly voted, and I trust that a portion of the advanced survey funds will be used to survey the economic possibilities for this service as was specifically covered in last year's appropriation. I understand that preliminary surveys have been run, but further work is required. I wish to thank you for this opportunity to make a few general remarks. I know that the 17 major items of these two estimates will, because of defense considerations, receive your full attention. Therefore I do not feel that it is necessary to go into the details that make up these amounts that cover construction outside of Oregon. I know that Oregon will share equally in the benefits of these expenditures, as the nature of the lower river terrace is such that lines serving this part of the Oregon country have to be routed along the Washington side of the line. You will find on analysis that the executed contrasts occurring between the dates of the two estimates more than justifies the supplemental estimate. These lines are all a part of a comprehensive grid. No one can be left out unless we wish to have idle and therefore nonusable plant capacity on hand during such a critical period, when every kilowatt should be put to work.

Why Not Think of Peace?

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1941

ARTICLE FROM THE WASHINGTON TIMES-HERALD

Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Times-Herald:

[From the Washington Times-Herald]

WHY NOT THINK OF PEACE?

Why not think of peace at Easter time? Why think of nothing but war—and of continuing the war through some indefinite

period to some sadly definite end of utter destruction and complete prostration?

In the very beginning the genuine military experts of England declared that no war could be brought to an entirely victorious conclusion unless the military strength and manpower of one side were 3 to 1 as compared with the other side.

In the Napoleonic wars this proportion of 3 to 1 existed on the side of England.

In the World War the same proportion prevailed on the English side.

In this war those proportions do not exist.

In fact, the proportions are nearly 3 to 1 against England unless the United States actively intervenes.

And then the proportions would be about equal.

Equal proportions of military strength and manpower mean an interminably protracted period of war—of mutual destruction and world-wide demoralization.

There have been protracted periods of war in Europe before.

The Napoleonic Wars lasted over 20 years.

Then there was the Thirty Years' War and the so-called Hundred Years' War.

English statesmen now declare that the present war is likely to last 10 years.

We, people of America, are cordially invited in to fight the war for Europe.

To what termination?

For what beneficent purpose?

To save democracy?

Bosh!

There will not be a shred of democracy left anywhere in the world at the end of a 10-year war.

There is mighty little left now in this country and less in England.

Will England in the end gain commercial supremacy over Germany?

What good will that do England or ourselves if in the meantime all commerce is destroyed and all purchasing power dissipated and all peoples prostrated, physically and financially—and all utterly demoralized, socially and politically?

Perhaps you do not think this will happen.

Well, my friends, the war has been going on for a year—and we have not yet actively participated.

Think what has happened in that year and multiply it by 10.

We have raised the national debt by $15,000,000,000—in 10 years that would mean by one hundred and fifty billions.

And, of course, the Nation would be bankrupt long before it reached that point.

In the last year we have conscripted 1,000,000 of our fine young men.

We are already talking of 2,000,000.

In 10 years it would be 10,000,000 at the least.

Nor would the 10,000,000 all stay in this country if we were actively in the war.

More than half of them—much more than half of them; probably nearly all of them—would be sent abroad.

We would have not only to keep the Germans and their European allies out of England, but we would have to drive them out of Europe—their Europe.

Could we do that with 5,000,000 men?

Could we do it with 10,000,000 men?

Those European people have 10,000,000 men or more strongly entrenched on their own soil.

Can we defeat them on their home grounds?

Can we dislodge them?

Can we reconstruct them?

Can we ever tell them what to do and how to do it, and will they continue to do it, any more than they did after the last war?

Can democracy ever be established in Europe?

Is not communism far more likely to be established in America?

With all our 10,000,000 men and our $150,000,000,000 and our misery and our bankruptcy and our loss of liberty what beneficent result can we actually accomplish in Europe?

What can we do that will warrant and justify all our sorrow and sacrifice?

What can we achieve by protracted and destructive warfare that cannot better be achieved by peaceful negotiation?

Poland could have been saved by peaceful negotiation.

And if Poland had been saved, Finland, Latvia, Lithuania, Estonia, and Bessarabia would never have been endangered.

Norway and Denmark and Holland and Belgium could have been saved by the peaceful negotiation which the Queen of Holland and the King of Belgium and the Kings of Norway and Denmark earnestly and repeatedly urged.

France and all her empire—England and all her empire could have been saved by the same insistence upon peace that was exerted to create war.

Poland was told to refuse peace.

That she would be given support in war, and the brave little country heroically and recklessly went to war.

Norway was told she would be given support.

Holland and Belgium were pledged undying aid and alliance and told to hold out to the last man.

France was given every sacred vow of fraternal affection and military support.

But while the breath of the pledge was still warm, while the ink on the pact was still wet, the masterly retreat from Dunkirk was being accomplished and the continental Allies, the brothers in arms, were left to suffer alone the impact of Hitler's mechanized divisions.

The help promised came "too late or too little" or not at all—or if it came it stayed too little a while or not at all—and went right back to defend the right little, tight little isle, leaving the brothers in arms at the mercy of the foe.

Doubtless that was a natural and reasonable result.

Self-preservation is the first law of Nature.

All obey it except the saps and Uncle Saps.

So there is no use calling England "perfidious Albion."

There is no use branding Germany as forsworn and faithless.

There is no use calling France mercurial and undependable.

It is better to realize that all these nations were thinking in terms of war when they should have been thinking in terms of peace.

The world should have been thinking in terms of peace.

The world should be thinking now not in terms of continued warfare and unending destruction but in terms of peace and recovery and reconstruction.

The public of any nation—the dear, good, and dumb public—has been likened to a man riding backward in a train who never sees anything until it is passed.

Well and good.

We in America believe in the public.

We believe in the high purpose of the public.

We believe in the superior wisdom of the public.

We have a country which is the greatest on earth, and which has been built to greatness by this same dear, dumb public.

We are perfectly willing that the public shall not see anything until it is passed—if it only sees it then.

If it only shall profit by what it sees and what it experiences. We are satisfied if we do not repeat the mistakes of the past.

We are happy if we learn from them as we see them from the train window and watch them disappear in the distance.

When we look into the future we may think we are right in our opinion, but we cannot be sure.

But when we see clearly what is passed we know we are right if we only have the wisdom to learn by experience.

The world was eager for war when it should have been anxious for peace.

Perhaps all the people of the world, having learned by experience, are wisely desirous now not for a continuance of the war but for permanent and prosperous peace.

Of course, you have heard the old story of the Englishman and the Irishman who were having a fight.

And the Englishman said (and the Irishman agreed) that when either one was beaten he should shout "sufficient," and that would end the fight.

The two were strong and brave and they fought long and hard until both were battered and bruised and weak and worn.

And then the Englishman leaned against a post and said faintly, "Sufficient."

"Glory be," said the Irishman. "I have been trying to think of that word for the past half hour."

It may be that the embattled nations are trying to think of a word now—and that word is "peace."

It may well be that they are weary of war and only want an opportunity to negotiate peace.

The Pope, in his marvelous Easter message, said:

"Nothing can impede or restrain us from doing all in our power in order that, in the tempest of surging waves of enmity among the peoples of the earth, the divine ark of the church of Christ may be held firmly by the anchor of hope under the golden rays of peace.

"That blessed vision of peace which, in the midst of worldly conflicts, is the refuge and abode and sustenance of that fraternal spirit, founded in God and ennobled in the shadow of the cross, with which the course must be set if we are to escape from the present tempest and reach the shore of a happier and more deserving future."

What a glorious thing it would be for the great peace-loving people of the United States to labor in harmony with the Pope's noble ideals and strive to bring a Christian Easter peace to a war-weary world.

Objectives of Belligerents in the Current World War

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1941

RADIO ADDRESS OF BISHOP FRANCIS J. McCONNELL

Mr. COFFEE of Washington. Mr. Speaker, recently Bishop Francis J. McConnell, of the Methodist Church of the United States, delivered an instructive and provocative address over a Nation-wide hook-up of the National Broadcasting Co., before a luncheon of the People's Lobby in the National Capital. The speech was reprinted in the People's Lobby Bulletin. It contains factual data and persuasive arguments which I deem eminently worthy of incorporation in the CONGRESSIONAL RECORD.

The People's Lobby, the executive secretary of which is Benjamin C. Marsh, has been carrying on a persistent and aggressive fight against the possibility of our involvement in World War No. 2. Bishop F. J. McConnell is one of the outstanding liberal divines in the country. As the president of the People's Lobby, he has been a staunch protagonist of legislation designed to improve the lot of organized labor. He has unfailingly inveighed against bills designed to limit or circumscribe civil liberties. He has demanded the retention of the democratic process. He has resisted proposed legislation which embraced tactics of alien baiting, Negro baiting, Jew baiting, and "red" baiting. He is not frightened by the war hysteria inspired bugaboo of the Red menace. He does not suspect the presence of a metaphorically long-haired, bewhiskered, bomb-carrying sycophant of Moscow, under every bed or chair in every building he visits.

McConnell has his feet on the ground and his eyes are clear and alert. He is capable of looking straight ahead. He cannot be coerced. He is not a fair-weather progressive. He does not trim his ideological sails to conform to every transitory breeze. We need more of his caliber in the clergy and in public life.

His speech is as follows:

I stand as a representative of, I think, a great body of American citizens who simply want light on some questions and are becoming a good deal puzzled as to why they can't get any light, in the way of a formal statement. I refer to the apparent unwillingness of the leaders of Britain to state, even in a general way, the peace aims. I want it distinctly understood that I'm speaking now simply from the standpoint of one asking for information. I'm not here as an absolutist conscientious objector. I never have been one. I'm not talking from that point of view. I'm not here standing as an opponent of giving whatever aid I can give in any way to Britain. That doesn't happen to be the question just now, except that Britain is seeking and is receiving aid from the United States. I am simply asking a question I think Americans ought to ask, each of them for himself and seek for an answer somewhere.

BRITISH PEACE AIM

What is to be the peace aim of the leaders of Britain, or the British Government? And I do not expect by that any statement in detail as an answer. I'm simply talking about the general aim.

Of course, Mr. Churchill has said if we stop fighting you'd soon find what we were fighting for. But that's not quite an answer to the question. The question is, after this war is over, what is the aim of the British people, and aside from the mere matter of self-defense of the Empire or of the Nation, on what grounds are they asking for aid from the American people.

There are some very disquieting things which keep creeping up in reports from England, repeated here in the United States. For example—the militarists, and the militarists now, of course, have to be listened to in England—the militarists are saying that the war won't really begin for 2 or 3 years yet, and then will have to end by a knockout blow by armies administering the blow in Germany itself. Well, now, if that's a statement of policy, we ought to know about it. If that's just the opinion of the military experts, of course, that's a different matter. These experts are specialists. They have their own use, good or bad, but if that in any sense represents the point of view of the British leaders, we ought to know about it for the simple reason that England hasn't herself enough troops to do that, and inasmuch as she hasn't enough troops to do that, where are the troops to come from? And inasmuch as we are concerned in the matter of giving aid to England, that becomes a very pertinent question to us.

If it means, on the other hand, going far enough to convince the entire German people that they cannot dismember the British Empire, or rather, put the whole British Nation out of business, that's an entirely different matter. But on as fundamental a point as that, there's been no clearing up at all. And inasmuch as we are being asked for aid on such large scale, it seems that there might be some answer to that question.

BRITISH CHURCHMEN'S VIEW

Now it's only fair to say that in England there is already another group of persons representing a point of view about which they are willing to speak, but it's a good deal of a puzzle that this does not get any larger representation in the press. You take, for example, the attitude of the Archbishop of York. He was one of the principal men speaking at the recent Malvern Conference, and that Malvern Conference went quite a distance in the way of stating the basis on which England must establish or reorganize society after the war is over. I can't go into detail about their program, it's a very advanced program. I do say it's very remarkable that it hasn't been given wider circulation in this country. I looked for a long time to find it and found it finally in the Information Sheet of the Federal Council of Churches of Christ in America.

WHO DETERMINES BRITISH POLICY?

I was utterly amazed to see how far a group under the leadership of an Archbishop of the Church of England is willing to go. I don't want to say that their platform is the platform of the British Labor Party, because I'm not familiar with any statement of that platform since about a year ago, now, May 1940. But it represents an entirely different point of view.

Now, is there any way of our knowing, will anybody tell us how far these matters are being considered? There seems to be a conspiracy of silence in hushing the whole matter up. It makes a very vast difference as to whether this is just a group of persons on their own, talking in a small circle or whether there is a growing sentiment on the part of England itself which will finally influence the leaders as to what the final peace aims are.

GETTING TO GERMAN PEOPLE

Of course, it can be said that if you talk this way, why then you give the impression, especially to Germany, that you're of a defeatist attitude. I haven't any spirit of defeatism at all. Only we keep hearing all the time that is is to be a war of public opinion. We're being told that Hitler's success depends not on Hitler, he's just an individual, but he struck his note at the right time so far as the sentiment of Germany is concerned.

In spite of all the restrictions on receiving messages in Germany, certainly there'd have to be some way of getting across to Germany these peace aims, if they are of the kind I'm talking about, looking toward a larger reorganization of society, looking toward a better chance for the ordinary man, looking for the dawning of a new day, and the rehabilitation of the world on some kind of sounder economic and social bases than we've ever known.

What broke the morale in 1918 of the German people were the fourteen points of Woodrow Wilson. Of course, they were not lived up to, but then people thought they would be lived up to, when they were uttered. And I imagine well enough it's easy to say in Germany the points now would not be lived up to.

But that's a good deal wiser policy, especially if it's sincere on the part of the people, than to keep talking about knockout blows which nobody can really define. Knockout blow might mean a victory of the sea, it might mean this other thing, the military conquest of Germany, which simply would be impossible, if civilization is to endure at all on the continent of Europe.

So I say there is every reason why we should keep insisting upon this. And there's another thing, we simply have to stand and ask the question—think what we're doing.

We're moving on, now, a nation of a hundred and thirty million, carried on with tremendous speed, and one criticism of the present social system is just this, that there has been such a swing away from the old individualistic opportunity for the expression of opinion to these massive movements, and these massive expressions in which the individual is not allowed to ask any questions at all.

So, as I say, without sympathizing with anything in the way of the German aim at all, I simply say that as an American citizen, I have the right to raise this question and insist upon it, and in spite of all the objections keep insisting, "What is the aim of Britain in this great conquest?" And the right of it, not because we want to interfere with any other nation's duties or activities, but a right come simply in this, that we are being called upon to make such tremendous sacrifices, and the most simple and the most reasonable requirement that we can make, is simply to insist upon a statement of what the final aims are to be.

It seems to me that's wise strategy and wise tactics, and certainly it's wise Americanism and wise social morality.

Wheeler's Appeal to Emotionalism

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1941

EDITORIAL FROM THE MILWAUKEE JOURNAL

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of April 23, 1941:

[From the Milwaukee Journal of April 23, 1941]

WHEELER'S APPEAL TO EMOTIONALISM

One thing was significantly missing in Senator WHEELER'S speech at the auditorium. It was that clincher the isolationists were using only a short while ago in their assumption that this country has nothing to fear from Hitler. It ran like this:

"If Hitler hasn't been able to invade England over 22 miles of water, how can he attack this country across 3,000 miles of ocean?"

Aren't the isolationists so sure now that Hitler will not be able to land troops in England? Are they beginning to suspect what others have been thinking, that the German aggressor is using a subtle strategy—hammering the British Empire to pieces bit by

bit while making feints at the English island, thus keeping immobilized there huge forces of men and masses of war machines, the lack of which brings defeats to the British elsewhere?

Or have the isolationists, the WHEELERS and the LA FOLLETTES and the NYES concluded that it is a bit silly to keep talking about Hitler's not being able to land troops in England when the island is slowly being pulverized anyway by bombs from the sky?

Have they also been looking at pictures of that long-distance plane our Army is testing, a plane designed to fly the round trip to Europe? If we can build that kind of bomber, Hitler can, too.

Events have moved so rapidly to discredit the shallow arguments of these isolationists that they have to shift their ground rapidly. They have been shifting constantly ever since the late Senator Borah, then their leader, stood up in the Senate to answer President Roosevelt's warning in the fall of 1939 that a world war was likely to break out soon.

Borah declared flatly that there wasn't going to be another world war. He knew better than the State Department. And the echo of his words had hardly died away before the cannon began to roar.

Then the isolationists had a lot of us believing and saying that it was just a "phony" war. Remember? They aren't saying that any more either. In fact, they have been tripped up so often by their own shortsightedness that there isn't any reason why anyone should put any faith in their judgment any more.

So Senator WHEELER simply assumes without argument that there is nothing to be worried about, that nobody is going to hurt us if President Roosevelt doesn't force us into war, and that if anybody does attack our shores every man will rush to the mantel and take down the old musket, and if the men don't thus spring to the defense of this country he is sure the women will.

A Senator of the United States actually said that.

Perhaps this was a lame attempt to be humorous, but that kind of talk isn't funny in these grave days. Oh, yes; the Senator, as do all the dissembling isolationists, declares himself for arming this country to hold off any power or any combination of powers that might be so foolhardy as to attack us. And then he blisters the administration for acquiring land in Bermuda and sending 5,000 American troops, to that defensive outpost. What kind of muddled reasoning is that?

The prospect of the vise this country will be in, if Great Britain falls, with Japan pushing one pincer down into Singapore and Hitler pushing the other pincer into North Africa, apparently has not entered Senator WHEELER's horizon.

An idea of what may be shaping up for us with Hitler and his Axis partners, masters of millions of people embittered, who may even in the poverty of their war wreckage turn on us for self-survival, apparently has never given WHEELER pause for thought.

That Hitler has proclaimed a crusade of the "have nots" against the "haves," imbuing his followers with the zeal of fanatics, apparently gives WHEELER no concern. Even though we are the world's largest storehouse of riches, the Senator assumes that we could deal with Hitler, although the whole course of Nazi philosophy belies any safety to any country which puts its trust in Von Ribbentrop agreements.

So the Senator drones on for the better part of an hour and a half, venting his anti-British sentiments, indulging his anti-New Deal animosities, playing skillfully upon the desire and the hope of all of us that in some honorable way—and we stress the word "honorable," although the Senator does not—that we shall escape the holocaust that is sweeping all the rest of the world. So he drones on, ad libbing vicious jabs which do not appear in the text he gives newspapers for publication.

As a demagogic appeal, we presume, Senator WHEELER's campaigning would be considered a masterpiece. But his perspective of this tragic world convulsion extends no further than the end of his nose. And the harm of it is that it may persuade some emotionally high-strung but well-meaning citizen to do something that may get him into serious trouble with his Government.

Latest Gallup Poll Reports Big Majority Against Any Further "Steps Toward War"

EXTENSION OF REMARKS

OF

HON. WILLIAM G. STRATTON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1941

ARTICLE FROM THE BALTIMORE SUN

Mr. STRATTON. Mr. Speaker, the attached reproduction of the latest complete Gallup poll as printed in the Baltimore Sun this week merits the close study and analysis of every thinking American who believes in the principle of majority rule in this country.

It will be noted that in addition to the 83 percent of Americans who oppose our entrance into the war as reported in the last Gallup poll on that question, the current poll reveals the even more significant fact that vast majorities of Americans oppose any more steps toward war, whether it be sending a part of our Army, a part of our air force, or a part of our Navy for use in convoys. In fact, the South is the only section of the country which gives as much as a 30-percent vote favorable to any of these steps and in not a single instance, even in the South, is a vote of over 40 percent recorded for any of these steps smacking of active participation in the war.

[From the Baltimore Sun]

THE GALLUP POLL—TREND OF AMERICAN THOUGHT ON SENDING NAVY AND AIR FORCE TO EUROPE

(By Dr. George Gallup)

PRINCETON, N. J., April 19.—How are the American people reacting to the latest events in the European war?

As part of its continuous soundings of American public opinion on the war, the institute has put a series of questions to men and women in every corner of the American Republic, in order to answer the following urgent questions and others:

Have recent reverses for Britain and her allies increased or decreased the American public's desire to help?

What has been the trend of United States thinking on convoys?

How have the average American's views of the length and probable outcome of the war been affected by the latest events? And how much sentiment is there now for active intervention as in 1917?

Nation-wide tests of American public reaction were begun the moment Adolf Hitler's panzer divisions swung into Greece and Yugoslavia, and succeeding reports in this series will chart the resulting picture.

Meanwhile new studies begun just before the German blitzkrieg in the Balkans and North Africa reveal that many Americans are making an important distinction between entering the war with an A. E. F.—as we did in 1917—and waging a war limited to warships and air forces only.

While the institute's survey finds that a majority of voters are opposed to fighting even a "limited" war in Europe, probably no picture of United States thinking is complete today which does not take the following phases of public opinion on the war into account:

SEND PART OF ARMY?

First and most important is the attitude on sending an army—another A. E. F.—abroad to fight.

From a score of surveys the institute has found that the term "entering the war" generally means only one thing to the American public—the dispatch of men as in 1917. And on this question majority American opinion continues to register an overwhelming "No."

Opinion on the question has been remarkably stable so far, no matter what events have occurred in Europe. It is true, of course, that Americans have thus far been able to find numerous measures "short of war."

Yet even at the height of Hitler's blitzkrieg in the west last spring—and at the peak of his raids on London in September—the institute has never found quite a fifth of the voters of the country in favor of a "shooting war" with troops.

SEVENTY-NINE PERCENT ARE OPPOSED

The newest institute tests show that this attitude has been holding firm. "Do you think the United States should send part of our Army to Europe to help the British?" men and women in a cross-section of the voting population were asked.

Replies from every State in the Union show the following results:

	Percent
Favor sending part of Army	17
Oppose sending part of Army	79
Undecided	4

While most voters show by their comments that they are opposed to sending troops on principle, many who oppose it in today's survey indicate their opinions might be subject to change later. These are the men and women who say "we shouldn't send troops abroad now," or "not at this time," or "Churchill and Roosevelt both say the British need guns and tanks—not men."

PLANES AND WARSHIPS

But Washington observers and military writers have mentioned the possibility the United States might wage a "limited war" on the Axis, using either warships manned by American seamen, warplanes with American pilots, or both.

How would the public respond to such proposals?

The results of the institute's survey indicate that when the idea of American participation is limited to part of our air force, the 17 percent willing to send men increases to 24 percent.

When participation is limited to "some of our warships," the 17 percent becomes 27 percent.

Here are two important phases of the public's attitude hitherto unrevealed:

Do you think the United States should send part of our air force with American pilots to Europe to help the British?

	Percent
Favor sending part of air force	24
Oppose sending part of air force	69
Undecided	7

Do you think we should send some of our warships manned with American sailors to Europe to help the British?

	Percent
Favor sending some of our warships	27
Oppose sending some of our warships	67
Undecided	6

VARIED INTERPRETATIONS POSSIBLE

The foregoing attitudes will give American observers new material for reflection, and doubtless individual commentators will interpret the results in different ways. Some will stress the fact that American public opinion remains preponderantly against armed intervention by the United States even in a "limited" war.

Others will stress the distinctions the public seems now to be making between the use of the Army and the other services. The institute's only purpose in this, as in all other surveys, is purely one of finding the facts about the public's attitudes.

What new trends of thinking have been set in motion by the events in North Africa and the Balkans will be reported in four further articles this week.

SOUTH 40 PERCENT FOR WARSHIPS

Noteworthy in today's tests is the division of opinion in different sections of the United States. The Midwest remains most noninterventionist, while the relatively belligerent South votes 25 percent for sending part of the Army, 36 percent for sending air squadrons, and 40 percent for sending United States warships manned by American sailors.

The sectional vote:

SEND PART OF ARMY?

	Yes	No	Undecided
	Percent	*Percent*	*Percent*
New England, Mid-Atlantic	15	81	4
East Central	16	80	4
West Central	13	82	5
South	25	68	7
West	19	78	3

SEND PART OF AIR FORCE?

New England, Mid-Atlantic	22	71	7
East Central	21	72	7
West Central	20	73	7
South	36	56	8
West	26	67	7

SEND PART OF NAVY?

New England, Mid-Atlantic	24	71	5
East Central	27	68	5
West Central	21	72	7
South	40	54	6
West	29	66	5

Congressional Apportionment

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

STATEMENT BY PROF. EDWARD V. HUNTINGTON, OF HARVARD UNIVERSITY

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Prof. Edward V. Huntington, of Harvard University:

THE ROLE OF MATHEMATICS IN CONGRESSIONAL APPORTIONMENT

(By E. V. Huntington, Harvard University)

In regard to methods of apportionment in Congress, Government officials have three times appealed to scientific bodies for technical information. Since one of these bodies is the Harvard Department of Mathematics, of which I happen to be now the senior member, I beg the privilege of explaining briefly the role which mathematics has to play in this situation.

This role has been much misunderstood. The picture of a "long line of mathematicians" filing by, each trying to sell his own pet scheme to the committee, is a fantastic travesty. A mathematical theorem is not a matter for proponents and opponents to wrangle over as if it were a river-and-harbor bill. A new mathematical theorem has just one essential property: It is either true or false. If it is true, it is simply accepted as one more step in advance in the natural growth of this rapidly growing science. If it is false, that fact will be speedily discovered by competent critics. No personal or political motives, inside or outside of Congress, have anything to do with the truth or falsity of the theorem.

What mathematics has done in the present instance is to establish, in 1921, a new theorem called the theorem of equal proportions, through which the whole problem has been enormously simplified.

For over a century Congress had been trying to find a mathematical method of apportionment that would put each State as nearly as possible on a par with every other State, in accordance with the Constitution; but the mathematical tools then available were not far enough advanced to supply a solution. All kinds of complicated theories about things like "sliding divisors" and "fractional remainders" were argued pro and con without leading to any satisfactory conclusion. The new theorem came like an answer to prayer, supplying precisely the kind of simple and self-explanatory test that Congress had long been seeking.

The simplified theory is thoroughly realistic. It takes up the situation at precisely the point where Congress itself takes it up in each decennial debate—at the point, namely, where an actual apportionment bill is presented for discussion. Every Congressman who examines such a bill begins by figuring out the average numerical size of the congressional districts in his State (by dividing the population of the State by the number of Representatives assigned thereto). If the average district in his State comes out larger than that in some other State, he very naturally and properly raises the question whether a seat should not be transferred from that other State to his. The size of the House being fixed, the debate always comes down, in the last analysis, to this question: "Should or should not such a transfer be made?" As the most natural commonsense answer to this question, the modern theory offers the following simple test:

TEST OF EQUAL PROPORTIONS

A proposed transfer of a seat from one State to another State should be made when, and only when, the percentage inequality between the congressional districts in the two States would be reduced by the transfer.

For example, suppose State A demands the transfer of a seat from State B. If, before the transfer, the A district is 11.02 percent larger than the B district, while, after the transfer, the B district is 11.26 percent larger than the A district, then, under the test of equal proportions, the transfer should not be made.

By this simple test, any dispute between two States in the matter of apportionment can be settled immediately by the most elementary arithmetic. The only data required are the populations of the two States directly concerned and the number of Representatives assigned to each. It is no longer necessary to compute any "exact quotas" or any "fractional remainders." All the controversial items in the earlier debates simply drop out of the picture.

It should be observed that this test of equal proportions merely gives precise expression to an aim which has always been upheld by Congress, namely, the desire to equalize as far as possible the congressional districts among the several States. The only point at which any real mathematics is involved is in the proof that the test can be successfully applied to every pair of States. (It is not immediately obvious that an improvement in the relation between two States, A and B, might not upset the relation between one of these States and some third State, C.) This point is covered by the following theorem:

Theorem 1. There is a process of computation, well known to the Bureau of the Census, the result of which will always satisfy the test of equal proportions for every pair of States simultaneously.

The truth of this theorem is vouched for by the unanimous report of the Census Advisory Committee, requested by the chairman of the House Committee on the Census in 1921, and by the unanimous report of a committee of the National Academy of Sciences, requested by Speaker Nicholas Longworth in 1928; and the technical process referred to in the theorem is clearly set forth in many places. But the details of the process of computation shed no new light on the fairness of the method and need not be repeated here. The fairness of any method can be tested only by examining the resulting actual apportionment. In this game the test's the thing.[1]

The current debate in Congress turns on a choice between two methods. The role of mathematics in this debate may be summed up as follows:

Theorem 2: If Congress desires to equalize the congressional districts as far as possible among the several States, the method of equal proportions will always give a better result than the older method of major fractions. The method of major fractions cannot be counted on to equalize the congressional districts on any basis whatever.[2]

---

[1] As far as the process of computation is concerned it is the same in all the methods, except that a different "table of multipliers" is used in each case. There is no difference whatever in the amount of time or labor involved in the computation. For further information, see E. V. Huntington's A Survey of Methods of Apportionment in Congress, printed for Senator DAVID I. WALSH as S. Doc. 304, 76th Cong., 3d sess., 1940; or Dr. Schmeckebier's book on Congressional Apportionment, published by the Brookings Institution in Washington, 1941; or Dr. Dedrick's statement on behalf of the Bureau of the Census, printed in the hearings on H. R. 2665, held before a subcommittee of the Senate Committee on Commerce, February 28, 1941, p. 44.

[2] In order to meet a certain unsound criticism, the following somewhat stronger theorem may be noted: Theorem 3: The method of equal proportions is the only method which will apportion a given number of Representatives among the several States, so that the ratios of population to Representatives, and also the ratios of Representatives to population, shall be as nearly equal as may be among the several States.

To a layman the information contained in these theorems 1 and 2 may seem a useful service for any science to perform.

Not so in the eyes of professional politicians. The Gathings equal-proportions bill (H. R. 2665), which passed the House on February 18, 1941, by a vote of 210 to 142, was blocked in the Senate by a small group in the Senate Committee on Commerce. Members of this group, largely influenced by Professor Willcox, of Cornell, sharply resent the intrusion of mathematical theories in a field which they regard as purely political, not at all mathematical. Professor Willcox flatly rejects (or, more accurately, deliberately ignores) the mathematical theorems cited above, replacing them by statements which he holds to be free from mathematical taint. Thus in 1928 he stoutly upheld the following thesis:

WILLCOX STATEMENT OF 1928

The only method which makes the congressional districts in small and large States as nearly equal as possible is the method of major fractions.

In 1940 he replaced this statement by the following, which he believes more accurately reflects the political wishes of Congress:

WILLCOX STATEMENT OF 1940

If the main purpose of apportionment is to make the congressional districts as nearly equal as possible, that purpose is best secured by the "method of smallest divisors."

These two statements, we are to understand are purely political and therefore entirely immune from mathematical attack. The fact that both of them, no matter how they may be labeled, are definitely false appears not to worry their author in the least.

In fairness to Professor Willcox, however, it must be noted that his opposition to the method of equal proportions is based primarily on a different thesis, namely, that no one in Congress can understand it. This is perhaps the first time in history that advocates of any measure have openly accused the Congress of the United States of being unable to multiply and divide. And yet the ability to follow these most elementary rules of arithmetic is all that is needed to understand the exact meaning of the test of equal proportions and to apply it successfully in any given case. The only difficulties that have arisen are due to the persistent inclusion, by the opponents of the method, of superfluous and irrelevant complications that it was the purpose of the new method to remove. By consistently refusing to place before their readers any correct citation of what the test of equal proportions really is, the opponents of the modern theory stamp themselves as 20 years behind the times.

George Washington, whose first veto concerned an apportionment bill, and Daniel Webster, whose eloquent appeal for a just apportionment represented the best thought of his day, would have welcomed eagerly the mathematical tools which are now available for achieving their goal. The goal remains the same: To make the congressional districts as nearly equal as possible among the several States. Senator CARAWAY, of Arkansas, is endeavoring to revive the equal-proportions bill with a perfecting amendment. According to theorem 2 above, a vote to reject this amendment and to retain the method of major fractions would be tantamount to a complete abandonment of the goal of equalization of districts. Do the present-day leaders in Congress really believe that a deliberate abandonment of that goal would be a sound political policy?

The following note is added for convenience of reference: Under the 1940 census, for a House of 435 Members, the apportionments by the method of equal proportions and the method of major fractions differ in respect to only two States. A comparison between the resulting congressional districts in these two States is shown as follows:

(Size of House: 435)		Method of equal proportions		Method of major fractions	
State	1940 population	Number of Representatives	Congressional district	Number of Representatives	Congressional district
Michigan	5,256,106	17	309,183	18	292,006
Arkansas	1,949,387	7	278,484	6	324,898
Absolute difference			30,699		32,892
Percentage difference			11.02		11.26

Thus the inequality between the congressional districts (whether absolute or relative) is smaller under the method of equal proportions than it is under the method of major fractions.

This example, which is typical, illustrates the main argument in favor of the method of equal proportions as against the method of major fractions.

Increase of Gasoline Tax in the District of Columbia

REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

Mr. SPRINGER. Mr. Speaker, I have introduced in the House of Representatives today a bill (H. R. 4549) to levy an additonal gasoline tax of 2 cents per gallon upon motor-vehicle fuel sold in the District of Columbia. This bill is exactly like the one introduced by the gentleman from West Virginia, the Honorable JENNINGS RANDOLPH, who is the chairman of the District of Columbia Committee of the House of Representatives, which he introduced on August 4, 1939, except that I have changed the tax stipulated in his bill from 1 cent to 2 cents. This will make the total gasoline tax in the District of Columbia 4 cents per gallon, which is exactly the same as it is in my State of Indiana, and brings it practically to the average of the gasoline tax paid by our constituents in the several States. This average is 4.2 cents per gallon.

When my bill becomes law, the total gasoline tax for the District of Columbia will be 4 cents per gallon, exclusive of the Federal tax. The Federal tax is added to the State tax in all jurisdictions.

When the gentleman from West Virginia, Chairman JENNINGS RANDOLPH, introduced his bill known as H. R. 7526, on August 4, 1939, in the Seventy-sixth Congress, he made the following remarks which are contained in his extension of remarks appearing in the Appendix of the CONGRESSIONAL RECORD, volume 84, page 3858, which I quote:

After due consideration of these principles, I believe the fairest means available is the levying of an additional 1-cent sales tax per gallon on gasoline * * * and which could be collected with very little administrative expense.

I hope every Member of the Congress will take the time to read the excellent presentation of this subject as contained in the gentleman from West Virginia's [Mr. RANDOLPH'S] remarks.

This bill, H. R. 7526, of the Seventy-sixth Congress, was referred to a special subcommittee of the District of Columbia Committee of the House of Representatives, of which the gentleman from Texas, the Honorable W. R. POAGE, was chairman. This special subcommittee conducted extended hearings upon this subject of increasing the gasoline tax in the District of Columbia, and secured valuable data and information from the Engineer Commissioner of the District of Columbia, Col. D. McCoach, Jr., and then the chairman of the special subcommittee of the District of Columbia Committee of the House of Representatives, the gentleman from Texas, the Honorable W. R. POAGE, for and in behalf of his special subcommittee, submitted an exhaustive report on the necessity of imposing an increased tax on the retail sale of motor fuel in the District of Columbia. I feel this special report submitted by the gentleman from Texas, Chairman W. R. POAGE, is one of the finest and most convincing reports which has been given to the Congress on this distressing subject. I hope every Member of the Congress, as a service to his or her constituents, will read this report of the gentleman from Texas, Hon. W. R. POAGE, chairman of this special subcommittee of the District of Columbia Committee of the House of Representatives. If you do, you will learn how your constituents are being imposed upon by this unfair gasoline tax situation which has prevailed in the District of Columbia too long.

On page 7 of the Poage report, you will find that during the 15 years of operation of the gasoline tax fund in the District of Columbia, it has lacked over $42,000,000 of meeting the expenses required for the proper maintenance of streets, highways, bridges, and traffic control in the District of Columbia. The Engineer Commissioner of the District of Columbia, Col. D. McCoach, Jr., has repeatedly officially informed members of the District of Columbia Committee of the House of Representatives that urgently needed street, highway, and traffic improvements cannot be made without much additional road-improvement revenue.

The Honorable WILLIAM T. SCHULTE, of Indiana, who is the chairman of the streets and traffic subcommittee on the

District of Columbia, making recommendations of remedial traffic measures, has recently filed the report of his subcommittee known as Traffic Investigation Committee 5-Year Gasoline Tax Increase. Mr. SCHULTE's report recommends an additional gasoline tax of 2 cents, which would raise the total gasoline tax in the District of Columbia to 4 cents. I hope every Member of the Congress will read this splendid report of Chairman SCHULTE's subcommittee.

This bill which I have just introduced accomplishes the results recommended by Chairman W. R. POAGE's report, and the report by Mr. WILLIAM T. SCHULTE's traffic committee.

I can see no good reason why our constituents in Indiana, Texas, and West Virginia must pay an average 4-cent gasoline tax to maintain their roads, and then be required to contribute through a Federal tax donation to the District of Columbia road fund to keep up the streets and bridges and traffic police in the District of Columbia, and at the same time the District of Columbia motorists pay only 2-cent gasoline tax. If the District of Columbia did not need the additional road, street, and traffic-control money, it would be a different story, but when 2-cents-a-gallon gasoline tax will not maintain the streets, bridges, and traffic control in Washington, D. C., it is decidedly unfair to our own constituents to collect only a 2-cent gasoline tax in the District of Columbia, and then ask our own constitutents who pay 4-cent gasoline tax to maintain Indiana roads, to also make up the deficit caused by this low, discriminatory, special-privilege gasoline tax in Washington, D. C.

I know that the Capital Traction Co., which buys many thousands of gallons of gasoline and collects 10 cents per ride from its passengers, wants to buy gasoline at the expense of our Indiana, Texas, and West Virginia constituents and at the expense of the constituents of every Member of the Congress, but that is no reason why we Members of the Congress should permit this to be done.

I know the big oil companies are against this bill, and are always against any tax on petroleum products. They have appeared before committees of the Congress considering bills of this character at various times in the past in vigorous opposition and they have signified no change of mind. I know there are owners of large fleets of automobiles and trucks doing business in Washington, D. C., who care nothing for our Indiana, Texas, and West Virginia taxpayers, but that does not justify we Members of the Congress permitting a condition to exist where the District of Columbia needs all of the revenue a 4-cent gasoline tax will produce, and then only levy a 2-cent tax, and make up what the other 2 cents would produce by dipping into the Federal Treasury maintained by our constituents.

Our Indiana constituents contribute to the Federal Treasury through Federal taxes of various kinds, they also maintain their own roads, through an average of a 4-cent gasoline tax, and it is only fair to our own constituents to demand that the motorists and operators of large fleets of cars and trucks in the District of Columbia pay a like gasoline tax for the maintenance of roads, highways, streets, and traffic-control purposes, before asking the Congress to appropriate money contributed by our own constituents and your constituents to make up the deficit we allow to prevail in Washington, D. C., by permitting a gasoline tax far below the average of the States.

If our constituents contribute to a deficit in road, highway, street, and traffic control funds in the District of Columbia and at the same time keep up their own roads, they are being definitely discriminated against. There is no reason why residents of Washington, D. C., should not pay as much gasoline taxes as do the constituents of every Member of the Congress. It is a privilege to live in Washington, D. C., the Capital of our Nation, but it is not the kind of a privilege that requires the Congress to permit its inhabitants to pay less gasoline tax than do their own constituents and then appropriate large sums of money to help Washington, D. C. I am in favor of helping the people of Washington, D. C., when they have paid as much gasoline tax as the average of the States; then if they need more money the Congress should provide it. It should not allow motorists in the District of Columbia to pay less gasoline taxes than our Indiana, Texas, and West Virginia constituents do, and then ask the Congress to make up a deficit caused by the District of Columbia very low gasoline tax rate. Ordinarily I am against any increase of tax in any tax field unless it is absolutely necessary. In this instance human life is at stake in the District of Columbia, and I want the District of Columbia to bear its just share of the cost of solution.

I know that the failure to provide road, street, highway, and traffic control gasoline tax money is costing many human lives; many persons have been killed and injured in the District of Columbia whose fatalities and accidents could have been avoided by purchasing proper safeguards in the way of traffic personnel and highway and street improvement. Does the District of Columbia expect to have only a 2-cent gasoline tax when the State average is 4.2 cents per gallon gasoline tax and still ask the Congress to make up the deficit this low gasoline tax causes in road funds in order to save lives and limbs?

If there are those selfish interests or selfish individuals who are so unfair as to demand a very low gasoline tax when their District of Columbia government needs the money to solve its murderous traffic problem, and then ask the Congress to make up the deficit in road funds caused by this very low gasoline tax in the District of Columbia, I am ashamed of such selfish persons, and their selfish wishes and desires must be completely ignored by the Congress.

I hope that in view of the fact that extensive hearings have already been held as to the merits of increasing the gasoline tax in the District of Columbia to 4 cents per gallon, which will be practically the average of all of our States, and that two very fine reports have been filed recently by congressional committees recommending that the gasoline tax in the District of Columbia be raised to 4 cents per gallon, that the District of Columbia Committee of the House of Representatives will report this bill out without further consideration, and at its next meeting, with the recommendation that the bill do pass at once.

I appeal to my colleagues, both Democrats and Republicans, not to permit this disservice to longer prevail against our constituents.

Help Those Who Were Young Yesterday

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

ARTICLE BY RICHARD L. NEUBERGER

Mr. WHITE. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit an article prepared by Richard L. Neuberger which was printed in the Progressive on March 29, under the heading, "Help those who were young yesterday":

HELP THOSE WHO WERE YOUNG YESTERDAY

(By Richard L. Neuberger)

In the present drive to rearm America everyone is thinking about young folks. Young men are needed to man warships, fly bombing planes, and work in factories. Young women must be nurses and must take the place of men behind the lines.

But what about the old folks? They are still American citizens. They are the people who were young folks yesterday. Tomorrow their counterpart will represent the boys and girls who are young today. In the emphasis on youth and on the national-defense program, we must not forget the old people and the social-security program.

The entire social-security set-up, good beginning though it is, sadly needs revision. Some States pay reasonable pensions. Some States pay pensions which cannot keep body and soul together. There should be a uniform national pension. My own State of Oregon pays average pensions of $21 a month This is a disgrace in view of the fact that Washington, to the north of us, pays $40 and California, to the south of us, pays $38.

"A MATTER OF RIGHT"

A few days ago I read a speech in the CONGRESSIONAL RECORD by Congressman COMPTON I. WHITE, of Idaho. He recommended a pension on a Federal basis, the same pension throughout the Nation. He pointed out that such a plan is "winning new support in the populous industrial sections of the country." Why shouldn't it? In the high pressure of modern machine manufacture, men are

thrown on the scrap heap before they are 50. Often old-age assistance is their sole support.

A newspaper in Washington—the Daily News—has reported that President Roosevelt soon will propose a flat Federal pension of $30 a month, a pension to be paid regardless of need and regardless of State pension systems. Let us hope that the President does not permit the international situation to divert him from this worthy purpose. Such a proposal would be one of the high lights of the New Deal. No one must overlook for 1 minute that until Mr. Roosevelt entered the White House, the words "old-age pension" were not included in the vocabulary of the Presidency. The aged people of the country owe Mr. Roosevelt an undying debt for that.

The report from our National Capital declares that the President intends to pay a pension as a matter of right, rather than as a matter of need. Millions of elderly people will bless him for that too. At the present time men and women over 65 are penalized if they have children who might support them. Little or no consideration is given the financial status of those children. As like as not, they may be as hard up as their parents.

Case workers now investigate the people who apply for pensions. They snoop and pry into the old peoples' private lives. They search their financial problems. Frequently these case workers are young and sophisticated. They have scant understanding of what 65 years of toil and struggle might mean. They are hardboiled and tough. They try to make a record for themselves by keeping the pensions as low as possible. They have an idea that the goal is to save money. They forget that the purpose of the social-security program is to end suffering and ameliorate poverty.

ELIMINATE THE BUSYBODIES!

Making pensions a matter of right rather than need would totally eliminate these case workers. There would be no further use for them. Any elderly person over 65 and out of employment would be eligible to receive old-age assistance. His private life and the life of his children would not have to be pried into. I am glad that I helped promote in the recent session of the Oregon Legislature a bill to pay old-age pensions to people regardless of the status of their children. Unfortunately this bill clashed with Federal law. The Federal law in this respect ought to be changed.

No group of men and women has been fooled more often than the old people. In the meeting of our legislature, I saw men who had promised the old folks everything, vote again and again against taxes proposed to increase old-age assistance. One legislator who constantly assured the elderly people of his support scarcely gave a second thought to a measure some of us introduced providing for a privilege tax on dividends. This measure was patterned after the law enacted in Wisconsin by the Progressive Party. Its adoption would have helped to raise additional money for pensions.

It is the duty and obligation of liberals in America to think of the old folks in the present emergency. I am sure the enthusiasm of young men for our great democratic form of government will increase if they see that democracy takes care of men too old to work. Now that the Nation as a whole has accepted the idea of social security, we must labor to improve the set-up.

The pensions paid in some States are mere pittances. They must be increased. We must hope that President Roosevelt, who launched the social security program, will make it stronger by proposing a $30 national pension to all elderly citizens as a matter of right, a pension not conditioned on poverty or paupers' oaths or any other humiliating terms.

Letters Pertaining to Present Power of Federal Government To Prevent Delays in National-Defense Program

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

LETTERS FROM PRESIDENT ROOSEVELT AND SECRETARY OF LABOR PERKINS

Mr. BECKWORTH. Mr. Speaker, I wish to incorporate in the RECORD two letters I have recently received pertaining to the authority now possessed by the Federal Government to terminate delays resulting from industrial disputes which the Conciliation Service and the National Defense Mediation Board are unable to settle. One of these letters is from the President of the United States and the other letter is from the Secretary of Labor. The letters follow:

THE WHITE HOUSE,
Washington, April 19, 1941.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN BECKWORTH: I have your letter of April 9, 1941, inquiring as to the authority now possessed by the Federal Government to terminate delays resulting from industrial disputes in the event the Conciliation Service and the National Defense Mediation Board are unable to effect a settlement.

I have asked the Secretary of Labor to go into this question and to reply to your inquiry.

Sincerely,

FRANKLIN D. ROOSEVELT.

DEPARTMENT OF LABOR,
OFFICE OF THE SECRETARY,
Washington, April 23, 1941.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN BECKWORTH: The President has referred to me for reply your letter dated April 9 inquiring as to the authority now possessed by the Federal Government to terminate delays resulting from industrial disputes which the Conciliation Service and the National Defense Mediation Board are unable to settle.

I have asked the Solicitor of Labor to go into this matter and as soon as his investigation is completed I shall be glad to communicate further with you.

Sincerely,

FRANCES PERKINS.

Mr. Speaker, it was conceivable at the time the National Defense Mediation Board was established that the Board might not be able to settle all disputes referred to it. The press indicates this morning that the National Defense Mediation Board has been unable to settle the controversy which involves the mining of coal so essential at this time to the production of steel for national-defense purposes.

Since my letter of April 9 has not yet been answered by the Solicitor of the Labor Department, I have this day again submitted an inquiry to the Labor Department, which I herewith quote:

The Secretary of Labor wrote me a letter April 23, stating that she referred to you a letter which I wrote the President April 9, inquiring as to the authority now possessed by the Federal Government to terminate delays resulting from industrial disputes in the event the Conciliation Service and the National Defense Mediation Board are unable to effect a settlement. In view of the fact that the National Defense Mediation Board, according to the press this morning, has given up effort to end coal stoppage, I am particularly interested in receiving an answer to my inquiry. Thus far I have received no answer. For your aid in this connection I shall be very grateful.

In conclusion, it occurs to me the time has come when we should have definite knowledge as to what power our Government has to prevent delays in our national-defense program.

Sauce for the Goose Is Sauce for the Gander

EXTENSION OF REMARKS
OF
HON. WILLIAM T. PHEIFFER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

EDITORIAL FROM THE NEW YORK HERALD TRIBUNE

Mr. WILLIAM T. PHEIFFER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the New York Herald Tribune of April 26, 1941, which should be closely read and taken to heart by the officials of certain branches and agencies of our Government who propose to spend additional huge sums of the taxpayers' money in the name of national defense but not in the actual furtherance thereof:

[From the New York Herald Tribune of April 26, 1941]

ECONOMIZE AS WELL AS TAX

If the shock of the proposed enormous increases in income and luxury taxes results in focusing attention on the possibilities of economizing in the nonmilitary side of the national Budget, a distinct gain will have been made. However much we may quarrel with the particular form of taxes which have been suggested, few persons will question the wisdom of adopting the policy of paying for as much of the emergency expenditures as possible out of current revenues. Even if this is done, the additions to the national debt will be staggering. This makes all the more imperative the need for reducing to a minimum those expenditures which are not exclusively or primarily for purposes of national defense. Unfortunately, the politicians' philosophy, as expressed in both Houses,

appears to be that the preparations for war have brought about a gigantic spending spree, and that as many persons as possible—the taxpayers excepted—should be given a substantial share of the hand-outs.

That this philosophy is as fatal as it is unjust must be apparent to all thoughtful students of financial and fiscal problems. Nothing is gained by seeking explanations why the country has so easily accepted the theory of piling billions on billions, or by attempting to apportion blame for the unwisdom of trying to spend our way out of the depression. Rather, is it now necessary to accept the extreme urgency of concentrating on spending for national defense and of making the burden of these expenditures less onerous by cutting all nondefense items that can possibly be reduced or eliminated.

As a matter of fact, the Government's task is very much the same as that which it is planning to impose on the taxpayers. If the Treasury Department's present schedule is adopted, Uncle Sam will say to John Q. Taxpayer: "You have got to pay me two (or three or four) times what you paid me last year, and you must do this even if you have to cut out many expenditures and reduce others." What John Q. Taxpayer has the right to say in return is, "O. K., Boss. I'll pay you more, but in order to meet the burdens of defense you will have to cut out many expenditures and reduce others. You do your part and I'll do mine."

What that would mean would be that farm subsidies would have to be cut instead of, as is now proposed, increased by several hundred million dollars; that relief payments would have to be pared to the bone; that elaborate ventures in Government construction would have to be halted or abandoned; that a substantial part of the army of persons on the Government pay roll would have to be dropped; that every possible saving on nondefense items would have to be made, regardless of the political consequences.

The American people will shoulder the burden of national defense, however much it may hurt. But they have a right to expect that the administration in Washington will adopt a policy of drastic economy in all other fields so that more money will be available for defense purposes. The very urgency of spending for national defense makes the need of saving on other items more imperative than ever.

The Petroleum Industry in California

EXTENSION OF REMARKS

OF

HON. ALFRED J. ELLIOTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

ADDRESS OF R. E. COLLOM, PRESIDENT OF CALIFORNIA OIL & GAS ASSOCIATION

Mr. ELLIOTT of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech of R. E. Collom, president of the California Oil & Gas Association, delivered at the annual dinner meeting of the association held in the Biltmore Hotel, Los Angeles, April 3, 1941:

Although somewhat delayed, this is the annual meeting of the members of the California Oil and Gas Association. Ordinarily on this occasion, but closer to the first of the year, you would have a fresh crop of officers, at least a new president, to induct into office. Everyone was so busy, however, in the last few months of last year, listening to political speeches, casting ballots and answering summonses, that your present officers were practically declared in by default.

California Oil and Gas Association has 30 directors. These men are representatives of integrated companies; of independent producers, refiners, gas companies, and a few supply companies. Subject to these directors, the affairs of the association are administered through Managing Director F. E. Foster and staff and a number of standing committees. The roster of directors appears on your program.

The more important of the standing committees are: Tax committee, fire committee, automotive, marine, advisory, ordinance, safety, defense, and the wildcats. They are all active in the respective field which their names suggest, and some of them are promoting real, measurable economices.

Speaking of economies, you know we have to hold our own against the sometimes too great enthusiasm of the tax extractors. Over 200 types of taxes are levied upon petroleum products and operations. Approximately $1 out of every eight received by the 183,000 Federal, State, and local taxing jurisdictions in the United States is contributed by or through the petroleum industry.

As I have said before, if there ever was a goose that laid golden eggs, it has an economic counterpart in the petroleum industry. Sales taxes on gasoline and petroleum products are levied and collected almost painlessly, and State and Federal legislators have acquired the habit of going to the oil goose for golden eggs. During the 6 years 1935–40 State and Federal taxes of all kinds extracted about seven and one-half billion dollars from petroleum and its products. In some years the total tax receipts were much greater than combined oil company income. In fact, there have been years, such as 1932, when only governmental agencies made any money out of the oil business.

You know what happened to the fabled golden goose and we are not expecting a similar early demise but the comparison should give pause and perhaps a warning to those who think that Government ownership or even Government control is the more efficient and conservative way to run the oil business.

To turn to the California petroleum industry we should like our guests tonight to know something about what the business represents to them, to the State, and the Nation. Also to give to you of other industries a brief idea of the degree of our interdependence. The requirements of preparedness and war now dominate our efforts and control our destinies.

Many of the present-day conditions are in marked contrast with conditions that prevailed in the early part of the last World War. At that time industrial activities related to war effort were confined to the Atlantic coast for a long time and moved westward very slowly. California oil companies, however, began very promptly to profit by war conditions. Now the situation is just reversed. Munitions maufacture on the Pacific coast has sprung promptly into the forefront of national importance with mounting backlogs of war orders, whereas California oil companies have suffered a decline in total consumption due to curtailed offshore shipments although there has been a substantial increase in both the fuel-oil market and local gasoline consumption.

California's crude oil production of 100,000,000 barrels per year during the period of the previous World War, with all wells producing to capacity, was less than half of the present yearly production from the severely curtailed output of an unpredictable but no doubt very large composite potential. Overall storage now is nearly 5 times greater than the 37,000,000 barrels of that time. Fourteen gravity crude, fuel grade, was $1.60 per barrel then—now 65 cents.

Many trainloads of gasoline were brought in from the Mid-Continent and gasoline was rationed from service stations. The price then was 25 cents, without tax, as against 10 cents, without tax, for approximately comparable qualities of gasoline.

In that time the California petroleum industry was in good shape to operate profitably in a heavy sellers market but not particularly well set up for extraordinary demands of defense. Today there is not much question of what we'd do with a profit if we made it and certainly no question as to the industry's ability to meet any demand whatsoever for civilian or war requirements.

In short a picture of the petroleum industry in California today is about as follows:

Raw products, crude oil, and wet gas, are derived from over 15,500 wells in various fields of the State, with some 4,700 wells shut in. The crude oil is gathered and shipped through pipe lines, tank ships, and trucks to the refineries. The wet gas is processed in natural gasoline plants and converted into natural gasoline, other liquefied petroleum products and residue gas. Liquefied petroleum gas, such as isc-butane, is used as charging stock in the refinery alkylation plant for the manufacture of high-octane aviation gasoline. Part of the residue gas is used as fuel in the field, and most of it is sold to the utilities for domestic, commercial, and industrial fuels. The natural gasoline is blended with refinery gasolines.

The refiners, by processes known as straight-run, cracking, alkylation, polymerization, hydrogenation, etc., turn out the gasoline, lubricating oils, fuel oils, and hundreds of other products which run your automobiles and trucks, fly planes, bunker ships, fuel trains, lubricate everything, and generally meet the needs of the consuming public at price indexes consistently lower than the price indexes of all other commodities.

To resort to statistics, I should say that current production under voluntary proration is about 600,000 barrels of oil and 1,000,000,000 cubic feet of gas per day. The State produced 224,000,000 barrels of crude oil during 1940, valued at $211,000,000, and 343,000,000,000 cubic feet of gas, valued at $22,000,000.

There are about 100 refineries in the State with a combined crude capacity of 950,000 barrels per day, and about an equal number of natural gasoline plants with a daily capacity of over 2,000,000,000 cubic feet of wet gas. These refineries range in capacity from two at 100,000 barrels per day each, three at 60,000 barrels per day, down to plants of less than 1,000 barrels daily capacity.

According to the United States Bureau of Mines crude runs to refineries could be increased at least 80 percent over the present level of 485,000 barrels daily without installing additional equipment.

The transportation of these various products requires some 6,000 miles of pipe lines, 60 oil tank ships, 8,014 tank trucks, and several hundred tank cars. In addition nearly 23,000 miles of pipelines are utilized in the hauling of natural gas.

As to the natural gas, largely residue gas after natural gasoline extraction, it is interesting to note that the gas companies

had 1,800,000 customers at the end of 1940. The total requirements for December 1940 were 23,600,000,000 cubic feet of gas, of which about 10,000,000,000 was for industrial use. This latter use is in competition with fuel oil and conceivably the business could be increased to such a volume that it would seriously hamper proper distribution of gas for domestic purposes, depress the price received for gas, and occupy a market which naturally belongs to fuel oil.

In order to serve the consuming public with products of the industry, there are about 16,000 service stations in California doing an annual business of some $250,000,000, in which, in addition to the gasoline which "starts quicker" and the lubricating oil which "puts the purr in the pearl," one may buy tires, batteries, cigarettes, and other accessories, not to mention the accommodations of some excellent sanitary rest rooms. These are all available to the style and tempo of our American way of life.

When you tell the service-station attendant to "fill it up," which I hope that you do, you are obtaining the end product of a great chain of highly technical operations. The oil business is one of intense specialization. I wish that I had the ability to describe to you some of the details of all the various technical steps from finding crude oil to filling your tank, of the geophysical crew that shoots off charges of dynamite and by the seismos reflections from various subterranean strata searches out and localizes the favorable oil-bearing structures; of the drilling crew that manipulates with professional ease the hundreds of tons of steel that penetrate the earth's crust in deep well drilling (one hole has been drilled in California to a depth of 15,004 feet) of the especially designed equipment to handle flush well pressures of as high as 3,500 pounds per square inch. There are geologists, geophysicists, petroleum engineers, chemists, research engineers, refinery engineers, and numerous types of other technologists employed in every kind of job from roughneck to president. Altogether there are about 85,000 persons employed in the California petroleum industry, a very large proportion of whom must have specialized experience and training to some degree in order to do their jobs.

Here, then, is a trained staff making available day in and day out an army of hydrocarbons to meet any peacetime or national-defense need. For example, the United States produces almost all of the world's 100- and higher-octane aviation gasoline, which gives enormous advantages in maneuverability, cruising range, lifting power, and speed to airplanes with engines designed for this grade of fuels. Production of 100-octane gasoline outside the United States is almost entirely concentrated within the British Empire. No other nation or combination of nations can remotely approach the technical refinements that have been developed in the American petroleum industry for designing certain combinations of hydrocarbons for specific and advanced superior uses, including many derivatives necessary for explosives.

After all, the adequacy of preparedness in airplanes, in mechanized equipment, and in naval operations hinges upon the production, adaptability, and availability of this array of hydrocarbons. All related civilian endeavor is likewise vitally dependent thereon.

I have already stated that California refineries have a capacity which would permit an increased throughput of about 80 percent without additional equipment. For the backlog of raw products to supply these refineries there is some difference of opinion as to what the 20,200 wells of the State could produce if they were all operated to capacity for, say, 6 months. Let me assure you, however, that no one is afraid that we can't produce enough oil. The figure, depending to some extent upon the degree of optimism of the estimator, will vary from 900,000 barrels per day to 1,500,000 barrels per day. The oil administrator carries the total potential capacity of the State at 3,485,000 barrels per day.

This potential capacity is backed by an estimated reserve, crude oil in natural underground storage, of 3,300,000,000 barrels as of January 1, 1941. In addition there is stored above ground 37,000,000 barrels or about 70 days' supply of refinable crudes, 22,000,000 barrels or 100 days' supply of gasoline, and 57,000,000 barrels or 220 days' supply of fuel oil.

Fuel oil always has been an important factor in California. Out of California's crude comes a large part of the fuel oil, Diesel oil, and lubricants necessary for successful operation of the Navy. Also the oil industry operates a fleet of over 60 tankers in and out of California's harbors, many of which have been built to United States Navy specifications and are of fleet quality.

Altogether the oil fields, pipe lines, refineries, tidewater outlets, tankers, bunkering facilities, tank trucks, tank cars, bulk plants, technical and research personnel, hundreds of executives who have grown up with the business, and thousands of skilled and willing workmen are a most important factor in America's defense economy. The petroleum industry operates on a 24-hour basis every day in the year, and all it needs is a green light. The California petroleum industry is really prepared to go.

Now, having said all this, candor and a sense of responsibility to the common cause require me to repeat that the petroleum industry is prepared to meet any national emergency. We are ready to produce anything in our line that is needed, in any quantity and for any use. All we hope is that those who are talking most about the petroleum industry's relation to defense are really thinking about defense and that they let those who know how and are trained for it continue to run the oil business.

Inter-American Cultural Center, St. Augustine, Fla.

EXTENSION OF REMARKS

OF

HON. JOE HENDRICKS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

JOINT RESOLUTION OF THE FLORIDA STATE LEGISLATURE

Mr. HENDRICKS. Mr. Speaker and Members of the House, I wish to call your attention to a resolution which was introduced on February 17, 1941—House Joint Resolution 119—to provide for the cooperation of the United States of America in the plans of the St. Augustine historical program for the establishment of a permanent Inter-American Cultural Center in St. Augustine, Fla. The St. Augustine historical program has been organized and undertaken under the leadership and sponsorship of the city of St. Augustine, the State of Florida, the Carnegie Institution of Washington, the American Council of Learned Societies, the American Philosophical Society, the United States Department of the Interior, the National Park Service, and other distinguished national organizations and individuals for the purpose of studying, preserving, and developing the rich materials relating to the Spanish colonization of St. Augustine and the region of which it was the historical capital.

For some months now we have had a very distinguished and intelligent gentleman heading an organization for the sole purpose of cultivating the friendship through economic and cultural relations of the South American republics, the Honorable Nelson Rockefeller. And, incidentally, I would like to say that he is doing a very splendid job. It would be well for all the Members of the House to make a study of the work that Mr. Rockefeller is doing and his accomplishments.

I feel that the adoption of this resolution for establishing an Inter-American Cultural Center at St. Augustine, in the State of Florida, would go a long way in reestablishing the cordial relations of the Latin-American republics with the United States and creating stronger bonds of friendship. Therefore, I will appreciate it if the Committee on Foreign Affairs will give this resolution its earnest consideration and if the Members of the House will give me their cooperation in getting it passed. I would like to insert here a memorial passed unanimously by both the Senate and House of Representatives of the State of Florida relative to this subject.

To the Honorable Franklin D. Roosevelt, President of the United States, and the Honorable Senate and House of Representatives in Congress of the United States, assembled:

We, your memorialists, the Senate and House of Representatives of the State of Florida, in legislative session assembled, do most respectfully memorialize and petition the President and Congress, assembled, as follows:

Whereas the St. Augustine Historical Program has been organized and undertaken under the leadership and sponsorship by the city of St. Augustine, the State of Florida, the Carnegie Institution of Washington, the American Council of Learned Societies, the American Philosophical Society, the United States Department of the Interior, National Park Service, and other distinguished national organizations and individuals for the purpose of studying, preserving, and developing the rich materials relating to the Spanish colonization of St. Augustine and the region of which it was the historical capital; and

Whereas the State of Florida, by reason of its discovery by Ponce de León and later colonization by Spain, became the cradle of American civilization and is today the cross road of all the Americas; and

Whereas the St. Augustine Historical Program recognizes the significant contribution of Spain to the processes of American civilization, and provides as its primary purpose for the creation in St. Augustine and in the region associated with it, through the development of important historic sites and buildings, of a national shrine commemorating this important period in the history of the United States; and

Whereas there is to be established in St. Augustine, Fla., as a part of the general plan of the St. Augustine Historical Program, a permanent inter-American cultural center to commemorate the founding of St. Augustine; and

Whereas the cultural relationships between the United States and the other American republics are of paramount importance; and

Whereas the Inter-American Cultural Center and the St. Augustine Historical Program will afford an opportunity for the advancement of these relationships; and

Whereas such a cultural center in relationship to other elements of the general plan of the St. Augustine Historical Program is worthy and deserving of the support and encouragement of the United States; and

Whereas the State of Florida has already gone on record as approving and sponsoring the St. Augustine Historical Program and to that end has appropriated $50,000 for the carrying on of said program: Now, therefore, be it

Resolved, That your memorialists do respectfully memorialize and petition the Congress of the United States, in order to accomplish the foregoing purposes, to authorize by suitable legislative enactment the proper agency or agencies of the Federal Government to establish at St. Augustine, Fla., an Inter-American Cultural Center to be maintained permanently thereafter to commemorate the founding of St. Augustine and particularly for the advancement of the cultural relationship between the United States and the other American republics: Be it further

Resolved, That copies of this memorial be immediately transmitted to the President of the United States, and to the Senate and House of Representatives of the United States, and to each Senator and Representative in Congress from the State of Florida.

Col. D. W. Seigler

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

NEWSPAPER ARTICLE CONTAINING LETTER WRITTEN IN 1892

Mr. FULMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting an article about Col. D. W. Seigler, one of the best-known Confederate veterans living in the State of South Carolina.

Colonel Seigler lived for many years in my district. Men of his type are fast passing away, and the incoming generation will miss the life and character of men of the type of Colonel Seigler.

The article follows:

COL. D. W SEIGLER HAS FALL; IS DYED-IN-WOOL CONFEDERATE

Col. D. W. Seigler, one of the best-known Confederate veterans living in the State, and the last survivor of the Battle of Rivers Bridge, suffered a severe injury to his left leg and hip recently at the Confederate home. His condition is fair.

The colonel has had a long life of church and civic activities that has made for him many friends. His correspondence reaches from California to many of the Northern States, most of it from persons he met on reunion trips.

The clerk of the First Baptist Church at Aiken recently visited him and carried a letter the colonel had written August 5, 1892. It was written when Colonel Seigler and his family were moving from Aiken to Greenville, and follows:

"To the superintendent, officers, teachers, and Sunday school:

"With this afternoon my Sunday-school work in your midst closes. After a period of 14 years of continual work in your church and Sunday school I must resign as vice superintendent. Though unworthy as I have been, I feel that my work has not been in vain. I have often met with you feeling depressed in spirit, but from the cheerful songs you'd sing and the promises of God's word I have been strengthened and better prepared for the Master's work.

"Again let me say to my fellow laborers, be faithful, be earnest, be constant, always abounding in the fear of the Lord.

"To the children of the Sunday school, I want to say that this may be my last time to admonish you to seek the security of the Master's hand in life—it's the only goal worth striving for in life's little while. This is my prayer.

"Yours in Christ,

"D. W. SEIGLER."

A dyed-in-the-wool Confederate and fond of poetry, Colonel Seigler often quotes When, by Sally Washington Maupin:

"When trumpets sound and the dead arise
I want to wear up in paradise
My old gray jacket that all may see
I fought for the right under General Lee.

"When reveille is heard no more,
And tents are struck on the greener shore,
On my breast let the cross of honor be
To prove I served under Robert E. Lee.

"When taps are blown and for me all's well
I want to give just one rebel yell,
That all may hear and know and see
I'm one of the men of Mars' Bob Lee.

"When furlough ends and at God's command,
With the ranks of the gray I take my stand;
The Confederate flag shall wave over me
While I salute our chieftain, Robert E. Lee."

Price of Domestic Copper

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

ARTICLE FROM HOUGHTON (MICH.) DAILY MINING GAZETTE

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Daily Mining Gazette of Houghton, Mich., for April 22, 1941:

[From the Daily Mining Gazette, Houghton, Mich., of April 22, 1941]

COPPER PRICE IS TERMED "UNFAIR"

NEW YORK.—Several stockholders attending the annual meeting Wednesday of the Miami Copper Co. expressed disappointment in the Government's decision to freeze the domestic price for copper at 12 cents a pound. They believe it will handicap the company which is operating ore bodies with the lowest copper content of any mine in the world. The 12-cent ceiling, they said, is an unfair hardship on producers that for the past decade have been barely able to stay in business because of depressed prices.

The management, answering questions regarding payment of dividends in 1941, stated that even with the Government paying the 4-cent tariff on South American copper, consumers in this country have been able to obtain only immediate requirements. With a further shortage of shipping a greater demand for the metal may develop, and thus effect higher prices. Another possibility would be adoption of a double standard for domestic copper producers, with the high cost operators to be subsidized with differentials in order to equalize competition between low- and high-cost mines.

In describing complications facing Miami Copper's management in its efforts to build up its cash reserves so that it may be able to pay dividends, E. H. Westlake, vice president, reminded stockholders that the company still has $104,904 of deferred taxes that must be paid, and that it was desirable to increase working capital above present figures. The company, according to Mr. Westlake, is able to make some money with copper at 12 cents a pound.

Stockholders amended the company's bylaws to provide indemnification for officers and directors and reelected the retiring board.

Sugar Production

EXTENSION OF REMARKS

OF

HON. JOHN Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

RESOLUTION BY THE CALIFORNIA STATE LEGISLATURE

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the following California Assembly Joint Resolution No. 28:

Assembly Joint Resolution 28

Joint resolution relative to encouragement of sugar-beet production in the United States

Whereas there is imported into the United States more than two-thirds of the sugar which is consumed therein; and

Whereas California is one of the large beet-sugar producing sections of the country, with many sugar refineries employing many people at good wages, thereby assuring prosperity in sugar-beet growing sections of the State, not only to the refineries and their employees but also to the farmers growing the beets for the refineries; and

Whereas movements are on foot to bring about a curtailment of sugar production in the United States which, if accomplished, would have a tendency to disturb the balance of trade, to the disadvantage of this country, would bring unemployment to thousands of working people, and would tend to cause overproduction in other lines of agriculture; and

Whereas it appears reasonable that the Government should encourage the production of such commodities as sugar when there exists such an unlimited market therefor: Now, therefore, be it

Resolved by the Assembly and Senate of the State of California, jointly, That the Congress of the United States of America be

memorialized to take such steps as may seem best to encourage a greater production of sugar and sugar products in the United States; and be it further

Resolved, That the Governor be requested to forward copies of this resolution to the President and to the Vice President of the United States, to the Speaker of the House of Representatives, and to each of the Senators and Congressmen from California in the Congress of the United States.

Developments in American Airplane Industry

EXTENSION OF REMARKS

OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

Mr. SHEPPARD. Mr. Speaker and Members of the House, having recently made a trip to the Pacific coast with the Subcommittee on Appropriations for the purpose of looking over naval-expansion projects and airplane factories, I found most interesting developments, specifically as it applies to the airplane industry.

The Douglas airplane factory located at Santa Monica, Calif., is producing the largest airplane that has ever been built in the history of man. It is known as the Douglas B–19, which has a wing spread of 210 feet and a cruising range of 7,000 miles, with an all-over load capacity of 28 tons.

My colleagues and myself made a very thorough inspection of this plane and its development, which is indicative of what American ingenuity can produce. We have heard many comments on the floor of the House relative to ability and inability to produce airplanes in this Nation. But after the recent survey made by my colleagues and myself I feel the aviation industry of this Nation is capable of producing some of the finest airplanes that can be produced anywhere in the world.

I found an article published in the Washington Post under date line of April 23 pertaining to planes manufactured in the United States being used by England. This article was written by J. Reagan McCrary, of the International News Service, as a special correspondent. I am advised that Mr. McCrary is considered an outstanding observer and writer on topics which he covers.

The following comments by Mr. McCrary are offered for the information of the House membership. I am sure they will find this article extremely interesting. I call your specific attention to that portion of his article which refers to the Lockheed Hudson type nicknamed by aviators as the "old boomerang." Also the last comments in the closing lines of Mr. McCrary's statement in which he quotes the Eagle Squadron, which is composed of Americans who are fighting in the R. A. F., in which they definitely state, "Give us American planes":

[From the Washington Post of April 23, 1941]

ONLY 890 UNITED STATES PLANES ACTUALLY USED IN COMBAT BY ENGLISH

(By J. Reagan McCrary)

NEW YORK, April 22.—Out of all the American aircraft flown or shipped to Britain only about 890 are operational—in actual combat or patrol service.

America has sent some 570 Curtiss P–40 fighters to Britain, where they have been christened with a good American name, Tomahawks. Of those 570 planes, only about 18 were operational when I left.

The rest were in storage "somewhere in England."

There seems to be little doubt that there is a definite, carefully planted prejudice inside England, sponsored by certain British aircraft manufacturers, against American aircraft. The "brains" of this clique has been Charles Grey, former editor of the technical journal Aeroplane. It was under his direction that the offending caption, "The United States has decided to support the war financially to the last Englishman," was published in the semiofficial volume All the World's Aircraft.

Lord Beaverbrook, Britain's fiery little pro-American Minister of Aircraft Production, has already taken care of Mr. Grey.

NEED BETTER ASSEMBLAGE

It is only fair to say, however, that in a certain sense American aircraft manufacturers have played into the hands of their critics by not having enough skilled men over in England to see to it that their "babies" are carefully assembled and tested after arrival in England.

There has also been a lack of systematic coordination by the British in seeing to it that the American planes are tried out and any lack of armaments quickly pointed out to the manufacturers so that speedy corrections could be made in American factories.

I must hasten to add, however, that Mr. Averell Harriman, the new industrial expert sent over by President Roosevelt to coordinate such things, and Generals Scanlon and Harmon, United States Army air attachés, in London, are cleaning up this mess as rapidly as possible. I know. I saw them in action at close range, saw them use tact when necessary, and forcefulness when that was the right medicine.

Last week, 14 combat pilots of the United States air force landed in Britain as observers; those men know how to handle the P–40's as well as other American fighting ships, know how to get the most out of them. Beginning this week they'll demonstrate that our aircraft can hold their own with Britain's Hurricanes and Spitfires.

SAYS AIRACOBRA TAKES BACK SEAT

But this I must add: There is no fighter now in production in America that can touch the Hurricane III's and the Spitfire II's, the Tornadoes and Whirlwinds, that are already in action in Britain.

The Bell Airacobra is the best fighter we've got; its speed is topped by the Hurricane III, which carries more armor and air cannon in the wings as compared to one in the nose for the Airacobra.

Prediction: Before November, Hurricanes will carry eight air cannon in the wings.

Nor do I believe that any bomber now in production in America can equal the bomb-carrying capacity or the speed or the armament of Britain's three new bombers, the Stirling, the Manchester, and the Halifax.

But now to sweeten the brine with praise for two American aircraft that are doing a superb job:

LOCKHEED HUDSON IS TOPS

First, the Lockheed Hudson, which looks like a transport, except for the twin-gun turret sticking out of its spine like a bump on a log.

"Old Boomerang," the boys call them, because they get you there and they get you back.

I had a run out of the north of England in one of them. The pilot that day was a boy who had flown them over Dunkirk:

"Listen, Yank, this is the greatest kite in this show. I've flown them as dive bombers. Look, here's how they handle when you're dive bombing. See that neck of water down there; here we go."

He aimed his Hudson as you would aim a gun, then over we went, Voooooom! with every rivet screaming, "Take it easy, old boy, I can't stand much more." Down and down.

"And then you flip the Mickey Mouse"—that's the bomb switches—"and then you pull it out before you get down to 800 feet."

It felt as though we'd swallowed a billiard ball when he pulled "Old Boomerang" out of the dive; he just laughed: "That's not half these Hudsons will do."

USED AS FIGHTERS

And then he told us how they'd used them as fighters over Dunkirk, knocking down the Junkers 87 dive bombers. And there was the time a flight of three Hudsons whammed right into a squadron of 12 Messerschmitts, scattered them like pigeons:

"I got an air cannon shell right in the air screw. She never stopped grinding. Right on, like that geyser you call Old Faithful."

That's the Hudson. There's another that the British boys swear by and not at—the Douglas DB–7, built first for the French as an attack bomber. All instrument panel markings are still in French. It was first rechristened "Boston" by the R. A. F., and now it's been converted for night fighting and rechristened "Havoc."

I have never seen such an ominous aircraft, soot black and frightening. Three-placed as a bomber, it carries only two now—the pilot, who operates a whole battery of forward-firing wing guns from the teat on his stick, and behind him, where a gunner used to sit, now sits the man who operates the secret device that searches the night skies for the Jerry raiders.

The whole life of a Havoc is "blacked-out"—the pilots wear dark glasses all day and eat carrots because their vitamins improve night vision.

And when the Havocs roar up into the dark skies at night they are completely blacked out. Not even the glow of a light on the instrument panel to dull the pilot's night vision for the nerve-wracking search ahead of him. All the dials gleam faintly with radium paint.

As soon as the chocks are taken away, you "go into your office," concentrate on the instruments. You don't even have a chance to lift your landing gear until you have about 3,000 feet under you—a second's distraction from intense concentration on the instruments might send you spinning into a dive that you would never come out of before your 3,000 feet were eaten up and you are splattered over the earth.

And up in the air, you patrol a plotted area, until you see the dark blob in moonlit skies that means a flight of Nazis is near, or until your "A1" operator picks up the scent and guides you to the quarry.

Then its "tallyho, there they go" and you begin to chase. You get on their tail first. Then you stalk them—their engines drown the roar of your own.

Closer and closer you creep up—because your Havoc is faster than the Jerries. Your fingers ache to press the teat, to let him have a burst at 300 yards, at 200 yards, but no, hold it, hold it, 100 yards now; still you must hold it; and now it's 50 and you press the teat and your guns blaze and the Jerry explodes in the night like a box of matches.

The Havocs are doing that job, the Yankee Havoc—even better than the Beau fighters the British built for the night hawking.

But we'll never be satisfied until the superiority of all the American aircraft that have gone "over there" to help beat Hitler is so

clearly established that the American boys in the Eagle squadron will unanimously demand, "Give us American planes."

Today, they fly Hurricanes.

The Farm Wages

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

EDITORIAL BY TOM LINDER, GEORGIA STATE COMMISSIONER OF AGRICULTURE

Mr. FULMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting an editorial written by Hon. Tom Linder, Commissioner of Agriculture of the State of Georgia, entitled "The Farm Wages."

This article, in the face of all types of propaganda which is going out to the country through the press, telegrams, and letters from selfish groups and those who oppose farmers and wage earners, should be very convincing that something should be done to protect that great class of people whose responsibility it is to feed and clothe 130,000,000 Americans.

If the agricultural interests of this country, which represent 24 percent of the total population of the United States, had a fair price for which they produce, in line with the prices that they have to pay for that which they purchase, it would mean employment and millions and millions in purchasing power, of which this country is sadly in need at this time.

The Agricultural Committee, of which I am chairman, is now holding hearings on major farm bills. It is our purpose in the near future to report to the Congress a bill which will be fair to all other groups but, in the meantime, will absolutely give to farmers that which we have done for various other groups, actual parity for their products.

The editorial follows:

THE FARM WAGES

A lot is being said now about farm wages being so low and the fact that people are leaving the farms to work on public works.

A farm is like any other business: it must pay the wages that it can afford to pay.

The exodus of people from the farms is not confined to farm labor; it is equally applicable to people who own the land. This proves that the income of the farm operator is as low in proportion as the wages which he pays for help.

The Ellaville Sun, Ellaville, Ga., of February 14, 1941, carries a most illuminating article on this subject. It also shows that the exodus from the farms is nothing new; it has been going on for years. During the 10-year period of 1926 to 1935, out of 107 girls who graduated at the county-wide high school, only 12 remained on the farm; while out of 26 boys raised on the farm who graduated during those years, only 4 are still on the farm.

This condition will prevail so long as farmers are discriminated against by national laws. The real trouble with farming is the same as it was in the days of the old Farmers Alliance and Populist Party. That condition has never been remedied, but it has been made worse by each succeeding Federal administration. That condition is caused by undertaking to protect industry with tariff walls and shutting their eyes to the fact that this protection to industry was gained at the expense of agriculture. The farmer, being unorganized and unable to make his voice heard in Washington, is naturally made the goat in this scheme of economics.

A diversified and well-balanced farm operation is of prime necessity in Georgia. We are doing all that we can to encourage the growing of cattle, hogs, and other food crops to a sane extent and based on good business judgment.

It must be remembered, however, that merely changing the crop produced by the farmer will not remedy the fundamental trouble.

The farmer who raises cotton and sells it at less than the cost is bound to go broke, it's true. We should not forget, however, that the farmer who produces beef cattle, hogs, vegetables, or fruits, and then has to sell them at less than the cost of production is equally certain to go broke.

It is easy to say that the growing of beef cattle will bring the farmer back, or that the planting of fruit trees will bring the farmer back, or that the raising of poultry and the growing of vegetables will bring the farmer back.

The truth of the matter is that the only thing that will bring the farmer back is a profitable market for what he grows—whatever his crop may be. A profitable market means a market that brings the farmer a net profit above the cost of production. The first cost of production is the interest that he pays on his land. If the amount of Federal and bank mortgages was reduced and the interest rate was reduced, this would be a major factor in reducing the cost of all crops grown and bring a profitable market that much nearer to the farmer.

One thing is certain: Unless farming is made profitable for the farmer the time is not far distant when the question of food will bring an acute worry to the people of the great cities. The time is not far distant when the scarcity of farm labor will be of much greater concern to the people who live in metropolitan areas than it will be to the men who are trying to operate farms.

TOM LINDER,
Commissioner of Agriculture.

Aliens, Too, Must Choose

EXTENSION OF REMARKS

OF

HON. BENJAMIN JARRETT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

EDITORIAL FROM THE FRANKLIN (PA.) NEWS-HERALD

Mr. JARRETT. Mr. Speaker, aliens within our country must now show where they stand. This is right and is covered in the following editorial from the Franklin (Pa.) News-Herald of April 23:

[From the Franklin (Pa.) News-Herald of April 23, 1941]

ALIENS, TOO, MUST CHOOSE

These are days when men must choose.

Days of drift and dream are over. Now, under a proposal by Secretary Hull to Congress, aliens too must choose.

Some have been drafted into the armed forces, probably without anybody's giving the matter much thought. Several foreign countries have objected, and properly so. We would certainly object if American citizens in Germany or Britain were drafted into those armies. It works both ways. So Secretary Hull is quite right in suggesting that Congress pass an amendment to the Selective Service Act, which would permit aliens thus called up after registration to be exempted at their request. It should be done, for it is no more than we would demand for our own nationals in other countries.

But the Secretary suggests this additional proviso: That such an alien, having asked and received exemption, should never thereafter be allowed to become a citizen of the United States.

So aliens, too, must choose, if they are called up in the draft. If they are merely temporary residents in the country on business, they will, of course, ask and receive exemption. Such people do not ordinarily expect to become citizens anyway, so no hardship will be worked.

But thousands of aliens are in a different case. They have come to the United States vaguely expecting at some time to become citizens and fully identify themselves with the national life. Such a man should no more be exempted than a citizen. He benefits daily from the security and conditions of the national life. He expects to benefit from them for an indefinite time in the future. He should bear his share in preserving them.

It would be unfair indeed for such a one to refuse armed service, to watch American citizens serve and perhaps die to preserve free conditions, and then, the emergency over, apply for and receive the benefits of citizenship.

To bar forever from citizenship a man who was unwilling at time of crisis to bear the burden that citizens bear is no injustice. It is elementary fairness that at times like this aliens, too, should be required to choose.

The time is coming for every man to do his part, no matter how small, in the cause of national defense. All these years we have taken the American way of life quite for granted, the day is soon coming when sacrifice in one way or another must be made.

Condition of Polish Citizens Deported to Siberia

EXTENSION OF REMARKS

OF

HON. RICHARD P. GALE

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

LETTER FROM THE POLISH CENTRALE, MINNEAPOLIS, MINN.

Mr. GALE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter from the Polish Centrale of Minneapolis, signed by John S. Kowalik, president, and Bert B. Olesinski, secretary:

DEAR SIR: In behalf of the Polish Centrale of Minneapolis, who voices the sentiments of 15,000 Polish Americans and as racial members of a people who have suffered more horribly than any who have come under the domination of Hitler and Stalin, feel that this world cannot possibly continue to be half free and half slave.

During the winter of 1940–41 the Government of Soviet Russia deported to Siberia more than 700,000 women, children, and old men, who, fleeing the German invasion in September 1939, took refuge in the eastern provinces of Poland, now occupied by the Soviets.

Those unfortunate peoples live now in Siberia, suffering from hunger and cold. They are perishing by thousands, and hence appeal to all the nations of the world to save them.

We beg you, Honorable Congressman, to request the Department of State the sending, in accordance with the Soviet Government, of an official or private mission to the determined places, with the purpose of bringing aid to those most unfortunate victims of the war.

Very respectfully yours,

JOHN S. KOWALIK, *President.*
BERT OLESINSKI, *Secretary.*

Labor Situation in the Bridgeport Industrial Area

EXTENSION OF REMARKS

OF

HON. LE ROY D. DOWNS

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

ARTICLE FROM THE BRIDGEPORT (CONN.) POST

Mr. DOWNS. Mr. Speaker and my colleagues, under permission granted me, I would like to insert an article in the Appendix of the RECORD, taken from the Bridgeport Post of April 25, 1941, dealing with the labor situation in that area:

[From the Bridgeport (Conn.) Post of April 25, 1941]

A GOOD RECORD

Congressman ROY DOWNS, of South Norwalk, took occasion, on the floor of the House last week, to praise the harmony which has thus far been displayed between employees and management in the Bridgeport industrial area.

Although Congressman DOWNS described this district as "a virtual arsenal of defense," he pointed out that we have not had a single serious defense strike.

Said Congressman DOWNS:

"This record is to the credit of labor. You cannot blame the rank and file of labor for these defense strikes. * * * Labor in New England does not invite people of un-American tendencies into their organizations. * * * The rank and file of labor is truly as American as the membership of this great body. They need the help of the Government in a definite and strong move to clean the Communists, Nazis, and others from their ranks."

These are true words, and we hope that the Bridgeport district may continue to enjoy industrial peace because of a spirit of cooperation between labor and management. It cannot be all one-sided. A lot of nonsense has been written about the radicalism of workers who are only trying to get better economic conditions for their own families. But a lot of nonsense has also been written about the greed of management which has been doing nothing more than to try to remain solvent, continue in business, and pay wages. There ought to be some way of getting together. This, of course, particularly applies to all contracts affecting defense. Neither labor or management should attempt to profit by the Nation's emergency, but each should strive to avoid slow-downs or tie-ups while ironing out any difficulties that may arise.

Bridgeport's good record is apparently the product of such cooperation.

St. Lawrence Seaway Project

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

Mr. SPRINGER. Mr. Speaker, the St. Lawrence seaway and power project, which is now contemplated, is bringing a storm of protests from the people throughout our country. The very fact that such a contemplated program cannot be completed in less than 6 years, and that it will cost almost $1,000,000,000, is the strongest evidence available that such proposal cannot aid in our defense program, and the huge expenditure of money contemplated for this project will, without any doubt, be highly detrimental to our defense program.

The taxpayers of this country cannot shoulder the great burden of our defense program together with other nonessential projects such as the St. Lawrence seaway project. They have their limitations. Our Government certainly does not want to crush the people under a tax burden which they cannot bear.

Mr. Speaker, it will not be very long until our Government will be asking the people to buy bonds and Government securities, for the purpose of financing the defense program. A huge tax bill will soon be presented to the Congress, under which our people will be taxed to the very limit of their ability to pay. This tax bill, which is surely coming, will make the people realize that pay day finally comes, and that they are now meeting the obligation they owe, which has been very largely created by many such projects as the St. Lawrence seaway project.

In my own State of Indiana, the State chamber of commerce is violently opposed to this unnecessary project at this time; those businessmen recognize the very great danger in the expenditure of such a vast sum of money as this project would require at a time when the people are struggling to meet the cost of our defense program. Our people, regardless of party affiliation, are opposed to this unnecessary project. A very enlightening editorial appeared in the Indianapolis Star, of date April 24, 1941, which expresses the views of the people of Indiana on this highly important question, which editorial reads as follows:

INDIANA'S SEAWAY PROTEST

Representative Hoosier businessmen have increased the long national list of industrialists, farmers, and professional groups opposing the proposed $1,000,000,000 St. Lawrence seaway and power project. The board of directors of the Indiana State Chamber of Commerce, by unanimous vote, registered a protest against the needless and costly enterprise. A referendum of the chamber membership also was taken, disclosing that 91 percent objected to the scheme.

The Hoosier businessmen recognized that such huge expenditures at this time would interfere seriously with concentration of every effort toward national defense. They also knew that any attempt to label the waterway as a defense project would be deliberate misrepresentation. The water route from the Great Lakes to the sea could not be completed in time to expedite direct shipping. The power project will not contribute to national defense, since neither the United States nor Canada requires the electric current which will be generated.

The St. Lawrence waterway is one of the Presidential dreams; like the proposed Florida ship canal and the Passamaquoddy scheme. The original excuse of benefiting the midwestern farmer has been dropped. This huge burden imposed on the taxpayers would provide little more than another Federal power program to drive the private utilities out of business. Existing defense emergencies have been advanced as a smoke screen to disguise the fallacy of the seaway proposal.

The State chamber went on record in a resolution which pointed out that the waterway and power project would "prove a serious, if not fatal, obstacle in our present emergency of national-defense efforts by a futile diversion of manpower, material, and money." It is hoped that the Indiana delegation in Congress will not disregard this attitude of the State's business leaders.

Mr. Speaker, we have one challenge today, and that is to build and develop our national defense. We must be prepared to defend ourselves in case of an attack; we must protect our country, our people, and our institutions. If the administration now in power insists upon the promotion of useless and unnecessary projects, such as the St. Lawrence seaway project, in the face of the existing emergency, then we cannot properly develop our national defense, because our people cannot stand the double burden; their taxes, their purchase of bonds, their eternal struggle to live, will be greater than they can bear if luxuries such as the St. Lawrence seaway project is forced upon them.

Let us meet the challenge of the day, let us prepare for our defense. While we are engaged in that major problem let us put aside every unnecessary project which calls for the expenditure of the taxpayers' money. We need that money for defense.

Should Not America Make the Peace Move?

EXTENSION OF REMARKS

OF

HON. RUDOLPH G. TENEROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

ARTICLE BY WILLIAM RANDOLPH HEARST

Mr. TENEROWICZ. Mr. Speaker, on March 3, 1941, I introduced a resolution,

House Joint Resolution 131, for the purpose of creating a joint congressional peace commission. I requested the Congress to assume the initiative in setting up such a commission and suggested that we communicate with other nations not at war to carry on negotiations for a peace that will best serve humanity. Although the establishment of a joint congressional peace commission would constitute an unprecedented action on the part of Congress, it is my firm belief that world conditions today fully justify that action.

The cause of peace must necessarily be made the object of general consultation and built on a union of the nations and people of the world. In order to arrive at a workable solution, equitable to all, the rights and limitations of each and every people and nation must be clearly defined, the principles underlying the relations of governments toward one another definitely established, and all international obligations and agreements ascertained and determined.

When we attempt to comprehend the vast armament program which has been planned for us for the next few years and attempt to envision the attendant suffering, loss, and confusion which must inevitably follow in the wake of "total warfare," we are forced to the realization that we are condemned to pass through a crucible which bids fair to destroy the entire human race.

That all wars are futile to victor and vanquished alike is an established fact. At this point I would like permission to incorporate in my remarks the following timely article by William Randolph Hearst, which appeared in the Times-Herald on April 26, 1941:

[From the Washington Times-Herald of April 26, 1941]

Winston Churchill, Premier of England, has repeatedly declared that he will agree to no peace except a peace of victory.

What victory?

Whose victory?

If Mr. Churchill is contemplating an English victory, how long will we have to wait for it, and how is it to be achieved?

England was unable to achieve victory when it had Poland and Norway and Holland and Belgium and France on its side.

Is it going to be able to achieve Mr. Churchill's prescribed peace of victory without all or any of those five nations, and without Greece and Yugoslavia also?

England has been offered a peace which would respect and insure the integrity of the British Empire.

Would that not be the equivalent of a peace of victory?

What else does Mr. Churchill mean by a peace of victory?

What kind of a victory does Mr. Churchill demand?

Does he mean that there will be no peace until England has conquered the Continent of Europe and the Axis Powers have bent the knee and bowed the neck to another Versailles Treaty—to conclude one war and compel a dozen others?

Moreover, England never has conquered Europe—never in her whole history.

Russia and Germany and Austria and England together defeated the armies of Napoleon in 1815.

France and England and Italy and the United States together defeated the armies of Germany in 1918.

England cannot hope alone to conquer Europe and she is not doing it.

She is just now being expelled from her last position on European soil.

She is just now being deprived of her last European allies.

She has against her Italy, Austro-Germany, Japan, and Russia.

Make no mistake where Russia stands.

She is a silent partner to the Axis but a very eager and active one.

And Stalin hates England more than Hitler does.

Austro-Germany, Italy, Japan, and Russia have the greatest armies of all the nations of the world.

If Russia does not fight, she will nevertheless supply the materials for the Axis armies and the food for the Axis civilians.

So how is England going to overrun Europe or to starve Europe?

Where is she going to land her troops on European soil?

And why is she going to land them since she can't keep them there when they are landed?

Why not make a wise peace and end this war in which all the odds are against England?

There will be other wars—unhappily—and in the next war the odds may be on England's side as they were in the Napoleonic wars and in the World War.

Your columnist wants to see England win.

He wants to see the British Empire survive.

He wants to see better odds and better conditions for England when she fights her fight—and better leadership.

Churchill is a well-meaning, eloquent-speaking old gentleman; but he is no Pitt, no Disraeli and no Lloyd George.

He is, we greatly fear, neither a strategist nor a diplomat.

Mr. Churchill disparaged the Russian-Japanese pact and intimated that it was aimed against Germany.

But, according to the Associated Press, "the Soviet Union, through the newspaper Pravda, official mouthpiece of the Communist party," said it was not directed against Germany, and "bluntly described the new Soviet-Japanese pact as a bewildering blow at the plans of the United States and British interests."

"The attempt to belittle the importance of the Soviet-Japanese pact," continues the Communist organ, "suffers a fiasco. The nerves of certain Anglo-American commentators are giving way."

Thus in diplomacy Mr. Churchill has gained no brilliant success, while in strategy he continually repeats the disaster of his World War Gallipoli.

His defeats are accomplished in the same way and for the same reason.

"Too little and too late" has become a byword in describing his aid to his Allies.

Now there are no more Allies, unless the United States be one.

Are we going to entrust our fortunes to the director general of the Norway debacle, of the Belgium-French desertion, and now of the Greek-Yugoslav disaster?

The English people are not satisfied with their leadership.

The London Evening News, a very important paper, says of the situation in North Africa:

"This is no diversion. It is a well-prepared blow for a glittering prize—to overrun Egypt, stand astride Suez, and seize Alexandria, the key to all British power in the Mediterranean and the Balkans.

"Even while they were crouching to spring we were told how lost those poor inexperienced Germans from the north would be in the desert if ever they came there.

"It is time that some of these spreaders of fairy tales were given a long rest."

The Daily Herald, authoritative organ of the powerful English Labor Party, says:

"Our ostriches try to persuade themselves—and us—that every Allied triumph is a major coup and every enemy triumph a side show.

"Let us expel the childish notion—the imbecile notion—that the trend of war in the Balkans and Africa can have no weighty effect on the real war.

"Libya should make an end to all that nonsense that it could not happen here."

Neither is Australia satisfied with the war leadership.

The sacrifice of the Australian imperial force in Greece may lead to a political crisis.

Labor members of the House are reported to be eager to defeat the Menzies government because the war cabinet acted in secret and did not consult the advisory council.

In response, Prime Minister Menzies of Australia has called for the formation of a "truly national war administration."

Shall America plunge into this maelstrom of confusion and disaster and strive to bring about that vague illusive "peace of victory"?

Or shall we endeavor to promote a peace of equity and justice now and not wait for that distant day when a peace of victory—someone's victory—will be negotiated amid the ruins of the nations?

Friends, 7 months ago your columnist put forth his impotent effort for peace.

Lloyd George, the great English Prime Minister of the World War, had written an encouraging article on peace, and your columnist sent him the following cabled message:

WYNTON, MCCLOUD, CALIF.,
September 22, 1940.

DAVID LLOYD GEORGE,
London:

I read your article today with great interest and emotional admiration. I agree entirely with your views.

Would it be possible for you and my humble self to do something to bring this whole war to a just and reasonable cessation?

My chief interest is as an American, but I also have material and personal interests in England.

It would seem to me that if the war is pursued to a stalemate, not only will there be disastrous destruction, but the difficulties of making a proper and all-preserving peace will be increased rather than diminished.

Unless England should win an overwhelming victory, she might never make a better peace than now; and if she did not win an overwhelming victory, she might not make peace as protecting to all her imperial interests as she could today.

If the war continues, not only will destruction continue, but there is some possibility of America being drawn into the war on one side and Japan on the other side, which would widen the devastation without hastening a conclusion or compelling a decision.

I know you have a crystal-clear view of the situation and the highest position among the statesmen of the world and the prestige of great achievement to back you.

I have only my earnest interest and such appeal as I might be able to make to the American people.

Can anything be done, and can I be of any service?

WM. RANDOLPH HEARST.

CRICCIETHPO,
September 25, 1940.

WILLIAM RANDOLPH HEARST,
Wyntoon, Calif.:

In complete sympathy with your desire that effort should be made to bring this horrible struggle to a peaceable conclusion, but I am strongly of opinion that this moment inopportune for appeal whilst grim battle now pending has not reached issue.

When German plan for invasion definitely checked and both sides faced with prospect of prolonged and exhausting war, then appeal for peace conference might succeed.

Premature intervention might prejudice chances.

Earnest personal greetings to you.

LLOYD GEORGE.

David Lloyd George is one of the greatest statesmen in the world, but is there a better chance of making a just peace today than there was a year ago, and will there be a better chance to make a just peace a year from now than there is today?

Should not we Americans make the move to save the world from the destruction of enduring war and to avert that destruction to ourselves?

The Vinson Bill

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

MEMORANDUM BY RUSS NIXON, NATIONAL REPRESENTATIVE, LABOR'S NONPARTISAN LEAGUE

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorandum on communications between House Naval Affairs Committee and the C. I. O. re the Vinson bill:

A serious question has arisen concerning the adequacy of the opportunity given to labor and other interested parties to present testimony before the House Naval Affairs Committee on H. R. 4139, the so-called Vinson bill, providing for compulsory "cooling-off" period, freezing open-shop status quo, etc. The C. I. O. takes the position that no adequate opportunity or notice was given labor in regard to these hearings. They further are of the opinion that the record of the committee on this question demonstrates a deliberate plan to preclude full discussion of this all-important bill. Because debate has already ensued regarding the facts involved in the procedure of the committee, it seems wise to set forth in detail the exact circumstances.

The original Vinson bill, H. R. 2850, was introduced in the House of Representatives by Mr. VINSON of Georgia on January 29, 1941. A revision of this bill was introduced by Mr. VINSON on March 21, 1941, and numbered H. R. 4139. During this period and up until Monday morning, April 14, the offices of the legislative representative of the C. I. O. and Labor's Nonpartisan League kept in touch with the Naval Affairs Committee, being informed consistently that the date for the hearings had not been set.

The first official communications addressed (although indirectly) to the C. I. O. was a letter under date of March 22, 1941, which went to Mr. Philip Murray in his capacity as a member of the National Mediation Board. A copy of this letter is included. It is to be noted that this letter was sent to each member of the Mediation Board. It is to be further noted that no mention was made of hearings on the Vinson bill. The second paragraph of the letter seems most normally, as written, to be interpreted as requesting an answering letter rather than testimony before the committee. It was, in fact, so interpreted by every person who received this letter.

It is abundantly clear that no interpretation of this letter would justify the position that Mr. Murray had been advised of hearings on the Vinson bill and had been asked to testify.

In the period following the sending of this letter, no definite date was announced in the press or elsewhere, or in any other fashion, by the House Naval Affairs Committee as to the start of hearings. From April 3 to April 14 the House of Representatives was in recess. During this period, it was clear that no hearings were to be held by the Naval Affairs Committee.

On Monday morning, April 14, it was announced that hearings on H. R. 4139 were to begin the next morning at 10:30. A telegram, copy of which is included, was sent at 11 a. m. to Mr. Philip Murray, addressed to the Congress of Industrial Organizations in Washington, D. C. The Washington office of the C. I. O. was closed on Easter Monday, April 14. The telegram was received on Tuesday morning, April 15, and was delivered to Mr. Philip Murray in Pittsburgh, Pa., just before he entered important steel negotiations. It was necessary that some time be taken by the C. I. O. to make the arrangements necessary for appearance before the committee. It was expected that reasonable time to respond to the first notification of the opening of the hearing would be provided. Such proved not to be the case. Forty-nine hours after the telegram announcing the opening of the hearings was sent from the office of the committee, the hearings on the bill had been closed; and 78 hours after the telegram was sent, the bill was reported out of committee. In terms of effective receipt of the telegram by responsible C. I. O. officials, it was only 27 hours until the hearings were closed and 56 hours until the bill was reported out of the committee. That this was inadequate notice seems beyond all argument. It should be pointed out, moreover, that no indication of the abrupt closing of the hearing is contained in the telegram sent to Mr. Philip Murray. The C. I. O. had every reason, on the basis of precedent, to expect that with adequate hearings several days could elapse before it was necessary to inform the committee of the exact arrangements it had been able to make for appearing before the committee.

Comparable experience was had by Mr. John Green, president of the C. I. O. Marine Shipbuilding Workers of America. Reading in the papers that the bill had been introduced in the House, Mr. Green requested that he be allowed to be heard by the committee some 3 or 4 weeks ago. He received a letter in response from the committee telling him he would be given an opportunity to be heard. Nothing further was heard from the committee until Mr. Green received a telegram about noon on Tuesday, April 15. This telegram instructed him to appear before the committee at 10 o'clock the next morning to present his testimony. This notice of less than 22 hours was completely inadequate for Mr. Green. It compelled him to appear under great disadvantage and with considerable difficulty before the committee.

When it was announced that the committee hearings were closed on Wednesday noon, Mr. VINSON was called upon at once by the following representatives of the C. I. O.: Mr. C. D. Fowler, of the C. I. O. publicity department; Mr. John Green, president of the C. I. O. Marine and Shipbuilding Workers of America; and Mr. Russ Nixon, national representative of Labor's Nonpartisan League; and representative of Mr. John T. Jones, legislative representative of the C. I. O. A protest was entered as to the proceedure followed by the committee which precluded adequate presentation of labor's position. These representatives were informed by Chairman VINSON that the hearings were closed.

Some differences of opinion appear to exist as to whether or not Chairman VINSON agreed to provide further opportunity for later appearance before the committee. The three representatives of the C. I. O. are in complete unanimous accord that such opportunity was not presented by Chairman VINSON. They further state that Chairman VINSON showed a callous disregard for labor's views and indicated strenuously that this bill was to be reported out of the committee (as it was) on the following day. That this was the position taken by the chairman is corroborated by the fact that the committee went ahead without any reservation on the basis that the hearings were closed. No announcement, private or public, was made to indicate in any way that the hearings were to be reopened.

The very next morning, Thursday, April 17, the committee went into a special session with the drafter of the bill, Mr. Morgan, of the Legislative Drafting Division of the House of Representatives, to complete through amendment and revision the provisions of the bill. As noted above, the bill was reported out of the committee in the afternoon of Thursday, April 17.

In view of the above facts, it is clear that no adequate opportunity was presented either for an adequate testimony on the part of labor or for adequate testimony on the part of other interested parties. The flagrant nature of this inadequacy is all the more apparent when it is realized that after the hearings were closed, through the simple device of substituting "national" for the word "naval" in the provisions of the bill limiting its jurisdiction to naval-defense contracts, the bill was extended to cover virtually all of American industry.

The letter and telegram follow:

MARCH 22, 1941.

Mr. PHILIP MURRAY,
President, Congress of Industrial Organizations,
Washington, D. C.

MY DEAR MR. MURRAY: I am enclosing herewith a copy of H. R. 4139, which I introduced on March 21. This is a revision of H. R. 2850, which I introduced on January 29, 1941.

The Committee on Naval Affairs, of which I am chairman, would appreciate any comments, suggestions, or criticisms which you would care to make with respect thereto.

It has been my purpose in the bill (1) to give statutory recognition to the National Defense Mediation Board which the President created by Executive order just the other day; (2) to give that Board, by statute, virtually the same powers and duties as were given to it by the President in the Executive order; (3) to impose, by statute, on employers and employees virtually the same obligations which were imposed on them by the President in the Executive order; (4) to treat by statute the troublesome question of the union shops in the same manner as such question was treated by proclamation of President Wilson in creating the National War Labor Board; and (5) to implement these powers, duties, and obligations and use treatment with adequate enforcement provisions.

The bill is drawn to relate solely to naval contractors, for the reason that jurisdiction of the Committee on Naval Affairs is limited to matters dealing with the Navy. Should the bill be reported to the House, however, it will be possible to extend its provisions to the whole national-defense program. Hence, in considering the bill it was considered to be in connection with the whole of that program and not merely in connection with that part of it relating solely to the Navy.

Thanking you for your kindness, I am,

Yours very truly,

CARL VINSON,
Chairman, House Naval Affairs Committee.

APRIL 14, 1941.

Mr. PHILIP MURRAY,
Congress of Industrial Organizations,
Washington, D. C.:

Hearings will commence tomorrow morning before the Naval Affairs Committee of the House of Representatives at 10:30 o'clock in room 313, old House Office Building, on H. R. 4139, to further expedite the national-defense program in respect of naval construction and procurement by providing for the investigation and mediation of labor disputes in connection therewith and for other purposes. The committee will be glad to have the views of your organization at the hearing.

CARL VINSON,
Chairman, Naval Affairs Committee.

Cardinal O'Connell Denounces Those Who Would "Sell Out Their Country" to Enter the European War

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

ARTICLE FROM THE BOSTON POST

Mr. TINKHAM. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following speech by Cardinal O'Connell, from the Boston Post of April 24, 1941:

[From the Boston Post of April 24, 1941]

DON'T JOIN WAR, SAYS CARDINAL—COUNTRY MUST LET NATIONS FINISH IT THAT STARTED IT, HE TELLS WOMEN'S CONGRESS

The United States must stay out of the war and let the nations which started the war finish it, William Cardinal O'Connell told the Congress of Catholic Women yesterday, pointedly adding that President Roosevelt's word that the United States shall keep out is promise enough for him and should be promise enough for everybody.

Making his annual address to the congress at St. Clement's Church, he denounced warmongers and propagandists and accused many of them of imposing on the widely acknowledged generosity of Americans, while others are attempting, he warned, "to sell out their own country."

Disputing the widespread propaganda, which, he said, paints the war as a brave war, he said that the skulking under the oceans, the blasting of ships, the bombing air raids, and the starvation of a lot of women and children is not bravery but absolute cowardice.

"You can't glorify that kind of war for me," he said, as he urged the congregation of women, which completely filled the church, not to be misled. Bravery, he said, undoubtedly there is, but most of what the propagandists have been picturing as bravery is cowardice.

The cardinal urged the women to pray steadfastly for peace, but, moreover, he added with stress, they must work to root out from society the modern tendencies toward godlessness which bring on world strife and civilization's ruin.

HITS AT RADIO PROGRAMS

War, although it was a chief topic of the cardinal's hour-long address, was but one of the many topics he discussed. He denounced the shallowness of radio programs, the evil influence of the movies, the ridiculousness of modern fashions, the worship of wealth, and the abuse of leisure.

War, nevertheless, was the topic for which he reserved his strongest and most impassioned words.

"Don't let anyone put it over on you that this is a courageous war; it's rot," he said.

"And they are trying to get us into this war," he added, pausing a moment before he vehemently cried, "Never!"

"We have the word of our President, and that ought to be enough for all of us. It is enough for me," he said.

He urged: "Let us all pray God that the officials of our Government will stand out strong and firm in their determination that this country will not be dragged into this war."

PLAYS PROPAGANDA

"And when one sees the various propaganda in the press, in letters, and in orations, one wonders if Americans really love their own country," he said. "We know that Americans are generous, but when it comes to selling out their own country—" here he paused.

"Let those who started the war finish it. It is not our affair," he warned, and then added: "We have seen too much in the past of the abuse of the kind-heartedness of Americans." At this point the cardinal declared that he spoke as an American and a lover of America.

"Defend ourselves—yes," he said.

REFERS TO MARSHFIELD FIRE

"We are all united on that. We want perfect security for the Nation. Let us pray Almighty God to bring peace to the world. That is the work of Christian women; that is the work for all of us. And when peace comes, then they will realize that much of the causes of all this trouble is infidelity to God. Man has not considered his purpose in life."

The cardinal used the incidents of the Marshfield fire to draw an analogy of how wars begin and how a tiny flame can bring great devastation. In Marshfield, he said, lands surrounding the town were dried up, and when a careless smoker dropped a match or a butt, a flame leaped up and proceeded to make wide devastation. When thousands of souls are dried up from godlessness, a similar conflagration can break out, he said.

"When you take away the thought of God and the thought of the duty toward God; when men and women just think of pleasure, getting money, and something else just as selfishly, then the ground dries up and the soul becomes desiccated. There's nothing in it. It is ready for the flames. And then someone tosses a cigarette on it, or a match. All Europe is like that.

"First of all," he began, " it is true that the world of the present time seems to be bereft of its senses. It seems to be ceasing to reason about things and to act through spite, or hatred, or some other motive that is not in the catalog of Christian virtues.

SEES PEOPLE'S DUTY

"And, of course, it is the duty of all Christians to do all in their power to bring back the people of the earth to the service of God. That is the reason of the creation of man; and without that—well, there is no reason for man's existence. God created us to know Him, to serve Him, and to love Him, and to do His will on this earth, and to glorify Him forever in all eternity.

"These principles are being lost sight of. For some time there has been a creeping paralysis over what was formerly the religious attitude of the people; a certain decadence of morals has crept in. It shows itself in a thousand disagreeable ways. First of all, the fundamental principles of Christianity have been protested and challenged in the lay schools and the universities, and the professors and those in charge seem to be acting as if determined they are going to put Christ out of the world," he said.

PRAISES SESSIONS

"Of course, when that happens," he continued, "then comes the ruin of civilization. You have had a wonderful congress in many ways. I am so delighted that so many have attended the congress and that the quality of the speeches was so wonderful."

Then the cardinal praised the address of Edward B. Hanify, who spoke Tuesday on Christian Citizenship. The cardinal called the address "a superb summing up of the case against infidelity and paganism. If you heard that alone, the congress would have been most worthwhile," he added.

He discussed decadence among womanhood. He said that there always have been women who have had no high ideals, but they were not so conspicuous as they are today.

"The idolatry of the stage stars and the movie actresses," he charged, has contributed false standards for many women. "I am not saying anything against them. I don't judge them, but they are not the models to which Christian women ought to look," he said.

Discussing fashions, the cardinal humorously said, "This idea of fashions is beyond us mere men," and, continuing, said, "but I tell you this quite on the sly, that I think all of us men feel rather sad when they see a woman trying to make herself look ridiculous."

The cardinal struck out against women who go to the communion rail with their fingernails, lips, and cheeks painted. "It is almost blasphemous," he said.

TOO MUCH PLEASURE

"In the world today," he went on, "there is too much pleasure, too much luxury, too much selfishness." He then pointed out as the examples for women to follow their mothers.

"When our mothers and fathers were struggling in this country, they weren't thinking of luxury and degeneracy or pleasure; they were doing their duty, and you know it," he said. "What are we doing, you, their daughters, and we, their sons?"

Turning again to the matter of women's dress, he added: "I don't mean that everyone should dress like a nun. I don't care what capital declares the fashion—Paris, London, New York, or Washington. Don't follow after these silly, foolish things that seem—I don't like to mention the word. There is a certain moderation, and Catholic women should give the example. You have your own ideals. You were well brought up. I am talking like a father to his family; I am using the intimacy of a father, which is the right of a father. If the Christian women don't set the example of a holy life, then who will?"

LITTLE MARTYR

The cardinal turned to a discussion of wealth, stating "the more limited, it seems, in their resources, the more wonderful men and women are." "Worship of wealth," he said, is "a part of the paganism of the day."

"The little girl who has to get up early in the morning and stand on her feet all day—she is a little martyr. We know them, and you know them," he said, "but the woman who has the leisure and the wealth, is doubly bound to give good example."

"I do glance now and then at the society columns—but God help us: It is wonderful, isn't it, for the world to know that someone was wearing an ermine wrap. How silly it all is. There is so much to do with life and time," he said, as he urged his hearers to do all in their power to "preserve the principles of Christian conduct."

Referring to present-day radio programs, the cardinal scored them as "simply barbarous."

"I love music," he said, "and find much relaxation in it. I am very fond of it, but this radio music is just the most rotten stuff that man can compose. Is that the sort of music that Americans like? It is really vulgar, low-down stuff—both the words and the music." "Radio plays are not any better," he said.

HITS AT MAGAZINES

He turned to the picture magazines, many of which, he said, started out well but turned into nothing but magazines pandering to sex. He no longer is able to look at them, he said, as he termed them "the products of filthy minds."

"Where does one find a decent picture book? Never before was there such rotten filthiness as there is today," he said.

Following the cardinal's address, solemn benediction was held by the Reverend Richard A. Rogers, administrator of St. Cecelia's parish, which includes St. Clement's Church. The closing hymn was of the cardinal's own composition, The Hymn to the Holy Name.

Following the service, the cardinal gave his blessing to the multitude and invited a group of the officers of the congress within the altar rail, where each kissed his ring. Previous to the service an organ recital was given by Irvin Brogan, a graduate of Boston College.

Thomas Jefferson

EXTENSION OF REMARKS

OF

HON. GEORGE W. JOHNSON

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

ADDRESS BY HON. CLYDE T. ELLIS, OF ARKANSAS

Mr. JOHNSON of West Virginia. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by the gentleman from Arkansas [Mr. ELLIS] before the Thomas Jefferson Club at Parkersburg, W. Va., on April 14, 1941:

Who was Thomas Jefferson, and what was his contribution that should command our attention at this hour?

Life to us is liberty. Of few men can it be said, "He stood at the gateway of life and opened wide its portals that the multitude might enter and enjoy more abundantly the riches of God's creation." Such a man was Jefferson.

A little while ago it was Lincoln who noted that, "Fourscore and ten years ago our fathers brought forth upon this continent a new nation conceived in liberty and dedicated to the proposition that all men are created equal."

We then were testing whether this Nation should live as one or two democracies. Today, fourscore years later, we are involved in an even greater, though less tangible, conflict, testing whether democracy itself shall live.

We are met here as Democrats, as members of the oldest political party in power in any major nation. As heirs to that illustrious party of the people, we are heirs also to an almost sacred philosophy of government. We are met in honor of him who visioned, enunciated, and executed that philosophy and gave it life as a governing force in the world.

Thomas Jefferson was born, lacking 2 years, two centuries ago yesterday, the son of undistinguished parents, the third child in a family of 10. From boyhood he was a student, and upon his entry into William and Mary College at 17 he was immediately accepted into the exclusive little fraternity of one of the professors, of a distinguished lawyer, George Wythe, and of the Governor of the Colony, Francis Fauquier. For 2 years these four intellectual giants dined together once a week and indulged in mutual exchange of the best thought of the day, though there is no evidence that they ever came to a common conclusion. This for Jefferson was the opportunity and the beginning.

After graduation he spent 5 years studying the law and acquiring the beginning of what was to be the best library of the land. Then he practiced law for 7 years, earning as high as $10,000 annually. Like Franklin, he was a genius at many arts. He studied the classics and the Bible religiously, and even did a New Testament translation of his own. He was an accomplished violinist, an artist, architect, gardener, farmer, hunter, botanist, horseman, essayist, inventor, manufacturer, politician, statesman, and diplomat. From early manhood he was a chronic and meticulous writer, but as a public speaker he was poor.

His own county of Albemarle elected him to the house of burgesses in 1769. He stood in the hallway at Williamsburg and heard Patrick Henry's famous resolution and there gained his inspiration for his bold and fearless career. He was ready for the battle, for even before this he had had engraved upon a seal for himself his motto, "Resistance to tyrants is obedience to God." He was on the Committee of Correspondence that stirred the Colonies to action. Thus he began a long career of 40 years of constant official service for his country.

He was elected a member of the Virginia Conventions, then of the Continental Congress, of the Virginia Legislature, Governor of Virginia, Member of Congress, Minister to France, Secretary of State, Vice President, and President of the United States.

THE DECLARATION OF INDEPENDENCE

Jefferson's first great opportunity came at the age of 33, a year after his election to the Continental Congress. On June 11, 1776, he had been appointed along with Franklin and Adams and two others to draft a suitable Declaration of Independence. Franklin was the most important man in the Congress, but he had been sick with the gout. Adams had refused because, he said, he had become too "obnoxious" by his clamor for independence, so they wished the job off on the tall, silent, young, red-headed, grey-eyed lawyer from Virginia, about whom John Adams later said that he had not until that time heard him utter three consecutive sentences.

Jefferson set to work, and at last, with rare judgment and clever literary skill, he amalgamated the essence and some of the form of three already existing documents, one of which he had written himself, and polished them into one of the world's most famous pronouncements, proclaiming, "We hold these truths to be self-evident, that all men are created equal, that they are endowed by the Creator with certain inalienable rights; that among these are life, liberty, and pursuit of happiness."

After acceptance of the formal declaration, a new copy was made, the one now enshrined in the Library of Congress. The original Jefferson carried away to his home in Virginia, where it lay among his files untouched for 47 years "before the country suddenly awoke to the fact that the Declaration of Independence was an imperishable state paper." At long last and while he still lived Jefferson began to receive the acclaim justly due him.

Thus came the first of his great achievements, and in the document were both the objectives later embodied in the Constitution and the ideals which later inspired the Democratic Party.

The Declaration of Independence remains the most revolutionary of all documents.

Among the old letters of John Adams I find one which he wrote his wife on the evening following the first day's debate and the day after the passage of the Lee resolution calling for the declaration: "Yesterday the greatest question was decided whichever was debated in America, and a greater perhaps never was nor will be decided among men. A resolution was passed without one dissenting colony that these united colonies are, and of right out to be, free and independent states."

HIS WORK IN THE VIRGINIA LEGISLATURE

Jefferson retired from the Second Continental Congress in 1776, returned to his native State, and entered the legislature with the hope of revising and modifying Virginia's laws that they might more nearly conform to his philosophy of Republican government. He succeeded in breaking down the laws of primogeniture and entail, in practically disestablishing the English church and in enacting one of the best laws the world has even seen for public education, from the common schools to and including the University of Virginia.

Jefferson did not believe that the Church of England, operating virtually as a government and indeed sanctioned by the State, should force its monopoly so savagely upon the people. Though an ardent student of the Bible, his efforts brought down upon him the wrath not only of the church but of those "high-flyers" of colonial society, as he called them, who principally through their favors from the crown, dominated everything. Throughout his official life this monstrous opposition arose again and again to strike at him on every turn.

Even Alexander Hamilton, while they were both candidates for the Presidency, was a party to a movement within the church designed to eliminate Jefferson. Pamphlets were spread through the land referring to him as "a mean-spirited, low-lived fellow, the son of a half-breed Indian squaw sired by a Virginia mulatto father; raised wholly on hoecake made of coarse-ground southern corn. He would sell his country at the first offer made to him cash down, should he be elected to fill the Presidential chair." At the conclusion of a speech containing these statements, it was unanimously voted by the assembled freemen present "that in case any individual, or individuals, should dare to vote for that half Indian, half nigger, half Frenchman—Thomas Jefferson—he, or they, should be rode on a green, split chestnut rail, sharp side up." (Incidentally he was not only the foremost champion of free worship but also of the freeing of the slaves.)

In a sermon of the Fourth of July preceding the election, Dr. Timothy Dwight, president of Yale, prophesied faithfully the terrible consequences of permitting the ungodly Virginian and his desperadoes to seize the reigns of political power: "Is it that we may see the Bible cast into a bomb fire * * * is it that we may see our wives and daughters as victims of legal prostitution, soberly dishonored, speciously polluted, the outcasts of delicacy and virtue?" and on and on into what becomes too vulgar to repeat here

Upon Jefferson's election, certain pious women in New England buried their Bibles in their gardens, fearing confiscation.

If Jefferson had settled the many issues he raised as completely as he did this one, there would never have been any other party, for this one never raised its head again. But at what a price.

And yet there are those of us who flinch at the first sign of opposition.

Only Jefferson's ability and his personal popularity enabled him, always at least a decade ahead of most great men of his time,

to force his education system through the Virginia Legislature. It is not unimportant to note that at the same moment he was forcing the separation of his church and state he was installing public education as a function of the government and as the greatest weapon of a free people.

SERVICE IN FRANCE AND THE BILL OF RIGHTS

Although Jefferson was in France from 1784 until 1789, his was the greatest influence of any one man upon our Constitution including the Bill of Rights.

In checking through his old letters I find that 2 years before his departure for France he wrote, "I never saw a native American begging in the streets or highways." Then I find a letter which he wrote back to the States a year after his arrival in France: "Of 20,000,000 supposed to be free in France, I am of the opinion that there are 19,000,000 more wretched, more accursed in every circumstance of human existence than the most conspicuously wretched individual in the whole United States."

Even in 1814, after he had been President, he wrote of America, "We have no paupers."

While in France he kept up his constant stream of letters and he and his friends exacted unofficial promises of the Colonies that the Bill of Rights would be added before the Constitution ever was ratified.

In one of these letters he said—and note the resemblance to our own time: "I asked myself what could be the reason that so many should be permitted to beg who are willing to work in a country where there is a very considerable proportion of uncultivated lands"; and his conclusion was that "whenever there is in any country uncultivated lands and unemployed poor, it is clear that the laws of property have been so far extended as to violate natural rights. The earth is given as a common stock for man to labor and live on."

SECRETARY OF STATE

As the first Secretary of State, Thomas Jefferson's greatest achievement was in expounding what was later to become the Monroe Doctrine and in so eloquently enunciating his philosophy of government that when Washington sided with Hamilton, thereby virtually forcing Jefferson's resignation from the Cabinet, Jefferson took with him the sympathies of a majority of the people, and thus came into existence for the first time a party of the people as opposed to the Federalists or Tories or Tyrants—and there is a modern term for them.

AS PRESIDENT

As Vice President Jefferson had continued his fight for the rights of the common man and thus had secured his election in 1801 as President.

The first President to be inaugurated in Washington, D. C., he acted swiftly to build the United States into a place of security and respect among the nations of the earth. His annihiliation of the Pirates of Tripoli and his purchase of the Louisiana Territory were events that occur once in history. He feared that the United States could not endure as a democracy should the Empire of Napoleon surround us on the West. It is true that no provision existed in the Constitution for any such adventure but although Jefferson believed in strict interpretation of the Constitution—where human rights were endangered—he also believed that it should be a living thing.

At the end of 1 year even Hamilton congratulated him upon his administration.

Until his death in 1826, Jefferson remained one of the most powerful figures in the Nation's history. It was his letter to President Monroe in 1823 that encouraged and inspired Monroe to announce to the world what now is known as the Monroe Doctrine.

The occasion of Jefferson's death provided one of the strangest coincidences of all time. Of the 56 signers of the Declaration of Independence, only 2 of them—he and Adams—later became President—the one who wrote it and the other who steered it through the Congress—and both of these masters died at almost the same hour on the same day—July 4, 1826—the fiftieth anniversary of, as they styled it, "The Unanimous Declaration of the Thirteen United States of America."

Historians record at least 21 different achievements that would entitle the Sage of Monticello to a permanent place in history. And so it was with extreme modesty that he in preparing the inscription for his own tomb listed of his achievements only: "Author of the Declaration of Independence; of the Statute of Virginia for Religious Freedom; and Father of the University of Virginia."

JACKSON, CLEVELAND, BRYAN, AND WILSON

Andrew Jackson, Grover Cleveland, William Jennings Bryan, and Woodrow Wilson were the big four who kept alive and contributed most to Jeffersonian democracy in that long expanse of years between Jefferson and our present leader.

THE G. O. P.

It is said that we still have in the United States another political party.

May I give you here a picture as suggested by the columnist Jay Franklin:

Once there were two hairy mammoths, with long, curved tusks, inquisitive noses, and gluttonous appetites.

One was cavorting around the Siberian tundras in the Pleistocene Era, stuffing his tummy with Alpine poppies and similar delicacies left behind the retreating glaciers. Lord of all he surveyed and concerned only with his own immediate contentment, he defied all danger signals. The glaciers had been retreating steadily for thousands of years, hadn't they? What cared he if the birds were flying south? Snug in his warm woolen coat he refused to believe the glaciers were on the move again.

Just the other day they dug him out of an iceberg, hair and all, frozen solid, taken by surprise in an unfair caprice of nature that apparently had no further use for giant mammoths and had decided that the Pleistocene age was over.

Then there was the other creature, the American tycoon (genus G. O. P.), who cavorted among the lush savannahs of laissez faire, stuffing his maw with rugged individualism, corporate mergers, special privilege, and other Wall Street delicacies left behind the retreating forces of mercantile philosophy. For generations the grass had grown greener, the pastures wider, and there seemed no reason to believe that eventually the entire world might not become this creature's playground. He merely smirked at the rising tide of unemployment; he laughed at Hitler and possible world revolution. These things would pass—they always had. He had enormous cash reserves, laws, and judges, and philosophies which provided him with a thick coat against the storm. He would not believe that the climate of public opinion had changed and that human nature had rung down the curtain on the age of rugged individualism and industrial laissez faire.

They'll dig him out some day from the cold iceberg of history and they'll marvel at how he was tolerated so long among the monopolies and want and inequalities of opportunity which he created.

We have seen the mammoth of this genus trample and exploit the masses since the War between the States. We have seen him sink the Nation's battleships after World War No. 1, rather than be taxed a little to sustain them. We have seen him permit millions to go unemployed and cold and hungry, and we have seen him keep hands off while we lost our homes. We can still hear him bellow forth, as the people slipped the iceberg down upon him in 1932, "* * * grass will grow in the streets of a hundred cities."

Eight years have passed and we have seen him struggle, through a policy of negation and obstruction, to make his boast come true. Last fall we heard again his trumpet, warning that if we did not resurrect him, "this way of life will pass." We have seen him oppose rearmament and give aid and comfort to the dictators.

But the people did not resurrect him, and the grass did not grow, and this way of life did not pass—and shall not pass—and we shall not comfort the dictators.

JEFFERSONIAN DEMOCRACY TODAY

Not since the day of Jefferson himself has Jeffersonian democracy bloomed forth so profusely as during the past 8 years. We forget so quickly.

In St. Paul, Minn., at a Jefferson Day dinner on April 18, 1932, several months before the election of that year, the then Governor of New York warned the Nation that "great fear has swept the Nation" and that we are "facing an emergency today more grave than that of the war." After reviewing the national crisis and pointing out that democracy also means equality of opportunity, the Governor observed that, "as the great Virginian sat at Monticello in the twilight of his life he saw the rise of manufacturing and the growth of the cities and he still held fast to the principles that a truly national economy is many-sided."

As is usually the case in our democracy, the greater the crisis the greater the leader, and so the people recognized in the Governor of New York another Jefferson standing at the gateway of life.

Stunned and staggering, the rich and the poor, the tyrants and the lowly—all fell begging at his knee; all were happy for the radiance of his hope.

Eight years have passed, and now in every town and every countryside stand enduring monuments to the democracy that our party and our leader put to work. Look at them. There is our bank-deposit insurance; there are our idle men employed; there are new roads and streets, Legion huts, community buildings, and schools; there are the N. Y. A., C. C. C., and new vocational training programs; there are Farm Credit, Farm Security, Soil Conservation, Reforestation, Surplus Commodity Marketing, and the A. A. A.; there are rural electrification, Federal and United States Housing, and the Home Owners' Loan Corporation; there is social security; there are new flood-control and rivers and harbors programs, T. V. A., Grand Coulee, and on and on—a new Army, a new Air Corps, and a new Navy.

All this under the administration of that gallant humanitarian and Jeffersonian Democrat, the recognized leader of peace and democracy in the world. Your leader and mine, Franklin D. Roosevelt.

Had either Jefferson or Franklin Roosevelt lived in the day of the other he would have been the other's greatest ally.

We Democrats may make mistakes, but they won't dig us out of an iceberg.

WHAT OF TOMORROW?

All this is history. In the light of it what is there of hope and inspiration for us? To build now our defense against enemies and potential enemies from without the United States and to build now our defense against enemies and potential post-war enemies from within, whether they be individuals or conditions—that is the twofold task supreme in the mind of every true American.

Everything that Jefferson and the party of Jefferson have fought for for one and a half centuries, including the ideals and the governments of every country of the Western World, stand condemned and have been promised destruction by the new forces of tyranny that threaten to engulf the earth. It must be admitted that we know not at this moment how those forces shall be stopped but again the graveness of the hour has added to the stature of the man at the

helm and, war or no war—and God grant that it shall be with no war—I have every confidence that in the end justice will prevail, that the outlaw governments of Europe will be overthrown and that peace and democracy will again settle upon the earth in a fervor of sweetness not heretofore enjoyed.

OUR POST-WAR COURSE

But after the war, what then? Surely we shall not be a party directly or indirectly to winning the battles and yet lose the cause. With the victory that shall accompany peace will come also unemployment, a crippled economy, and fear and uncertainty. It well may be that the hours that shall follow the war will be darker than the hours of the war itself. We must, like Jefferson, forget individual selfishness. We must take the broader view and we must recognize, each of us, some responsibility for seeing to it that democracy is never finished, that it shall be a tool for opening new frontiers for providing equality of opportunity and for securing the rights of the individual—including the right to live and work. As yet, only one general proposal for tiding us over the inevitable post-war depression has made the headlines. It is that of the President to provide a reservoir of projects for our own internal development.

It has been my honor to introduce in this session of the Congress, with the approval of the administration, one of the largest of those projects, the proposed Arkansas Valley Authority—a project covering an area seven times the size of the T. V. A. and one-tenth of the United States; a project that will open new frontiers by securing our lowlands from $9,000,000 direct flood damage annually; by opening four great rivers to navigation; by irrigating new lands; by developing tremendous, cheap hydroelectric power; by using the vast stores of oil and gas and coal of the region to build peak hydro power into firm power, and by thus making possible an industrialization necessary for a well-rounded economy in a region rich in natural resources but poor in per capita income—a region that will help absorb the unemployed of the East and North, whereas that region is now contributing one-fourth of its sons and daughters annually to the North and East and West.

And this project, like many others, will pay for itself in direct benefits, not to mention the tremendous benefits of using the idle wealth of the Nation to develop the idle resources with the idle manpower. This vast undertaking, like T. V. A. and many others, will in the end cost the Nation nothing.

To borrow a phrase from Jefferson, "We hold the necessity of the enactment of these projects for the general welfare of the people and the preservation of our democracy to be self-evident."

Let us then determine, you and I, that as we face these perilous days ahead we shall keep ever in mind the example of Jefferson and the ideals of his sacred philosophy, all of which he borrowed from the Bible itself.

If we do that, God being with us, no sacrifice and no task shall be too difficult.

The Vinson Bill

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

ARTICLE BY MARK THISTLETHWAITE

Mr. GILLIE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I wish to include an article by Mark Thistlethwaite, Washington correspondent for the Indianapolis News, which appeared in that newspaper on April 23, 1941:

[From the Indianapolis News of April 23, 1941]

MOMENTS IN WASHINGTON

(By Mark Thistlethwaite)

WASHINGTON, April 23.—The principle of the Vinson bill to curb strikes in plants engaged in national-defense production is neither new nor untried. This principle of requiring observance of a "cooling off" period at the time of a threatened strike was crystallized into statutory law 15 years ago to apply to the railroads and their employees. Experience since then has justified completely what was proposed as an experiment. The rail carriers and the commercial air lines, which later were brought within the law's purview, have been free from strikes growing out of disputes between employees and managers.

The Vinson bill would establish in the national-defense production field the principle of conciliation, mediation, and arbitration that the Watson-Parker Act of 1926 established in the field of transportation. It would depend for success, as does the Railroad Anti-strike Act, on a "cooling off" period for a peaceful settlement of differences based on public opinion after the merits of a controversy have become known as a result of conferences and direct negotiations.

However, the situations of 1926 and 1941 are widely different, and thus the Vinson bill faces bitter opposition whereas the Watson-Parker Act was virtually unopposed. Organized labor, in the present emergency, is against antistrike legislation in whatever form proposed. Its leaders are demanding that the existing right of immediate strike not be infringed in any way. They are fighting the Vinson bill and lining up their friends in Congress against it. This means a hard battle in contrast to the rejoicing on both sides that marked enactment of the Watson-Parker law.

The term "cooling off" as applied to the Vinson bill, in all current discussions, is no newer than the principle of the proposed legislation. First use of this descriptive term was by James E. Watson, of Indiana, when the railroad peace bill of which he was a coauthor was up for approval. As chairman of the Senate's Interstate Commerce Committee, the Hoosier championed the legislation that had been worked out and agreed on by the carriers and the brotherhoods. "For 60 days the status quo shall be preserved; no strikes shall happen; no lockouts shall occur; no trains shall stop," Watson told the Senate. "This period of repose, this cooling-off time, will give the public full knowledge of the situation." This was on May 6, 1926.

Whether the Vinson bill, if enacted into law over the opposition of labor, would prove as beneficial as the Watson-Parker law is to be doubted. Successful administration of the Railroad Peace Act has been due to the loyal support of management and trainmen. Having sponsored the legislation, the carriers and their employees were under a moral responsibility to see that it worked. Their joint acceptance of this obligation continues to this day. To both belongs the credit for preservation of amicable relations and for an uninterrupted transportation service, and the good will of 1926, still existent, accounts for an efficient and reliable transportation system in the present emergency.

Calvin Coolidge, who as President signed the Watson-Parker bill and thereby made it a law, offered a word contribution which has reappeared in the discussion of the Vinson bill. Praising the carriers and their employees for the cooperative effort in the public welfare, Mr. Coolidge said that the solution ought to be an example to all other industries. "Those who ask the protection of civilization should be ready to use the methods of civilization," he added.

Coolidge's discussion included remarks which on repetition sound as timely as though uttered today instead of 15 years ago. "A strike in modern industry has many of the aspects of war in the modern world," he said. 'It injures labor and it injures capital. * * * It injures the economic welfare and general comfort of the whole people. * * * It tends to embitter and divide the community into warring classes and thus weakens the unity and power of our national life. * * * Labor can make no permanent gains at the cost of the general welfare."

It Can Be Done

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

EDITORIAL FROM THE LEAD (S. DAK.) DAILY CALL

Mr. CASE of South Dakota. Mr. Speaker, under permission granted by the House, I wish to place in the RECORD an editorial from the Lead (S. Dak.) Daily Call on the record of fiscal achievement by States under Republican administration, including that of my own State of South Dakota. The editorial follows:

[From the Lead (S. Dak.) Daily Call of April 23, 1941]

REPUBLICANS CAN DO IT

In these days of billions for defense and billions more for the Roosevelt deficit, it is always refreshing to read of reduced budgets and taxes in Republican-administered States.

Under the leadership of Republican Governor James, Pennsylvania has reduced the 2-year budget for 1941–43 by 10 percent. The 1939–41 total was $607,000,000, while the new budget is $543,000,000.

The new Republican administration in Indiana has enacted into law virtually every pledge of the 1940 State Republican platform. In doing so a new record for economy has been made, and the State treasury will have a favorable balance of more than $10,000,000 by 1943, in spite of the dire prediction of Democrats that the program would result in a huge deficit and in spite of the 50-percent reduction in the gross income tax for retailers.

Republican South Dakota had a delightful problem on its hands this spring. Governor Bushfield's administration piled up a new surplus in 1940, and the question was what to do about it. It was generally agreed that taxes should be cut, but there were different opinions as to which taxes should be given the ax.

It was finally agreed to slash 1 cent from the sales tax, reduce the personal-income tax, and turn over the remainder of the saving to various school districts. The $4,150,000 saved last year brings the total for the Bushfield administration since 1939 to $7,650,000. The annual State expenditure is approximately $29,000,000.

Most significant is the fact that these savings were not effected by eliminating any of the State's essential services, but by a businesslike administration. Governor Bushfield

has maintained that government, like private business, should live within its income.

Conference of the Inter-American Bar Association

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

PROGRAM OF THE CONFERENCE, REPORT OF THE ORGANIZING COMMITTEE, AND THE DECLARATIONS, RESOLUTIONS, AND RECOMMENDATIONS OF THE CONFERENCE

Mr. MARTIN of Iowa. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I wish to call the attention of the House of Representatives to a very young organization that has come a long way, and can go a long way, in building up friendly relations between this country and our American neighbors. The organization to which I refer is the Inter-American Bar Association which was organized May 16, 1940. The constitution, bylaws, press releases, and address by William Cattron Rigby were inserted in the Appendix of the RECORD by Hon. Morris Sheppard, of Texas, at page 4520 of volume 86.

The president of the association, Dr. Manuel Fernandez Supervielle, made a very impressive speech at a dinner given in his honor at the Army and Navy Club Monday evening, October 28, 1940. This speech was placed in the Appendix of the RECORD by Hon. HATTON W. SUMNERS, of Texas, at page 6949 of volume 86. I am sure you will all be interested in rereading the foregoing extensions in the CONGRESSIONAL RECORD.

The First Conference of the Inter-American Bar Association was held at Habana, March 24 to 28, 1941. The program of this meeting, the report of the organizing committee, and the declarations, resolutions, and recommendations adopted by the first conference are of particular interest, and I am including them herewith:

PROGRAM OF THE FIRST CONFERENCE OF THE INTER-AMERICAN BAR ASSOCIATION, HABANA, MARCH 24–28, 1941

MONDAY MORNING, MARCH 24, CHAMBER OF THE HOUSE OF REPRESENTATIVES, NATIONAL CAPITOL

9:30: Opening of the conference by the Vice President of Cuba, the Honorable Dr. Gustavo Cuervo Rubio. Introduction of official personnel by William Cattron Rigby, chairman of organizing committee. Roll call by the secretary general.

Addresses of welcome

9:45: The mayor of Habana, the Honorable Raúl G. Menocal.

10: The Secretary of State of Cuba, the Honorable José Manuel Cortina, on behalf of the National Government.

10:30: Dr. Natalio Chediak, for the Colegio de Abogados de la Habana.

10:45: Response by Secretary-General William Roy Vallance.

11: Presidential address, Dr. Manuel Fernández Supervielle.

MONDAY AFTERNOON, MARCH 24, PLENARY SESSION, HOTEL NACIONAL, SALA VEDADO

3: Address by Dr. Enrique Gil, Federación Argentina de Colegios de Abogados.

3:30: Report of the organizing committee, William Cattron Rigby, chairman; and submission of bylaws. Submission of resolutions, of proposed amendments to the Constitution, and of rules of procedure. Adoption of bylaws and of rules of procedure for the conference. Appointment of resolutions committee and other committees.

4: Round tables:

I. Sala Vedado:

Comparative constitutional law: Chairman, Frederic R. Coudert. Address, Frederic R. Coudert, The Constitution of the United States in a Time of World Revolution.

Papers by—

Dr. Noel T. Dowling, to be read by Frederic R. Coudert.

Dr. Rafael Cuevas Zequeira, Puerto Rico, One Link of a Future System of Jurisprudence in the Western Hemisphere.

Wenceslao Troncoso, Similarities and Differences Between the Constitutions of the United States of America and the Dominican Republic.

Dr. Esteban A. Alfonso, On the Advisability of Limiting Constitutional Precepts in the Field of Procedure in the Penal Law.

Dr. Enrique Hernández Corujo, Advisability of Including in the Constitution Adequate Protection for Technical Officials of the Government.

II. Sala Taganana:

Administrative Law and Procedure: Chairman, Harry S. Knight. Paper by Judge Félix Pérez Porta, Administrative Law and Procedure.

III. Sala Santa Clara:

Immigration, Naturalization, and Nationality Laws: Chairman, Dr. Eduardo Salazar.

Papers by—

Dr. Albert E. Reitzel, Recent Developments Relating to the Admission, Residence, and Expulsion of Aliens and Change of Nationalities Under the Law of the United States of America.

Dr. Enrique Gay Galbó, Nationality and Citizenship.

Dr. David Whitmarsh, Immigration Legislation.

C. G. Pella, Draft of Reform of Legislation Which Regulates in America the Loss of Citizens as a Consequence of Military Service in a Foreign Country.

Henry F. Butler, discussion.

TUESDAY MORNING, MARCH 25, HOTEL NACIONAL, SALA VEDADO

9:30: Address by the Honorable Jacob M. Lashly, president of the American Bar Association.

10: IV. The Role of the Lawyer in the Defense of the Americas.

Addresses by—

Col. Edwin Ruffin Beckwith, The Role of the Lawyer in the Defense of the Americas.

James W. Ryan, Program for Western Hemisphere Cooperation and Defense.

Dr. Luis Anderson, The Role of the Lawyer in the Defense of the Americas.

Dr. Luis Anderson in the chair.

Hon. William S. Culbertson, The Reign of Law.

Dr. Dantés Bellegarde, The Role of the Lawyer in the Economic Defense.

Dr. Rigelio Pina, The Role of the Lawyer in National Defense.

Dr. Leonor Saavedra, The Responsibility of the Lawyer at This Historic Moment and in the Defense of the Americas.

Dr. Natalio Chediak, The Bar Associations in the Defense of the Americas.

Dr. José López G. de Villalta, The Role of the Lawyer in the Defense of the Americas.

Dr. Emilio del Real, The Role of the Lawyer in the Defense of the Americas.

Dr. Cosme de la Torriente, The Defense of Democracy.

Dr. Miguel Angel Campa, The Juridical Significance of the Declarations of Panama and Habana.

Dr. Enrique Guiral, Draft of a Declaration on the Reaffirmation of the Principles and Precepts of International Law.

Dr. Felix Chediak, Natural International Law and Legitimate (Just) War.

TUESDAY AFTERNOON, MARCH 25, HOTEL NACIONAL, SALA VEDADO

3: Address by Judge Herbert F. Goodrich, The American Law Institute.

3:20: Address by Dr. Antonio S. de Bustamante, member of the International Court of Justice.

3:40: Address by Dr. William Draper Lewis.

4: Round tables: Comparison of civil and commercial laws, including real-estate and mortgage laws; commercial arbitration; negotiable instruments; the law of trusts and trustees of Canada and the United States; Powers of Attorney. (In two parts.)

V. Session A, Sala Vedado. Chairman: Edmundo Miranda Jordao.

Papers by—

Hessel E. Yntema, Comparative Legal Research and Unification of Law.

Dr. José Béguez César, Property—Its Social Function.

Dr. Salvador Waldo de Castroverde, Would the Creation of a Uniform Mortgage System for the Countries of the Americas be Advisable?

Dr. Agustín Aguirro, Mortgages as Guaranties of Bearer Certificates Transmissible by Endorsement.

Dr. Isabel Siero Pérez, The Rights of Collateral Descendants in the Americas.

Dr. Manuel Dorta Duque, The Ownership of Real Estate—Stabilizing Influence in Inter-American Relations.

Dr. Virgilio Ortega, The Life Insurance Contract—Rights of the Insured and the Beneficiaries.

Dr. Alberto Blanco, On the Unification of Private Law in the Americas.

Dr. Francisco Javier Villaverde, The Future of Voluntary Mortgages.

Dr. E. Le Riverend, New Matrimonial Forms.

Dr. Oscar García Montes, Consideration of the New Trends in the Civil Law as a Necessary Antecedent to Possible Unification of Private Law.

VI. Session B, Sala Taganana, corridor A. (Adjourned to 10 o'clock Wednesday morning, March 26.) Chairman: Judge Otto Schoenrich.

Papers by—

Judge Otto Schoenrich, Comparative Law and Pan American Solidarity.

Dr. R. G. Patton, The Land Title Records of Canada and the United States.

Dr. Guillermo de Montagú, Negotiable Instruments.

Dr. Carlos A. Llanes, Toward Inter-American Legislative Unification.

Dr. Antonio Iglesias, Legislative Unification.

Dr. Raúl Seelig Ruibal, On the Legislative Unification of Trusts.

Dr. Gregorio del Real, Inter-American Unification of Commercial Legislation in Regard to Negotiable Instruments.

Dr. Mario Nin Abarca, The Rights of Minorities in Stock Companies.

Dr. J. E. Gorrin, The Trusts and Their Application in Cuba.

Dr. Fernando Colomar, Mortgagee and Trustee.

Dr. Luis de Solo, Powers of Attorney and Representation in the Courts.

VII. Sala Taganana: Customs Legislation and Commercial Agreements: Chairman, Dr. Dantés Bellegarde.

Papers by—William E. Masterson, Customs Restrictions in the Countries of the Western Hemisphere.

Dr. Lawrence D. Egbert, Latin American Commercial Treaties.

Charles E. Jackson, The Problem of Conserving Fishes that Migrate Across International and Interstate Borders.

Dr. Mercedes Gatell, Inter-American Commerce.

Dr. Roberto A. Netto, The Drawback.

VIII. Sala Santa Clara:

Communications: Including Air Law, Telecommunications, Maritime and Highway Transportation. Chairman: Dr. J. Blanco Ustariz. Address: Dr. J. Blanco Ustariz, Aerial Legislation.

Papers by—Dr. Antonio S. de Bustamente, The Constitution of International Committees on Aviation.

Howard S. LeRoy, Trends of International Aeronautical Law.

John A. Eubank, Some Aspects of Aeronautical Jurisprudence Related to Aerial Warfare.

David E. Grant, The Law Relating to Transportation by Air.

Dr. José Ramón Gutiérrez, Advisability of Creating an Inter-American Institute of Communications and Transportation.

Dr. Rogelio Sandrino, Sovereignty Over Air Spaces.

WEDNESDAY MORNING, MARCH 26, HOTEL NACIONAL, SALA VEDADO

9:30: Address by Dr. Alberto Cruchaga Ossa, Colegio de Abogados de Chile. The Lawyers Before International Tribunals.[1]

10: Address by Dr. Alberto Ulloa, Colegio de Abogados de Lima. Observations on the Present Status of Law.

10:30: Round tables:

IX. Sala Vedado:

Inter-American legal documentation: (a) Bibliography of American Legal Sources. (b) Establishment of an Official Bulletin or Organ of the Inter-American Bar Association. (c) Establishment of an Inter-American Journal of Comparative Law. (d) Inter-American Exchange of Legal Publications. Chairman: Dr. John T. Vance. Address: Dr. Vance, Inter-American Legal Documentation.

Papers by—

Dr. Félix Magloire, Inter-American Legal Documentation.

Harry C. Shriver, Current Session Laws and Statutes (to be read by Francis W. Hill, Jr.).

Dr. Bartholomew Landheer, Need for Inter-American Journal of Comparative Law (to be read by Miss Mary Agnes Brown).

Dr. Crawford W. Bishop, Current Codes of Latin America.

Francis X. Dwyer, Current Session Laws and Statutes of Canada (to be read by Miss Marguerite Rawalt).

Dr. Herminio Rodriguez Von Sobotker, Bibliography of American Legal Publications.

Dr. Lincoln S. Méndoz, Inter-American Exchange of Legal Publications.

Dr. Armando Mencia, Unification of Inter-American Legal Documentation.

Dr. William Sanders: Discussion.

X. Sala Taganana:

Tax problems, including taxation and regulation of public utilities, international double taxation, etc. Chairman: George Maurice Morris.

Papers by—

Edwin D. Ford, Recent Trends in Regulation of Public Utilities in Latin America and their Effect on the Aibility of Public Utility Companies to Meet Demands for Service.

Mitchell B. Carroll, Prevention of Double Taxation in the Americas Through the Development of International Law.

[1] Owing to illness, Dr. Cruchaga Ossa was not able to present his address in person.

XI. Sala Santa Clara:

Protection of intellectual and industrial property. Chairman: Dr. Camilo de Brigard Silva.

Papers by—

Dr. Stephan Ladas, Inter-American Copyright Protection in the Americas.

Dr. Ricardo Moré, Bases for Unification of Patent Legislation in the Countries of the Americas.

Dr. Carlos Gárate, Protection of Patents, Trade-Marks and Trade Names, and Industrial Property.

Dr. Natalio Chediak, The Precarious Situation of Copyrights in the Americas.

Dr. William Sanders, discussion.

WEDNESDAY AFTERNOON, MARCH 26, HOTEL NACIONAL, SALA VEDADO

3: Address by the Honorable D. L. McCarthy, president of the Canadian Bar Association.

3:30: Round tables:

XII. Sala Vedado:

Legal education: (a) The importance of international and comparative law studies to inter-American cooperation. (b) Exchange of chairs and scholarships. (c) Practicability of an inter-American institute of comparative law and an academy of international and comparative law. (d) Contributions of private legal organizations to the work of unification and uniformity of law undertaken by official inter-American agencies. Chairman: James Oliver Murdock. Address: Mr. Murdock, The Challenge to Legal Education in the Americas.

Papers by—

Philip C. Jessup, The Importance of International and Comparative Law Studies to Inter-American Cooperation.

Dr. William Sanders, Unification, Uniformity, and Codification of Law in the Americas.

Dr. Carlos Raggi, Unification of the Legislation of the Americas in Regard to Labor Jurisdictions.

Dr. Eduardo C. Lens, Procedural Trends in the Field of Labor Law.

Dr. José Garcia Pedrosa, Labor Jurisdiction and its Procedure: (a) Creation of labor courts in those American countries where they do not exist; (b) Procedural laws for the settlement of jurisdictional conflicts between courts in the field of labor.

Dr. Raúl de Cárdenas, Moratoria and International Credit.

XV. Sala Taganana:

Criminology; Penal law, procedure and administration: (a) Crime prevention: Medical, educational, juvenile court, and juvenile institution aspects. (b) Uniform and reciprocal laws: Extradition; defense; regulation of traffic and transportation. (c) Criminal procedure, pre-trial, trial, post-trial. (d) Penal treatment: Quarantine, classification based upon medical and other data, on conference and diagnosis; treatment process by experts, housing work, etc. (e) Administration, including personnel: Police investigation; judicial, prosecutory, probation, and parole, penal institutions.

Chairman: Dr. José Agustin Martínez.

Papers by—

Ledo. Héctor Beeche, Bases for the Unification of Penal Laws in the Americas. (Paper to be read by Dr. Martinez.)

Dr. José Agustín Martínez, Unification of Penal Legislation and Uniformity in Extradition Legislation.

Dr. José Agustín Martínez, Contribution of Internal Penal Legislation in the Protection of International Peace.

Dr. Manuel Oliva Rodriguez, On the Means of Extinction of Penal Action in Regard to the Foundation and the Object of the Penal Action.

Dr. Evelio Tabio y Castro Palimino, Mercy Killings Before the Law.

Dr. Manuel Pérez Picó, Inter-American Cooperation of Laboratories and Identification Departments.

Dr. Francisco Caronne: Criterion for the Unification of the Legal Definition of Political Crime in America.

Dr. José Miró Cardona, Judicial Intervention in the Execution of Sentences.

Dr. Armando Raggi, Contribution of International Conferences to the Progress of Penology.

Dr. Francisco Ponte Domínguez: Trends in the Parole System in Cuba.

11: Closing plenary session: Chamber of the House of Representatives, National Capitol. Address by the Honorable Edmundo Miranda Jordao, Instituto da Ordem dos Advogados, Brazil.

11:30: Address by the Honorable Robert H. Jackson, Attorney General of the United States.[2]

12. Address by the Honorable Victor Vega, the Minister of Justice, of Cuba.

12:30: Report of resolutions committee, and other committee reports. Adoption of amendments to the constitution, if any. Election of elective members of the Council. Election of vice presidents. Adjournment.

REPORT OF ORGANIZING COMMITTEE, FIRST CONFERENCE, INTER-AMERICAN BAR ASSOCIATION

The Inter-American Bar Association was organized on May 16, 1940, by lawyers from different countries present at the Eighth American Scientific Congress. Its origin and general purposes are outlined in the printed circular in the Spanish language sent out by this committee February 1, 1941, carrying the preliminary program of the conference, as

[2] Address read by Ambassador Messersmith in Mr. Jackson's unavoidable absence.

well as in that of January 25, 1941, of the distinguished Committee on Cooperation with the Inter-American Bar Association, appointed by John T. Vance as chairman of the American Bar Association's section of international and comparative law, and headed by George Maurice Morris. Copies of both of those circulars are appended to this report.

There are present at this conference representatives of national associations of 16 countries, all the way from Canada in the north to Argentina and Chile in the south, as well as of 31 State, Provincial, city, and special law associations of different kinds, falling in the category of constituent geographical associations under our constitution. Definite ratification of provisional signatures to our constitution, or definite resolutions of adherence to this association, have now been received from the national associations of countries and from constituent geographical associations. A list is appended.

At the organizing meeting on May 16, 1940, Dr. Manuel Fernandez Supervielle, the president of the Bar Association of Habana, was unanimously elected as our provisional president; William Roy Vallance, secretary general; Curtis Shears, assistant to the secretary general, for the United States; and William Cattron Rigby, treasurer; and this organization committee was appointed. Dr. Raoul Herrera Arango, second secretary of the Cuban Embassy to the United States, was afterward requested by President Supervielle to act as his representative with the committee at Washington, as well as to be a member of the local committee of arrangements of the Habana Bar Association for the conference. Dr. Herrera has given us freely of his time and has been a great help. Our thanks are due to him as well as to his chiefs, the former and present Ambassadors from Cuba to the United States, Dr. Pedro Martinez Fraga and Dr. Aurelio F. Concheso, for their courtesy and good will in sparing him from other pressing duties to aid us.

In line with the precedent set by the Argentine Federation in its meetings with the associations of Brazil, Chile, and Peru, and in accordance with the recommendations of the American Bar Association's committee in 1934, our constitution creates a "delegated association" composed of representatives of its member associations, instead of having individual members. That committee said on this point in its 1934 report:

"By this means alone could the affiliation become truly comprehensive and typical of the respective bars. Experience in other professional fields makes this so plain that it needs no argument."

There is pending, however, a proposed amendment to the constitution offered by Mr. Phanor J. Eder, of New York, for action at this conference contemplating election of distinguished individuals as honorary members. Its adoption would not affect the essential character of this association as a delegated body.

The formal purposes of the association are stated in article I of its constitution. In addition an underlying purpose—perhaps, in those times of stress, its most important immediate purpose—is the cultivation of mutual acquaintance and of friendship among the lawyers of our different countries, and through them the advancement of the spirit of good neighborliness among the peoples of the Americas.

Appended are copies of reports of a number of bar association committees upon adherence to this association—those of the New York State Bar Association, the Association of the Bar of the City of New York, the Philadelphia Bar Association, and the Law Association of the Province of Quebec—all indicating careful examination and a general appreciation of the purposes of this organization.

In accordance with the resolution appointing it, this committee has prepared and presents with this report the bylaws of this association, and recommends their approval. Rules of procedure for this conference, based upon original drafts by a committee headed by Mr. George Maurice Morris, of the United States, and by Dr. José Agustin Martínez, of Cuba, have been approved by this committee for presentation at this session.

In framing the agenda for this conference, the committee has kept several general purposes in mind. Representatives designated on behalf of national associations are addressing general sessions of the whole conference. Special subjects are considered at separate round tables, in papers and discussions by specialists in those subjects, or by lawyers especially interested in them. In the subjects for the round tables the committee has tried to choose such as may prove suitable for further study by permanent committees and sections of the association.

The officers of the association and the committee have had the benefit of the sympathy and cooperation of distinguished lawyers in the different countries of our continent as well as of the governmental authorities. Acknowledgment should especially be made of the cooperation of the Government of Cuba, particularly of the President, the Honorable Fulgencio Batista, and of the signal mark of his approval of the purposes of this organization evidenced by his intended presence and opening of this conference today. Active and most valuable assistance has been received also, among many others, from President Jacob M. Lashly of the American Bar Association, Dr. Leo S. Rowe, Director General of the Pan American Union and the members of his staff, and from the Carnegie Endowment for International Peace, particularly its secretary, Mr. George Finch.

The Commission on Commercial and Cultural Relations between the American Republics—Nelson A. Rockefeller, coordinator—has made the association a substantial grant to assure it the means to defray the expenses of the conference. The great help given by that commission, as well as by other friends, is acknowledged.

It is recommended that greetings and felicitations from the conference be extended to Dr. Antonio S. de Bustamante, Dr. James Brown Scott, and Dean John H. Wigmore.

For the committee:

WILLIAM CATTRON RIGBY,
Chairman, United States.
EDMUNDO MIRANDA JORDAO,
Brazil.
LUIS ANDERSON,
Costa Rica.
DANTES BELLEGARDE,
Haiti.
CAMILO DE BRIGARD SILVA,
Colombia.
NATALIO CHEDIAK,
Cuba.
J. BLANCO USTARIZ,
Venezuela.

Appendixes not attached.

DECLARATIONS, RESOLUTIONS, AND RECOMMENDATIONS ADOPTED BY THE FIRST CONFERENCE OF THE INTER-AMERICAN BAR ASSOCIATION

I. DECLARATION OF ALLEGIANCE TO THE PRINCIPLES OF DEMOCRACY, INTERNATIONAL LAW, AND CONTINENTAL SOLIDARITY

The first conference of the Inter-American Bar Association declares:

First. Its unreserved devotion to the democratic principles on which the American republics were founded.

Second. Its desire for the strengthening of the cordial relations existing among the countries of America.

Third. Its allegiance to the principles of international law and the precepts of international conduct set forth in the treaties and resolutions approved by the International Conference of the American States.

Fourth. Its determination to cooperate effectively in the defense of the foregoing principles and precepts.

II. RECOMMENDATION ON THE UNIFICATION OF LEGISLATION RELATIVE TO FOREIGN INVESTMENTS

For reasons arising out of the present international situation, among them being those set forth in the paper Future Foreign Investors and Their Relations to the Internal Legislation of Each Country, the First Conference of the Inter-American Bar Association resolves to recommend that the academies, institutes, or associations of lawyers, and particularly those which are members of the Inter-American Bar Association, exert influence in their respective countries in behalf of legislative uniformity in matters relative to foreign investments, endeavoring to have included in such legislation principles which, while assuring the integrity and economic and commercial progress of each country, shall afford the foreign investor sufficient protection to encourage such investments.

III. RESOLUTION ON INTER-AMERICAN CODIFICATION OF AIR LAW

The First Conference of the Inter-American Bar Association resolves—

First. That the president of this Conference officially request, in the name of the association, all the Governments of America to organize immediately the National Commissions of Aviation recommended by the First Inter-American Technical Aviation Conference at Lima in 1927.

Second. That the President also request the said governments to arrange to have their national commissions collaborate with the national societies known as Inter-American Aviation Squadrons.

Third. That he communicate this resolution to the Pan American Union with a request that it urge the national commissions to undertake the work assigned to them, and that the Permanent American Aeronautical Commission (C. A. P. A.) be organized as soon as possible.

Fourth. That he undertake all the measures of publicity that he may consider necessary and desirable for the achievement of the foregoing objective, and that he report on the result thereof to the second conference of the Inter-American Bar Association.

IV. RESOLUTION ON JUDICIAL ASSISTANCE

Whereas the present provisions made by the republics of the Americas for international judicial assistance, aspecially between the tribunals of the common law and those of the civil law system, are uncertain, inadequate, inefficient, and expensive of operation; and

Whereas a spirit of international legal solidarity exemplified by the Hague Convention on Civil Procedure of July 17, 1905, the Bustamante Code, annexed to the Habana Convention of February 20, 1928, the draft convention prepared by the League of Nations Committee of Experts for the Progressive Codification of International Law, and the more recent Draft Convention on Judicial Assistance prepared by the Research in International Law under the auspices of Harvard Law School, renders desirable the inclusion of all the republics of the Americas in a common system of judicial assistance.

The first conference of the Inter-American Bar Association resolves—

First. That this association favors the execution by all the states of the Americas of treaties or their adherence to a convention providing a simple, expeditious, effective, and inexpensive system whereby the tribunals of each country, by invoking the assistance of the tribunals of others, can procure the service of documents and obtain evidence within the territory of others, procure information upon the law of other states, and assure the

recognition and execution of their final judgments, according to the recognized principles of international law; and

Second. That the members of this association recommend to the proper authorities of their governments that appropriate steps be taken to effectuate the purposes of this resolution.

V. RESOLUTION ON THE ADOPTION OF ADVANCED STANDARDS OF LEGAL ETHICS

The first conference of the Inter-American Bar Association resolves—

First. To recommend to the member bar associations and, where no bar association exists, the judicial authorities of the respective country, to create law libraries for the use of those persons entrusted with the administration of justice and for the use of the legal profession.

Second. To encourage the establishment, within the law schools of each country, of courses on legal ethics.

Third. To express the hope that the law schools of the Americas shall prescribe, as a condition of entry and as a requisite for a law degree or of a doctorate in jurisprudence, the satisfaction of high moral standard.

Fourth. The executive committee shall encourage discussion among bar associations of America on the subject of the formulation of a code of professional ethics, the results of which shall be submitted to the association at the next conference.

VI. DECLARATION ON THE INCORPORATION INTO THE LEGISLATION OF THE COUNTRIES OF LATIN AMERICA OF THE ANGLO-AMERICAN INSTITUTION OF THE TRUST

The first conference of the Inter-American Bar Association declares that it recognizes the advisability and feasibility of incorporating in the civil law of the Latin-American countries the institution of the trust along the lines upon which it exists in Anglo-Saxon countries, and recommends the enactment of adequate laws so that in this important matter the two great legal systems in force in the American continent may be brought into harmony.

In voting affirmatively on this declaration, the Brazilian delegate formulates the reservation that he desires to undertake a study of the matter.

VII. RESOLUTION ON INTER-AMERICAN COPYRIGHT PROTECTION

Whereas it is essential from the viewpoint of the development of the cultural relations of the American republics and of the best interests of each one individually, that the legal associations and organizations which make up the association endeavor through all means at their disposal to improve inter-American copyright protection, the first conference of the Inter-American Bar Association resolves—

First. To recommend to the countries signatories of the convention on literary and artistic property, signed at Buenos Aires on August 10, 1910, which have not yet done so, to deposit their instruments of ratification as soon as possible.

Second. That it is desirable that the convention be amended in certain aspects in accordance with the suggestions made by the Eighth International Conference of American States.

Third. To request the associations and organizations which are members of the Inter-American Bar Association to work, with all the means at their disposal, for the achievement of the foregoing purposes.

VIII. RESOLUTION ON THE STUDY OF THE IMMIGRATION, NATURALIZATION, AND NATIONALITY LAWS OF THE AMERICAN REPUBLICS

The first conference of the Inter-American Bar Association resolves to request the executive committee of the association to study the immigration, naturalization, and citizenship laws of the countries of the Western Hemisphere with a view to assembling and disseminating information pertaining thereto, and to make recommendations for resolving differences and harmonizing these laws, with necessary broadness and opportune flexibility, in order to achieve the greatest uniformity possible.

IX. RESOLUTION ON THE APPOINTMENT OF A COMMITTEE ON THE UNIFICATION OF LEGISLATION RELATIVE TO THE CIVIL STATUS OF PERSONS

The first conference of the Inter-American Bar Association resolves to entrust to a technical committee a general comparative study of legal documentation in the countries of America relative to the civil status of persons, and concerning other relevant questions, in order to obtain inter-American unification of legislation in this matter.

X. RESOLUTION ON DISCRIMINATORY, EXTRATERRITORIAL, AND DOUBLE TAXATION

Whereas taxes may unnecessarily obstruct inter-American trade if they do not conform to sound principles of jurisdiction, the first conference of the Inter-American Bar Association resolves that the members of the association recommend to their respective governments the conclusion of treaties to prevent discriminatory, extraterritorial, and double taxation.

XI. RESOLUTION ON THE EXCHANGE OF INFORMATION RELATIVE TO ADMINISTRATIVE PROCEDURES

The first conference of the Inter-American Bar Association resolves to establish a system of exchange of information on administrative procedures in the various countries of America.

XII. RESOLUTION ON THE CREATION OF NATIONAL CENTERS OF LEGAL DOCUMENTATION

The first conference of the Inter-American Bar Association recommends the establishment of national centers of legal documentation in the countries which have either present or future members of the association.

XIII. RESOLUTION ON THE ESTABLISHMENT OF A SECTION OF THE ASSOCIATION ON CUSTOMS LAWS AND COMMERCIAL TREATIES

The first conference on the Inter-American Bar Association resolves to request the executive committee to study the desirability of organizing a section of customs laws and commercial treaties of the association.

XIV. RESOLUTION ON THE PUBLICATION OF A JOURNAL OF THE ASSOCIATION

The first conference of the Inter-American Bar Association resolves to request the executive committee to study the feasibility and desirability of publishing a journal devoted to the activities of the association and to the publication of articles of interest to the legal profession.

XV. RESOLUTION ON THE CREATION OF NATIONAL BIBLIOGRAPHICAL INDEXES OF LAW MATERIALS

The first conference of the Inter-American Bar Association recommends—

First. That the bar associations of the Americas create and publish bibliographical legal indexes in their respective countries, so that such work may lay the foundations for the ultimate creation and publication of the American Bibliographical Index.

Second. That the bibliographical indexes shall be made in accordance with a uniform plan which the council of the association shall provide.

XVI. RESOLUTION ON THE APPOINTMENT OF A COMMITTEE ON INDUSTRIAL PROPERTY

Whereas a paper has been presented to the conference entitled "Bases for the Unification of Legislation Relative to Industrial Property in the Countries of America," and also an excellent work entitled "Partial Unification of the Trade-Mark Laws of America," the first conference of the Inter-American Bar Association resolves to create a committee of the Inter-American Bar Association which shall report on the matters taken up in the two above-mentioned works at the earliest moment, and that the said committee shall be composed of one expert on industrial-property matters from each one of the American countries.

XVII. RESOLUTION ON THE TRANSLATION OF THE RESTATEMENT (OF THE AMERICAN LAW INSTITUTE) OF THE PRIVATE LAW OF THE UNITED STATES

The first conference of the Inter-American Bar Association resolves—

First. To endorse the resolution approved by the Eighth American Scientific Congress in May 1940 recommending the translation into the other languages of the American republics of the Restatement of the Private Law of the United States of America, formulated by the American Law Institute.

Second. To recommend that the translation contain, in addition to copious explanatory footnotes, brief historical and analytical introductions on the origin and nature of the corresponding Latin-American and Anglo-American legal concepts, principles, and institutions.

Third. To express the opinion that the result of this work should greatly advance and facilitate the successful completion of the important tasks relative to the unification of commercial and civil law and uniformity and unification of legislation entrusted to official agencies by the International Conference of American States.

Fourth. To recommend that once the volume relative to conflict of laws of the American Law Institute has been translated, official and private legal agencies and organizations cooperate in a detailed comparative study thereof with the Bustamente Code of Private International Law for the purpose of examining the extent to which the two systems may be reconciled.

XVIII. RECOMMENDATION ON THE RATIFICATION OF THE BUSTAMENTE CODE ON PRIVATE INTERNATIONAL LAW

The first conference of the Inter-American Bar Association recommends that the signatory countries that have not ratified the Bustamente Code of Private International Law, signed in Habana in 1928, be urged to do so at the earliest possible moment, by the respective bar associations.

XIX. RECOMMENDATION ON THE DEVELOPMENT OF RELATIONS BETWEEN THE LAW STUDENTS OF THE AMERICAN REPUBLICS

The first conference of the Inter-American Bar Association resolves to recommend the development of correspondence and contacts between law students of the various universities of America as a means of advancing the study of legal science.

XX. RESOLUTION ON THE CREATION OF AN INTER-AMERICAN ACADEMY OF COMPARATIVE LAW AND INTERNATIONAL LAW

The first conference of the Inter-American Bar Association resolves—

First. To create in the city of Habana, Cuba, the Inter-American Academy of Comparative and International Law, the purpose of which shall be to promote and develop studies on those subjects, especially with reference to matters which affect and interest America, in order to encourage cooperation in legislative matters and to bring about mutual understanding.

Second. For the fulfillment of its purposes, the academy shall organize in Habana every year, if that is possible, special courses on matters of comparative law and international law, particularly for the students of America, by professors of the different American countries, thus contributing toward the development of the international spirit.

Third. As financial resources for carrying out its purposes, the academy will have, in addition to what it may collect from registration or matriculation fees, such donations

or contributions as may be made to it by the Governments of America and by private or official institutions that may have an interest in developing such studies.

Fourth. The academy shall be organized by a commission of seven members, appointed by the executive committee of the Inter-American Bar Association. The commission shall have full powers for drafting the statutes and regulations by which the academy is to be governed and to decide all matters in connection with its functioning, as well as to fill vacancies which may occur within the commission.

XXI. RECOMMENDATION ON THE APPOINTMENT OF A COMMITTEE TO STUDY VARIOUS PROJECTS

The first conference of the Inter-American Bar Association recommends—

First. That the executive committee study the proposals made to the conference relative to the creation of an American Institute of Comparative Constitutional Law, of a Pan-American Institute of Comparative Law, and of an Inter-American Office for the Unification of Penal Legislation.

Second. That the said committee present its recommendations thereon to the next conference of the association.

XXII. VOTE OF THANKS

The first conference of the Inter-American Bar Association, on terminating its deliberations, wishes to record its profound gratitude to the President of the Republic, to the high officials of the Government, to the Supreme Court, to the House of Representatives, to the mayor of Habana, to Dr. Manuel Fernández Supervielle, and to the Colegio de Abogados of Habana, for the many courtesies which they accorded the delegates attending the conference.

It likewise desires to express its appreciation for the efficient services by which Dr. Raoul Herrera Arango has contributed to the successful results of the conference.

RESOLUTION OF THE CALIFORNIA ASSOCIATION FOR HEALTH, PHYSICAL EDUCATION, AND RECREATION

Mr. VOORHIS of California. Mr. Speaker, I consider it an honor to insert with my remarks the following resolution of the California Association for Health, Physical Education, and Recreation, honoring our late colleague, PIUS L. SCHWERT:

Whereas Congressman PIUS L. SCHWERT, having worked untiringly and unceasingly in support of H. R. 1074, which bears his name; and

Whereas his unfortunate and untimely death on March 12, 1941, having deprived us of a stanch supporter and friend: Therefore, be it

Resolved, That the California Association for Health, Physical Education, and Recreation, meeting in session at Fresno, Calif., from April 3 to 6, 1941, at its eleventh annual conference, record deep appreciation for his services in behalf of health, physical education, and recreation, and convey to his family this expression of appreciation as well as sympathy in its hour of sorrow.

Against Defeatism—Is This the Gray Twilight of Democracy? We Believe Not

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

EDITORIAL FROM THE RAPID CITY (S. DAK.) DAILY JOURNAL

Mr. CASE of South Dakota. Mr. Speaker, under leave granted by the House, I offer for the RECORD the following editorial from the Rapid City (S. Dak.) Daily Journal:

IS THIS THE GRAY TWILIGHT OF DEMOCRACY? WE BELIEVE NOT

Success of the German blitzkrieg in the Balkans and in Egypt has given rise to a new wave of defeatism in the United States. Over the coffee cups in downtown cafes, on street corners, and wherever men meet, we now hear many who freely predict that America cannot save Britain or democracy from defeat.

Defeatism is not a new phenomenon in the United States. Once before within the last dozen years it was the attitude of many. In 1932 and 1933, when the country hit the bottom of the depression, there were many ready to write democracy off the books, to cry quits, and let panic have its way with them.

We weathered the crisis and soon recovered from our gloomy mood. We started on the long, slow pull to recovery, took set-backs in stride, and faced the future with hope.

Now we have another task before us: preservation of the democratic way of life we hold dear. We have chosen to throw our weight into the scales against those nations which seek to destroy that way of life, not only within their own borders, but throughout the world.

The task calls for steadfast courage, for the pluck and determination which our forefathers demonstrated time and again in dealing with the problems they were called upon to face. Defeatism was not in their make-up. Had it been, we should never have gained our independence in 1776, the Union would have been torn asunder in 1860, Cuba would still be under the domination of Spain, the Kaiser would have triumphed in 1918.

Are we now going to give up without a struggle the heritage of freedom and liberty for which our forefathers fought, or are we going to preserve it for those who follow us? The latter course, with all that it may entail in the sacrifice of privileges—nay, even life itself—is the American answer.

Other Americans, in other days, left with us these stirring words:

"We are not weak if we make a proper use of those means which the God of Nature has placed in our power. * * * The battle, sir, is not to the strong alone; it is to the vigilant, the active, the brave."—Patrick Henry.

"The tree of liberty must be refreshed from time to time with the blood of patriots."—Thomas Jefferson.

"Damn the torpedoes! Go ahead!"—David Glasgow Farragut, at the Battle of Mobile Bay in 1864.

"With reasonable men, I will reason; with humane men, I will plead; but to tyrants I will give no quarter, nor waste arguments where they will certainly be lost."—William Lloyd Garrison, great leader of the fight against slavery.

"Let us have faith that right makes right; and in that faith let us to the end dare to do our duty as we understand it."—Lincoln.

"I propose to fight it out on this line if it takes all summer."—Grant.

"Far better it is to dare mighty things, to win glorious triumphs, even though checkered by failure, than to take rank with those poor spirits who neither enjoy much nor suffer much, because they live in the gray twilight that knows not victory nor defeat."—Theodore Roosevelt.

Is this the "gray twilight" of American democracy? We hope not, and we believe not.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. THAD F. WASIELEWSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

RESOLUTION BY THE WISCONSIN STATE LEGISLATURE

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint resolution of the Legislature of the State of Wisconsin:

Assembly Joint Resolution 13

Joint resolution memorializing the President and the Congress of the United States to take the necessary steps for the procurement of a Great Lakes-St. Lawrence waterway

Whereas the exigencies of war have created an entirely new atmosphere in which the Great Lakes-St. Lawrence waterway project can be discussed by the United States and Canada; and

Whereas a special committee of high officials of both countries have under discussion the feasibility of such a project; and

Whereas, the placing of heavy war orders and the needs of future preparedness require new electric power; and

Whereas there would be certain conveniences and economy in having ocean-going vessels proceed directly into the Great Lakes rather than having a double handling of commodities; and

Whereas it is best that all factions of both countries forget their past differences for the common defense; and

Whereas President Roosevelt in a recent message to Congress said, "It is urgent that the project (Great Lakes-St. Lawrence waterway project) be undertaken at the present time not only from the point of view of our own defense but also in terms of those of our neighbor, Canada": Now, therefore, be it

Resolved by the assembly (the senate concurring), That the Legislature of Wisconsin memorializes the President and the Congress of the United States to proceed at once to the end that the Great Lakes-St. Lawrence waterway be made a reality; be it further

Resolved, That properly attested copies of this resolution be sent to the President of the United States, to both Houses of Congress, and to each Wisconsin Member thereof.

Full Parity for Agriculture

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

LETTER FROM C. W. CROES, SECRETARY-TREASURER, SOUTH DAKOTA STATE COUNCIL OF AGRICULTURE

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter, which I have received from Mr. C. W. Croes, secretary-treasurer of the South Dakota State Council of Agriculture, stressing the need for immediate congressional action looking to the establishment of parity prices for agriculture:

SOUTH DAKOTA STATE COUNCIL OF AGRICULTURE,
Brookings, S. Dak., April 25, 1941.

Hon. FRANCIS CASE,
House Office Building, Washington, D. C.

DEAR MR. CASE: The defense program of the United States of America cannot be successful unless each of the three great economic sections of society—labor, industry, and agriculture—can carry its part of the load.

The South Dakota Council of Agriculture believes that agriculture is seriously handicapped in its share of defense work, and will remain so unless parity prices for agricultural commodities be established in fact.

In the agricultural adjustment acts of 1933 and 1938 and other acts related thereto it was declared to be the policy of Congress that agriculture was entitled to, and should be given, a parity price for basic farm commodities.

The present program for agriculture, though of great benefit, has not been wholly effective in raising farm prices to a just level with the prices of the things the farmer finds it necessary to buy, and adjustments should be made in the program to bring this about; but any adjustments made must not fail to recognize the parity principle adopted by Congress as a worthy and fair basis for American farm prices.

Unless definite action is taken now to assure farmers parity prices for their products, along with the guarantees already assured industry and labor, the consequences will surely be serious not only to our farmers but to all classes of our citizens if this war long continues.

The council insists that parity be the basis for Government support of farm price levels.

Recent changes in the farm program as announced by Secretary of Agriculture Claude Wickard, April 3, fail to recognize parity as a fair basis for Government price support; and substitutes, therefore, supports of a designated price on a few commodities, which price, by the time further production will be ready for market, may leave the farmer in just as bad, if not worse, position than he has been in during recent months and years, due to increased costs of commodities he uses in production and living.

We, therefore, urge the President of the United States and the Congress to the necessity of immediate action, looking to the establishment of parity price for agriculture.

The council further does not limit its support to any particular measure now offered, but desires to lend its support to any one of the measures before Congress that the Congress finds can be effective in delivering a full parity return to agriculture.

Very truly yours,
SOUTH DAKOTA STATE COUNCIL OF AGRICULTURE,
C. W. CROES, *Secretary-Treasurer.*

P. S.—The secretary-treasurer of the council is directed to transmit the above to the persons addressed.

Los Angeles Health Defense Exposition of the Los Angeles County Medical Association

EXTENSION OF REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

REPORT BY JACK O. T. CARTWRIGHT

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD in view of the recent statement to the press of Surgeon General Thomas Parran, of the United States Public Health Service, in which he termed "a national disgrace" the condition of 30 to 40 percent of our young men called for military service and called it "a public-health problem to challenge the maximum intelligence of American medicine and public health," I include the following report by Mr. Jack O. T. Cartwright, director of public relations of the Los Angeles Health Defense Exposition held in Los Angeles, Calif., February 2 to 9, inclusive, of this year:

LOS ANGELES HEALTH DEFENSE EXPOSITION, SPONSORED BY LOS ANGELES COUNTY MEDICAL ASSOCIATION, EDUCATES THOUSANDS OF SOUTHERN CALIFORNIANS ON DEFINITE STEPS TO BETTER HEALTH AS A PART OF OUR IMPORTANT NATIONAL-DEFENSE PROGRAM

For the first time in the history of American medicine the ethical physicians and surgeons of one of the largest medical associations in the United States stepped out from behind their consultation desks, masks and gowns of the operating room, and test tubes of the laboratory to have real heart-to-heart talks with the public when the Los Angeles Health Defense Exposition was held in Los Angeles from February 2 to 9, 1941.

The Los Angeles Medical Association, headed by Thomas C. Myers, M. D., president; William M. Gibbs, M. D., vice president; and L. A. Alesen, M. D., secretary, has shown the way in which American medicine can aid in the national-defense program of the United States.

Among the leading doctors of medicine in Los Angeles County who also took part in sponsoring the program were Phillip Stephens, M. D.; E. Vincent Askey, M. D.; Harlan Shoemaker, M. D.; James DeWitt George, M. D.; John C. Ruddock, M. D.; William Paul Thompson, M. D.; John W. Crossan, M. D.; Edwin C. Nippert, M. D.; Donald A. Charnock, M. D.; and Arthur Smith, M. D.

Dr. Alesen, aided by Dr. Charnock, chairman of exhibits for the health-defense exposition, worked unceasingly for 10 weeks prior to the opening date of the exhibit with Guy L. Bowe, exposition director, and myself, as director of public relations, to arrange the first health-defense exposition ever staged by ethical medicine.

The primary object of the entire exposition was to educate the public on health and steps to be taken in health defense. To prevent or avert disease was the theme rather than cure of disease.

The Los Angeles County Medical Association was aided in its program by the Los Angeles County Dental Society, the Southern California Retail Druggists' Association, the California State Nurses' Association, and the Los Angeles Board of Education.

The specialist units of the medical association joined wholeheartedly in the program with special exhibits on the heart, lungs, eyes, throat, childbirth, and all the various phases of medical, surgical, dental, and nursing sciences.

Each exhibit had to pass a rigid board of censors headed by Dr. Charnock and its inclusion in the exposition depended upon whether it was scientifically sound and proven and would beneficially educate the public.

The exhibits occupied 100,000 square feet of floor space in the Los Angeles Shrine Auditorium and more than 150,000 persons jammed the exposition during its life of 8 days. Three times that many would have attended later exhibit dates, but the hall was not available for the medical men to continue their exposition.

The exhibits were not the type of silent, static booths, statistics, dummies, and models usually associated with explanations of medical and surgical science but colorful, moving, dynamic demonstrations.

Mr. Bowe and Mr. Cartwright, with approval of the ethical men of medicine in charge of the exposition, worked out demonstrations, programs, and unusual displays so dramatic that they not only attracted thousands of people intently interested in health, but so full of drama and general public interest that publicity efforts resulted in several thousand newspapers throughout the country using photographs, stories, and other descriptive material about the exposition. In this manner millions of readers were reached with this huge educational health program, as well as the thousands who attended the actual exposition.

People came to see and hear their own heartbeats, and in special events radio programs over three different stations broadcasts of the most interesting and helpful parts of the show were staged, reaching thousands of radio listeners throughout the Western States.

These health defense exposition pioneers broadcast the heartbeats of unborn twins, the heartbeats of beautiful girls, and other features, to attract attention of the public to the great need for health defense.

Lectures on health, colored motion pictures on health, and especially prepared articles on health and the various scientific tests necessary to determine good health or bad health resulted in hundreds of newspaper articles and pictures.

In this way the Los Angeles County Medical Association led the way in a definite step toward a possible national program of health defense which, if we urge the other communities of our several States to adopt, will do much toward solving the very health problem which our Surgeon General of the United States revealed to the press of this Nation at Boston, Mass., on April 2, 1941.

Good health is the greatest asset of individuals, communities, States, or a Nation, for as Rabelais wrote:

"Without health life is not life; it is only a state of languor and suffering—an image of death."

The results of this farsighted and timely movement toward more readily understood health education through the holding of such a health defense exposition as this one sponsored by the Los Angeles County Medical Association is apparent in the cooperation and

assistance which the newspapers and radio of America lent to the affair because of its great public interest.

Such public health defense expositions throughout the United States together with health education in our schools, among our industrial workers, among parents and our millions of adolescents just reaching manhood or womanhood should be of prime importance in alleviating the deplorable conditions which our Surgeon General of the United States Public Health Service recently pointed out as damaging to our national welfare—our national defense.

JACK O. T. CARTWRIGHT,
Director of Public Relations,
Los Angeles Health Defense Exposition.

LOS ANGELES, CALIF., *April 10, 1941.*

The Colorado-Big Thompson Reclamation Project and the Northern Colorado Water Conservancy District

EXTENSION OF REMARKS
OF
HON. LAWRENCE LEWIS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

STATEMENT BY HON. LAWRENCE LEWIS, OF COLORADO

Mr. LEWIS of Colorado. Mr. Speaker, the Colorado-Big Thompson project, now under construction in northern Colorado, is one of the outstanding works of the Bureau of Reclamation. No other project ever constructed or proposed will supply a more pressing need or will forestall the continuance of greater annual economic loss. This project is designed, not to develop a region now uninhabited but to supplement an existing but inadequate water supply for an area which has been settled for 60 to 70 years. During the past decade the inadequacy of this water supply has been accentuated by an unprecedented drouth. No other project has ever been more maturely considered or more carefully planned in engineering and in financing; none other gives to the United States greater assurance of ultimate prompt repayment of the cost in full.

For the information of those who may be interested but who are not now familiar with the details of this project, I submit the following detailed statement:

THE REGION TO BE BENEFITED BY THE COLORADO-BIG THOMPSON RECLAMATION PROJECT

The area forming the Northern Colorado Water Conservancy District, which will be served by the Colorado-Big Thompson reclamation project, includes the valleys of the Poudre, Thompson, and St. Vrain Rivers and of Lower Boulder Creek, and the valley of the South Platte River from above Platteville to the Nebraska State line. It includes most of the irrigated sections of Boulder, Larimer, Weld, Morgan, Washington, Logan, and Sedgwick Counties, in northern Colorado, east of the main range of the Rocky Mountains which constitutes the Continental Divide.

In this territory, which has been settled for 60 to 70 years, are about 800,000 acres of irrigable land under ditch, of which about 615,000 acres are taxed as irrigated. This irrigated section is served by 120 ditch systems and 60 storage reservoirs and includes about 8,200 separate farms or tracts.

The total population of the district, according to the 1940 census, is about 137,000, of which about 66,000 is rural, and about 71,000 urban. It includes 29 cities and towns, large and small, namely: Fort Collins, Loveland, Longmont, Berthoud, Wellington, Johnstown, Windsor, Milliken, La Salle, Evans, Eaton, Ault, Pierce, Greeley, Masters, Weldona, Fort Morgan, Brush, Union, Merino, Atwood, Sterling, Iliff, Proctor, Crook, Red Lion, Sedgwick, Ovid, and Julesburg. Some of these have been settled since the 1870's.

The assessed valuation of all real and personal property in the district is about $130,000,000, of which approximately $40,000,000 represents the assessed value of the farms and their improvements and the remaining $90,000,000 the value of the town and city property and all business and industrial developments.

The original water supply for the district is from the mountain flow of streams, known as the Poudre, Thompson, and St. Vrain Rivers and Boulder Creek, plus the discharge of the South Platte River at Fort Lupton. The average annual original supply is about 850,000 acre-feet, or a little over 1 acre-foot per acre for the land in the district. However, this supply is supplemented by the return flows to the streams so that the average annual diversion for irrigation in the district for both direct and storage uses, is about 1,500,000 acre-feet. The annual original supply of water varies greatly from about 420,000 acre-feet in the shortest year of record to as much as 1,400,000 acre-feet. This original run-off in the past 10 years has averaged only 690,000 acre-feet.

Only about 10 percent of the irrigation systems have priorities which have furnished them a satisfactory supply during the past decade. The remaining 90 percent of the territory has suffered in a varying degree depending on the priorities, storage capacity, and geographical position on the stream.

According to estimates, worked out from United States crop reports and other official data, crop losses for the past 10 years have ranged from $3,000,000 in 1930, to $13,000,000 in 1934, and have averaged over $7,000,000 for the 10-year period.

The demand for electric energy in northern Colorado is increasing rapidly. To supply this increasing demand an additional 25,000 kilowatt steam unit is being installed by a private utility. It is anticipated that the normal rate of increase in demand will be such that additional capacity will be required by 1943. Defense industries will further increase this demand.

HISTORY OF THE PROJECT

The possibility of securing an additional supply of water for this part of northern Colorado on the eastern slope of the Continental Divide from the headwaters of the Colorado River on the western slope has been considered for over 50 years. The actual start of the present program was made in August 1933, over 7 years ago.

At that time the Weld County Commissioners and a group of Greeley men undertook the job of determining whether such a project was feasible. Funds were secured by donations from Weld and Larimer Counties and from chambers of commerce and others in the territory.

The services of R. J. Tipton, an eminent engineer of Denver, in cooperation with the State engineer's office and L. L. Stimson, of Greeley, were secured to do this work. Mr. Tipton made a careful study and analysis of the entire situation and, in December 1933, submitted his report. Due to limited funds available, no extensive field surveys were possible and the report was mostly based on existing records and other data.

Briefly, the report concluded that an average of at least 300,000 acre-feet of water could be secured from the headwaters of the Colorado River; that the estimated cost of the project was reasonable, and that the need for a supplemental supply in northern Colorado would fully justify the expense. The report outlined a tentative plan for a complete project, which included development of electric power.

In April 1934 a meeting of representatives of irrigation systems throughout the territory was held at Greeley and the Tipton report was presented and discussed. At this time, a temporary organization was formed and a committee of 11 were selected from various parts of the district. The committee was authorized to make every effort to carry the movement forward.

During the balance of the year 1934, with the Tipton report as a basis, the need for the project was explained to Washington agencies by citizens from the locality and by the Colorado delegation in the Congress. In January 1935 Secretary of the Interior Harold L. Ickes made an allocation to the Bureau of Reclamation of $150,000, under provisions of the National Industrial Recovery Act, for the purpose of making a complete survey and report as to the feasibility of the project.

Early in 1934 it had developed that probably there might be considerable opposition to the project from the Western Slope. Water users in that part of the State west of the Continental Divide were apprehensive that the project might prove to be a definite threat to their water rights. Accordingly they organized a protective association. A large number of meetings were held during the years 1934, 1935, and 1936 for the purpose of attempting to harmonize the differences and arrive at a basis of understanding that would allow the project to go ahead and would also provide proper protection to water users on the Colorado River. Several conferences were held at Grand Junction and other Western Slope cities and towns. A basis of understanding was finally agreed upon, at a State-wide meeting held in Denver on June 13, 1935, by the adoption of the Delaney resolution to the effect that any diversion of water to the Eastern Slope should be based on careful surveys and provide adequate replacement for all water diverted from the Western Slope.

This fundamental theory was finally set out in the United States Senate Document No. 80 as of June 15, 1937, and was embodied in the enabling act of the Colorado General Assembly authorizing the organization of the district and in the repayment contract with the United States.

United States Senate Document No. 80, just mentioned, is a synopsis of the report of the Bureau of Reclamation on the Colorado-Big Thompson project and includes an outline of construction and operating conditions to which the project will be subject, covering in detail the agreement entered into between the Northern Colorado Water Users Association and the Western Colorado Protective Association.

In addition to the delays caused by discussing and satisfying objections from irrigation interests in western Colorado there was considerable opposition in the years 1934 to 1937 from those who were apprehensive lest the project would interfere with the Rocky Mountain National Park or would mar the scenic beauties or detract from recreational values of that mountain area. All of these objections were finally met and satisfied in one way or another.

In the fall of 1935 arrangements were made to secure an allotment for a W. P. A. project for the purpose of making an economic survey of the territory to be served by the project and to prepare the data that would be necessary to demonstrate the economic necessity for the construction of the project. This survey was

to be supplemental to the engineering study being made by the Bureau of Reclamation and was directed by L. L. Stimson under general supervision of the Bureau.

Up to January 1935 the work of organizing the movement had been handled by the committee appointed at the mass meeting held in April 1934.

THE NORTHERN COLORADO WATER USERS ASSOCIATION

In January 1935 the Northern Colorado Water Users Association was incorporated as a mutual stock company to carry on the program. The first meeting of the directors of the association was held in Greeley on February 9, 1935. The incorporators and first board of directors were Charles Hansen, W. E. Letford, T. M. Callahan, R. C. Benson, Moses E. Smith, J. M. Dille, Charles A. Lory, C. M. Rolfson, William A. Carlson, Burgis G. Coy, and Robert J. Wright.

The board adopted bylaws and provided for sale of stock to help defray expenses. During the life of the association $25,412.69 was received from sale of stock, from donations, and from a voluntary assessment of 1 cent per acre paid in by many of the irrigation organizations. Over 60 of such organizations took stock in the association.

At the first meeting the board adopted resolutions extending thanks to Secretary Harold L. Ickes and all others who had aided in securing the allocation of $150,000 for the survey of the project by the Bureau of Reclamation

Charles Hansen was elected president of the association. Later Thomas A. Nixon and William R. Kelly were retained as attorneys for the association and J. M. Dille was appointed secretary-manager.

The active life of the association continued until July 1938—a period of over 3 years—and during this time much of the preliminary work of organizing the project was accomplished. Three stockholders' meetings and over 40 meetings of the board of directors were held in this period.

Much work was required to meet the continuing opposition to the project from eastern people who were apprehensive that Rocky Mountain National Park would be impaired, to meet and satisfy the interests on the western slope and to secure the authorization and first appropriation for the project from the Congress.

It was also necessary to cooperate with officials of the Bureau of Reclamation, who were conducting the survey of the project, to carry on a campaign of education by meetings, news articles, and other means to inform the public of the plans that were developing and to gain popular approval and support.

Later on the association developed the plans for organization of a conservancy district, sponsored the legislation for the enactment by the Colorado General Assembly of the State enabling act, conducted the preliminary conferences leading to a repayment contract with the United States, and attended to many other necessary preliminary details.

THE PROJECT REPORT BY BUREAU OF RECLAMATION

In the fall of 1936, the full report of the Bureau of Reclamation, which had been under preparation by Mills E. Bunger, under the supervision of Porter J. Preston, was completed. This report was approved by John C. Page, Acting Commissioner of Reclamation, and by Harold L. Ickes, Secretary of the Interior. It outlined a combined irrigation and power project, described a feasible plan for diversion of 310,000 acre-feet of water from the Colorado River and found that the revenue from the sale of water at a price of $2 per acre-foot over a period of 40 years, together with the income from the proposed power plants, constituted a feasible project under the reclamation law and recommended construction.

The report filled two large volumes under the following heads:

(1) The economic survey of northern Colorado, showing the losses prevailing and the justification for the project.

(2) A complete description and analysis of land and water supplies of the Colorado River Basin, proving the existence of a surplus supply that could be diverted from the western slope to the eastern slope, and indicating the measures necessary to protect fully all present and future needs in western Colorado.

(3) Description and detailed plans for over 30 of the principal features of the proposed irrigation and power project and the part each one would take in the completed project.

These features included Green Mountain Dam and power plant to be constructed on Blue River on the western slope, primarily for replacement purposes; Granby Reservoir and Shadow Mountain Lake for collection and diversion of the Colorado River water on the western slope; the Continental Divide tunnel; the conduits and power plants along the Thompson River and the reservoirs and canals for storage and distribution of the water on the eastern slope.

In this report the several units of the work were segregated as either irrigation or power features and a plan outlined whereby irrigation would pay for one group, estimated to cost $24,800,000, and power would pay for the remaining $19,000,000 of the total estimate of $43,800,000.

This report furnished a firm basis on which the future development of the program could rest.

ENGINEERING FEATURES OF THE PROJECT

The Colorado-Big Thompson project consists principally of the following features: (1) Continental Divide tunnel, about 13 miles in length; (2) Green Mountain Reservoir and power plant, on the western slope, for the purpose of providing replacement of water to the western slope and generating hydroelectric energy at power plant No. 5; (3) Granby Reservoir, on the western slope, which constitutes the main reservoir to regulate the water which is to be diverted from the western slope to the eastern slope; (4) Shadow Mountain Dam, on the western slope, which is a diversion structure to divert water from the North Fork of the Colorado River; (5) the Granby pumping plant and canal, on the western slope, which is for the purpose of pumping water from Granby Reservoir to the tunnel; (6) five power plants on the eastern slope; (7) three reservoirs on the eastern slope; and (8) three supply canals.

NORTHERN COLORADO WATER CONSERVANCY DISTRICT, ORGANIZED UNDER STATE LAWS OF COLORADO

In the fall of 1936, when it became apparent that the report of the Bureau of Reclamation on the feasibility of the project would be favorable, it was recognized that existing district organization laws of the State of Colorado were inadequate to meet the requirements for the operation of such a project. New legislation obviously was required to provide an organization to guarantee repayment of the construction cost to the United States and to provide for a more equitable assessment in accordance with the benefits.

It was realized that the need for additional water varied widely on different farms, and therefore that the plan for allotment of water should be flexible and on a voluntary basis so that each farm owner could secure just as much as he needed and no more. It was realized also that business and industry of the entire community, which depends on the basic income of the farms, would be greatly benefited by the increased and stabilized water supply, and therefore should in some way participate in the repayment in recognition of the indirect benefits to be received. These and many other considerations indicated that a form of conservancy district might be the best agency to obtain all the results and benefits that were possible.

After many months of effort by the attorneys and the directors, the ideas and plan were finally incorporated in the form of a bill for an enabling act to be introduced in the Colorado General Assembly providing for the organization of water-conservancy districts. Attorneys Thomas A. Nixon and William R. Kelly were counsel for the district. The bill was drafted in final form by Mr. Nixon.

This bill was passed without objection by the 1937 session of the General Assembly of Colorado and became law on signature of Gov. Teller Ammons on May 12, 1937. Later, quo warranto proceedings, to determine definitely the constitutionality of the act, were instituted in the Supreme Court of the State of Colorado. On May 2, 1938, the court rendered a unanimous opinion upholding the legislation.

While the act is lengthy, in brief it provides, as a public benefit, for organization of conservancy districts by any district court of Colorado upon petition of a required number of property owners. The board of 11 directors is appointed originally and as terms expire, by the district court. The board appoints officers, has power to acquire and hold property, appropriate and acquire water rights, enter into contracts, levy taxes and assessments, allot water, and, generally, to administer the business of the district.

As a reflection of the indirect benefits, the board may levy, on all real and personal property in the district, a tax of not to exceed one-half mill during construction of the project and of not over 1 mill thereafter. In case of default or deficiency, an additional levy of not more than one-half mill may be made.

The act further provides methods for allotting water to individuals, municipalities, and irrigation districts, and for collecting special taxes and assessments for such use of water. The board has the power to contract with the United States for construction of works, when authorized by an election on the proposed contract by the property owners of the district.

During the summer of 1937 the association officers decided upon the territory to be included in the proposed district and circulated petitions to the district court of Weld County for the formation of a district under this act. The district's boundary line follows the section lines including the irrigated area that will be served or benefited by the project. The district covers a total of 1,481,000 acres.

There were 1,607 signers of owners of irrigated lands and 1,388 signers of owners of other property. The petitions were filed in the district court of Weld County. No protesting petition was presented. On September 20, 1937, Judge C. C. Coffin held the hearing, heard testimony supporting the need for the district, and issued a decree establishing Northern Colorado Water Conservancy District.

On September 28 Judge Coffin named the following the first 11 directors of the district: Charles Hansen, W. E. Letford, Ray Lanyon, Robert C. Benson, Ed. F. Munroe, Ralph W. McMurry, Moses E. Smith, William A. Carlson, J. M. Dille, Robert J. Wright, and Charles M. Rolfson. The first meeting of the directors was held at the office of the district in Greeley on September 29, 1937, when Charles Hansen was elected president, other officers were appointed, and plans laid to push the progress of the project as rapidly as possible.

At this meeting a levy of three-tenths of 1 mill was made on all property in the district to defray necessary expenses.

THE CONTRACT WITH THE UNITED STATES

Previous to the organization of the district the association had discussed with officials of

the Bureau of Reclamation the terms of a repayment contract. After the conservancy district had finally been organized as the contracting agency, the same men as officials of the district were in a position to proceed to negotiate a contract that would be acceptable for submission to an election of property owners.

This project for supplying supplemental water to many various users in a well-developed irrigated territory and also for developing electric power was quite different from the usual reclamation project. The problems presented were complicated and novel.

Many conferences were held and many drafts of the proposed agreement written and later discarded as new ideas emerged from the discussions. The final draft was agreed upon in Washington with President Hansen, Attorney Nixon, and Directors Moses E. Smith and Ray Lanyon representing the district.

The contract describes the 33 features tentatively determined upon and designed to deliver an average of 310,000 acre-feet to eastern slope streams. It provides that the irrigation feature and the power feature (the power feature to be retained by the United States) shall share equally in the total cost of the project, estimated at $44,000,000. It provides further that the obligation of the district shall in no event exceed $25,000,000.

As to the power feature, the cost will be repaid to the United States from sale of power at wholesale to distributing agencies.

As to the irrigation feature, it is provided in article 6 that, beginning the next year after the project is completed and water is delivered, the district shall pay $450,000 per annum for 20 years, $500,000 per annum for the next 10 years, and in each of the last 10 of the 40 years one-tenth of the amount necessary to complete the total.

Under the Federal reclamation laws the total cost of the irrigation feature as determined by the Secretary of the Interior (but not to exceed $25,000,000 in this case) must be repaid, without interest, in 40 annual payments.

The contract, which filled over a page of newsprint, covers many obligations of each party thereto, including provisions for operation of the project, overhead expenses, rights-of-way, levies and assessments, status of project water, obligations to the western slope, and many other detailed provisions.

After many discussions of the contract with the attorneys, officers, and R. J. Tipton, consulting engineer, the directors approved it as to form on May 23, 1938, as being the best possible contract under which the project could be built and a repayment program set up that would meet all obligations promptly and would provide proper distribution according to benefits, in conformity with the general plan incorporated in the Colorado District Act. Pursuant to the provisions of this law, the directors adopted a resolution approving the contract and submitting the question of executing the contract to an election of property owners to be held on June 28, 1938.

For the purpose of this election, the district was divided into 24 voting districts by combining the voting districts as now set up in the various counties. The resolution was published in all daily papers. Other news and explanatory articles were circulated to acquaint the property owners with the question to be voted upon. At the election 7,508 votes were cast for the contract and 439 votes against it. On July 5, 1938, the board adopted a resolution authorizing the execution of the contract.

THE PLAN OF OPERATION OF THE PROJECT

As before stated, the project is expected to deliver an average of 310,000 acre-feet of water annually.

The water impounded in reservoirs on the western slope will flow through the tunnel under the Continental Divide and to the power plants on the Thompson River on the eastern slope at a fairly uniform rate the year round, and will be stored in Horsetooth, Arkins, and Carter Lake Reservoirs on the eastern slope, so that the full supply can be delivered on demand or within a period of 60 days to the Poudre, Thompson, and St. Vrain Rivers.

The fall on the eastern slope, to be utilized for power, is 2,974 feet (334 feet more than half a mile), developed in a distance of 22 miles. This fall will be utilized in a series of power plants on the eastern slope. I submit that very few other projects afford such a long fall within such a short distance or such an opportunity for development of electric power.

The three reservoirs on the eastern slope have a capacity of 256,000 acre-feet. Granby Reservoir, on the western slope, which stores the Colorado River water for regulation through the tunnel, has a capacity of 482,000 acre-feet, so that the total storage capacity of the project is 738,000 acre-feet. This provides carry-over capacity, so that in years of plentiful local supplies in the district a part of the year's available supply from the project can be carried over until the next year.

As mentioned above, the district must repay to the United States one-half of the cost of the project (but not to exceed $25,000,000) in 40 annual payments without interest, starting 1 year after water is delivered to the water users.

The conditions in this district (where present water supplies vary so widely under the different irrigation systems and often under the same system and where the need is solely for supplemental supplies) seemed to require that a plan be developed that would provide the utmost flexibility and allow each individual landowner to decide for himself whether he wanted any of the water and, if so, how much.

It was not thought desirable or even possible to attempt to put through any plan which would in any way exert any compulsion on anyone.

Under the act it is possible for a mutual stock company of water users to contract for an allotment of water for distribution to its stockholders, and probably two or three such companies will do so. Officers of the district believe, however, that they can produce the greatest benefits and more nearly assure prompt repayment of the cost of the project if the water is carefully allotted on a basis of petitions from individual landowners.

To be able to secure the proper distribution of the water on this basis, it was necessary that the cost and terms of payment be definitely fixed so that any and every landowner who needed water would feel safe in filing a petition. The directors therefore decided to distribute the 310,000 acre-feet of water at a fixed price of $1.50 per acre-foot per annum during the term of the repayment period and in accordance with the provisions of the district act enacted by the General Assembly of the State of Colorado. The balance of the cost of the irrigation features of the project will be secured from the general tax on all property in the District.

The Colorado act provides three classes of petitions for allotment under which repayment by water users is secured from taxation.

Under class "B," the board may make allotments to petitioning municipalities which agree to secure annual payments by taxation of city property.

Under class "C," irrigation districts may secure an allotment of water and agree to levy the necessary taxes on their district lands to provide the payments.

Class "D" provides the authority and method by which individual landowners may petition for an allotment of water for certain tracts of land and agree that the annual charge of $1.50 per acre-foot shall be a tax lien on the described land. In other words, the payment is to be levied and collected as a part of the county taxes. This is the method by which most of the water will be allotted.

Under all three of the above classes, legal notices must be published, hearings held by the board of directors, and the order of the board adopted and recorded to consummate the allotment.

In addition to the above procedures, section 25 of the act provides that the board may sell or lease the use of water by contract.

METHOD OF WATER ALLOTMENT

Early in 1938, after the general plan had been completed and approved by the directors but before starting the campaign for allotment of water, the district collected and compiled a large amount of data concerning water supplies and uses in the district.

From various county records, the data was secured to set up a card file showing description, ownership, valuation, irrigated acreage, and other details concerning every farm in the district. From the State irrigation officials, all data available regarding water diversions and supplies of the various irrigation systems were compiled. From the irrigation companies, lists of stock ownership were secured. With all this information, the district was able to determine the approximate average annual water supply of each individual irrigated farm or tract to be used as a guide in determining the amount of water that could properly be allotted under the general policy of the board of directors.

This policy may be stated to be that only the amount of water from this project sufficient, in addition to present supplies, to furnish an adequate annual supply shall be allotted to each farm. This is to prevent speculation and to spread the benefits as widely as possible. The board favors the use of water as high up on the streams as possible because of the value of return flow for use lower down the streams. The board will not pass on petitions for allotments to lands now dry unless there should be a surplus after all needs for supplemental use have been met.

Preparation of the form of petition for the allotment of water to individual farms, class D, that would be generally acceptable and still fulfill the requirements, necessitated much time and study. The same provisions included in this form were, of course, incorporated in the petitions and orders for class B and class C allotments, and in contracts to be executed under authority of section 25 of the act.

During the summer and fall of 1938 the district mailed notices to landowners, published news articles explaining the opportunity, and set up additional agencies in towns other than that in which the main office is located for the purpose of securing the petitions of all who were interested.

At that time there were received 6 class B petitions (municipalities) for a total of 26,400 acre-feet, 1 class C (irrigation district) for 6,000 acre-feet, 1,934 class D for a total of 158,187 acre-feet, and 4 proposals for contracts under section 25 of the act for 41,180 acre-feet. The total of all petitions received at that time was 231,767 acre-feet.

In January 1939 the secretary published the legal notice of hearing on the class D petitions. On April 8 and August 5, 1939, the board adopted resolutions allotting a total of 133,146 acre-feet on 1,732 of the above class D petitions. The others were rejected or deferred for future consideration. Every class D petition on which water was allotted had been carefully checked for ownership, accuracy of description, and the land inspected in the field. Later in the year the board allotted water on six petitions for municipalities and for one irrigation district and executed three contracts under the authority of section 25.

At the present time a total of 166,226 acre-feet has been allotted and made of record and petitions for an additional 61,229 acre-feet are awaiting action by the board. The situation is considered satisfactory for the present and no attempt will be made to allot the balance of the water until the construction of the project is further along and more information is available regarding a number of problems that must be solved before the allotment is completed.

FEDERAL APPROPRIATIONS

The first appropriation by Congress for construction of the project was made in July 1937. This was for $900,000 and was for the fiscal year ending June 30, 1938.

The authorization of the project and this first appropriation were the consummation of over 4 years of persistent effort by the sponsors of the project led by President Hansen, of the Conservancy District, and by the united efforts of the entire Colorado delegation in the Senate and House of Representatives of the Congress of the United States, namely, Senators ALVA B. ADAMS and EDWIN C. JOHNSON and Representatives EDWARD T. TAYLOR, FRED CUMMINGS, JOHN A. MARTIN, and LAWRENCE LEWIS.

The total appropriations and allotments for the project to date are shown below:

N. I. R. A. allocation (investigation)	$150,000
Reclamation fund appropriation, 1938 fiscal year	900,000
Reclamation fund appropriation, 1939 fiscal year	1,250,000
Reclamation fund appropriation, 1940 fiscal year	1,500,000
Reclamation fund appropriation, 1940 (deficiency)	850,000
Reclamation fund appropriation, 1941 fiscal year	2,000,000
P. W. A. allocation (1938)	1,400,000
Total	8,050,000

Every appropriation secured has been the result of organized presentation of the merits of the project to congressional committees and various Federal agencies by the entire Colorado delegation in the Congress and by all State and local officials regardless of partisanship.

In the years that are past the problem was to get any appropriation at all to keep the work going. Now that the project is well under way the object is to secure larger sums so that the program can be expedited and the water and power made available as soon as possible.

An appropriation of $5,000,000 for the fiscal year 1942 would be required to enable the Bureau of Reclamation to continue work on Green Mountain Dam and Power Plant, to push the driving of the Continental Divide Tunnel, which is the bottleneck of the project, and to start construction of Granby Reservoir so that it will certainly be completed and filled with water when the tunnel is completed.

During the year last past, there has been an increasing interest by several Federal agencies in the power features of the project, particularly as to the amount of power to be made available, the cost and how soon it can be ready for use. Accordingly, arrangements were made by the district officials for preparation of a comprehensive special report on the power possibilities of the project to supplement a general report prepared in the fall of 1940. These reports outline a proposed construction schedule that will complete the project in 1945. These power studies have been completed by the Colorado Water Conservation Board under the supervision of R. J. Tipton. A number of copies have been placed in the hands of the appropriate Federal agencies.

It is hoped that these reports will serve to enlist the further interest and assistance of several Federal agencies in recommending larger appropriations in the future in order to secure the power at an early date for defense purposes.

All appropriations for the project to date have been from the reclamation revolving fund, a limited fund from which a number of projects are being financed. It is hoped that the 1942 and subsequent appropriations will be made from the General Treasury which is already financing several other larger reclamation projects such as Grand Coulee and Central Valley.

CONSTRUCTION PROGRESS

Actual construction on the project began in the fall of 1938 with erection of buildings, construction of roads, and other preliminary work.

GREEN MOUNTAIN DAM AND POWER PLANT

The first large contract let by the Bureau of Reclamation was for the construction of Green Mountain Dam and power plant on the western slope. This contract was let in November 1938, to the Warner Construction Co. of Chicago. The contractor began operations immediately and during the first year made good progress in excavating and lining the 20-foot diameter diversion tunnel and operating shafts at this dam, in starting the stripping of the foundations, and in performing other preliminary work.

In the second season (1940), the temporary cofferdam diverted the water of Blue River through the completed diversion tunnel, the stripping operations were completed, four cut-off walls were constructed, the powerhouse foundations and part of the spillway were completed and a start was made in building the dam itself.

All the remaining work on Green Mountain Dam and power plant has been carefully scheduled on a basis that will complete the job early in 1943 so that the river flow of that spring can be stored and power production started.

CONTINENTAL DIVIDE TUNNEL

The Continental Divide Tunnel is the key feature of the project and the one that will require the longest time to build. When completed, this tunnel will be 13.06 miles (68,980 feet) in length, with a diameter of 9 feet 9 inches inside the lining. It will have a water-carrying capacity of 550 second-feet. From the beginning, the district officials and the Bureau of Reclamation were anxious to get it started. After consideration of several methods of performing the work, including building the tunnel by force account, it was finally decided to call for bids on short sections of the tunnel.

EAST END OF TUNNEL

On April 8, 1940, bids were opened for excavation of 8,000 feet at the east end of the tunnel. The contract was awarded on April 25 to S. S. Magoffin Co., Inc., of Englewood, Colo., which submitted the lowest of 10 bids. Actual work started in early June of 1940. Labor and other difficulties caused some delays but this contract was completed in February 1941 nearly 6 months ahead of the time limit. This portion of the tunnel was driven at the rate of over 1,000 feet per month and indicates the progress that can be made with efficient management and good equipment.

As the result of opening bids on February 3, 1941, S. S. Magoffin Co., Inc., the lowest of three bidders, was awarded a contract for excavation of an additional 7,000 feet on the east end of the tunnel. This contract also includes construction of the concrete invert lining for this additional 7,000 feet and for the 8,000 feet already driven. The invert is the bottom one-third of the tunnel lining. Work is now well under way on this contract.

WEST END OF TUNNEL

On June 20, 1940, bids were opened for 6,600 feet of tunnel excavation at the west or Grand Lake end. There were five bidders on this schedule, with Platt-Rogers, Inc., of Pueblo, Colo., the lowest. Actual excavation on this contract started in September of 1940, and on April 15, 1941, the heading was in 4,600 feet from the west portal. At the present time the work is proceeding at the rate of 40 feet per day.

INCIDENTAL CONSTRUCTION WORK

In addition to the work on the two large features above mentioned, the Bureau of Reclamation has constructed numerous buildings, including offices, residences, dormitories, garages, warehouses, and similar structures, most of which are at the project headquarters near Estes Park village on the eastern slope. Some smaller groups are located on the western slope at Shadow Mountain Lake and at Green Mountain Dam to accommodate personnel of the Bureau during construction and during future operation in those areas. The Bureau has also constructed 176 miles of power transmission lines and 12 substations, partly for construction needs, but all of which will be a part of the completed power-distribution system.

The rate of progress made at the east portal of the tunnel to date proves that this controlling feature can be completed in 1945 if capable contractors are kept working. On this basis a construction schedule has been set up which will complete the essential features of the project by 1945. This schedule, with supporting reasons, was incorporated in a document prepared by the Colorado Water Conservation Board in November 1940. Copies of this report are available.

OUTSTANDING FEATURES OF THE PROJECT

Outstanding features of the Colorado-Big Thompson project are:

1. Assured repayment of the entire cost of construction under a conservancy district organization authorized by statutes of the State of Colorado, with power of general property taxation designed to obtain contribution from indirect beneficiaries, including towns, cities, and utilities. Costs of water to the farmers are well within their ability to pay.

2. Elimination of crop losses, which average $7,000,000 a year, by providing a necessary supplemental water supply for 615,000 acres of highly developed farm land in a district with a total assessed valuation of approximately $130,000,000.

3. As incidental to the use of water for irrigation purposes, generation of electrical energy in sufficient quantities to meet increasing demands within the area, including defense industries; the power feature carrying its full proportionate share of the construction cost.

Unemployment

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

ARTICLE FROM THE MESSENGER

Mr. VOORHIS of California. Mr. Speaker, I wish to express sincere appreciation for the following short article, which appeared in the Messenger, organ of the Evangelical and Reformed Church.

[From the Messenger of February 20, 1941]

A HUMANE PROPOSAL

Pointing out that the voice of religion has been raised against unemployment, and that

representatives of all faiths have united in a demand that "action be taken to eliminate it as a social evil from our land," Congressman VOORHIS, of California, has introduced a bill in the House of Representatives urging the establishment of a commission to develop a program for the "permanent elimination of mass unemployment in the United States." Industry, labor, agriculture, as well as church organizations are to be represented in this commission which is directed to give especial attention to a study of post-war peacetime economy in order that the reduction of defense expenditures will not result in depression and severely aggravated unemployment. This is one of the problems to which the best brains and the most sympathetic hearts in America certainly should be devoted.

National Conference of Real Estate Taxpayers Urges Appointment of a National Commission to Study Federal, State, and Local Taxation

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

RESOLUTION BY THE CONFERENCE AND ADDRESSES BY HON. MYERS Y. COOPER, OF OHIO, MAJ. A. A. OLES, SEATTLE, WASH., AND DR W. H. HUSBAND

Mr. ANGELL. Mr. Speaker, on April 25 and 26 the National Conference of Real Estate Taxpayers held a meeting in the city of Washington and engaged in an examination and a study of the need of readjusting our entire national, State, and local tax structure. It will be conceded there is no subject of greater importance pending before the American people today than the question of taxation, not alone to finance our all-out preparedness program, but also to provide adequate revenues for national, State, and local government on a scientific basis, making an equitable distribution of taxes based on the ability to pay and relieving the inequitable burden now resting on real estate in many of our States and local communities.

This conference passed unanimously a resolution urging the creation of a commission on taxation to study the entire field of taxation in the United States. This subject is of such vital importance that I deem it fitting to include this resolution as a part of my remarks, together with the address of the Honorable Myers Y. Cooper, former Governor of Ohio, and president of the conference, which is a most thought-provoking and informative address on the whole subject of taxation.

I also include as a part of my remarks the addresses of Maj. A. A. Oles, of Seattle, Wash., and Dr. W. H. Husband, member of the Federal Home Loan Bank Board, delivered before the conference and dealing with this subject of taxation. The resolution and addresses are as follows:

THE COMMISSION ON TAXATION IN THE UNITED STATES

Whereas the National Conference of Real Estate Taxpayers urges the establishment of an agency to study the tax structure of our cities, States, and the Nation to the end that this structure may be better integrated, and made more stable and equitable; and

Whereas the conference believes that the agency most capable of doing this successfully would be one created by the Congress and representative of all levels of Government and of all taxpayers: Now, therefore, be it

Resolved, That the Congress of the United States is petitioned to create the commission on taxation in the United States, as described hereafter.

This commission is charged to compile and analyze the facts in relation to:

1. The effects of the present Federal, State, and local tax structure upon the various elements in the social and economic life of the Nation; upon the financial stability of the three levels of Government; and upon the general public welfare.

2. The pyramiding and overlapping of the intergovernmental tax structure among the three levels of Government and among the 175,000 minor tax-levying authorities.

3. The causes and effects of decentralization and blight in the residential and commercial areas of our cities, and the effect of these on the financial stability of our cities and States.

This commission is further charged to recommend a program for integrating and unifying the entire tax structure upon a pattern or policy of economic and social concepts consonant with the modern democratic principles of the Nation.

The personnel of the commission is to be representative of all interests. Included will be representatives of the Congress, of the Federal Treasury, and of other appropriate agencies and executive departments of the Federal Government; of the legislative and executive departments of State governments; of the legislative and executive departments of local governments; and of taxpayers, including representatives of urban and rural real-estate taxpayers.

To implement the commission, appropriation of not less than $500,000 annually is to be made by the Congress; authority is to be granted to utilize all pertinent records of the Federal Government; State and local governments are to be requested to grant similar cooperation; the right to hold hearings and to subpena witnesses is to be provided.

The commission is to be instructed to organize itself by election of a chairman and vice chairmen; it is to be empowered to employ an executive secretary and such clerical and research assistance as it deems necessary; it is to be empowered to retain the professional services of attorneys, research agencies, and economic advisers. Members of the commission will serve without compensation, but will be reimbursed for travel, subsistence, and similar expenses when engaged in the work of the commission. The commission will pay its employees and fix their compensations.

The commission is to be instructed to make periodic progress reports to the public and to the Congress. It is to make its final report and recommendations not later than January 1, 1943. The final report and recommendations are to be made to the Congress and to each State and local legislative body and chief executive officer; further be it

Resolved, That copies of this resolution be published and delivered to the President of the United States, the Secretary of the Treasury, to each Member of the Congress of the United States, to the council of State governments, the Conference of Mayors, the Legislators' Association, the constituents of the National Conference of Real Estate Taxpayers, and to the press and the press associations.

Done this 26th day of April 1941 in Washington, D. C., by the National Conference of Real Estate Taxpayers.

MYERS Y. COOPER, *President.*
JAMES MCD. SHEA,
Chairman, Resolutions Committee.
LAWRENCE G. HOLMES,
Secretary.

ADDRESS OF MYERS Y. COOPER, FORMER GOVERNOR OF OHIO

Members of the National Conference of Real Estate Taxpayers, 1 year ago a momentous movement was launched in this city to reexamine the real-property-tax structure of the Nation and, if possible, to suggest a plan whereby some semblance of order and uniformity could be developed in substitution for the chaotic condition that has prevailed throughout the various taxing districts of the entire country.

At this conference there was banded together taxpayers in a movement of such general significance as to offer a new hope that confiscation of property through excessive taxation was soon to be a thing of the past. The widespread interest in the work of that conference was of such importance as to attract general attention, since it promised relief to real-property owners from the twin burdens of high valuation and high rates. The conference adopted plans that were sound and capable of fulfillment.

At last we had something to offer that gave greater assurance to the distressed property owners than mere resolutions of deploring and condemning without doing anything about the matter.

The rights of the property owners were clearly stated, and the disposition and ability to protect those rights through the adoption of a sensible, workable, and understandable plan were asserted with courage and conviction.

As this organization extends its influence in cooperation with its supporting groups, we shall hear less of the resounding thud of the sheriff's hammer on the auction block where exorbitant taxes have forced the sale of property. Serious losses have occurred in border-line cases where small relief from excessive taxation would have enabled hard-working people who want to hold onto their property to do so.

TAX CONFUSION ELIMINATED

We need to get taxation out of its present state of confusion, where all forms of wealth will share in the cost of government on a fair, just, and equitable basis—out where the man who pays the bill will know the sources of public income and how the money is to be spent.

In all too many instances the real-property taxpayer has been flailed out until about all there is left for him and his household is the chaff.

In protecting the rights of property owners against undue invasion of public-spending agencies, the responsible attitude is taken of making democracy work by preserving constitutional guaranties to which the citizen is entitled in the protection of property ownership. More we do not want; less we will not accept.

Any discussion of the tax question must necessarily take into consideration sound economy as a very first step, and by sound economy I mean efficient conduct of public affairs, eliminating waste and extravagance of every character.

We cannot accept the unsound fiscal theory so often advanced: "The more that is spent in public service the better it will be for the taxpayer who foots the bill."

Anyone familiar with the present tax structure as it applies to real estate must know that it is obsolete and archaic. It met the requirements of 100 years ago in a satisfactory manner, but it is no more qualified to meet present-day conditions than the ox cart

is qualified to meet present-day transportation requirements.

The remedy we seek is a modernization of the tax structure to prevent existing abuses by putting an end to haphazard methods such as prevail today. That is what the late Professor Seligman, of Columbia University, distinguished as a tax authority, was emphasizing when he called the property tax one of the worst taxes in the civilized world. "It is so inequitable," he said, "that its retention can be explained only through ignorance or inertia."

Let it be well understood that the National Conference of Real Estate Taxpayers is not seeking an escape for the property taxpayers of their rightful contribution to the support of government, but they do object to going beyond such responsibility.

We cannot take the position that the property tax is a bad tax for the reason that historically the facts are to the contrary.

We must, first of all, take an intelligent position on the rightful place of the property tax in the scheme of Government maintenance and put a stop to making a football of it.

We must not permit the interest in home ownership to diminish through default in making use of the remedies at hand to modernize the present property tax structure and to eliminate grave abuses contributing to discouragement in the ownership of homes and land.

In every community in the 175,000 taxing districts in this Nation there is dissatisfaction and unrest. The abuse has been so general, the excess burdens on small property owners have been so uniformly severe, that a remedy to relieve this intolerable situation would be equally applicable to every subdivision and every hamlet throughout the country.

We have had all too much political debt paying in the form of excessive and unnecessary public pay-roll expenditures by appointing and retaining political hangers-on who render no real service to the taxpayers.

Government is the one place where employment has shown a tremendous gain in peacetime, and the only place in recent years, or up to war preparedness, where there has been a gain in employment, for that matter.

There has been too much costly duplication of effort through the functions of overlapping bureaus. Increased personnel and duplications have loaded a charge on the Public Treasury of from 100 to 150 percent in many divisions during the past 10 years.

Thus it is not hard to visualize just why deficits pile up, extra bond issues are required, taxes increased, to meet governmental expenditures that far exceed the revenues.

I cited a moment ago that the inequities were great, and that an adjustment was due in virtually every tax district throughout the country. It is reported that a house which sold for $5,000 in Seattle, Wash., pays $1.50 per $100 in taxes, whereas a house which sold for $5,000 in Jersey City, N. J., is taxed at $7.50 per $100. The ownership of these properties receive from the municipalities exactly the same benefits in education, sanitation, hospitalization, police and fire protection, and such other customary services as a municipality affords.

We are dealing with hearthstone problems and their magnitude represents the summation of small abuses which collectively have reached huge proportions inflicting distress on countless numbers of people.

It is an American principle, vouchsafed to every man, that here in our democracy the right is inherent to own property and to be protected in that right. But what protection is there and what encouragement is there in ownership of property if there be an abridgment of that right when the property owner is saddled with a tax burden beyond his ability to pay?

It is an accepted fact that "the power to tax is the power to destroy," and let me say the abuse of that power has in it the authority to deny the necessities and comforts of life by infringing on family living conditions.

I am concerned about the fear which all too many people express of their Government. Better, far better, if we are to maintain a true democracy of a "government of the people, by the people, and for the people," that those in authority feel a little less secure, that they have a little more concern as to the attitude of the people whom they serve, if we are to have effective public service with due regard for the interests of the taxpayers, who by the sweat of their brow foot the bill.

I sometimes think if a greater concern was exhibited as to how to reduce taxes than the concern as to the discovery of new methods for wringing additional taxes from those who pay the cost, the problem would be met and our democracy safeguarded.

Economy and efficient public service are not incompatible and the people's progress is measured by the extent of a harmonious cooperative relationship designed to produce effective public service.

Sight should not be lost of the fact that a prime objective of government is "to do for the people collectively the things they cannot do so well or do at all in their separate or individual capacities." Public officials should not forget that they are the custodians of delegated authority.

The science of government is becoming increasingly complex. The call is for men of capacity, experience, and integrity, to man the posts of responsibility in America's greatest business enterprise, if we are to expect the tax dollar to reflect the same degree of value in public service as it reflects in successful private enterprise.

Samuel Crowther in an admirable address on Fighting for a Great Tradition asserted that "Our Government was becoming a bewildering thing until we hardly know what it is all about." "Our income," said he, "and corporate taxes are frankly aimed at the redistribution of income and inheritance taxes are capital levies designed to break up fortunes, great or small, for the benefit of somebody or other, while our real-estate taxes although ostensibly based on a reasonable income from the realty, in many cases come very close to being capital levies." "The redistribution," said he, "to date has not, as far as I can discover, satisfied anyone other than those engaged in handling the redistribution."

I should like to add to this statement that we have innumerable cases in our cities where the taxes on real estate have become actual capital levies, and the challenge to the National Taxpayers' Conference is to lay the keel for a program to stop this sort of thing.

The sale of real estate in many cities is made on a basis of 50 percent of tax values.

In one eastern city with a million population the first 900 sales of real estate in 1940 were made on an average of 50 percent of the tax value of the property sold. One-half of the tax, you see, was collected on wind. Perhaps that's where the slogan originated, "It's an ill wind that blows nobody good."

The situation becomes the more involved because of the confusion on the part of public officeholders as to the full meaning and importance of public credit. Unable to live within the income, the disposition to achieve things more desired than necessary leads to a resort to excessive borrowings, which have got to be met by excessive taxes. Such procedure frightens capital, slows down enterprise, and turns wage earners into the street jobless, while the market for farm and factory is curtailed. And this is so even though huge expenditures for war purposes obscure these fundamental facts.

It is not contended that all bond issues should be opposed by real property owners, who, in the main, must pay the carrying charges and ultimately the debt, but in every such instance, the proponents of the debt creation should be compelled to prove their case, and when the public is satisfied with such proposal, the cause is usually a good one.

You can preach economy until you are blue in the face, but you won't get it if the public service is to be indoctrinated with the idea that we have got to go beyond the bounds of public requirments. Pressure groups have frequently forced extravagances on the public without due regard for the safety and security of American institutions.

There is beyond question too much elasticity, too much freedom in debt creation, and this has had to do with the excessive load which the taxpayers are compelled to carry in increased cost of government. As it has been put, "We, the people, have demanded too much of government."

Many responsible people who cry loudest for government economy insisting that high taxes are ruining their business and confiscating earnings are flagrantly guilty of running up the cost for their own pet schemes while the getting is good.

We are in a tremendous preparedness program which has already resulted in a huge national debt. That preparedness means that come what may, America will stand its ground and defend its rights against any force, however powerful. We have got to go through with that program regardless of the cost, and we should do it as good American citizens without political bias. Sooner or later this war is going to be over, and we want to continue to maintain the American way of living when that time comes.

While public attention today is focused on huge Federal spending, which is so big that nobody can comprehend its meaning, let us not forget that the home base must be kept sound. Here is the last-ditch defense which we dare not surrender. We must preach and practice economy in the conduct of local government as it has never been practiced before if we expect to come out of this conflict with heads up and with the opportunity preserved to start over again with an assured future.

The motivating influence back of the tax reform which we advocate primarily has to do with the protection and stimulation of ownership of property, of homes, farm, and real-estate investments.

Any movement that has for its purpose the increase in home ownership and to provide better living conditions for the people, stimulating thrift and personal incentive, should have the encouragement and the assistance of all who are sincerely interested in the welfare of their country.

It is an undeniable fact that home owning means a deepened interest in government and the maintaining of a higher standard of living.

The tremendous amount of money being expended on the defense program should have a favorable influence in the building and selling of homes. Home building should not be disturbed, since adequate housing requirements is in itself a strong arm of defense. There are a number of important influences that operate today against home building, home ownership, and real estate generally, which can be brought under a rational control, the advocacy of which is a prime responsibility of this organization. The disposition is to be helpful, although I sometimes think the merits of the suggestions have not been given due consideration.

STORY OF BEGGAR AND DIME

The F. H. A. has made it possible for countless numbers of people to literally start on a shoestring and eventually acquire a debt-free home. My own experience covering more than a third of a century in the sale of property on a plan of easy payments bears out the statement I now make that this legislation is prac-

ticable, the benefits great, losses negligible, and is of tremendous economic and social value.

On the other hand, there is serious invasion of the field of private enterprise through Government housing projects that are in direct competition with private ownership. In such instances it is a conflict of ideologies as between the theory of Government ownership as against stimulation of private ownership. The Government's well-intentioned solution of the housing question simply does not make sense when there is encouragement on the one hand to own property and highly competitive discouragement on the other hand. It reminds me of Aesop's Fable of the Dog and Hare.

In the chase after the hare, the dog, having made a good meal, was in no hurry to conclude the sport, and so he would lick the hare, and then nip him, until finally the hare, in great fright, cried out, "Who are you, friend or enemy? If a friend, why do you bite me so, and if an enemy, why caress me?" And this seems to be pretty much the situation in a program that offers the finest possible cooperation in the development of home ownership on the one hand, and then subjects private property to harassing competition in suburban areas, where virtually every tenant is capable of sharing the cost of government and does not need a subsidy.

If we must have Government housing, it certainly ought not to invade a field where private enterprise is capable and eager to serve, and where the attack is direct on home ownership, adding new burdens of taxation on those who are trying to hold on to their homes. Certainly there is not the slightest excuse for any Government housing project, other than in blighted areas, to ask for a subsidy. It should be a mandatory matter that the Government pay the same ratio of taxes on Government-owned income property just as private owners of property pay; otherwise an utter collapse of the property tax as a sustaining influence in municipal affairs will inevitably follow.

President Philip W. Kniskern, of the National Association of Real Estate Boards, clearly stated the position of property owners when he said that both for present and future economic health it is important that a minimum of needed housing be Government built and that a maximum be privately built, but he emphasized it is essential above all else that we have the housing we need, where and when we need it, giving the sound advice that "rambling complaints are no substitute for complete and accurate facts and action. * * * Unless we can provide sound and satisfactory housing for our defense workers our entire defense program will be impeded."

"In all our planning we must guard at all times against the creation of ghost towns, against the building of permanent housing beyond normal requirements, especially in our small cities and rural section. If we do not do so, we shall burden these communities with bankruptcy taxes for many years to come."

Let me say that actual defense housing is entirely outside our consideration of the general housing problem. That is beyond question a matter for Government responsibility and action.

It is unwise to adopt a permanent housing program that makes it more economical to live in subsidized public property than to own a home.

There should be a meeting of minds between the Government and private enterprise, including financial institutions, which will solve this problem on the basis of improving social conditions and strengthening the national economy with the least possible disturbance to the economic life of the Nation.

MUST HAVE DEPENDABLE INFORMATION

If we are going to reduce Government costs we must first of all discover extravagance, prevent leakage and waste, and abolish nonessentials in the public service. We should have, and that with the least possible delay, a more thoroughgoing integration of the tax structure of National, State, and local government, and it must be developed along comprehensive, well-coordinated lines. True, the National Government collects no property tax; however, the penetrations are such that the national taxing program extends through the whole tax structure.

It is highly desirable that a commission be created by the Congress, and at this session, setting up authority to go into the whole taxation matter in great detail. Such a commission, appointed as a scientific fact-finding agency and composed of men thoroughly competent to make an analysis of taxation problems, would, beyond question, develop material of vast importance to every taxing district in the country.

The question transcends partisanship and obviously must be kept out of the political zone in the studies and recommendations made.

A fact-finding research with Government authority back of it would, I am convinced, be hailed as a sound and sensible approach leading to a successful diagnosis of the situation resulting in great reduction in the cost of Federal, State, and local governments. It would remove the guesswork that permeates the whole taxing structure.

Paul G. Hoffman, distinguished businessman and student of public affairs, in discussing benefits arising from such a commission, had this to say:

"The possibilities of such a study are limitless. The report issuing from it might well be our magna carta of taxation for years to come. The commission might well prepare schedules of tax sources and rates to meet budgets of varying sizes. Such a report would make visual to all the people their tax burdens at various governmental cost levels."

Let me say this, that it is conceivable that such an analysis would develop the fact that we are spending a lot of money for worthless services which might well be eliminated and which are not worth the cost of maintenance.

President Roosevelt and Secretary Morgenthau have both expressed hearty approval of a national commission such as I have been discussing here.

I quote from the President's Budget message briefly on this point when he insisted that "no really satisfactory tax reform can be achieved without readjusting the Federal, State, and local fiscal relationships," and he urged a thorough investigation of the possibilities of a comprehensive tax reform."

It is a matter of great encouragement to know that the Federal Government recognizes the importance of such a study and the need for simplification of the problem of taxation. Mr. Morgenthau has reiterated the stand he has previously taken on this question, in which he stated:

"It is generally recognized that real estate taxation in most sections of the country is unduly high," and while this was not primarily a Federal Government matter, the report went on to say that "the development of plans which may have a tendency to lighten the burden is certainly to be encouraged," and gave assurance of cooperation in further development of this proposal.

Let us have a new Magna Carta of taxation to modernize the structure to the end that no man shall be called upon to go beyond his ability to pay in meeting the cost of government.

For the first time there is organized effort to cope with the tax question, with uniform authority and the right to speak for a vast number of taxpayers throughout this Nation.

There is mobilized back of the National Conference of Real Estate Taxpayers the solid support of the National Association of Real Estate Boards, with its 15,000 members, who need no call to the colors in supporting a movement that has for its purpose a more just and equitable tax system; the Mortgage Bankers Association of America, an organization that has loaned tremendous sums of money on real-estate developments of great economic value to the Nation; the National Grange, a great spokesman for the farming interests of the country, realizes that excessive taxation has lowered farm values; the National Association of Apartment Owners and the National Association of Building Owners and Managers, representing vast investments on the part of private enterprise in improved real estate and contributing a large share of earnings to public revenues, now insist that the very security of the investments which they represent is dependent upon a sound solution of this whole problem.

We are not wanting in leadership. A great volunteer army awaits the call to put into effect a sound tax program throughout the Nation that will stabilize values and income and offer the best possible security for the maintenance of government itself.

One year ago there was adopted at the initial meeting of the National Conference of Real Estate Taxpayers a set of principles which fairly comprehended the problem confronting the taxpayers of the country. The suggestions which I now make embody many of the principles then enunciated and which I am convinced if adopted would prove a veritable boon to the ownership of property. I offer these suggestions in the interest of greater economic stability, the improvement of the social order, stimulation of housing and building generally under the banner of private enterprise. They are:

(1) A national commission on taxation and land policies of the Nation to evolve a long-range tax policy for all governments.

(2) Consideration of the importance of taxing real estate on a basis of productivity.

(3) Reduce the cost of government by a prudent spending of public money in harmony with the public income.

(4) Make government income-producing property pay its share for local government on the same tax basis as privately owned property.

(5) Give greater consideration to the earning power of property in matters of tax assessments.

(6) Coordinate taxation to prevent overlapping and unwarranted confiscation of earnings and values.

(7) The adoption by taxing authorities of a more vigorous tax-collection policy to prevent defaults.

(8) Put a tax limitation ceiling on real estate for its protection and to limit unbridled public spending.

(9) Amend the Federal laws so as to permit not less than 10 years for liquidation of real estate to meet Federal inheritance taxes.

I have already discussed in some detail the importance of a national commission on taxation and land policies and I now desire to take up a few moments in the discussion of two or three other suggestions.

Tax limitation has been adopted by nine States in the Union and the results have been highly beneficial and satisfactory. Not a single State where tax limitation prevails would consider for a moment a return to the old methods and this is a complete answer to some statements which have come to my attention made by certain municipal organizations that limitation is a failure.

None of the dire things predicted as to what would happen to the various States and subdivisions should tax limitation be imposed has ever come to pass.

The facts are that limitation has encouraged new enterprises to come into States that have modernized their tax structure. The ownership of homes and farms has shown an upward trend, and by broadening the tax base

more dependable public revenues have been realized.

I have never known business to flee from reduced taxes, but we have seen many an industry pull up stakes and leave a State where the taxes were exorbitantly high.

The need today is to underwrite greater stability in the matter of public revenues, and since real estate has been carrying an average of 25 percent above its rightful share as compared with other forms of wealth it is not hard to see that to bring in all taxable values on a parity is in the interests of stability in tax revenues and prevention of confiscation of property.

EDUCATION

One of the main objections which has been leveled at tax limitation has had to do with education. In all of the studies that have been made as to the effect on the educational systems as a result of tax limitation, I can say to you it has been clearly proved that the educational system has been greatly strengthened.

In the nine States which have put a ceiling on their real-estate-tax rate—namely, Ohio, Indiana, Michigan, West Virginia, Oklahoma, New Mexico, Nevada, Washington, and Rhode Island, the proportion of school revenues derived from the State has greatly increased. The average in 1930 in these States was 13.4 percent of school revenues supplied by the State, but these increased to 41.4 percent in 1940; in other words, the former narrow base resting entirely on real estate worked to the disadvantage of education, but after a limitation on real-estate taxes the base was immediately broadened until in these nine States it far exceeds the national average.

I come from Ohio and I should like to give you some very dependable figures which I have just received from the tax commissioner of our State. I asked the question as to the effect of limitation after 8 years' experience.

The revenues for school purposes in Ohio in 1940, according to the tax commissioner, totaled $134,000,000. Of this amount the State furnished from the general revenue fund $53,000,000 as against only $21,000,000 in 1934. Mr. Evatt, State tax commissioner, states:

"The revenue of the public schools in Ohio in 1934 from property taxes and State funds amounted to about $107,000,000. It has already been pointed out that these revenues amounted to about $134,000,000 in 1940. Thus it is obvious that the tax limitation has not prevented the public schools of Ohio from putting on an expanding program."

Thus the burden on real estate has been lessened by more than $30,000,000 for schools, since State funds are not realized from real-estate taxes, while on the other hand, practically the entire local tax is levied on property.

The total reduction in real-estate taxes in Ohio due to the constitutional tax rate limitation is in the neighborhood of $40,000,000 per year. There is no way of estimating what the additional tax load would have been with the introduction of old-age pensions, direct relief, and other new demands upon the State, if there had been no real estate tax limitation imposed in the year 1933. This limitation has on the other hand resulted in the creation of a school foundation program receiving its income from State tax sources which equalizes educational opportunities throughout the State, and in the opinion of the tax commissioner is one of the most complete educational programs in the Nation. Thus does Ohio's tax commissioner summarize the benefits of the constitutional tax rate limitation after 8 year of successful operation.

Ohio has pulled the key log of excessive taxation and the State is living within its income.

I suggest that you carry back with you the benefits to be derived from tax limitation and seek its introduction into your State tax system.

Taxing real estate on a basis of its earning power is constantly gaining support in this country. It appears the productivity of property has been given but little consideration in our present system of taxation. This change calls for extensive research and exploration and it should be a major objective of this tax conference.

Real-estate taxes do not concern simply the taxpayer only, but all citizens. It has to do with the progress of education and social necessities, of enterprise of every character, of government maintenance, and the general welfare of the people.

The fight we make is utterly unselfish. It is for every man's opportunity to ultimately acquire the American ideal of a self-owned home.

Today, as never before, we ought to thank God that we are American citizens, living in the most enlightened country on the face of the earth, great in her independence and the strength to meet foes without, and seditious conspiracies within; with courage and capacity to ride out any economic storm; to maintain a scale of wages and living unprecedented; a Nation so rich in natural resources that she can supply her every need and indefinitely, if need be, self-reliantly go forward while maintaining her national authority upon land and sea.

We are not going to carry the flag of our Nation at half-mast in any crisis; nor will be surrender to dismay or defeatism. We shall meet every test in a spirit worthy of the ideals, institutions, and ancestors of which we boast.

We may well stand solid in a time like the present, highly resolving in the spirit of Abraham Lincoln, who took up his pen and wrote his first message to Congress in 1861, offering great patriotic challenge:

"Having chosen our course, without guile, and with a pure purpose, let us renew our trust in God, and go forward without fear and with manly hearts."

In this spirit, let us go forward with renewed faith in our country, doing our part as free men determined to remain free. Forward with manly hearts.

OVER-ALL PROPERTY TAX LIMITATION

(Address of Maj. A. A. Oles, of Seattle, Wash.)

The taxation of property in the United States is not scientific; usually it is little more than a bad habit inaugurated for one type of development and carried on through 150 years of ever-changing industrial and social order. Property, as represented by homes, farms, and commercial-land investments, does not now represent the entire wealth of the country, it does not produce the entire income of the country, it does not indicate the complete ability of the people to pay taxes and property owners do not receive the entire benefits of government. We must admit, therefore, that the owners of wealth represented in land and building investments should not be called upon to bear the entire burden or an inequitable proportion of the cost of government. Admitting this, we must agree that taxes on property should be limited. The only question at issue, in my opinion, is the point at which the tax should be halted.

There are three schools of thought on this subject of tax limitation:

1. There are those who hold to the theory that taxes should be limited to the amount necessary to perform the primary functions of government—those things which can be better done by government than by individuals—and that all production in excess of that amount should be left in the hands of those who produce.

2. There is another group who believe that taxes should only cease at the point of diminishing returns; in other words, that government should collect up to a point which will continue our present profit system and use that money for inaugurating social reforms, caring for those unable to care for themselves and raising the standard of living of those unable to get along themselves under a competitive commercial economy.

3. Then there is a third class who believe that taxes should be used not only for the primary functions of government and social betterment, but that taxes should be increased to the point of confiscation of all property in land and that a new type of government and social order can be ushered once this is accomplished. In other words, there are those who seek the socialization of land through unpayable levies.

Only the third class believe in unlimited taxation of property.

This conference at its first meeting committed itself to the promotion of an over-all limitation of taxes on property. The people making up that conference believed in the right of private ownership of property; they were satisfied with our profit economy; they liked the American way of life; they sought to encourage people to own homes, to invest in farms and commercial property by an assurance that this could be done without fear of having their investments absorbed by overambitious governments. They believed in limiting the taxes which can be levied on real property. Their stand was based on a practical knowledge of the tax situation as it affects real property owners throughout the country. They knew that taxes had passed the point necessary to the proper care of the absolutely essential functions of government; they knew that in many cases they were beyond the point of diminishing returns and safe social changes and they hoped by definite limitation to prevent the complete socialization of land as advocated by the third class.

While most of us believe in limiting taxes in some manner, we have several theories as to how the limitation can be accomplished.

Unfortunately there is a vast difference between theory and practice. This is as true in the matter of tax control as it is in any other line. There are two ways to limit taxes: First, through election of representatives who will, under all conditions, hold taxes to a proper level, and second, by putting a ceiling on taxes by constitutional or statutory provision. One very large group of our people advocate the first method and think taxes can be controlled by the election of proper representatives, men who have a profound understanding of public finance and a long-range view of penalties which inevitably follow the violation of sound economic principles in the conduct of government. Practically we have not been able to control the expenditures of our Federal Government or expenditures in any of our 48 States—I might say any of our thousands of tax units—by the democratic process of electing these supermen to office. We, who represent property owners, have learned this in that realistic school of increasing government needs and diminishing long-range economic thought. Theory and practice have been in conflict and theory seems to have taken the count.

In the past 10 years governmental costs have jumped from 13 percent of our total national income to 30 percent, and our total public debt, Federal and local, from $30,000,000,000 to the present all-time high of more than $60,000,000,000. Control of expenditures and debts, where it has existed at all, has resulted from tax limits imposed by States.

Today we find ourselves in the position of having property-tax rates in most States so high that they bring the saturation point within a normal vision; so high that they compare either favorably or unfavorably with

a totalitarian state. We have in most taxing units expenditures at a point where no known system of taxation will produce the required money, and we finance government by deferred taxes and mounting government debt. In my opinion, and in the opinion of most of us, taxes must be controlled by the same power that levies taxes—by statutory law or constitutional prohibition.

Over-all tax limitation is one of the objectives of this organization. And let me interpolate here my personal opinion that tax limitation, which necessarily limits the power of government, is the greatest safeguard of a capitalistic system. I favor, as I believe you favor, our system of progress. War and political compromise may and perhaps will prolong our present economic life, but tax limitation—limiting all exactions of government to the growth of production—is the only system which will preserve democracy and our free institutions.

Everyone, except those who hope for eventual socialization, favors tax limitation. We must either believe in tax limitation or in unlimited taxes. Even those who believe and hope for the eventual triumph of the State over the people who make up the State have not opposed a limit on any tax except that on property. Gas taxes, income taxes, insurance taxes, sales taxes, and every other tax except property taxes are limited by the enactments which levied them. Property taxes are left open in most tax-levying units, to absorb excess appropriations and for the deficits of economically irresponsible governments. The only tax which is not limited over all and at least by statute is the tax on real and personal property.

Strangely enough, with most of our people convinced that property-tax limitation is desirable, they hesitate to suggest or promote over-all limitation. Limitation is not an innovation. Today 48 States in some manner limit the property taxes which can be levied by their municipal subdivisions. County taxes are likewise limited by statute or constitutionally in all of 48 States. Yet only 9 States have over-all limitation.

It seems to me that knowing these things as we do and having committed ourselves to the principle of over-all property-tax limitation, there remains for us the task of convincing the voting public of three things:

1. That over-all tax limitation is practical.
2. That it is fair and in the interest of the public.
3. That it can be accomplished.

As to its practicability, I bring you the experience of one State—Washington. I live in this State; I know its problems, and I have been closely associated during the past 20 years with real property. I knew in 1921, the first year that Laurence Booth and Jim Wheeler, pioneers in tax limitation, first suggested tax limitation, that limiting taxes was not in accord with the best theories on the subject of taxes; that it was frowned upon by most of the so-called tax authorities. What I did not know, and what a lot of other people did not know at that time, was that it was the only method by which mounting taxes could be controlled and the right of private property in land preserved in a country of constantly expanding government. Last fall we conducted the fifth successful campaign; one that gave us a 3-to-1 majority for tax limitation. After 10 years' experience 70 percent of our people favor tax limitation. In our State we had reached the point of diminishing returns and also the point of confiscation. Our delinquency in 1932 reached an average of 30 percent. Under a tax-limit law it was reduced to 10 percent in 1940. Our average delinquency in 1932 does not correctly picture our condition. Certain governmental bills—for example, bond interest and redemption—must be paid regardless of collection, and we found counties and other taxing districts trying to get on with as low as 25 percent of the amount estimated and levied. Mounting delinquencies and no funds for local governments meant not only the confiscation of private property but the eventual collapse of local governmental units. These conditions have been corrected by tax limitation, and the shift of property taxes to other sources of revenue is pictured for you in the chart prepared by our State tax commission. In 1931 we had a total governmental cost in our State of, roughly, $100,000,000. Real- and personal-property taxes accounted for 79.5 percent of the total expenditures. And 17.35 percent of the total was from gasoline and motor-vehicle taxes, which might also be termed personal-property exaction.

In other words, almost 97 percent of our taxes were paid by the people who owned tangible property, property that was in sight and could not escape the eye of the collector. Income, intangibles, and other wealth were free from Government exactions. Our shift to other sources was not accompanied by an increase in total governmental cost notwithstanding the fact that during the past 10 years we have had to try to properly feed and clothe that one-third of our population who vote so solidly and consistently for an increasing share of the things the producers produce. We have more relief, better educational facilities, and more roads than ever before in the history of our State, and we are still keeping our totals within the 1929 limits. In addition, we have reduced our county debt by 46 percent, our State debt by 25 percent, and our school debt by 34 percent.

And we believe we know the answer to this question: Does property-tax limitation make other taxes? In our State, the answer is definitely "no." We find that 27 States have retail sales taxes, while only 9 have any over-all property-tax limitation; and we find that 20 of these States without property limitation have, in addition to the retail-sales tax, an income tax and other sorts of taxes not in vogue in our State. Our other taxes would have come without property-tax limitation; they will stay should the property-tax limitation be removed. We believe, and our experience has proven, that definite tax limitation is both practical and desirable.

As to the second point, tax limitation is fair and in the interest of the public. By fair I mean it is on an equality with other forms of taxation. Did you ever make a comparison? Figured from a 2-percent tax on a home valued at $6,000, you would pay $120 per year in taxes. Such a home would have an annual rental value of about $720, and the owner would be paying a 16-percent tax on gross income value for doing what social workers tell us is preserving the American home and standard of living. If he were renting his property, his tax on net would approach 40 percent. No one ever heard of such a tax on sales, on insurance, on intangibles, or on income. If there is an element of unfairness, it certainly, at least in the case of the home, is on the levying of such a tax.

Now let's look at commercial property—and that's the kind of property with which I am especially familiar. Most commercial property pays from 15 to 25 percent of its gross income to government, and in practically every city in the United States Government is taking in taxes from commercial property owners more than is being taken by the owners for their investment and for their management.

Is tax limitation in the public interest? One may as well ask if democracy and the right of private property is in the interest of the public. We believe that it is and we know when we glance at the record of the past 10 years that unlimited taxes mean the confiscation of private property in land. And this is not a new thought. Books have been written and organizations have been formed in advocacy of the principle of absorbing private ownership of land by excessive taxation, and every year the advocates of this system have made small gains which must eventually spell success unless the people who believe in private ownership, in personal liberty and in democratic government awake to the menace of expanding government and excessive tax levies against real property. Tax limitation is fair and in the public interest. It can be accomplished. Nine States have enacted over-all limitation laws. In my State we have repeated the experiment every 2 years since 1932 and at the last election, a campaign which I had the pleasure of directing, we carried the State by a majority of three to one and we won in every precinct in the State. This after 10 years' experience with tax limitation. Today we have practically no opposition except from those who stick to theories in the face of our practical experience and from those who believe that government should be all powerful and that personal rights must be sacrificed to the aggrandizement of the State.

How can it be accomplished? I know of only one way and that is to get out, organize and do it. Persuade your legislators if possible—and it's not probable that you can—initiate if you can and most of the States can. But do it while you still have more home owners than you have public employees and social workers—for you must always remember that tax limitation restricts the rights of those who live by government.

Taxation and Security

(Address by Dr. W. H. Husband, member of the Federal Home Loan Bank Board)

The decade of the thirties will long be remembered as a momentous turning point in the affairs of the Nation. Various opinions exist as to the final outcome of the changes which have taken place but such concepts of future prospects are at best tenuous, human forecasts. It is much more realistic to try to comprehend what has already taken place and to adopt a course of action which is related to the facts as we see them now. Of course, our own defense program and the war abroad take the spotlight and serve to divert attention from the problems of more normal living but, wherever possible, they should not be used as a cover for various maladjustments in our existing economy.

One of the most significant developments during recent years has been the quest for security. More than we realize, this search for certainty and freedom from risk has been in the minds of most people—rich and poor, the farmer and the city worker. It is for this reason that it would be a mistake to assume that the various reforms which have been set up to provide security affect only the well-advertised "lower third." Obviously, there is no such condition as perfect and ultimate security and we need only to look at the present hazards of war to recognize the stark reality of the many risks which will overhang our future lives. Nevertheless, in the interest of order and national progress, it is still important to do all we can to encourage the maximum security consistent with the American way of life.

Contrary to widespread and popular belief, the road to security is by no means an easy one. It is not paved by either good wishes or easy spending but instead is created only by sacrifice and thrift. Even those modern disciples who have advocated a campaign of more spending have simultaneously given support to various forms of savings. Representative of the latter are such well-known features as the present governmental insurance program for old age and retirement, and the insurance of deposits and savings accounts. Indeed, the very essence of security is an exchange of present use and enjoyment for later availability

and comfort. This principle applies equally to the programs of security provided directly under individual sponsorship as well as to those taking form under governmental auspices.

Some critics believe that undue emphasis is now being placed upon security and that more stress should be placed upon adventure and a willingness to assume greater risk. Undoubtedly there is much merit in this point of view, particularly when the search for security arises as a result of fear. However, when provision for security is positive instead of negative and is earned instead of bestowed, then it may well be one of the chief cornerstones of a strong nation. Unfortunately, too many people look to the Government to provide a security which in the last analysis can be obtained only through reasonable self-reliance. Not only are there great dangers to many of our familiar freedoms under a governmental setup which guarantees security for all, but its cost and administrative complexities stagger the imagination. It is in this sense that security means a cost or sacrifice of other values, and the primary question is by what means we wish to achieve it.

The most practical way, in my opinion, is to place the major responsibility upon the individual. At the same time, it should be expected that the Government would adopt policies and provide numerous facilities which could render material aid to the individual.

One of the chief means of obtaining individual security is found in home ownership. Imagine the impossible, if you will—a nation where everyone owned his own home, free of debt and without any taxes to pay. Could you ask more in the way of individual security or of national stability? The home and the nation would be so welded into a compact whole that no aggressor would dare attack it and, in addition, an important shock absorber would be provided against the stresses and strains of economic distress. This fiction of 100 percent home ownership is obviously impractical for many reasons and probably impossible of achievement in the world as we know it. Nonetheless, we can do much to lend every encouragement to those who do seek to provide this form of security and to avoid unnecessary burdens which penalize home ownership.

The Federal Government has already taken many steps to foster widespread ownership of homes. The Federal Home Loan Bank System and the Federal Housing Administration have been the means of providing both economy and convenience in the terms of financing. The Home Owners' Loan Corporation went even further and saved approximately 1,000,000 homes from foreclosure by directly advancing sufficient funds to refinance the outstanding indebtedness. However, the Home Owners' Loan Corporation is in reality more than a financial institution—it is a laboratory where the problems of individual home owners can be seen and analyzed in the light of actual experience.

True, it is a liquidating institution, but I have high hopes that through it many benefits will be passed along to individual home owners and to private lending institutions. Day in and day out, we are testing such familiar characteristics of home ownership as the terms of financing, the size of down payment, the scope and need for reconditioning, and of such indirect burdens as taxes and insurance. Besides, we have had all the familiar "aches and pains" arising from the management of individual properties.

To date, it has been my observation that one of the most serious deterrents to sound home ownership is that of an unfair tax burden. In the 8 years of operation of the Home Owners' Loan Corporation the total tax disbursements now amount to approximately one-sixth of the total original loans. An analysis of our tax accounts shows the following distribution:

Taxes and assessments paid and included in original loans	$230,598,089
Tax advances to original borrowers and vendee accounts	145,687,871
Taxes on acquired properties	67,788,696
Total disbursements for taxes	444,074,656

In addition to these taxes paid by the Corporation, a much larger amount has been paid by the borrowers themselves. If this were added to our own payments, the total tax bill would probably amount to approximately one-half of the total original loans made about 8 years ago. At times, some observers have been perplexed by the anomalous picture of a Government official criticizing taxes because it seemed to be a case of "biting the hand that feeds you." I believe that these facts will make the reason clear: Like any home owner, we pay taxes and do not receive them.

I should like to point out, too, that I criticize unfair taxation on homes not only because they are a burden upon the home owner, but because I believe they are equally a threat to the stability of local government. The home owner feels the effects immediately, but the taxing authority will suffer in the end just as sure as the sun rises and sets. Eventually, declining home values, curtailment of new construction, increasing vacancies, and many other familiar signs of a decaying real-estate market will become a burden instead of a source of revenue to the city. And unless many cities adopt constructive, reasonable tax programs, their policy of oppression will lead to inevitable bankruptcy. This sort of talk is not popular with many tax officials, but it is said solely to be helpful and in the interest of local and national security.

All too often property taxation is a relic of an earlier day more than it is a calculated financial process which is designed through careful planning to achieve the maximum benefits. Also, the tax rate is determined more by the pressure of expediency than as a factor to build a sound foundation for future community growth. But to command respect and to be effective, government must do more than direct our life by rule and regulation; instead, it must apply to itself those reforms and changes which are necessary to keep abreast of changing times. Specifically, I may suggest modernization of tax programs along the following lines:

1. Establishment of a fair ratio between the tax burden and the income return.

2. Provision of reasonable tax-servicing facilities.

3. Reasonable exemption for low-cost homes.

One of the most pronounced developments in the field of housing during the past decade has been the sharpening of the objective. In the twenties, new construction was more or less aimless and homes were constructed mainly because they could be sold. For the most part, demand was molded to houses instead of producing housing types which were determined by careful market analysis. The results of this policy are apparent in almost every city today—excessive vacancy of unwanted types, and large, expensive homes which are a drug on the market. Out of this, fortunately, has come a more careful appraising of housing needs and we are now trying to produce what the mass of our people really want—low-cost homes.

Thus far the concept of low-cost housing has been limited to the initial outlays for construction. However, to be complete, low cost must also embrace the ensuing operating costs of ownership. Indeed it is much more important to determine that the $3,000 to $5,000 house can be paid for and maintained than whether or not it can be produced. Already, many improvements in financial arrangement have been effected which will materially aid the liquidation of debt. For the most part, fair and equitable rates of interest have been established and the monthly payment for financing has been made to conform with the borrower's income. Unfortunately, comparable progress has not been made in many legal arrangements which affect home ownership and financing. The title search pays tribute to legal tradition more than it serves as a facility of sale; foreclosure costs and delays are a source of risk to both borrower and lender; and the tax structure is geared more to meet the financial needs of the taxing authorities than it represents the capacity of home owners to pay.

I am not ready to declare finally that all homes below an established minimum cost should be totally tax exempt, but I do think that the question is deserving of our most serious thought. In many respects, the issue is comparable to the application of a sales tax on such recognized necessities as bread, milk, and butter. Likewise, minimum shelter accommodations is equally necessary and much can be said in favor of a public policy which would lend every possible encouragement to low-cost housing. On the other hand, there is real merit in the argument that limited and reasonable taxation on these homes might well serve as an incentive of interest in local government. Probably no flat generalization on this subject is warranted but one cannot escape the correlation between the results of H. O. L. C. operation and the tax burden.

Whether it be pur coincidence or a condition of fundamental causal relationship, it is a fact that we have had a smaller percentage of foreclosures in those areas where taxes were either exempted or established at more reasonable levels. For example, the foreclosures in Florida amount to approximately 9.3 percent of the original loans made in that State; in New Jersey, where prohibitive tax schedules are frequently found, the percentage is 35.3. Again, Georgia, which has partial tax exemption, has a percentage of 11.8, while a comparatively high-rate State like New York has 37.5 percent. I would be the first to recognize that many other factors, such as business conditions, population trends, costs of construction, etc., would undoubtedly have a direct bearing upon these results, but, at the same time, it is also possible that the tax rate may have exercised serious "termite" influence upon the self-same factors.

It is difficult to determine the ideal tax rate, but certainly it may be said that taxes should be scrutinized and studied just as much as the charge for interest. Indeed, it would appear that we have reached a point where further pruning of the interest rate may be detrimental to the best interests of home ownership. In many areas the cost of funds to the home owner has been cut in half but taxes seem to go merrily upward in a spiral irrespective of supporting values. In the Home Owners' Loan Corporation portfolio, there are many loans in some States where the monthly tax accrual exceeds the total installment for both interest and principal. Obviously, there is little incentive under these conditions to liquidate the financial indebtedness because the home owner will still be left with an intolerable burden.

For the country as a whole, annual taxes represent about 2.7 percent of the amount of original loans made. Keep in mind that these loans were made on a formula which permitted them to be equal to 80 percent of an average of current market, cost of repro-

duction less depreciation, and the capitalization of the average rentals for the preceding 10-year period. As a result, our original loans often exceeded market value and were generous, to say the least. To show the range of tax burden in relation to the amount of original loans, the following table is of interest:

Ratio average annual tax to average original loan

Percent:	Number of States
0 to 0.9	1
1 to 1.9	15
2 to 2.9	13
3 to 3.9	12
4 to 4.9	7
5 to 5.9	1
Total	49

Another way of measuring the tax burden upon home owners is to compare it with the interest charge—that is, the cost of capital. As you know, home-financing institutions are increasingly arranging for the monthly collection of taxes so as to avoid the hazards of a lump-sum annual payment. In the case of H. O. L. C. more than 390,000 accounts have been set up on this basis. An analysis of these accounts shows the following relationship between the monthly tax accrual and the monthly interest charge:

Ratio of tax and insurance monthly installment to interest installment

Percent:	Number of States
20 to 39	6
40 to 59	5
60 to 79	10
80 to 99	18
100 to 119	7
120 to 139	1
140 to 159	2
Total	49

Such statistics as the foregoing reflect clearly the significance of taxes as a cost of home ownership. However, in taking steps to secure better balance in the distribution of these costs, our opposition must be constructive and helpful. Cities are burdened with operating and financial costs which must be met and their dependence upon property taxation as a source of revenue is generally recognized. Therefore in suggesting revision of existing tax structures we must do so with full recognition of the rights and responsibilities of both sides. There must be careful marshaling of the pertinent facts and it must be recognized that the time interval required for adjustment may call for patience and understanding.

The second proposal has to do with the establishment of a fair ratio between the tax burden and the income return. One of the most widely accepted principles of taxation is the ability to pay—and certainly such ability is determined more by income than it is by the incidence of ownership. In earlier days there was often a measure of justification for a direct tax on the property because appreciation of values was normally anticipated and because at that time tangible property was a more reliable index of wealth. Today, however, there is less likelihood of any continued and major advance in property values, and especially in the case of homes. Moreover, such a basic item of necessity as a home should not be a trading medium for purposes of speculation, and, in the long run, it is not good business to sell homes on the basis of a possible increase in values. Frankly, we need to sell homes for what they are—long-time consumption goods which normally depreciate and must eventually be replaced.

It may be contended that the consonance between property values and the income return should cause little difference as to which base is used for purposes of taxation. Undoubtedly, there is much truth in this principle as it relates to market values, but, unfortunately, there has been a failure to adjust assessed values to reflect the pronouncements of the real-estate market. It is not easy to assemble mass statistics to measure the extent of the discrepancy, but I have seen innumerable cases where the assessed value exceeds many times the current appraisal of a property. One case comes to mind of a property which was appraised at approximately $5,700, but its tax value was $20,500. Upon application for relief the assessed value was generously dropped to $19,500, only to be restored to $20,500 the following year.

To give evidence on a wider scale, the following facts about the tax factor in the management of H. O. L. C. properties are offered:

State of New York: 145 single-family properties—taxes were equal to 33.1 percent of the gross rental; 224 multiple-family properties—taxes were equal to 23.5 percent of the gross rental.

State of New Jersey: 57 single-family properties—taxes were equal to 31.7 percent of the gross rental; 57 multiple-family properties—taxes were equal to 30 percent of the gross rental.

Such consolidation of results means that many properties had a tax ratio well in excess of the average, while others, of course, must have been less than the average. In the 2 States combined, 15 properties showed a ratio of taxes to gross rental in excess of 50 percent, and 40 properties ranged from 40 to 50 percent.

Turning briefly to other geographical areas where the H. O. L. C. had sufficient concentration of holdings to warrant reasonable general observation, the following data covering single- and multiple-family properties in Chicago and Kansas City are presented:

Chicago: An analysis of 76 properties shows the ratio of taxes to gross rental of 20.5 percent, ranging from 16.1 percent in the west zone to 25.5 percent in the north zone.

Kansas City, Mo.: An analysis of 54 properties shows that taxes were equal to 26.4 percent of the gross rental income.

In many fields of business enterprise it is frequently regarded as startling news when the taxes equal or exceed the return upon investment. In comparison, real estate is being crucified upon a cross of taxes. Fortunate indeed is the management which can show any return at all upon real estate, and especially if allowance is made for all overhead, including depreciation and the cost of capital. Under the circumstances it is little wonder that many financial institutions make it a policy to dispose of real-estate holdings as rapidly as possible. In turn, such rapid liquidation precipitates a depreciation of values which is more or less continuing in character until the liquidation program is completed. One of the weakest elements in the whole real-estate market today has been the inability to clean up the enormous real-estate overhang which has existed from the early thirties.

It is because of such conditions as the foregoing that I offer the second suggestion for tax reform, namely, that the tax rate should be established on the basis of income instead of being levied on the basis of an assessed value which is usually obsolete. In an earlier period little harm was done because it was common practice to establish a tax value which was usually less than the market value. Today the opposite relationship is not uncommon, and properties are being taxed with little regard for their current position.

Probably the chief cause of resistance against the use of income as a base for property taxation is the fact that in this country the valuation approach has been established by long tradition. However, such a reason represents an interesting bit of archeology, but it is sadly deficient as a premise of economic activity. In the latter, income is a primary determinant of success or failure, and this applies to the field of real estate as well as it does to manufacturing companies, public utilities, and the many other categories of business enterprise. In brief, the present system of property taxation too often fails to distinguish between the dead and the living.

Obsolescent properties are not given a reasonable chance of recovery because the prohibitive tax load acts as a taboo on needed reconditioning and seriously undermines any opportunity for a reasonable return upon investment.

Not only does the use of rental income as a basis for taxation make it possible to give a better deal to property owners but, in addition, it offers many advantages to taxing authorities. The appraisal of property is a costly operation and wide differences of opinion of valuation indicate the possible inequities under the present system of establishing a tax base. In contrast, the task of computing rental income is simple and there is surprising uniformity of results. Of course many city and State officials would say that the pressure of debt and the need for operating revenue would make it exceedingly hazardous to change the basis of property taxation at this time, but this response is not satisfying because it is neither constructive nor based upon the development of a sound future position.

Finally, to keep pace with these changing times, taxing authorities should consider carefully the need for adequate and well-organized servicing facilities. Foreclosure, once recognized as a positive remedy of tax and loan delinquency, is now being viewed in its true perspective—a tragic burden on the home owners and a form of pyrrhic rescue to cities and mortgagees. It is true that there will always be some need for this drastic remedy but we need to achieve a condition where it may be said that foreclosure was at least not the result of failure to service loans properly. Only by a comprehensive servicing arrangement can consideration be given to other alternatives of relief.

To bring the present tax picture into focus, it may be observed that all too often taxes are "received" more than they are "collected." Collection implies the exercise of due care and responsibility on the part of the taxing authority, while the act of receiving places the burden primarily upon the taxpayer, with the taxing authority playing a relatively passive role. What is needed is aggressive and organized servicing: Prompt and regular billing of taxes due; provision for installment payments where necessary; and studied revision of excessive penalties which discourage the regaining of a current status once the taxpayer is in arrears. All this costs money now, but it will save money in the end.

There can be little doubt that in the future the total tax burden will be greater than ever before in our history. The inevitable quality of this outlook means that little is to be gained by irrational complaint or giving vent to more popular "griping." However, the size of the tax load does make it imperative that it be distributed fairly and with due consciousness of the ultimate results. It is from this balanced point of view that I believe taxing authorities should lend a sympathetic ear to the cries of distress on account of property taxation. Large areas today are being blighted not simply because of deteriorating neighborhood encroachment but also because of the tax burden, which any sensible person will avoid whenever the opportunity presents itself. Also at stake is the security of individual families, cities, and our whole governmental structure. May heed be paid to the latent and existent dangers before it is too late.

H. R. 2794

EXTENSION OF REMARKS
OF
HON. JAMES A. SHANLEY
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

STATEMENT AND REPORT ON BILL TO APPOINT SONS OF DECEASED VETERANS TO MILITARY AND NAVAL ACADEMIES

Mr. SHANLEY. Mr. Speaker, I am taking advantage of my unanimous consent to include in my extension of remarks an explanatory statement of H. R. 2794 and its companion bill in the Senate, S. 658.

I also include the report of the Senate bill which passed that body and is now over here for disposition.

The statement and report follow:

H. R. 2794—EXPLANATORY STATEMENT

[A bill authorizing appointments to the United States Military Academy and United States Naval Academy of sons of soldiers, sailors, and marines who were killed in action or have died of wounds or injuries received or disease contracted in line of duty during the World War]

The act of June 8, 1926, which this bill amends, increased the number of cadets at the United States Military Academy and number of midshipmen at the United States Naval Academy by 40 at each institution and provided that appointments to fill the vacancies created by the act should be made by the President from among the sons of officers, soldiers, sailors, and marines who were killed in action or died piror to July 2, 1921, of wounds or injuries received or disease contracted in line of duty during the World War.

The appointment under this act corresponds to those made by the President from among enlisted men of the Army, Navy, and National Guard. They in no way affect congressional appointments or those made upon recommendations of Senators and Representatives.

The youngest of the possible beneficiaries of the act of June 8, 1926, was born in December 1921 and has now passed his nineteenth birthday. After 1941 he will be too old to enter the Naval Academy, and after 1943 too old to enter the Military Academy. This act, unless amended, will thus expire by its own limitation in 1943.

The purpose of the act of June 8, 1926, was to provide educational and professional opportunities for a limited number of sons of those who sacrificed their lives for the country in the World War. The increase in the authorized number of cadets and midshipmen was incidental to this primary purpose.

The limiting date, July 2, 1921, specified in the act, is more or less arbitrary. The son of a veteran who has died since that date of a service-connected disability is just as much entitled to assistance as one of a veteran who died prior to that date and after his discharge from the military or naval service. This was realized at the time the act was passed, but it was felt that some limit should be placed upon the number made eligible for these comparatively few appointments. This was accomplished by confining the appointments to sons of those who were killed or died during the legal period of the World War.

The number of eligibles, originally more than 6,000, is now 594 for appointment to the Military Academy and 57 for appointment to the Naval Academy. Next year, all will be too old to enter the Naval Academy, while the number still eligible for the Military Academy will be only 201.

This bill (H. R. 2794) extends the provisions of the act of June 8, 1926, to include the sons of those who have died since July 2, 1921, or may hereafter die, of a World War service-connected disability, or, to use the language of the bill, "of wounds or injuries received, or disease contracted, or preexisting disease or injury aggravated, in line of duty during the World War."

The records of the Veterans' Administration show that there were on December 31, 1939, 19,639 sons of veterans who have died since the World War of service-connected disabilities. These boys range in age from infancy to 21. The number rendered eligible under this bill who will desire to take the examination, in any one year, for appointment at the Military and Naval Academy is, of course, problematic, but, judging from the experience with the examinations under the original act, it is believed that it will not be so great as to render the administration of the act impracticable or burdensome.

[Act of June 8, 1926 (44 Stat. 704; U. S. C., title 10, sec. 1091a and title 34, sec. 1036a)]

The number of cadets authorized by law prior to June 8, 1926, at the United States Military Academy, and the number of midshipmen authorized by law prior to June 8, 1926, at the United States Naval Academy, are each hereby increased by 40 from the United States at large, to be appointed by the President from among the sons of officers, soldiers, sailors, and marines of the Army, Navy, and Marine Corps of the United States who were killed in action or died prior to July 2, 1921, of wounds or injuries received, or disease contracted in line of duty during the World War: *Provided*, That one-half shall be appointed from among the sons of officers and one-half from among the sons of warrant officers, soldiers, sailors, and marines of the Army, Navy, and Marine Corps.

PROPOSED CHANGE

That the number of cadets now authorized by law at the United States Military Academy, and the number of midshipmen now authorized by law at the United States Naval Academy, are each hereby increased by 40 from the United States at large, to be appointed by the President from among the sons of officers, soldiers, sailors, and marines of the Army, Navy, and Marine Corps of the United States, including members of the Army Nurse Corps (female) and Navy Nurse Corps (female) employed in the active service by the War Department or Navy Department, who were killed in action or have died, or may hereafter die, of wounds or injuries received, or disease contracted, or preexisting injury or disease aggravated, in line of duty during the World War: *Provided*, That the determination of the Veterans' Administration as to the cause of death shall be final and conclusive and shall be binding upon the Secretary of War and Secretary of the Navy, respectively.

The act of 1926 authorized 40 additional cadetships for the United States Military Academy and the United States Naval Academy to be appointed by the President from among the sons of officers, soldiers, sailors, and marines of the Army, Navy, and Marine Corps of the United States who were killed in action or died prior to July 2, 1921, of wounds, or injuries received, or disease contracted in line of duty during the World War; 20 to be appointed from among the sons of officers and 20 from among the sons of warrant officers, soldiers, sailors, and marines of the Army, Navy, and Marine Corps.

The proposed changes in the act of June 8, 1926, remove the limiting date of July 2, 1921, when World War officers, soldiers, sailors, and marines shall have been killed in action or died of wounds, injuries, or disease, and make the law applicable to those who were killed in action or have died and may hereafter die. It also includes sons of members of the Army Nurse Corps (female), and Navy Nurse Corps (female) employed in the active service by the War Department or Navy Department. Further change is a provision that the determination of the Veterans' Administration as to the cause of death shall be final and conclusive and shall be binding upon the Secretary of War and Secretary of the Navy.

The War Department estimates that the additional cost to the Government would be $25,290. This figure covers 24 cadets at $1,053.75. During the past 5 years an average of 16 cadets only were appointed under the act of June 8, 1926.

The Navy Department estimates that the additional cost to the Government would be (year 1942), 37 cadets, $65,305.

Heretofore both the War and Navy Departments have recommended against such legislation, principally due to the difficulties involved in determining eligibility of candidates for appointment under conditions imposed in the act of June 8, 1926, but since the Veterans' Administration must determine the cause of death, the Departments favor the enactment of this measure.

War Department report follows:

REPORT TO ACCOMPANY S. 658

The Senate Committee on Military Affairs, to whom was referred the bill (S. 658) authorizing appointments to the United States Military Academy and United States Naval Academy of sons of soldiers, sailors, and marines who were killed in action or have died of wounds or injuries received or disease contracted in line of duty during the World War, having considered the same, report favorably thereon with recommendation that it do pass.

This bill is designed to amend the second paragraph of the act of June 8, 1926. The language in the act and the proposed change are shown below:

WAR DEPARTMENT,
Washington, March 15, 1941.

Hon. MORRIS SHEPPARD,
Chairman, Committee on Military Affairs, United States Senate.

DEAR SENATOR SHEPPARD: The War Department favors the enactment of S. 658, a bill authorizing appointments to the United States Military Academy and United States Naval Academy of sons of soldiers, sailors, and marines who were killed in action or have died of wounds or injuries received or disease contracted in line of duty during the World War.

The purpose of the proposed legislation is to amend the act of June 8, 1926 (44 Stat. 704). Briefly stated, that act increased by 40 the authorized number of cadets at the United States Military Academy and midshipmen at the United States Naval Academy, and provided that such additional appointments be made from among the sons of officers, soldiers, sailors, and marines, who were killed in action or died prior to July 2, 1921, of wounds or injuries received, or disease contracted in line of duty during the World War. In view of the limiting date, July 2, 1921, prior to which the fathers of eligible candidates must have died, coupled with the statutory age of 22 years for admission to West Point, this source of appointment will lapse in 1943. The effect of S. 658, if enacted, would be to continue to provide vacancies

for eligible among the sons each year to fill the 40 cadetships provided by the act of June 8, 1926. Thus a source of appointment would remain open to these young men which otherwise would fall within the next 2 years.

The War Department has previously recommended against the enactment of several bills designed to continue these 40 vacancies beyond 1943 because of the administrative difficulties involved. Although certain provisions of S. 658 were embodied in varying degrees in previous bills, the present measure contains a proviso, which would remove much of the administrative difficulty heretofore stressed by the Department as an objectionable feature. This provision reads as follows:

"That the determination of the Veterans' Administration as to the cause of death shall be final and conclusive and shall be binding upon the Secretary of War and Secretary of the Navy, respectively."

During the past 5 years there has been in attendance at the Military Academy an average of 16 cadets appointed under the act of June 8, 1926. In the event of the enactment of S. 658, it is believed that under its broad mandatory provisions all of the remaining 24 vacancies would be filled annually for a number of years by appointments from sons of deceased veterans and nurses. The estimated additional cost to the Government for these 24 cadets would be $25,290 per annum (24 times $1,053.75).

The War Department has always been in accord with the purpose of proposed legislation whereby the dependents of World War veterans might continue to share in the benefits provided by the original act. As S. 658 specifically provides that the determination of the Veterans' Administration as to the cause of death shall be final and conclusive, thereby greatly simplifying the War Department's administrative processes in considering the eligibility of candidates for these particular appointments, it is recommended that this bill receive favorable consideration.

The foregoing sets forth the views of the War Department only. The proposed legislation pertains also to the Navy Department.

The Bureau of the Budget advises that there is no objection to the submission of this report.

Sincerely yours,

HENRY L. STIMSON,
Secretary of War.

Navy Department report follows:

NAVY DEPARTMENT,
OFFICE OF THE SECRETARY,
Washington, March 19, 1941.

The CHAIRMAN, COMMITTEE
ON MILITARY AFFAIRS,
United States Senate,
Washington, D. C.

MY DEAR MR. CHAIRMAN: Further reference is made to your letter of February 4, 1941, in which you request the views of the Navy Department in connection with the bill (S. 658) athorizing appointments to the United States Military Academy and United States Naval Academy of sons of soldiers, sailors, and marines who were killed in action or have died of wounds or injuries received or disease contracted in line of duty during the World War.

The general purpose of this bill is as stated in its title.

The act of June 8, 1926 (44 Stat. 704; U. S. C., title 10, sec. 1091a and title 34, sec. 1036a), increased by 40 the number of cadets and midshipmen authorized by law at the Military Academy and the Naval Academy, respectively, to be appointed from among the sons of officers, soldiers, sailors, and marines who were killed in action or who died as a result of wounds or injuries received or disease contracted in line of duty prior to the official termination of the World War on July 2, 1921.

The bill S. 658 would, among other things, remove the prohibition against appointment of sons of veterans who died subsequent to July 2, 1921, extend the category of those whose sons are qualified for appointment under the act of June 8, 1926, to include members of the Army Nurse Corps and the Navy Nurse Corps, and provide that the determination by the Veterans' Administration as to cause of death shall be final and conclusive in determining eligibility of candidates for appointment.

The Navy Department has heretofore recommended against proposed legislation of this character due, principally, to the difficulties that would necessarily be involved in determining the eligibility of candidates for appointment under the conditions imposed by the legislation under consideration at the time. This ground for objection to legislation of this nature has been removed by the inclusion in the bill S. 658 of the provision with respect to the determination by the Veterans' Administration as to the cause of death.

In view of the above, the Navy Department interposes no objection to enactment of the proposed legislation.

The estimated additional cost to the Government for the ensuing 4 years which would result from the enactment of this bill is as follows:

Cost for 1942: 37 average number of additional midshipmen, $65,305.

Cost for 1943: 37 average number of additional midshipmen, $65,305.

Cost for 1944: 38 average number of additional midshipmen, $67,070.

Cost for 1945: 38 average number of additional midshipmen, $67,070.

This estimate is based upon the assumption that all 40 appointments will be filled during the calendar year 1941.

The Navy Department has been advised by the Bureau of the Budget that there would be no objection to the submission of this report.

Sincerely yours,

(Signed) JAMES FORRESTAL, *Acting.*

Embattled Farmers Fight for Rural Electrification

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

Mr. RANKIN of Mississippi. Mr. Speaker, while the battle for rural electrification goes on, the interference of the private power interests continues.

I should like to direct the attention of the Members to a situation within 40 miles of this Capitol, where a private utility is making a desperate effort to maintain an ancient monopoly to the detriment of the farmers of two counties.

More than 20 years ago, the Legislature of Maryland granted to the Potomac Edison Co., a subsidiary of the American Water Works Co., a franchise so broad in language as to embrace virtually the entire State. Since that time a public service commission has been created, and certain laws and regulations have been promulgated. Yet this company still insists on the principle that its monopoly still holds good, and that it has the exclusive right to determine whether the farmers in the northern part of Maryland shall or shall not receive electric service. Though this company has for years, and in spite of repeated requests, refused to grant service to thousands of farm homes except at exorbitant rates, it nevertheless contends in effect that no other company or agency has the right to serve within its area. That is a fair sample of the attitude of this ruthless power monopoly throughout the whole country.

The farmers of Frederick and Carroll Counties in the northern part of Maryland have made many efforts to get power. At a recent hearing before the Public Service Commission in Baltimore, they rose to their feet, one by one, and told of their efforts. They have petitioned individually and in groups, yet the power company was not interested. Farmers calling at the company's office were turned away with little or no information. Company representatives agreed to meet with groups of farmers, and then failed to show up. When compelled to quote rates, the company insisted that the farmers pay hundreds of dollars for construction of lines, which would belong to the company thereafter, and in addition agree to pay monthly minimum bills of $8 and $10.

As a result, even today, within 40 miles of our Nation's Capital, there are thousands of farm homes dependent upon kerosene lamps, hand-pumped water, and the farming methods of 50 or 75 years ago.

Last June these farmers at last found some hope of service. A cooperative association financed through the Rural Electrification Administration was organized in Adams County, Pa., just across the border. The farmers of Adams and several neighboring counties were going to have electricity at rates they could afford to pay. Immediately, the Frederick and Carroll County farmers asked the newly formed Adams Electric Cooperative to bring power to them across the State border into Maryland, and the Pennsylvania cooperative agreed.

Within a few weeks hundreds of Frederick and Carroll County farmers were signing applications for service. But suddenly the Potomac Edison Co., after 20 years of slumber, woke up.

No sooner had solicitors for the cooperative passed down a road than they were followed by power company employees. Within 24 hours the power company had 50 men in this area which it had neglected before. Within 48 hours carloads of poles and hardware were being dropped along the country roads.

Potomac Edison employees told newly signed members of the cooperative that they could never build their own lines. They told them that these cooperative lines would be weak and fall down in every storm. They told them that each consumer would be assessed heavily for any such damage. All of these things, of course, were completely false, the same old "fifth column" technique the Power

Trust has practiced to thwart rural electrification all over the country.

Their line-building crews came in and worked day and night. They built lines where they had few signed customers, or where they had no signed customers at all, and where there were not even any potential customers. These were spite lines intended solely to prevent the cooperative from constructing any lines of its own.

What happened to rates? Potomac Edison solicitors were apparently given full authority to set their own rates as they canvassed. Some farmers were offered minimums of $2.75; others as high as $6 and $7. The solicitors worked from early in the morning until midnight.

The farmers were not discouraged. They saw clearly that the actions of the company were unjust and probably illegal, and as free citizens of a free State they simply did not believe the company could get away with it. Harry Slattery, Administrator of R. E. A., reassured them by allotting $150,000 for construction of rural power lines in Frederick and Carroll Counties.

Through their attorney these farmers appealed to the Public Service Commission of Maryland to stop the Potomac Edison's construction of spite lines. Their appeal was well taken and well reasoned. As a cooperative they had no legal right to build any lines of their own until they had received authorization from the Public Service Commission. Yet the private utility company claimed the right to build wherever it chose, not to serve the public but to protect its monopoly.

For several hours the farmers presented detailed evidence. Yet at the end of the hearing the acting chairman of the commission stated simply that the commission's engineer had talked with representatives of the Potomac Edison and had reported that the company was complying with all rules and regulations. The acting chairman told the farmers that they had no rights, using those exact words. The commission then flatly refused to restrain the company in any way.

Working now against time, because new spite lines were going up every day, the farmers asked for permits from the roads boards of the two counties. Usually this is a mere technicality. The roads boards are charged solely with maintaining safety along the highways and with ascertaining that each new structure proposed constitutes no menace to safety. Such permits are granted to power companies and R. E. A. cooperatives quickly and as a matter of course.

But when the farmers went to the roads boards of Frederick and Carroll Counties in the free State of Maryland, there began one of the most astonishing performances by elected public officials that has ever come to my attention.

For weeks the roads boards did nothing at all; refused to take any action and refused to state any grounds for their delay, while the Potomac Edison Co. kept on building spite lines. The farmers replied by writing letters, attending meetings of the roads boards, and applying pressure in other ways. The attorney for the Carroll County Roads Board at last informed the cooperative attorney that the permit would be granted within a few days. Yet even this was only a way of gaining time for the power company. The permit never was granted. In Frederick County the attorney for that board explained the board's delay on nothing more complicated than his own absolute ignorance of the laws under which the board operated, and raised a number of legal questions so ridiculous that they would be laughed out of any court in the land.

Finally the Carroll County board wrote a letter to the cooperative. It stated that the board was going to give the power company 90 days in which to build all the lines it chose. At the end of that time the cooperative might possibly be granted a permit.

Thus for the past 3 months public officials of two counties have conspired with a private utility company to protect its monopoly. They have abdicated their duties to those who elected them.

The farmers, officials of the cooperative, and representatives of R. E. A. have stated repeatedly that their sole interest is in making sure that every farmer who wants service can get it. The R. E. A. has offered to withdraw from the area if the power company would only agree to serve every farmer that the cooperative would serve. But, with unusual frankness, officials of the power company have said that they are only interested in wrecking the cooperative and that they have no intention of serving every farmer in the two counties.

During the session of the Maryland Legislature a remedy was sought, a remedy too late to help the particular group in Frederick and Carroll Counties, but which would prevent similar situations in the future. Working with representatives of two existing Maryland cooperatives, 27 members of the house of delegates, including the speaker, introduced a version of the R. E. A. model act. This act includes what is known as a preemption clause. Under this clause a group of farmers, on signing up 50 percent or more of the unserved farmers in a given area and notifying the public service commission, are granted protection against any construction by private utilities in the area for 6 months and for an additional 12 months if the R. E. A. grants them a loan.

Then began a bitter fight to kill the bill without letting it come to a vote, for the demand of farmers in Maryland for power is such that few members of either house would dare to oppose such a measure publicly.

With the session nearing its close, the bill was delayed on the request of the utility lobby and hearings were postponed three times. Finally it came out of committee with a favorable report and passed its second reading. Late one night after the farmers and their representatives had gone home, Mr. John White, the floor leader, made a surprise motion to recommit the bill to committee. The farmers' friends went into action and administered to Mr. White what the Baltimore Sun called the worst defeat he has ever experienced. He withdrew his motion before it could come to a vote and the bill passed its third reading in the house. Between the house and the senate the bill was mysteriously lost and there was more delay until angry proponents of the measure compelled the opposition to find it. The senate committee delayed hearings and finally held one in the closing minutes of the session. Making a last-ditch stand, the opposition introduced 15 amendments to the bill which, if accepted, would have destroyed it. The senate committee accepted them, word for word.

With only 15 minutes remaining before the senate vote, the cooperatives' attorneys analyzed the amendments and found they could accept 12 of them safely. They prepared to fight on the other 3. After a bitter battle on the senate floor, the 3 destructive amendments were voted down and the measure passed the senate. So the bill is now awaiting the signature of the Governor and, though he has not signed it during the past 16 days, he has promised to do so.

But the farmers of Frederick and Carroll Counties who cannot be helped by this legislation because it comes too late, are making a last desperate stand to obtain electricity over their own lines. They are now pleading their case before the Public Service Commission in Baltimore, asking for a certificate of convenience and necessity which they must have in order to proceed.

The Potomac Edison has blanketed the entire area with lines. They have built more miles of line in the cooperative's territory in the last 5 months than they have built over their entire system in the last 5 years, but witness after witness has testified to the Public Service Commission that he signed with the cooperative first, and that even though the power company lines pass his very door, he has signed no contract with them and will sign none until the cooperative is actually dead. Witness after witness has testified that there are miles of power company line with no signed customers. Witness after witness has testified that the power company has not even asked for a service contract but merely for an easement enabling the power company to build the lines across his land.

The Public Service Commission of Maryland is known to be hostile. It has refused twice to assure the equality of the contesting parties by prohibiting further construction by Potomac Edison pending the outcome of the hearings, but the evidence is piling up. There could be little question as to the commission's action were it not for the fact that the power company lines have been built even though they are not serving the people the cooperative proposed to serve.

These two battles fought by the members of the Adams Electric Cooperative—one in Maryland and the other in Pennsylvania—are but illustrations of one startling truth: That a large number of private utilities have chosen this moment to renew their attacks on the R. E. A., that at this time when all good citizens are concerned primarily with matters of national defense, a large group of private utilities has resumed a campaign of de-

fense of their self-arrogated monopolies. They are once again raising the old battle cry, "we and we alone shall decide if farmers shall have electricity, and if we choose not to serve them, they shall not be served."

The people of Maryland and Pennsylvania ought to have the lowest electric rates in the world, and every farmer in those two States ought to enjoy the most abundant use of electric energy. Yet, last year, 1940, the people of Maryland were overcharged $14,747,000 for their electricity, and the people of Pennsylvania were overcharged $81,243,000, and the farmers in those States are having the battle of their lives to get any electricity at all.

The following article which appeared in Friday Magazine of April 25, 1941, is characteristic of the struggle the embattled farmers of America are now making, in order to secure electric service that has been so long denied them:

POWER COMPANIES HIDE THEIR LIGHT—FORGOTTEN FARMERS UPROOT TRANSMISSION LINES

Two-year-old Sonny Kann has never seen an electric light. When his mother, Mrs. Edwin Kann, of Shippensburg, Pa., makes his supper, she does it under the sputtering glow of an oil lamp. His dairy-farming father does chores by lantern, and if oil happens to run low they use candles. There is electric-line service only 500 yards away, but the Kanns would have to guarantee to pay $18 a month to get it. Private power trusts don't like to go even a few steps off the beaten track except for large fees. This situation led to the January 30 "post-hole battle," a farmer-utility fight that is still raging.

The Kanns are well-to-do, hard-working, native American stock, like their neighbors in rich, fertile Franklin and Cumberland Counties. The oil lamp is as much out of place in their modern home as horses would be pulling a 16-cylinder car. They have installed the latest type of plumbing, enjoy steam heat, and even have a telephone. But their radio is battery operated and a gasoline put-put motor drives their washing machine. This is because the Kanns, like 5,400,000 others, are skimmed milk to power trusts that want only cream.

Utility companies don't actually refuse service to the farmers. They simply make the cost prohibitive. They expect the farmers to pay all installation costs, furnish the poles and help set them, and then pay a hefty minimum every month. Farmers can hardly hope to clear much over their living expenses in an average year, and even with good crops they can expect to net no more than $500 for a year's work. So they can't afford the turn-on-the-switch luxury that is a commonplace in city homes. Some rig up their own little power plants, some plug along with the old oil and hope for a change.

Robust, red-cheeked Glen Mains, Jr., finished winter courses at Pennsylvania State College and set up dairy farming on his own. His biggest problem was lack of electricity. Pennsylvania Power & Light, utility serving his area, demanded a $12-a-month guarantee. Mains stayed on the candle circuit but began a check into Federal Rural Electrification Administration long-term loans to farm cooperatives. His check-up started a campaign that has already brought one hot farmer-utility clash in January and is now becoming a national issue.

Over in nearby Adams County, fruit growers were solving the electric-power problem. They formed the Adams Electricity Coop., Inc., borrowed $308,000 from the R. E. A., hired engineers and contractors, and prepared to serve themselves. They would own their own company; pay a $2.75 minimum a month. "That's what we need, too," said Mains.

Mains' neighbors agreed. Co-op fever spread like measles among local farmers, who realized more members meant lower rates. The Pennsylvania Power & Light got busy, too. Its agents visited farmers day and night, predicting the co-op would fold up. Minimum rates dropped like snowflakes. The power company bid for rights-of-way. Mrs. Fanny Horne sold hers. "They told me you had signed," Mrs. Horne explains to J. D. McCulloch, a farm neighbor. Deception had been used to get signatures, many charged. But McCulloch, son of Revolutionary stock, hadn't been fooled. He was one of two stubborn men, as they're now known throughout the countryside, who held out firmly. Their offer of a $50 bribe made him mad.

The other stubborn man was R. Boyd McCullough. Because these two refused rights-of-way, the P. P. & L. was forced to have bonds approved at county court before waiting crews could rush lines to areas mapped out for co-op planned service. During that delay the co-op filed a map with the public utility commission, preempting the territory where it had signed up a majority of potential consumers. Pennsylvania State law bans utilities from such construction, but P. P. & L. went right ahead.

As utility crews raced to put up poles in co-op territory, farmers took counsel with Attorney Daniel E. Teeter. "What'll we do if they put up poles in preempted territory?" they asked him. "The State law says that once the co-op has filed its map, the utility can't go in," Teeter told them. "If the crews start work, defend your property." The farmers hurried to the Big Spring area, a 4-mile stretch where activities centered, and got ready to block the lines that night.

Historic Big Spring mill was farmers' headquarters on January 30. "Don't let them dig a hole" was the watchword. But while landowners assembled with shovels, one gang of power company workers concentrated on the North Newton Township highway near J. D. McCulloch's property, and another worked near R. Boyd McCullough's land in West Pennsboro Township. Traffic, mostly utility cars, whizzed along usually deserted roads. Hundreds of utility men were at work. Farmers followed the company workers and shoveled dirt into holes as fast as they were dug. Sheriff Ira Dunlap came in to arrange a truce.

During the truce farmers warmed up inside the mill, talked about the co-op's rights and the utility's wrongs. "After refusing to serve us except at the highest rates, they're trying to put up spite lines, now that we're ready to serve ourselves," they said as they munched apples. They found out while talking that nearly all of them had just lately been offered a $2.75 minimum, same as the co-op's, now that the P. P. & L. saw that the farmers meant business. "But that's just a trick," they warned each other. "If we fall for that now and give up the co-op, the rates will go right up again. Anyway, we've the right to serve ourselves."

But the truce was one-sided. While farmers stayed inside the mill, the company had its crews continue to dig and set up poles. News came in that somewhere along the highway construction was still going on. Led by Glen Mains, Jr., the landowners poured out and prepared for action. "The Constitution gives us the right to defend our land and serve ourselves," they said. "No company is going to tell us we can't serve ourselves." While patrols set out to find where utilities might be working, the farmers burned up inside, built fires to warm up outside. There was tension in the air, and a spark could have set off a hot battle.

WHERE POWER COMPANY AND FARMERS MET

A few minutes later the co-op members found a crew setting a pole near the property of J. D. McCulloch. They got there too late to fill in the hole, so they did the next best thing. While some pushed utility workers to one side, others grabbed shovels and poured in dirt so loosely that the pole couldn't be planted firmly. P. P. & L. men took the fracas in good part; didn't lose their tempers. "This dirt is sure going to get worn out tonight getting shoveled back and forth," one of them said. The shovel fight lasted until 2 a. m.

That night persons unknown sawed down the pole that had been loosely set through farmers' intervention. D. A. Elias, P. P. & L. vice president, announced the company itself cut it down to avoid danger. Farmers just laugh when you mention it, because it's a serious thing to chop down utility property. But it stands near the 150-year-old farm of J. D. McCulloch, not far from historic Gettysburg, a reminder of the determination of the producers' co-op to fight this case out with the P. P. & L. even if it goes up to the United States Supreme Court. There is a good chance that the case will go that high. Since the January 30 "battle of the post holes," the P. P. & L. has stopped construction in territories preempted on the co-op map, but the struggle has been transferred to the State public utilities commission, where the Power Trust is challenging both Pennsylvania's law authorizing co-op preemption and the Federal law creating the R. E. A. All rural electrification is at stake.

Mrs. Guy Loy already has electricity in her farm home in Cumberland County. Her husband waited as long as he could, then reluctantly signed years ago with the P. P. & L. To get power he had to provide 27 poles, dig 32 holes, and help string the line himself. He figures installation cost him more than $300 and tells with some indignation how he had to struggle to pay the $16.80 which the company demanded for years as a monthly minimum. Recently it has dropped a little. Loy can never change over from the P. P. & L. to the Adams Co-op because the law setting up the R. E. A. forbids Co-ops' taking on private utilities' customers.

In spite of that, Loy is one of the strongest rooters the Co-op has, and he testified on its behalf before the Public Utilities Commission during hearings now pending. Practical farming can't be done successfully and profitably nowadays without power, says Loy, who has a reputation throughout the neighboring counties for knowing what he's talking about. Electric milkers, such as the one Loy's 9-year-old son uses here, mean fewer farm hands. Because the hen house is electrically lighted his hens lay more eggs in winter, when they bring the best price. "It means the difference between being in the black and going to the red," says Loy.

Cumberland's fight with the P. P. & L. is "the most important case ever to come before the Public Utility Commission," according to Commissioner Richard J. Beamish. If the company wins, he warns, every rural Co-op in Pennsylvania would be destroyed. Twelve such co-ops operate in the State now, serving 18,996 consumers. But interest extends beyond State borders. Maryland's Frederick and Carroll County farmers joined the Adams Co-op and are up to their necks in fights with Potomac Edison. Like all of rural America, they look for a co-op victory and a final decision defending producers' rights to use R. E. A. and give themselves electricity.

This battle must go on and will go on until every farm home in America is electrified at rates the farmers can afford to pay.

He that is not with us is against us, and I want to sound a warning now to every

Member of Congress, and to every elected official throughout the United States, that they are going to have to face this issue in the coming campaign.

I again call upon the Securities and Exchange Commission to enforce section 11 of the Holding Company Act, force these vast holding companies to release their grips on local utilities in order that the people's elected representatives may be enabled to see that the people are properly protected in their respective areas.

Let us put a stop to the racketeering of these ruthless utilities, develop the water power of the Nation, supply to the people of the country electricity at rates based upon the cost of generation, transmission, and distribution, and, as I said, electrify every farm home in America at rates people can afford to pay.

Food for Oppressed Peoples

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, April 29, 1941

ADDRESS BY HON. EDWIN C. JOHNSON, OF COLORADO

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address prepared by transcription to be delivered over a number of radio stations by the junior Senator from Colorado [Mr. JOHNSON].

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Greetings, radio listeners. As you hear my voice, 37,000,000 innocent people are desperately hungry. As I speak, the women and children and the helpless aged dependents of patriots who a few weeks ago stood by Great Britain's side in a gallant fight for man's right to be free face the horrors of starvation and pestilence.

Trapped between the millstones of the British blockade and the German armies of occupation, the God-fearing people of Belgium, Norway, Holland, Poland, and Finland—the kinfolks of 15,000,000 American citizens—are existing, in this very hour, literally on hope. The hope they cling to so desperately is that the United States of America, the great humanitarian Nation of the world, will hear their plea for food and will prevail upon Britain and Germany to work out an agreement for their relief.

What are we going to do about it? This country has assumed the responsibility of becoming the arsenal of democracy. We are proud to be known as the defenders of democracy and Christian civilization. How can we aid democracy's cause, call ourselves a Christian people, and at the same time callously allow the conquered democratic peoples of continental Europe to starve, without a vigorous protest? How can Great Britain seriously believe that by starving her former friends, and our friends, that she is entitled to our help? The United States is trying to keep the flame of democracy burning in the British Isles and in continental Europe, but that flame must surely go out in the conquered nations if they can only secure food by adopting the Nazi way of life.

America is willing to make great sacrifices for Britain's security, but I do not believe that any of us want to buy Britain's security (if we could buy it that way) at the cost of famine and pestilence and death to millions of our lifelong European friends. Britain cannot be made secure by starving the conquered nations of Europe. In the long run it will mean insecurity for her. If Britain and the United States condemn the peoples of the small democracies to starvation, future generations will shudder to read the pages of that black history. Be not mistaken. Time would reveal not only the immorality and injustice of such inhumanity toward Britain's former helpless Allies who resisted the enemy as long as they were able to do so, but it would reveal also the stupidity of that inhumanity.

These friends of ours and of Great Britain are starving because of the rigors of a blockade aimed against Hitler. However, it is rather generally agreed by military experts that a food blockade is not going to starve out Germany this time. Long before this war began, self-sufficiency had been one of Hitler's military objectives. Self-sufficiency was one way in which he prepared for war. While the democracies were "coasting," the Germans were accumulating food and guns. Realizing they had been beaten down in the last war through the food blockade, they determined that there would be no vital food shortage this time. Many thousands of additional acres of German land were put under cultivation, and a new high level of food productiveness achieved. Enormous food reserves were stored up, and the German population adopted a scientifically planned rations system for conservation purposes. We may not like to think of this phase of the situation, but while continental Europe never has produced enough food to supply Norway, Belgium, Holland, and France, Germany has the food with which to feed her own armies and her own civil populations. Therefore, the blockade, admitted a potent weapon of the war 20 years ago, is not inflicting fatal injury on Germany. Her people are not going to starve. In this war, the sharp edge of the blockade falls upon the victims of aggression, not upon the aggressor. Great Britain's friends, not her enemies, are its victims.

It is obvious that Hitler will not feed conquered nations and let his own armies and his own people starve. That is not his ruthless method. Some contend that if the small nations are left to starve, they will revolt. That is wishful thinking. These people have been disarmed completely. They cannot overpower a machine gun with wooden clubs, nor bring a bomber down with rocks. Well-fed people in this country smugly say, "It is noble to starve for the sake of democracy," but one cannot help wondering how the person who is being starved feels about it when he knows that the democracies aided and abetted his starvation.

It is my opinion that Germany is basically responsible for the plight of the people in the small democracies. These people, however, are daily being told over the German-controlled radio that the blockade imposed by Great Britain, the friend for whom they fought and bled, is responsible for their present hunger. It is useless to argue ideologies with people who suffer famine. They are concerned with empty bellies, not finely spun theories of government. Hunger breeds irrational and savage hates.

When Great Britain achieves victory, as we all want her to, she will need friends in Europe. The rehabilitation of Europe will be made a thousand times more difficult if the small democracies hate her for their mass starvation, as they are certain to do, since they know that Great Britain will not permit food to come in from their colonies and their usual sources of supply. How much better for Great Britain if these friends were still her friends after the war! How much better for the cause for which she fights if her former comrades-at-arms had not been alienated from her.

These are the realities of the situation confronting both Great Britain and ourselves. She cannot avoid her grave responsibility where her helpless hungry former Allies are concerned. Nor can we, as democracy's arsenal—Great Britain's arsenal—avoid our grave responsibility. The products of our munition plants make the blockade effective, and the whole world knows it.

I do not believe any American listening to me wants the people of the small democracies to starve; neither do they want Britain to go down. If I did not believe with all my soul that Great Britain's friends can be fed without helping Hitler, I would not be here urging relief for them. In my opinion, it can be done without a single crumb getting to Hitler and the German people. A workable solution to this problem has been advocated by the National Committee on Food for the Small Democracies, of which former President Herbert Hoover is honorary chairman.

This committee has not given up its fight to institute a relief program that will satisfy Great Britain. Millions of thoughtful, responsible Americans share its view that somehow, in some way the problem can, and must be met; and the sooner the better. Hunger cannot wait. The most recent proposal of the committee is that a trial feeding be made in Belgium where the situation is admittedly critical. There babies are dying from malnutrition, children are too weak to go to school, and the daily food ration of the population generally is less than one-third of the amount necessary to maintain physical health. Let a test be made in Belgium. Let us ascertain whether it is possible to feed the hungry without interfering with Great Britain's war effort, and without aiding Germany. Mr. Hoover states (and he is supported by the highest military authorities of the first World War, Gen. John J. Pershing, and Admiral William V. Pratt) that it can be done. Let's find out the truth, and stop these never-ending arguments.

The feeding test proposed for Belgium is that soup kitchens be established for 2,000,000 children and 1,000,000 destitute adults. The food would be eaten at the soup kitchens under the direct supervision of our own representatives. We would not only administer the relief, but we would guard and check imports and native stocks in such manner that no food could be diverted to the Germans; they having already agreed to cooperate in this test. Furthermore, they have agreed to cease taking food from Belgium, and to compensate her for that already pillaged. They have agreed to contribute 25,000 tons of bread grains a month to Belgium from their own stores, and not to bomb mercy food ships as they come through the blockade, one at a time. They have agreed that the whole feeding operation should be under neutral control.

So now, if Great Britain should also agree that the test be made, the hungry children of Belgium will be fed. And if the Belgian soup kitchen plan is successful, then a similar food-relief program can be safely extended to the other famine-stricken democracies, and 37,000,000 hungry people eventually saved from starvation.

If Great Britain were to sanction the Belgian experiment, and Germany were to break her word, as the enemies of the plan suggest, the program would cease instantly. The whole world, including the hungry, would know that full responsibility for their sad plight rested on Germany alone. The idealism of the British cause would be re-

fortified, and America's finest instinct as a humane people would have found expression.

We are told that it is our sacred duty to God and man to save democracy with our arms. I shall not argue that point, but if we must provide guns for democracy's fighting defenders, we should also provide food for democracy's vanquished former defenders. If one is to be done, both should be done; and both will be done, if Britain says the word. I believe Britain will say it. I believe that our great humanitarian President will exercise the unprecedented powers freely conferred upon him by the American people in this world crisis, and raise his voice in behalf of these helpless peoples. I believe that the way will be found whereby we can work hand in hand with our British neighbors to rescue their hungry friends.

America and Britain will then be entitled to pose as the champions of democracy and Christian civilization.

Our Western Front

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 29, 1941

ADDRESS BY WILLIAM C. BULLITT

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address entitled "Our Western Front," delivered by Hon. William C. Bullitt in behalf of United China relief. The address was delivered at Constitution Hall, Washington, D. C., on April 27, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

To speak of the Chinese is to stand before 40 centuries of history facing a people whose civilization was great before Athens existed or Rome was founded: A people who today are as young in courage as they are old in wisdom.

All the bitter roads of battle and starvation that mankind is now traveling have been trod many times by the people of China. However tragic a street of sorrow—the Chinese have been down that street before. They have survived because in physical endurance and intellectual power they are unsurpassed by any people on earth. They have grown wise because long ago out of the sufferings of centuries, they learned to be true to themselves in the face of death, and adopted in their hearts as well as their minds the maxim: "Better a broken jade than a whole tile."

Our own relations with the Chinese have been exceptionally friendly since the day in 1783 when Robert Morris wrote to John Jay: "I am sending some ships to China, in order to encourage others in the adventurous pursuits of commerce." The commerce was profitable, and the adventurers returned with stores of tea, silks, shawls, wallpapers, paintings—and porcelain so exquisite that in our country porcelain became known simply by the name "China."

The Emperor of China of that day, examining certain mechanical inventions brought by traders to exchange for the products of his cultivated empire, commented in a manner that prefigured the destiny of his country until the present century. Through his officials, the Emperor superbly stated:

"Our empire produces all that we ourselves need. Your mechanical toys do not interest us in the least. But since our tea, rhubarb, and silk seem to be necessary to the very existence of the barbarous western peoples, we will, imitating the clemency of Heaven who tolerates all sorts of simpletons on this globe, condescend to allow a limited amount of trading through the port of Canton."

The emperors and the people of China continued to despise the mechanical inventions of the western world and to look down on soldiers. Since a considerable portion of the inventiveness of the western world was devoted to the development of instruments of war, China became less and less equipped to combat foreign aggressors.

It was not until the birth of the Chinese Republic that the Government of China fully faced the fact that China must adopt the techniques of the west or perish. And it was not until 1927 that Generalissimo Chiang Kai-shek established the authority of the central government sufficiently firmly to begin large-scale modernization of China's way of life.

The 10 years that followed were years of enormous progress. Industries, railroads, paved roads, schools, colleges, laboratories, hospitals, were constructed with a speed that proved that the people of China had lost none of the qualities that had created their magnificent civilization.

The physical revival of China was accompanied by a moral and spiritual renaissance; a rebirth of patriotism and of the spirit of self-sacrifice, which finally found expression in the new-life movement under the leadership of Generalissimo and Madame Chiang Kai-shek.

China was well on the road to unity and strength—both moral and physical—when Japan struck. Indeed one of the chief reasons why Japan attacked China in 1937 was to stop the progress that China was making. The strength of China was growing so fast that the Japanese, who know that the Chinese are superior to them not only in numbers but also in endurance and intelligence, saw slipping away rapidly their chance to reduce China to the same condition of abject slavery that they had imposed on Korea.

There is an old and true French proverb which runs, "To govern is to foresee." Fortunately for the people of China, their Generalissimo Chiang Kai-shek foresaw that the Japanese militarists would not permit him and his colleagues to carry out in peace their program and task of rebuilding China. In the autumn of 1934, when I talked with the generalissimo in Nanking, he predicted not only how Japan would attack and where Japan would attack but also when the Japanese attack would be made, and he explained to me his plan to meet the attack by giving space in order to buy time—a strategy familiar to Americans, since it was the strategy that George Washington employed during our War for Independence.

The generalissimo predicted that he would lose battles, but would win the war. He said that he would establish the capital of China at Chungking, in Szechwan, where he now stands, and that he would never surrender. Like Washington, he has proved himself to be not only a great general but also a great statesman. He has not surrendered. He will not surrender.

The Japanese Army which attacked China was fully equipped with all modern instruments of war—heavy artillery, tanks, and airplanes. The forces of Generalissimo Chiang Kai-shek had no heavy artillery, no tanks, and only a handful of airplanes. The Japanese were so confident that they would win a few easy victories and that Chinese resistance then would collapse that the Japanese Prime Minister, Prince Konoye, announced, "In 3 months China will be beaten to her knees." The Japanese won victories, but they did not win them easily, and Chinese resistance did not collapse, even though the Chinese had to meet the attacks of airplanes and tanks with nothing but rifles, hand grenades, and stubborn courage.

When the Japanese discovered that although they could win battles they could not end the war, they attempted to break the Chinese spirit of resistance by the infliction of unspeakable atrocities on the civilian population. Men and boys were lined up alive for bayonet practice by the Japanese soldiers. Whole towns and villages were burned and every woman in them raped. Chinese captives—civilians and soldiers alike—were soaked with gasoline and burned alive. Fifty million men, women, and children were driven from their homes. But the spirit of the Chinese remained unbroken.

After nearly 4 years of war that spirit is still unbroken. The Japanese Army has suffered a million casualties and today more than a million Japanese soldiers are bogged down in China, unable to advance to victory, unable to retreat without acknowledging defeat.

The eyes of Americans are turned toward Europe by events so tragic that we are apt to forget that for every man who has died resisting aggression in Europe, 10 have died in China; and that no men have ever risen to greater heights of epic courage than have the Chinese.

By the agreement that Japan signed in Berlin on September 27, 1940, with Germany and Italy, she leagued herself with the totalitarian dictators against us and all other nations that live in freedom. We have not yet been attacked by Germany, Italy, and Japan for one reason and one only—they have not been able to get at us. The British have held the forces of Germany and Italy on the other side of the Atlantic, and the Chinese have kept the Japanese so fully occupied that they have hesitated to add a sea war against the British or ourselves to their land war with China. By draining the energies of Japan, the Chinese have rendered and are rendering today a far greater service to the people of the United States—and of Great Britain—than any service that we have even rendered to them. The Chinese, no less than the British, are fighting battles which are the making of our security.

How long can the Chinese continue to fight our fight unless they receive more help from the United States than they are now receiving? Longer certainly than any other people could under the scourge and burden of like sufferings. But, just as the courage of the Greeks has not availed against the planes and tanks of the Nazis, so, unless greater material aid can be delivered to China, all the courage of the Chinese may not avail.

During the past few months the Japanese have occupied portions of French Indo-China, and have cut the railroad by which the Chinese received a large portion of the supplies they imported from overseas. The Burma Road, which has become the vital Chinese line of supply for instruments of war, can now be bombarded by Japanese aviators. If Japan should be able to occupy Burma, no military supplies from overseas could reach the Chinese armies. Only the long land route to the Soviet Union would remain open, and now the Soviet Union has signed an ominous agreement with Japan. This pact, in effect, gives Soviet assent to Japan's seizure of the Chinese Province of Manchuria, in return for Japan's assent to Soviet seizure of the Chinese Province of Outer Mongolia. No one is so naive as to believe that Japan and the Soviet Union have become friends. But by this agreement, these two countries have at least become brother bandits at the expense of China.

The Chinese believed that because they were fighting the Soviet Union's fight against Japan, they could count on the support of the Soviet Union to the bitter end. Now they have seen Stalin embracing Matsuoka on the platform of the railroad station in Moscow and breaking his promise to respect forever the sovereignty of China over all parts of China. They have seen the Soviet dictator promising Matsuoka that if Japan should become engaged in war—that is to say, in war with the British or ourselves—the Soviet Union would remain neutral. One hope of China has always been that in the end the Soviet Union would give China effective military support against Japan. The Chinese now see this hope in eclipse. Moreover, they are obliged to fear that even the trickle of supplies which now reaches them overland from the Soviet Union may be cut off—if Hitler so orders. For behind Stalin's agreement with Matsuoka lies Stalin's fear of Hitler.

The Soviet pact with Japan is Hitler's gift to the Japanese militarists. Now that Hitler's army and air force are on the Rumanian frontier of the Soviet Union, ready and able to cut Stalin off from the wheat of the Ukraine and the oil of the Caucasus, the Soviet dictator, cringing in his Kremlin, takes orders from the dictator in Berlin. And Hitler wants Japan to feel free from all danger of attack by the Soviet Union because he hopes that the Japanese militarists, feeling their flank protected, will, beguiled by his agents, dare at last to assault the British and Dutch possessions in the East and became involved in war with the British Empire and the United States.

Some Americans, with the same perverted view of human nature that made them consider Mussolini a great lover of peace and the hope of Europe, have recently been dreaming of Stalin as the great defender of the democracies against Japan and Germany, and have been trying to seduce him into an affectionate embrace. But Stalin has preferred to embrace Matsuoka. The Soviet pact with Japan will bring some gain if it makes all Americans realize that the Communist State is the enemy of all men who live in freedom, and that we as a nation can aid China in just one way—by helping her directly and doing it ourselves.

Our Government can help by financial aid and by the effective delivery to China of arms, munitions, and airplanes. We, as individuals, can help by giving all that we can give to the United China Relief.

Every dollar that is given to bind up the wounds of a Chinese soldier is a dollar given to aid a man who by fighting the fight of his own country has been contributing to the defense of all democracies. Every dollar that is given to help stamp out war epidemics of cholera, dysentery, typhus, and typhoid in China is a dollar given to strengthen the resistance of 400,000,000 people to an armed force that but for them might readily be turned against us. Every dollar that is given to build up the small cooperative industries which are being founded in Free China to increase production for the Chinese Government and the Chinese people pays for instruments to hold in check the men who have declared themselves our enemies. To help the Chinese is to help ourselves. They are fighting the battle of freedom and of free peoples, on what is literally—in a strategic sense—our western front.

All that we give to the United China Relief now will go to men, women, and children whose virtues have not changed since they were described twenty-two hundred years ago by the old Chinese poet Chu Yuan in these words:

"Though their limbs were torn, their hearts could not be repressed.
They were more than brave; they were inspired with the spirit of valor.
Steadfast to the end, they could not be daunted.
Their bodies were stricken, but their souls have taken immortality—
Captains among the ghosts, heroes among the dead."

We Americans, like all other peoples on this earth, face a tragic destiny. The dictators have abolished neutrality. To be neutral is to become their future victim. We cannot get off this planet; and Hitler, with Mussolini and Stalin in leash, and the Japanese militarists as gun bearers, is out to destroy us and all other peoples that live in freedom. He and his accomplices will not stop. They can only be stopped—stopped with shot and shell.

We have been hoping that the British and the Chinese, with material assistance from us, could stop the dictators without intervention of our armed forces; but we have not had the foresight or the will to produce a sufficient quantity of ships, airplanes, and other instruments of defense for the nations that, by defending themselves, are protecting us. For the past year we should have been producing as fast as if we were at war. We have done nothing of the sort. Even now we tolerate delays and continue to behave as if our motto were: "Too little and too late."

The British and the Chinese are hard pressed. For our own salvation we must turn all our strength into producing instruments of defense for them and for ourselves. We must not only produce but also deliver the goods. If we hesitate and vainly hope for temporary safety, then we shall surely perish. Do we look for peace with Hitler? He honors his peace agreements by attack in the night. Do we look for mercy? He shows his mercy with a bomb.

We have heard, to be sure, a knight of Hitler's Order of the German Eagle, telling us that we ought to stop helping the British and the Chinese and then everything would be all right. We should save our skins without having to fight. We should have peace.

What sort of peace?

We know that many states of South America are waiting only for the disappearance of the British Navy to turn totalitarian and invite the economic and military cooperation of the dictators. We know that if the British Navy should be eliminated we would soon see a totalitarian army and a totalitarian air force in South America, and that all Europe, all Asia, and Africa as well, would be organized against us. What peace could we have then? Democracies await incidents. Dictators make them.

Peace?

We could have peace at the price of submission to Hitler's will; at the price of accepting a puppet fuehrer in our country. We could have peace at the price of putting our churches under the heel of Hitler and our children into the hands of Goebbels for education in the creed of satan. We could have peace at the price of abolishing our press and our right to speak our minds. We could have peace at the price of tearing up our Declaration of Independence and our Constitution. We could have peace at the price of slavery.

I think that at that price we shall never have peace. I think that there is in America something which grew here, long before Hitler's Knight of the German Eagle was born—and that is liberty. I think that out of our soil and out of our sky there has grown a freedom which has opened the gates of hope not only to the people of this country but to the peoples of all the world. And I think that we are ready—as we have always been—to fight for that freedom.

We have no longer an easy choice between peace and war. We have a choice between keeping open the life lines to Great Britain and China and supporting those countries with all our strength, or fighting alone—and soon—in this hemisphere against the united forces of the dictators—with all of Europe, Asia, Africa, and the major portion of South America organized to supply their war machines. Choice? There is no choice. In self-defense, for our own preservation, whatever the consequences, we must back the British and the Chinese.

This is America, where men admit no master but God. This is the country where men and women faced a savage continent to keep faith with their Creator and themselves. This is the country of the men who held their guns at Valley Forge, when blood from their naked feet stained the snow. This is the country of Lincoln and Lee, of the men in blue and the men in gray. Has our marrow turned so soft that we do not dare to face the forces of incarnate evil? No.

It may be that in supporting with all our resources and all our strength the British and the Chinese, we shall have war. It may be that we shall not have war. But support them we will. And if the dictators wish to call that war, let them remember that this is one country that has never known defeat. Let them consider that against their conspiracy will stand a fellowship of peoples that hold freedom more dear than life. Let them recall that the bugles of man's unconquerable soul will never blow retreat. Let them remember that this is America.

Facts About Our Naval Building

EXTENSION OF REMARKS
OF
HON. HENRY C. DWORSHAK
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

ARTICLE FROM THE WASHINGTON TIMES-HERALD

Mr. DWORSHAK. Mr. Speaker, almost daily we hear spokesmen of the administration defying the entire world with provocative statements and reminding Americans that this country has never been defeated in a war. Congress has appropriated huge sums for national defense and the development of a strong Army and Navy. However, the people are not aware of the fact that mere authorizations do not provide actual defense equipment, but that it is necessary to convert these funds into ships, planes, tanks, and other munitions.

It is shocking to read that while we are building a two-ocean navy there is little consolation in the fact that on April 1, 1941, our Navy actually had 329 vessels as compared with 359 on January 1, 1940, or a loss of 30 vessels. Likewise, it is disconcerting to learn that in the past 15 months the Navy has actually added only 9 vessels to shipways, and that of the 361 combat vessels reported under construction by Secretary Knox on April 1, 1941, only 63 were actually on shipways, the remainder being listed merely on paper as under contract.

Under leave to extend my remarks in the RECORD I include the following article from the Washington Times-Herald dealing with pertinent facts regarding the construction of our naval craft:

FACTS ABOUT OUR NAVAL BUILDING
(By Walter Trohan)

Only one out of every six Navy ships, listed as under construction in reports of the Navy Department, is actually on shipways, an official compilation of the naval-construction program revealed yesterday.

On April 16, Secretary of the Navy Frank Knox announced in a summary of the progress of naval construction that a tremendous increase had taken place in the number of ships under construction on April 1, 1941, as compared with January 1940.

He reported 361 combat vessels are under construction this month as compared with 61 on January 1, 1940. He also reported that 123 auxiliary vessels are under construction this month as compared with 16 on January 1, 1940.

The official naval records do not bear out the Secretary's claims. Most of the program which he boasted is on paper, according to the Navy's own compilation of the building program. The Secretary listed ships under contract as vessels under construction.

According to the compilation, only 63 of the 361 fighting ships, listed as under construction, are actually on shipways or being completed in shipyards after launching. On January 1, 1940, the Navy listed 61 fighting ships under construction, and 54 were actually on shipways. In the intervening 15 months the Navy has actually added only 9 vessels to shipways.

In the field of auxiliary craft only 13 of the 123 vessels listed by Knox as under construction are actually on shipways. On January 1, 1940, the Navy listed 16 auxiliary ships under construction, and 14 of these were actually on shipways. In the intervening 15 months 1 less auxiliary vessel is in construction.

On January 1, 1941, there were 74,385 persons employed on naval construction. At the beginning of this month, the number of shipyard employees had almost doubled, with 142,999 persons on the pay rolls of the eight Government yards and major private yards.

The current building program has taxed the facilities of American shipyards. The Government and private yards have accommodations for 63 fighting ships, the number the Navy is building.

The Navy has a program for increasing the Nation's shipbuilding facilities, but construction of new ways will take months, particularly since a drive is also under way for increased shipyards for the building of merchant vessels for Britain to replace those she is losing in the battle of the Atlantic.

The following table shows the number of vessels under construction and under contract for January 1, 1940, and April 1, 1941:

FIGHTING CRAFT

	Jan. 1, 1940		Apr. 1, 1941	
	Building	Contracted	Building	Contracted
Battleships	6	2	10	7
Aircraft carriers	2	----	1	11
Cruisers	----	4	9	45
Destroyers	32	----	26	174
Submarines	14	1	17	61
Total	54	7	63	298

AUXILIARY CRAFT

Destroyer tenders	2	----	----	3
Mine sweepers	2	----	----	60
Net layers	----	----	----	4
Gasoline tankers	----	----	----	5
Transports	----	----	----	2
Repair ships	1	----	1	3
Submarine tenders	1	----	2	5
Submarine rescue ships	----	----	----	5
Seaplane tenders	4	2	6	14
Mine layyers	1	----	1	2
Fleet tugs	3	----	3	7
Total auxiliaries	14	2	13	110

In the 15-month period the size of the Navy has been decreased by 30 vessels. A comparison of the Navy of Jan. 1, 1940, and the Navy of Apr. 1, 1941, is given in the following table:

	Jan. 1, 1940	Apr. 1, 1941
Battleships	15	15
Aircraft carriers	5	6
Cruisers	34	37
Destroyers	218	164
Submarines	87	107
Total	359	329

The Question of Convoys

EXTENSION OF REMARKS
OF
HON. CHARLES W. TOBEY
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Tuesday, April 29, 1941

LETTER TO HON. SOL BLOOM, OF NEW YORK

Mr. TOBEY. Mr. President, I ask unanimous consent to have included in the Appendix of the RECORD a letter which I have today addressed to the Chairman of the House Foreign Affairs Committee, the Honorable SOL BLOOM, together with a copy of my earlier letter to him on the subject of convoys.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

APRIL 29, 1941.

Hon. SOL BLOOM,
Chairman, Foreign Affairs Committee, House of Representatives, Washington, D. C.

DEAR MR. BLOOM: On April 14, I addressed a letter to you with regard to the convoy issue and certain statements which you had made in connection therewith.

Will you kindly advise me when a reply may be expected.

Very truly yours,

CHAS. W. TOBEY.

SENATOR TOBEY'S ANSWER TO REPRESENTATIVE SOL BLOOM'S CONVOY STATEMENT

APRIL 14, 1941.

The Honorable SOL BLOOM,
Chairman, House Committee on Foreign Affairs, House of Representatives, Washington, D. C.

DEAR MR. BLOOM: I was considerably surprised to read your statement against submission of the convoy question to the Congress, and your declaration that this question of convoys is strictly a matter for the President's determination.

In your statement you say, "Only the President can determine how and where convoys are needed, if they are needed. That isn't in our department * * *."

Isn't in our department? I recognize that the Congress, which is supposed to be a body representative of the people, has reduced itself to a sorrowful position by virtue of its "Yes-man" attitude, and I equally recognize that the Congress has turned over many of its powers to the President, but I cannot for a moment concede that we have reduced our status to that of a department, subservient to the whim and rule of the President. God forbid that the time will ever come when the people entirely lose the benefit of a Congress which has the determination in a crisis to exercise its constitutional prerogatives.

Your statement further says, with regard to convoys, "I couldn't imagine what such a resolution would say."

To relieve your imagination, I herewith enclose a copy of my anticonvoy resolution, which prohibits in the plainest of English language the use of the armed forces of the United States and American vessels and aircraft from transporting, delivering, or convoying articles or materials to belligerent countries.

Your statement further says, "We—the Congress—couldn't say we authorized convoys or we forbade them. The President has that power." In this position you are in disagreement with the distinguished chairman of the Senate Foreign Relations Committee.

The argument is used that because the President, under the Constitution is the Commander in Chief of the Army and Navy, it follows that he can send convoys of the United States Navy anywhere in the world that he chooses, regardless of any prohibition by the Congress.

This argument overlooks the fact that section 8 of article 1 of the Constitution gives to the Congress the power to make rules for the regulation of the land and naval forces. Therefore, while the Constitution makes the President the Commander in Chief of the Army and Navy, it further specifically provides that the Congress shall make rules to regulate the Army and Navy.

It seems clear from this that if the Congress makes a rule prohibiting the Navy from being used to convoy goods destined for belligerents, that this would be a rule within the meaning of the Constitution, and comes under the powers granted to the Congress by the Constitution.

Further, the same article and section of the Constitution provides that the Congress shall have the power to declare war.

The President himself has said that "Convoys mean shooting—and shooting means war." Can it logically be held, for example, that the President, because he is Commander in Chief of the Army, could send a large part of the Army over to German soil under orders to fight, without a declaration of war by the Congress? I have never heard that contended by even the most ardent interventionists.

It is equally true that the President cannot send United States warships to convoy goods for belligerent countries if the Congress by law specifically prohibits such action.

In conclusion, I raise this question: Is it fair and honest to the American people for us to allow action to be taken now which will immediately launch the millions of American citizens in a long struggle of active warfare, in the face of the fact that the President raised their hopes in his assurances to them over the radio, 2 days before he was reelected, that the first foreign policy of our Government would be to keep this country out of war; in the face of the fact that both the Republican and Democratic Party platforms gave the same assurances to the American people; and in the face of the fact that the Members of the House and Senate, only a few months ago, were elected to office on their solemn pledge that they would do all in their power to keep this country from being involved in the war?

This question I put to you in all earnestness and sincerity, and in view of your responsible position as chairman of the Foreign Affairs Committee of the House of Representatives I would appreciate from you a full answer.

Sincerely yours,

CHARLES W. TOBEY.

A Plea for Peace

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Tuesday, April 29, 1941

LETTER FROM REV. F. DORNBLASER

Mr. JOHNSON of Colorado. Mr. President, the other day I received a most unusual letter from a most unusual person. In it Reverend Dornblaser, D. D., who is 100 years old and who served 4 years in the Civil War, makes an earnest plea for peace. This letter was written in long hand and one appreciates it more when he notes the trembling writing and the determination of the writer. Reverend Dornblaser's grandfather saw military service in the War of 1812. Two of his sons were in the Spanish-American War, their health was broken by their military service, and they are dead. His youngest, and as he says, his "only hope," was killed in the World War. He has paid in sweat, blood, and tears, and knows that Sherman was right. I ask unanimous consent to insert the Reverend Dornblaser's letter in the Appendix of the RECORD.

CHICAGO, *April 14, 1941.*

MY DEAR SENATOR JOHNSON AND ALL FRIENDS FOR PEACE: I am so glad that we have heroes in our country, and you will have a hard fight. Yes, feed the people with food, not with devil's food and war poison. "War is hell," said Sherman. I had enough war. My grandfather was a commander against the British in 1812. My two sons have been in the Spanish-American War; came home broken in health; all dead and gone. My youngest, my only hope, was killed in the World War. For what? I am 100 years old. Served 4 years in the Civil War. So, you see, I have enough. For 65 years I was a minister in the Lutheran Church. Save lives and save souls and God will bless you and our country.

Yours sincerely and respectfully,

F. DORNBLASER.

P. S.—Children and children's children will bless you in that holy war.

F. D.

Reed Report Drives Hard Toward Final Fusion of United States and British Civil Services

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, April 29, 1941

ARTICLE BY GEORGE D. RILEY

Mr. TOBEY. Mr. President, I ask unanimous consent to have included in the Appendix of the RECORD an article by George D. Riley, in his column U. S. and Us, of April 27, 1941.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald of April 27, 1941]

U. S. AND US

(By George D. Riley)

REED REPORT DRIVES HARD TOWARD FINAL FUSION OF UNITED STATES AND BRITISH CIVIL SERVICES—DREAM OF CECIL RHODES AND ANDREW CARNEGIE BEING REALIZED STEP BY STEP 40 YEARS LATER

RHODES, CARNEGIE, AND OXFORD

Cecil Rhodes, British Empire builder, dreamed of the day when there would be a confluence between the United States and Britain. He founded the Rhodes scholarships, approximately half of which are issued to the United States, more than to the entire Colonial Empire.

Andrew Carnegie, who died soon after Rhodes' death, was a devoted adherent of the Rhodes' policy of coupling the United States and Britain. He, too, left wealth to a foundation. Today, Clarence K. Streit, Rhodes scholar, is urging adoption of his Union Now movement which carried into great detail the aspirations of the youthful Rhodes. Streit, in his "Union Now with Britain," nominates President Roosevelt as prime minister of the western end of the union. Winston Churchill is his choice for prime minister, the eastern end.

—

Piece by piece, the United States Government's civil service is becoming the British civil service. This change is being accelerated. It started in the early 1930's and even before the report of the Commission of Inquiry on Public Service Personnel.

One board after another has been appointed, always with the motto "improvement of the public service." And invariably we have found familiar faces on the different boards. True, one or two drop out in courtesy to their fellows whose names are imprinted on masterful reports which dispense with the public administration in learned terms. But these return at a later time and sit on future boards.

"Reorganization," "streamlining," "clearing houses." These have become commonplace terms not only in this country but in England. Hands across the seas have a common fellowship of anonymity. There is only one discordant note between the Brownlow reorganization committee's urge for "passion for anonymity" and the anonymity in the British ruling class civil service. Here are the words of Prof. Herman Miller Stout, University of North Carolina, speaking of "masters and servants" in the British civil service:

"With the increasing appreciation of the important role of the civil servants in the formation and execution of policy, there is some question of the desirability of continuing the virtually absolute anonymity of their (British administrative classes') opinions."

We find three of the same five members on the Commission of Inquiry on Public Service Personnel reconvening only 2 years later, in 1937, as the President's Committee on Administrative Management, as follows: Louis Brownlow, Prof. Charles E. Merriam, and Prof. Luther Gulick.

"Freedom from patronage"

In 1935 these men found that "freedom from patronage permits concentration on positive service." In 1937 they wanted an "upward, downward, and outward" civil service. In 1940 legislation known as the Ramspeck Act joined the issue for the Brownlow committee and patronage, at least of the political variety, was ordered ended. Meanwhile the Reed committee made certain findings which closely knit in with the Brownlow committee's discoveries. The President followed through this week and adopted the Reed committee's recommendations, as well as Mr. RAMSPECK's thoughts on the subject.

However, Mr. RAMSPECK seems destined to become the forgotten man of his own act. The President strewed flowers in the direction of the Brownlow and Reed committees, but nary a posy or kind word for the author of the Ramspeck Act which entitled everyone to go about with broader smiles, justifying use of the Presidents phrase, "development of a broad system which will further encourage men and women of outstanding ability to enter the Government under conditions which will offer them fair and equal opportunities to build satisfactory careers."

Everything which happens today in the Federal executive civil service is designed directly to link inseparably and irrevocably the administrative government of the United States with that of Great Britain. This is brought about quickest and best by tying together the purposes and approaches of both Governments and by binding with an extreme closeness the personal practices in both countries. And if we have seemed to be slow in convoying munitions to Britain, that country has succeeded in convoying its civil-service system directly into Washington, laid down and delivered.

"Permanent official" is British title

"We recommend that each department and major independent establishment or agency give careful consideration to the advisability of creating the position of general manager, with an appropriate title," says the Reed committee. "Experience in all large-scale organizations, public or private, demonstrates the desirability of a single permanent official, not a policy-determining official, and his position should consequently be in the competitive classified service. He is directly and completely responsible to the political head of the organization—the secretary of the department, the commissioners, or the administrator."

The Reed committee, continuing with its adoption of the British system, says: "We recommend use of the so-called committee type of examination in selecting those who apply for higher positions in any of the professional fields. Briefly, as applied to the present problem, it would consist in the establishment of a special examining board for each examination. * * * The examining committee would make a careful analysis of records which have not been rejected and establish a small group of qualified candidates. There would follow an oral interview, in which the committee would act as the oral board. There would be no occasion to assign rankings to the limited number of names appearing on the final register."

This exactly is the British system for making selections for the administrative class, and which included the viva voce test. It further disrupts the competitive system and holds at bay the Civil Service Commission. By Executive order this plan was put into effect this week for attorneys.

The British civil-service selection of men to fill the good-pay jobs is made from a close, knotty group of schools. Oxford and Cambridge supply 76 percent of all the British Indian Service, the Home Service, and the Colonial Service. The British take their economists from the London School of Economics (the Columbia University—King's College) of England.

In the United States we pick our Foreign Service officers typically from Harvard with a scattering of what might appear to be courtesy geographical appointments to other schools. All of which suggests a quotation from the Reed committee for our own use:

"An active, positive program of recruitment, designed to attract to Government employment the top-ranking men in undergraduate and graduate courses in the natural sciences, be undertaken by the Civil Service Commission and by the appropriate departments and agencies."

This must mean that the civil-service machinery will be borrowed by agencies to narrow the field to the output of those schools which are deemed worthy of supplying quick brains, for we read further:

"Besides the effort being made to integrate recruitment for the civil service and the educational system, the type of examinations is important in attracting young university-trained people into the Government service. The administrative class examination is designed to test young men and women, not in the more or less practical work of a Government department, but rather in their mental ability."

The latter quotation, believe it or not, is not from the Reed report but from Professor Stout's Public Service in Great Britain, issued in 1938.

To this point it is apparent that the cost of higher education is beyond the reach of millions with meager means, thus constricting the field from which the better-pay Federal jobs can possibly be filled through the British civil service-Reed committee formulas. Even so, we find a plenitude of young men and women who have fine educations, but $1,620, and even $1,440, is the best they can earn with their studious preparation.

What, then, can be the goal of this close tie-up across the seas administratively? Demand for higher education for better-pay jobs also means higher education for low-paid jobs. The difference is that the former are filled from the alumni nucleuses of narrowed limits confined to a select few schools, while anyone may compete for the low jobs.

Viewed another way: A few schools supply candidates for higher administrative and professional jobs. Many schools supply the candidates for lower administrative jobs.

Collective Bargaining and Defense

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 29, 1941

ARTICLE DISTRIBUTED BY THE WASHINGTON LEAGUE OF WOMEN SHOPPERS

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Collective Bargaining and Defense," printed and distributed by the Washington League of Women Shoppers.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COLLECTIVE BARGAINING AND DEFENSE

WHAT IS COLLECTIVE BARGAINING?

Collective bargaining has been defined as "a mode of fixing the terms of employment by means of bargaining between an organized body of employees and an employer, or association of employers, usually acting through duly authorized agents. * * * It is a method of securing that equality which is presumed, under the free contract assumption of our law, to give to each party what he is entitled to and what is to the best interests of all." (Hoxey, Robert F., *Trade Unionism in the United States*, pp. 263–264.) The objective of collective bargaining is the formation of a written agreement which covers some or all of the following terms: "a minimum wage over as large an area of the industry as possible; the setting up of wage differentials upon the basis of seniority, experience, skill, or other scarcity factors; equal pay for equal work without regard to sex; overtime rates for overtime work; shorter hours and rest periods; restriction of output to preserve quality, spread the work, or prevent exploitation of the worker through excessive speed; and job control in hiring and firing, promotions, lay-offs, shop discipline, and the handling of grievances." (Brooks, Robert R. R., When Labor Organizes, p. 223.)

SUCCESS OF THE NATIONAL LABOR RELATIONS ACT

At the outset of the defense emergency the principles of labor's right to organize and to bargain collectively, embodied in the National Labor Relations Act enacted in 1935, had the support of organized labor, and general acceptance among a majority of employers. After the validation of the act by the Supreme Court in 1937 there was clearly evidenced a trend toward greater industrial peace. The Fifth Annual Report of the National Labor Relations Board for the fiscal year ending June 30, 1940, states:

"The decline in strike activity is emphasized by a comparison of data for 1936–37 and 1939–40, periods of comparable business activity. The total number of strikes declined 49 percent between the two periods; the number of workers involved declined 63 percent, and man-days of idleness declined 66 percent. The number of strikes for recognition and against discrimination declined 62 percent."

Employment relationships in many of the mass production industries hitherto unorganized, including the largest steel companies and most of the great automobile manufacturers, had stabilized in collective agreements embodying the terms of employment, and, in many cases, machinery for the settlement of questions arising during the contract period.

EMPLOYER OPPOSITION

A few extremely powerful employers and employers' associations, among them dominating groups in the National Association of Manufacturers, however, continued to resist the Federal labor policy. Notable among these has been the group popularly known as "Little Steel." The Ford Co., acting alone, has remained adamant. Opposition to union organization expressed itself in repeated violations upon the part of this willful minority of the statutory injunction against "unfair labor practices," and in loud demand for the repeal of the act, or its emasculation by amendment. (Ed. note: The Ford Co. has been held guilty of such practices no less than seven times by the N. L. R. B.)

These employers, and many others, were dramatically exposed by the Senate Civil Liberties Committee's investigation begun in 1936 by Senator ROBERT M. LA FOLLETTE and by Senator ELBERT D. THOMAS, of Utah. The hearings before this committee revealed the existence of antilabor activity in the form of industrial espionage, the importation of strike breakers from other communities, the use of industrial munitions against the workers and other forms of violence. Senator LA FOLLETTE, in the National Lawyers' Guild Quarterly, December 1937, said:

"The record of the Senate Civil Liberties Committee focuses attention sharply upon the need for responsible management. A Federal law guarantees to labor the right to organize freely and to bargain collectively. In the face of that law, employers have committed their labor policy to the tender care of Chowderhead Cohens, have spent thousands of dollars on gas and other thousands on union wrecking through espionage. And when called to account they have persistently concealed and evaded. Until management is prepared decently and straightforwardly to discharge its duties to its workers, its Government, and the public, it can ill afford to speak of the responsibility of labor."

The committee's record and reports reveal that the groups of employers sponsoring and using these practices waged a concerted campaign to nullify the N. L. R. A. and defeat its purposes, and that these groups are still in existence, many of them with their purposes and objectives unchanged.

NEW LABOR ORGANIZATION PROBLEMS

With the declaration of the national emergency, industrial production entered a period of great expansion. Speed in production became the outstanding demand. Millions of unemployed and many unorganized workers began to be absorbed into the industrial process. Workers migrated from their homes to towns where defense activity was suddenly expanding. Unions theretofore firmly entrenched or steadily progressing to a position of organizational maturity were faced with the realization that they must, in order to survive, bring organization to millions.

HOURS LENGTHENED

A survey made in December 1940 by the Bureau of Labor Statistics reveals that in 394 of the largest establishments in 11 key defense industries, where more than half of the estimated total number of workers in these 11 industries were employed, "almost one-half of the plants covered were operating at least 6 days per week. * * * Overtime was widespread throughout the industries surveyed * * * approximately 280,000 wage earners in the reporting establishments worked a total of more than two and one-half million hours of overtime during the midweek of December 1940." To the comment that this is fair enough since the workers received time and a half pay for overtime, one must point out that millions are still unemployed, that the efficiency of the worker is greatly reduced by continued overtime efforts, and that industrial accidents mount rapidly in number for overtaxed workers. As long ago as 1917 the Chief of Ordnance of the United States Army stated:

"In view of the urgent necessity for a prompt increase in the volume of production * * * vigilance is demanded of all those in any way associated with industry lest the safeguards with which the people of this country have sought to protect labor should be unwisely and unnecessarily broken down. It is a fair assumption that for the most part these safeguards are the mechanisms of efficiency. Industrial history proves that reasonable hours, fair working conditions, and a proper wage scale are essential to high production. * * * Every attempt should be made to conserve in every way possible all of our achievements in the way of social betterment. But the pressing argument for maintaining industrial safeguards in the present emergency is that they actually contribute to efficiency."

INDUSTRY PROFITS SOAR

Since the present emergency, profits in industry have soared. Philip Murray, C. I. O. president, speaking before the American Association of School Administrators on February 25, 1941, at Atlantic City, said:

"I have here a list of the earnings of six of America's outstanding corporations for the year 1940 * * * the total net profits of these six corporations for the year 1940 being $699,780,000 on 850,000 employees. * * * The General Motors Corporation, on each employee for the year 1940, had a net profit of $977 per employee. * * * The American Telegraph & Telephone Co. netted $528 per employee; the Standard of New Jersey netted $2,000 per employee; the United States Steel Corporation netted something approximating $420 per employee; the Du Pont Corporation netted $2,220 per employee, and the

General Electric Corporation had a net profit of $826 per employee."

LIVING COSTS SOAR, TOO

Today all indications point to a period of rising costs. According to the Bureau of Labor Statistics, between August 1939, the month before the outbreak of war in Europe, and March 1941 wholesale commodity prices rose nearly 10 percent; and, although costs at retail to moderate-income city families rose only a little more than 2 percent on the average over this same period, dislocation of production and of trade is almost certain to bring further price increases. Rental costs, according to reports of the Bureau of Labor Statistics, have already risen on one-third to one-half of the rented homes in many of the cities in which defense activities have been increasing.

WAGES LAG

It is frequently pointed out that wages also rise. But one must remember that while wages rise to some extent in some defense industries, the cost of living rises for all wage earners in all industries. Furthermore, World War experience proved that in a period of rapidly expanding industry, wage increases do not nearly keep pace with increases in living costs.

The American Federation of Labor's research and information service, basing its studies on data supplied by the National City Bank and the Labor Department, reports that net profits of 925 manufacturing companies increased an average of 26.9 percent in 1940 over 1939, after deduction of taxes, while average hourly wages in these companies increased an average of only 4.7 percent. Profits in these companies increased in 1940 over 1939 from 9.9 percent in the automobile industry to 190.7 percent in the aircraft industry. Yet the wages in the aircraft industry continue to lag behind those in the automobile industry. Figures released by the Bureau of Labor Statistics show that earnings in the aircraft industry in January 1941 averaged 77.6 cents an hour, as compared to 96.6 cents in the automobile industry. Labor feels that it is entitled to a share of the enhanced profits.

THESE FACTORS GIVE RISE TO STRIKES

In this changing situation lies the explanation for many recent strikes. Expanded production with greatly increased profits, longer hours and lagging wages, and the need to organize many workers newly drawn into industry are among the factors present which have always given rise to strikes. Bernard M. Baruch, Chairman of the World War Industries Board, was quoted in the Washington Star of March 11, 1941, as saying:

"Strikes are bound to occur, and justifiably, if any effort is made to take advantage of the situation to reverse labors hard-won advances.

"The wage earner cannot be blamed for demanding higher wages if he finds himself being squeezed by the rising costs of the necessities of life and at the same time sees industry receiving inflated profits, of which he does not feel he is getting a fair share."

NEVERTHELESS STRIKES HAVE DECREASED

Against the background that over the last 100 years of American history such periods as these have generally resulted in an increase in strikes, the Labor Division of the National Defense Advisory Commission reported as of March 1, 1941, a decline in the number and duration of strikes. (Labor Speeds Defense, Report of Progress, pp. 8, 9.) Some of its facts are as follows:

"Work stoppages due to strikes in American industry during the year 1940 accounted for an average loss of less than 2 hours per year per worker. * * *

"There has been a 47-percent decline in the number of man-days idle due to strikes during the first 6 months of the defense program over the corresponding period of 1939.

"The number of men involved in strikes was only about half as great during the first 6 months of the defense program as when the United States was actually at war 24 years ago. This is all the more significant when it is realized that total nonagricultural employment is 22 percent larger today."

LEGISLATIVE ATTACKS ON N. L. R. A.

In this session of Congress the same recalcitrant employer groups and short-sighted legislators continue to fight for the destruction of the N. L. R. A. In the official 1940 pamphlet, Policies Advocated by the Chamber of Commerce of the United States, "outright repeal" of the act is advocated. Failing this desideratum, the Chamber urges the adoption of the Smith committee amendments. The National Association of Manufacturers in its annual report, December 1940, proposes the adoption of these amendments as "just a step in the right direction." It further suggests "that the status quo in bargaining relationships should be maintained so long as the preparedness program is a major national policy." In other words, further development of collective bargaining as an instrument of industrial peace is to be suspended although such peace is indispensable to the national defense. The Smith amendments which passed in the House last spring, but were not reported out of the Senate committee, have been reintroduced in the House by Representative SMITH and in the Senate by Senator HOLMAN. So crippling, so decimating to the powers of the act are these amendments that a minority report by two members of the original committee states that, if adopted in toto, the amendments would destroy the guaranties of employee freedom in self-organization and in collective bargaining.

Representative HOFFMAN in H. R. 1405 goes much further; he proposes repeal of the Wagner Labor Act and the substitution of an act which would make practically illegal ordinary organizing activities. Among the provisions of his bill is the deprivation of workers from benefits of the labor board he proposes to set up for having participated in illegal strikes, such as sit-down, general strikes, and strikes in violation of employment agreements.

ATTACKS ON STRONG UNION ORGANIZATION

Under the guise of measures to speed defense production or to prohibit sabotage, a swarm of bills have been introduced in the House of Representatives which violently attack the means by which organized labor protects its advances. The maximum achievement of a strong union is the establishment of a closed shop.

"A closed shop means that the employer agrees to employ only union members. Unions justify their demand for a closed shop on two grounds: (1) They allege that only workers who support the union financially and otherwise are entitled to the benefits which it secures. (2) They insist that if the shop remains open to nonunionists collective bargaining will be endangered. For the union will be seriously weakened, both because workers will not feel the need of retaining membership and perhaps more important because the employer will be able imperceptibly to discriminate in favor of nonunionists." (Commons and Andrews, Principles of Labor Legislation, p. 391.)

Representative HOFFMAN'S H. R. 1814 would outlaw the preferential and closed shop agreements in all establishments handling government orders. Representative SMITH'S H. R. 2695 has a provision which outlaws closed and preferential shops in defense work, not only for future contracts, but retroactively for past contracts. Representative Cox's H. R. 2694 seeks to enforce the open shop in any industry or establishment where there might be any order paid for directly or indirectly by the United States Government. Representative VINSON'S H. R. 2850 outlaws the closed shop on naval defense contracts. Notice that the provisions in these bills go even further than the N. A. M.'s suggestion that the status quo be maintained; i. e., freezing labor-management relations as they are now; these bills advocate complete retrogression.

Representative DIRKSEN'S H. R. 2662 would abolish union hiring halls in the maritime industry, requiring hiring through Government halls. This strikes directly at a gain won by the maritime workers after a difficult struggle, and could not but restore much of the past conflict and exploitation in this industry.

The check-off, a system by which the union dues and fees are collected by the employer, who deducts them from the pay envelopes, and which is embodied in a number of collective bargaining agreements is prohibited in another provision of Representative HOFFMAN'S H. R. 1405. Representative Cox's H. R. 2694 has a provision which would make it a crime for unions to solicit or receive dues, initiation fees, or union assessments from workers employed on Government contracts. Thus, it seeks to destroy union organization in defense industries.

Of course, many of these extreme measures may not receive serious consideration by the Congress. It is important to recognize, however, that they are an essential part of the antilabor campaign. They are not an attempt to correct such abuses as may exist in union practices, such as excessive fees and racketeering, but are a direct effort to obstruct the development of sound collective bargaining relationships.

ATTACK ON COLLECTIVE BARGAINING PRACTICES

With an aim to outlaw all strikes in defense industries, regardless of their cause and justification, three bills have been introduced in Congress which set up compulsory procedures for the handling of labor disputes: Senator BALL'S bill, S. 683, Representative SMITH'S bill, H. R. 2695, and Representative VINSON'S bill, H. R. 2850. With slight variations as to the procedures, the postponement periods, and the penalties, all three bills require labor and management, in the event of dispute, to give notice in writing to each other and to a Government mediation agency of intent to strike or lock-out and to submit the dispute to the investigation and recommendation of the agency. If the mediation is unsuccessful, report is made to the President for publication. This subjects the merits of the dispute to the pressure of public opinion. Until the expiration of the periods specified for the completion of this procedure any strike or lock-out is unlawful.

Legislation to compel the submission of a labor dispute to Government intervention without the consent of the parties concerned, even though only for investigation and recommendation, is a rare occurrence and contrary to the tradition of our Government, even in wartime. (Adjustment of Labor Disputes, Monthly Labor Review, November 1939, U. S. Department of Labor.) In disregard of this tradition these three bills are pressed and defended upon a false analogy. The public is asked to consider the success of the National Railway Labor Act of 1926, and the implication is obvious. If compulsory mediation has worked for years in one industry, why shouldn't it work in defense industries?

WHY THE RAILWAY LABOR ACT WORKED

The railroad industry, before the passage of this legislation, had long been strongly unionized, with the right of labor to bargain collectively well established throughout the industry. Unfair labor practices had been eliminated from the industry. Over a long period of years skilled negotiators had been developed and a mutual respect and will to agree had grown up on the part of management and labor. Collective bargaining agreements throughout the industry were in force long before the law was enacted.

Without such preconditions, compulsory mediation measures must work either against labor's efforts to establish its own bargaining power or be rendered ineffective by industrial disputes.

WHY RAILWAY ANALOGY DOES NOT APPLY TO THE DEFENSE INDUSTRIES

Defense industries at present are not strongly organized. Philip Murray in a statement to the press estimated the organization in defense industries as from 20 percent to 40 percent. It is significant that for the most part strikes have been limited to those industries and establishments where union organization has been resisted by the employers and where collective bargaining procedures have not heretofore prevailed. As Ernest Lindley said in the Washington Post, March 21, 1941:

"If employers had not wasted so much energy fighting the National Labor Relations Act, nearly all industry by now probably would have been well past the stage of organizational strikes. These are the growing pains of collective bargaining. But until Bethlehem Steel, Ford, and other holdouts bargain collectively with bona fide labor unions, organizational strikes will remain a threat."

The dangerous outcome from such hostility to union organization was demonstrated in a report of the Senate Civil Liberties Committee, filed with the Senate March 31, 1941, which found that the Little Steel strikes of 1937 resulted from the refusal of the companies to accept the process of collective bargaining, and which warned that this same attitude on the part of such large producers as Bethlehem Steel and Republic Steel may today cause serious strikes, and should be recognized as a threat to national defense and a blow to national unity.

Unfair labor practices, labor espionage, lethal weapons and strikebreakers have been used in many of the establishments in possession of Government contracts. The signed collective-bargaining agreement, voluntarily arrived at, with its provisions for mediation and adjustments, is the exception, rather than the rule. In the absence of the signed agreement mutually achieved by the employer and the union representatives, the employer has always the right to deprive the worker of his job; the worker has as his means of achieving adequate and fair wages, reasonable hours, and decent working conditions only the right to strike, and the pursuit of a collective-bargaining agreement.

The Ball, Vinson, and Smith bills seem to be offered to the Congress in complete ignorance of these facts. When similar legislation was being considered in 1937-38 for the maritime industry, Secretary of Labor Perkins said: "A law that works because both management and men want it and are convinced of its usefulness is hardly likely to work when it is imposed on an industry against the will of either the employer or the employees."

HANDLING DISPUTES WITHOUT LEGISLATION

The foregoing legislation seeks to supply penalties for failure to postpone strikes or lock-outs. These penalties are loss of Labor Board rights, injunctions from a Federal court, fines, and imprisonment. The imposition of these penalties does not prevent strikes. Organized labor commonly strikes only as a last resort and has always sought instead to have industry establish and use the processes of collective bargaining. To penalize labor because the processes of collective bargaining are not established or accepted or functioning will only serve to alienate labor and intensify disputes when full cooperation is most vital.

Organized labor has cooperated willingly with the staff of the United States Conciliation Service and of the Labor Division of the N. D. A. C. in seeking to settle disputes by voluntary negotiation. This is apparent in the news reports of strike negotiations, but it is far more significantly proved in the reports of the Labor Division as to the settling of hundreds of disputes before they have reached the stage of strikes and headlines. (Labor Speeds Defense, page 8, incorporating testimony by Mr. Hillman before the House Judiciary Committee, February 20, 1941.)

In this framework of voluntary cooperation the National Defense Mediation Board was established by Executive order on March 19, 1941. The A. F. of L. recommended such a mediation board early in the emergency. The C. I. O., however, was opposed to its establishment for the reason that it might tend to freeze the status quo in bargaining relationships, as the War Labor Board tended to do in the World War. It was feared that even though existing collective-bargaining contracts might be protected and enforced crucial drives for organizing unorganized industries and for strengthening organization by gaining closed shop and check-off contracts might be frowned upon as disturbing factors.

There is, however, a distinction between labor organizing during the World War and now. Because of the N. L. R. A. organizing drives are now protected by law and union organization is recognized as filling a social need. The success of the National Defense Mediation Board in promoting industrial peace must, therefore, depend largely upon the extent to which it can bring about and insist upon compliance with Federal labor law.

USE OF THE GOVERNMENT'S DEFENSE PURCHASING POWER

One great safeguard of labor's rights lies in the Government's use of its defense purchasing power. The full use of this power would minimize the possibility of disturbances in labor relations in defense industries.

On September 1, 1940, the N. D. A. C. unanimously adopted the statement of labor policy submitted by Mr. Hillman as chairman of the labor policy advisory committee. This was that "all work carried on as part of the defense program should comply with Federal statutory provisions affecting labor wherever such provisions are applicable. This applies to the Walsh-Healey Act, the Fair Labor Standards Act, the National Labor Relations Act, etc."

The President endorsed this policy in a special message to the Congress on September 13, 1940, transmitting the declared policy of the N. D. A. C. Thereupon, the very Members of Congress who sponsor antilabor legislation organized an attack on this policy which was joined in by much of the press on the presumption that compliance with labor laws is necessarily an obstruction of the defense program. In response to this attack, congressional investigating committees were assured by the Defense Commissioner of Labor, the Secretary of War, and the Secretary of the Navy that no defense contracts had been withheld or delayed because of charges of noncompliance with any of the labor laws on the part of any prospective contractor.

Today this declared labor policy finds expression in Procurement Circular No. 43, issued December 1940 by The Adjutant General's Office of the War Department, which provides that every invitation for competitive bids shall require a statement that the work will be carried on in compliance with the laws affecting labor. For failure to file this statement with his bid, Ford's bid was disqualified on an Army truck contract of $4,000,000, though it was the lowest bid received.

There is no similar administrative ruling governing negotiated contracts, which thus far have received the bulk of the money awarded. While, as a matter of practice, a provision requiring compliance with labor laws has been included in most negotiated contracts, it has been omitted to satisfy certain companies which did not wish to agree to it, notably Ford and Bethlehem. Ford holds several hundred million dollars of negotiated contracts and Bethlehem Steel more than a billion dollars, although both are notorious violators of the National Labor Relations Act.

LABOR'S PARTICIPATION

The President appointed Sidney Hillman, chief of the Amalgamated Clothing Workers' Union and a founder of the C. I. O., as the codirector of the Office of Production Management, after having first appointed him head of the Labor Division of the N. D. A. C. (now a part of the O. P. M.). Mr. Hillman has appointed labor leaders to serve as defense conciliators and as members of advisory committees on the activities of the Labor Division. Labor leaders, likewise, advise on the program to train workers in new skills and labor unions serve as agencies for locating skilled workers. The Labor Division has also organized the Shipbuilding Stabilization Committee, composed of representatives of management, organized labor, and Government, which is the first defense effort at establishing labor standards acceptable on an industry-wide basis.

The executive council of the A. F. L. reported to the annual convention in November 1940 the policy that labor should have representation on all defense agencies dealing with matters affecting labor, specifying that representation be selected by the group concerned. At the annual convention of the C. I. O., held in November 1940, similar demands were made, and criticism was particularly directed against the fact that there was not only too little labor representation, but that there was no representation by labor's own nomination. The C. I. O. now advocates the specific plan of industry councils. This plan calls for a council established in each major defense industry composed of representatives of management and of organized labor, with a Government representative as chairman, to coordinate and direct production for defense and for consumer goods.

Organized labor thus uniformly demands representation of its own selection with appropriate authority for participation in determining the policies and practices of defense administration as it affects labor and production. With the growth of strong unions, safeguarded in the freedom to exercise their collective-bargaining rights, greater participation by labor in industrial policy and the administration of government may be expected.

CONCLUSIONS

"In this time of world crisis American labor is awake to the crucial need for a strong national-defense program. Labor recognizes fully that if the democratic way of life is to be preserved and enlarged our country must prepare itself for total defense—morally and materially." (Labor Advisory Committee of the N. D. A. C. New York Times, December 9, 1940.)

With this statement, the committee is in complete accord. We want the defense program to proceed with expedition and without obstruction from any source. Defense of our country and its democracy requires that the country be strong; this it can be only if it has a strong labor movement.

This report has sought to show, first, that labor's contribution to national defense depends on labor's unqualified right to organize into unions of its own choice, without interference, and to bargain collectively; and second, that the preservation and extension of these rights makes for industrial peace which is essential to the national defense. Only with freedom to exercise these rights can the worker gain or maintain that decent living which is the right of every American.

(Report approved by the executive board of the Washington League of Women Shoppers, April 2, 1941.)

American Women and Home Defense

EXTENSION OF REMARKS

OF

HON. ERNEST W. McFARLAND

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 29, 1941

RADIO ADDRESS BY COL. CHARLES H. RUTHERFORD

Mr. McFARLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address entitled "American Women Can Help Home Defense," delivered by Col. Charles H. Rutherford, civilian aide to the Secretary of War, for Arizona, over station KTAR at Phoenix, on April 24, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen of the radio audience: I particularly desire to address this discussion on how American Women Can Help Home Defense, the women themselves, and particularly those who like Mrs. Nan Douglas, Mrs. Coit Hughes, and others, have shown great interest, or have training, or have natural aptitude for training, in the many lines of work that will be most useful in connection with both preparedness for defense in general, and in connection with home defense in particular.

The viewpoint of both men and women, as to the tasks that could be, and should be, undertaken by women, in connection with defense, preparations for defense, and even actual war, has changed very materially in the past years. Personally, I'm still pretty old-fashioned in some ways, and I should prefer not to see women trained for, and engaged in, any line of defensive or offensive service that would place them under fire. On the other hand I realize that, with the major battles apparently being fought by raining down fire and explosives on all alike, men, women, and children, that women must be and are as much exposed to the dangers of injury and death as the men are. That being the case it seems obvious that women can be of tremendous value in every phase of the work of taking measures for protection, and in every phase of the work that results from attack. But, of course, if women are to be useful in these various services they must be trained for them. Under war-emergency conditions an untrained woman would be just as much a liability and a nuisance as an untrained man—but no more.

There can be no question of the bravery or the patriotism of women. Women are just as determined to protect our way of life as men are; they are even more determined that their children, present or prospective, shall have the same equal opportunity, according to ability, that they have, and that their parents and grandparents had.

There can be no question either that various abilities and various adaptabilities are distributed among women in about the same proportion as among men. However, up to this time, under either normal conditions or under the present emergency conditions, facilities for developing and training useful natural abilities have not been as available to women as to men. Let us for a few minutes discuss the various phases of this problem, for the fable of feminine frailty has passed on. Native ability and clear thinking has made women as successful as men in the operation of their own businesses, and as helpers in the operation of every form of business and industry. True, the ability of women to contribute first-class service outside the home is in direct proportion to her responsibilities in that home, but there is no reason why every woman who desires to, and who has the ability to render service of value to the defense program, should not be encouraged to do, and should be trained at public expense for the work she is capable of doing.

Neither public sentiment as a whole, or sentiment among women themselves, has as yet crystallized into a definite plan for utilizing women to the best advantage on defense projects. But public opinion is very definitely trending in the direction of making the utmost practicable uses of women in the preparedness progra , and particularly in matters connected with home defense, where women can function efficiently and still be at home. Women themselves, if I am to judge from what many women have told me, and from the published expressions of many more, no longer desire that men alone should give their lives, or risk their lives, in order that they may continue to live and enjoy the privileges of democracy.

Women that have the natural ability—and there are many of them—when properly trained make excellent drivers and mechanics for trucks, ambulances, motorcycles, or motorboats. Their ability as nurses is well known. They can be trained as signalers, in decoding, radio, and wire transmission of messages. A few might even make the more glamorous and adventurous fields, like airplane piloting, though I doubt the advisability of trying to train women as combat flyers.

There can be no question, however, of the desirability of training women in practically every phase of home-defense work. Their services will be urgently needed if we ever are actually attacked by the modern methods as firemen as well as fire wardens; as operators of field kitchens to feed the homeless; as workers in bombproof shelters for the comfort, safety, care, and sanitation of those who seek shelter. In England the women are just as grimly and just as effectively doing their part in defense as the men; and we should, as a part of our own preparedness program, train our women as well as our men to be useful if war actually comes.

It seems to me, as it has seemed to many intelligent women who have given the matter careful consideration, that the training of women for war service is just as much a proper function of government as is the training of men. Just how this should be done, or where, or when, or under what conditions is yet to be decided.

But that is one of the blessings and privileges of the American way of life. We make our own decisions, as a people; we do not wake up some morning and find that someone has dictated what we are to do, and how. So, according to our regular method, we will proceed to discuss the matter, and eventually arrive at a definite plan, and then we will work the plan. To do this we will, of course, have all the ideas and opinions expressed that all kinds of people happen to possess. There are some women who want women trained just like men, for the Army, for tanks, planes, guns—the whole show. Then there are some who go to the other extreme and don't want women mixed up in this fighting business in any manner. Somewhere in between those extreme points of view we will work it out. Go ahead and think about the problem of what women can do for the defense of the Nation. Go ahead and talk about it, in your homes, in your clubs, over the back fence. Get up discussions about it. Write letters about it. Eventually—and it will not take long—there will be some definite, Government-sponsored program for training women to do their bit.

But in the meantime, a word of warning. Don't get all hopped up and start off after some quack idea; some organization that jumped out of the agile brain of some smart promoter who is interested in what he can make out of it—and what he can make out of gullible people whose very real and patriotic desire to be of service he can translate to his own advantage.

For instance, I'm told there are organizations being promoted—purely private organizations, with no Government sponsorship, no Government approval, no Government connections whatever—that are doing a wholesale business selling membership—and uniforms—to women.

Now, that would be funny, if it wasn't pathetic. So look out; don't get taken in.

Remember that the functions of women in the preparedness progam and the services women can render in home defense will be arrived at by the Government as a crystallizing of public opinion. When that has occurred definite plans will be formulated. These plans will be studied by our Representatives in Congress, and if necessary laws will be passed.

Depend upon it, when the Government—and that means the people of America—is ready to undertake the training of women for defense functions, you will find out about it, and you will have your chance for training in whatever field your native abilities lie. There is no need for you to waste your money buying uniforms and parading; if Uncle Sam decides he wants you in uniform, he'll furnish them.

So again, in conclusion, I say to the women who are interested—and you all are interested—think seriously, talk seriously, discuss carefully, the important problems of what women can best contribute to defense, and let your Representatives know what you think about it. That is the way we do things in America; and I thank Heaven that our women, as well as our men, are willing and eager to serve in any way to preserve our ways.

How To Defeat Hitler

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, April 29, 1941

ARTICLE BY E. G. B. RILEY

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled "How To Defeat Hitler," written by Mr. E. G. B. Riley, of Laconia, N. H.

This article should prove of unusual interest because Mr. Riley is a well-known war analyst and radio commentator.

Previous articles and forecasts of Mr. Riley have been printed in the CONGRESSIONAL RECORD and have attracted widespread attention.

In asking permission to have this article inserted in the RECORD, I do not necessarily concur with the views ex-

pressed in the article, but I do believe it to be of general interest.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW TO DEFEAT HITLER

(By E. G. B. Riley)

Hitler can be defeated, but not by the methods now being used.

The course that Great Britain and the United States are now following will most certainly lead to the early defeat of Britain and bring down economic chaos and revolution in this country.

It is most necessary, in order to properly visualize the real hectic state of affairs, to realize that there are no war experts in existence today.

Where are Generalissimo Maurice Gamelin and the commanding general of the British forces in France of only a few months ago? What is the present status of General Wavell, last month's hero of Libya?

The heroes and war experts of yesterday become the military "goats" of today.

This evolution is the result of inexperience and failure to recognize the terrific battering power of coordinated mechanized air and land war machines.

These generals, competent to successfully command huge land forces when war was conducted on the same basis as 1915, planned their defensive and offensive campaigns along outmoded lines with the most disastrous results. Even General Wavell was unable to combat the offensive launched against his army after his successful occupation of the greater part of Libya because of a slight variation in the method of attack that had been previously utilized by the Italians in their first raid on British forces. General Wavell's decline in prestige may be partially blamed on the orders given to him by politicians who had sought to win diplomatic victories by promises of aid which could not be fulfilled.

No American, British, or French official observers were allotted to the German or Italian armies when they were engaged in fighting the Royalists in the Franco-Spanish War. In that war Hitler first utilized the mechanized ground units used in conjunction with airplanes, out of which evolved the present panzer-blitz system which has proved its worth.

There was not a single member of our Government capable of recognizing the terrible import to the United States of the new military methods that were being adopted because our Army observers were not given the opportunity to witness their efficiency in actual warfare.

This new system was first proven by the rapid rape of Poland, and then its military value was not given proper recognition because the so-called foreign war experts blamed the disaster on the weakness of the Polish Army.

The accomplishments of Hitler's mechanized units when directed against the Yugoslavians and the valiant Greeks, after the latter had wrecked the Italians, are even now considered astounding by our civilian war "experts." Our civilian experts, in the name of Uncle Sam, encouraged the Yugoslavs to offer armed resistance to Hitler because they knew nothing of the military power of his mechanized armies.

It cannot be denied that the United States and Great Britain are partially responsible for the futile loss of thousands of Greeks and Yugoslavians who would never have dared to combat while unprepared a tested, proven mechanized war machine, unless they believed that the United States and Great Britain would immediately give them both military support and badly needed munitions. Anyone familiar with the present state of our arsenal and the breakdown of our production lines must have had "his tongue in his cheek" when making such promises of aid.

Our high-ranking Army and Navy officers must now be given more opportunity to gain experience by personal observation of wartime panzer methods. No military observer, irrespective of rank, can qualify as being experienced in war tactics as practiced by the Germans without devoting months of study to the application of these methods in actual battlefield operations. No civilian or politician can bring back to this country a true picture of the actual military requirements of this Nation by spending a few hours or days conferring with foreign governmental and military heads.

It is long past the time when we should have replaced civilian "yes" men and women in the Government with the most progressive members of our Army and Navy.

Fighting or planning to fight a war along "horse and buggy" lines must be stopped here in America, and not in the future on foreign battlefields.

In view of actual developments covering the duration of this war, your analyst sees the necessity of a secretary of aviation in the Cabinet with equal rank with the Secretary of War and the Secretary of the Navy.

Would that these United States could recall to this world Gen. William Mitchell, the one man who foresaw the importance of wartime aviation units. I called attention a year ago to the necessity of concentrating on implements of war that would be available by January 1, 1941. That date has passed. We should certainly concentrate now on the construction of munitions of war that will be completed on or before January 1, 1942. Our major effort should be directed toward securing the equipment that can be completed in a minimum time for the proper arming of our Army and Navy.

When will our leaders learn that now we need vital war machines, planes, tanks, bombs, and guns? We need them here to equip our sons who are now in the Army and Navy. We will need them to defend the soil of North America.

Uncle Sam is following closely the pattern of France and Britain, which countries, when not at war and while inadequately prepared, uttered strong inciting and encouraging words which they were unable to sustain but which contributed to the devastation of Poland, Belgium, and many other small nations.

New weapons have been devised for use under all conditions. Hitler, recognizing that the Italians, with far superior equipment, could not hold their own with the Greeks, developed and improved mine-throwing tanks, so that they can blast away obstacles and negotiate many of the so-called impassable trails of the Transylvanian Alps, and armed asbestos-clad parachutists with flame-throwing machines for use behind the enemy lines.

Hitler, while improving his position in the Balkans, stalled until such new weapons were on hand and then—blitz.

Do you think it will be less than 2 years before the United States will have comparable tanks and equipment? If so, you are one of those wishful thinking optimistic individuals who are responsible for having Uncle Sam "lead with his chin."

Unfortunately for us a few impractical college professors, lawyers, and social workers have at times a dominant voice in our affairs and shape many of our governmental policies. These men, who in the past have shown that they cannot even solve our own domestic problems, are now rushing and pushing our sons on to foreign battlefields. It will be at least 1 year before our sons can be properly disciplined, trained, and equipped so that they will have an even chance battling with an experienced and tested enemy of equal numerical strength.

All aid short of war should be the policy adopted by the United States, but, first, all aid should be given to our sons who are now serving in the Army and Navy by providing them with the needed equipment which they now lack. Let us concentrate on properly uniforming, equipping, and training them.

In extending aid to other nations great care should be used not to bring about a repetition of the situation whereby planes, equipment, and munitions of war intended for certain nations eventually are received by the Nazis or some other hostile power.

Everyone, irrespective of age, should know that in the last World War the "Allies floated to victory on a sea of oil."

Everyone should know that Hitler cannot float to victory without a now more necessary "sea of oil."

Hitler is compelled by his new system of coordinated mechanized attack to use many times the quantity of oil used by the Kaiser in 1915.

The Germans with their usual thoroughness developed many sources of synthetic-oil products, and by capturing the Ploesti oil fields in Rumania they supplemented the approximated 1 year's supply which was stored in Germany in 1939.

In addition, the huge amount of oil and gasoline they secured by conquering Belgium, Holland, and France was of the greatest military value to them, but even though these supplies are augmented by limited shipments from Russia, the Germans are running short of both gasoline and oil.

This approaching shortage accounts for the intermittent periods of inactivity of the German Luftwaffe. The gasoline shortage explains why some of their troop-transport planes are powered with Diesel motors.

Hitler figured that this war would terminate in a speedy victory for Germany and Italy and that the duration of the war would be less than 1 year and, in no event, would it last longer than 18 months. He has been compelled to revise his estimate because of the gross failure of the Italians to hold up their end of the Axis war plans. To make matters worse, much of Mussolini's supply of oil—most of which had to be drawn from Germany—was captured in Africa.

Hitler witnessing the great destruction wrought by the valiant R. A. F. on his oil supply bases in France, Belgium, Holland, and Germany, not to mention that brought about by the bombing of his synthetic-oil plants deep in German territory, has had to revise his original plan of war. This plan was to have Italy capture Greece and then Yugoslavia, thus placing the Italians facing the Turkish boundary while the Italian fleet occupied the Aegean Sea.

Had Italy succeeded in carrying out such a plan, Hitler would have been free to follow out his original "anchor to windward" plan of "blitzing" Turkey in order to seize the oil fields of Iraq and Iran. In these two countries is located the only source of supply of oil that Hitler can reach without bringing Russia into the war as Britain's ally. Hitler is now headed for Iraq and Iran and the Grecian episode is only incidental to his plans.

Hitler has, within the past 2 weeks, through "fifth column" activities, brought about the overthrow of the pro-British Iraq Government, and his men now control the Iraq Government. He must be stopped from attaining this objective or he will dominate both Europe and Asia. In addition to gaining his most vital supply of oil, Hitler's conquest will shut off from the British this most accessible supply of oil, thereby placing a great additional strain on their tanker shipping problem.

With the same diabolical cleverness that he has displayed in his power diplomatic victories of the past year, Hitler is slowly but

surely swallowing the Russian bear. Stalin is now "on the spot" that Hitler has prepared for him and that spot is much too warm for Stalin's comfort. Stalin, by way of the Axis, is Hitler's ally, but Stalin is also Hitler's enemy because he is aware that Hitler is crucifying him.

When Russia was breaking her back on Finland's Mannerheim line, Stalin was forced, in order to maintain some small vestige of international prestige, to call on Hitler for aid. Hitler responded, but only after he forced Stalin to accept certain of his terms regarding Hitler's supervision of the Russian Baku oil fields and the delivery of oil to Germany.

Hitler's engineers and army officers were placed in strategic positions in Russia, but only after Stalin had purged every Russian officer who, up to that time, had any wartime military experience.

When Italy started to show signs of collapse Stalin thought that Hitler's dream of power was about to end and to hasten this end Stalin began to lessen his shipments of oil, nickel, and grain to Germany. This action forced Hitler to start his revised Balkan campaign. He placed a powerful German and Rumanian Army on the Pruth River, the Rumanian-Russian boundary extending north from the Black Sea, facing toward the Baku oil fields of Russia. Then Hitler evidently promised India to Russia if Stalin would guarantee that Turkey would permit German and Italian troops to pass through Turkey in order to reach Iraq and Iran, and turn over to Germany the control of the Dardanelles. Hitler has told Stalin that he is going to get oil from Iraq—or else. The "or else" means that if Germany has any trouble with Turkey or Russia, Hitler will take from Russia the Baku oil fields.

If the British will concentrate on protecting Iraq and Iran, Syria, Palestine, and the Suez Canal, and not attempt to protect all of their world empire, Hitler will be defeated and oil will have brought about his end.

Hitler, through a shortage of oil, will have had his mechanized army rendered impotent. Without his chief war weapon he cannot maintain control of the many countries he has conquered and which he is forced to occupy to maintain his supremacy. Armed resistance in these occupied countries will then result in revolution against German control and Hitler's power regime will collapse through internal discord and dissension.

Delays due to inability to secure oil for the operation of his mobile mechanized army will permit the United States to prepare for any eventuality and will permit the British to regain control of territory previously lost to Germany.

Russia, Finland, and other nations will turn on and rend apart that which is left of Hitler's "world empire."

The labor troubles, the strikes that are hamstringing our boys in the service, are more to be feared than Hitler, and are a thousand times more dangerous. The delay in production of one small, inexpensive part of machines or machinery may result in the loss of the deciding battle of the war.

We have a sure, immediate cure for these troubles, but we have not found the doctor with the courage to prescribe the remedy.

Ernest Bevin was England's doctor who knew the cure and did not hesitate to prescribe.

Would that we had such a leader to supplant some of the leaders we have in this country today—a man who would not countenance strikes in vital defense projects that are so necessary to our men in the Army and Navy. These strikes are encouraged by leaders who are sympathetic to the Communist, Nazi, and Fascist cause, or whose avariciousness makes them an easy prey to un-American influences and intrigue.

There are ways of dealing with such persons, and if labor itself does not act to correct this hampering situation, then Congress will be forced to act, and to act with a firm hand. This may take the form of restrictive strike legislation or eventually may go as far as reopening concentration camps in this country such as existed in the previous World War. Action must come, and come immediately. There can be no delay. Only by immediate action can we avoid following that path which Hitler has paved for us.

We cannot maintain a complete defense program under present conditions. Contrast what is happening in some places in this country today with the contribution that British labor is making under Bevin's leadership. British labor has accepted without complaint a 72-hour working week. Such hours were not established until the fall of France when Hitler was at the very gate of Britain.

Let us hope that we do not reach that point in America—but if the present sabotage of our defense efforts continues as a result of unwarranted strikes, we will have to take similar drastic measures. The American workingman is a real American patriot. He founded and built these United States; but, unfortunately, a small group of selfish, Communistic, pro-Nazi, pro-Fascist individuals have, without his authority, given forth utterances which falsely portray his position in this emergency.

Fellow Americans, remember that you constitute the Government of these United States, that those billions that are being hurled recklessly abroad are the billions that you will have to take out of your pockets or out of your future earnings. Bear in mind that Government has not one dollar of its own and that if any trace of democracy still exists you can stop this headlong plunge into economic chaos before it is too late.

Arm and equip our boys, prepare and defend our Nation and our adjoining neighbors, but do not endeavor to rule and dominate every foreign nation. Refrain from squandering your birthright in attempts to change human nature.

We cannot do the impossible.

Hitler has no doubt planned to take advantage of our most obvious proposed course of action. Hitler is aware that we are unprepared today and that we are straining our resources to send abroad planes, equipment, and munitions that we can ill afford to spare here.

From the activities of the present administration, it does not seem that the matter of convoying ships will ever be brought to the attention of Congress—and this prediction is made on the assumption that convoys will be used.

We have only a one-ocean navy, and it is physically impossible for us to have a two-ocean navy for a period of several years.

Hitler will undoubtedly take the steps necessary to bring about a war between the United States and Italy. When such a state of war exists, Japan, as per existing treaties, will be drawn into the conflict on the Axis side.

With our fleet spread in a necessarily thin line by reason of our taking over the military protection of the entire Western Hemisphere, which is apparently only the beginning of our voluntarily assumed obligations, we will be in the exact position that Hitler has anticipated and planned for us.

Then with our Navy convoying ships to so-called neutral Egypt, which may be captured by the Axis before our first delivery of arms can be made, Japan will make a feint toward French Indochina. With attention directed toward Singapore, the Japanese will capture the Netherland East Indies, thereby gaining the supply of gasoline and oil without which the Japanese cannot even continue their present war on China. Within 60 days of the day we start to convoy ships across the Atlantic, Japan will be actively in the war.

On July 1, 1940, via radio and press, your analyst announced the probable signing of the treaty of nonaggression between Russia and Japan, which is now being termed "startling and astounding."

Now it can be forecast that trouble in South America, in Argentine, Brazil, and Chile, fomented by Hitler, Mussolini, and Franco, will soon break out. Focus your attention on the Panama Canal and on our aviation factories.

Do not be "startled," or "astounded" in the very near future to hear of troop and aviation activities by combined Japanese and Russian forces within 300 miles of our Alaskan border.

This is all part of Hitler's plan for us and we are following it on schedule.

Remember, Americans, our larder is full but—our "Arsenal" is bare.

Mediation as Remedy for Strikes

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 29, 1941

ARTICLE BY JAY FRANKLIN

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able article by Jay Franklin, entitled "Mediation Is Best Remedy for Strikes."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WE, THE PEOPLE—MEDIATION IS BEST REMEDY FOR STRIKES

(By Jay Franklin)

If Congressmen listen to the advice of ex-Gov. Clifford M. Townsend, of Indiana, now with the Office of Production Management and a member of the new O. P. M. plant-site committee, they will set aside their current proposals for compulsory antistrike legislation and rely on mediation to settle disputes in defense industries.

Compulsory arbitration has been tried in Canada, Australia, Kansas, and Colorado. The results have not been good. In fact, the results have been so bad that, where compulsion has been tried, it has been abandoned—except, of course, in the totalitarian countries to whose methods the democracies are opposed.

Governor Townsend believes that the most important thing in labor relations is mutual trust. This, of course, must be fostered and much past history must be lived down. Mediation is, according to his experience, the best course, for when legislation curtails the rights of labor all trust is ruined and the situation becomes dictatorship and the legislation destroys itself.

The former chief executive of Indiana claims to speak from experience and points to the Hoosier record under the mediation system which he set up. He is, therefore, very optimistic concerning national labor relations, although he admits that both sides are to blame—with some stubborn managers and antiquated owners, some radical or irresponsible labor leaders.

HOW IT WORKED

Governor Townsend established Indiana's mediation system in the wake of the 1937 wave of sit-down strikes. At one time he and C. I. O.'s Van Bittner lived in their clothes for 36 hours during the "little steel" strike.

Townsend then laid the groundwork for a truce with Inland Steel. During this period he demanded that John L. Lewis remove the C. I. O. regional director at Indianapolis because of Communist connections, and won his point from the grim leader of the sitdowns.

Then Townsend set up a one-man mediation board. For the director he picked a labor man who had been in prison 14 times for labor disturbances. The only weapon this Indiana State mediator possessed was the right to demand certain records when needed to settle a dispute. Since the establishment of this unique system, over 1,400 labor disputes have been settled inside 4 years in Indiana, no blood has been lost, and not a dollar's worth of property has been destroyed.

Since the establishment of this effective mediation system the State has witnessed a growth of half a billion dollars of corporate plant investment. Included are one large International Harvester plant and two General Electric plants. The corporations have told Townsend that one of the greatest inducements influencing their investments was the fact that labor relations were being handled intelligently and successfully in Indiana.

A FAIR TEST

Indiana is a good laboratory for testing mediation since the State is representative of labor and industry on the national scale. There are Gary and South Bend, and industrial enterprises include steel and rolling-mill products, automobiles, furniture, glass, soap, refrigerators, farm implements, pumps, and grain-mill products, in addition to coal, coke, petroleum, natural gas, limestone, gypsum, and pig iron.

Nearly every kind of labor organization is also represented in the State from the sailors on Lake Michigan to the United Mine Workers in the field, which used to contain John Lewis' central office for organizing coal.

Mediation produces better results than does compulsion, says Townsend, and results are what America needs to beat Hitler.

George A. Mathews

REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

Mr. CASE of South Dakota. Mr. Speaker, I have just learned that the Honorable George A. Mathews, who was a Delegate from the Territory of Dakota at the time of the admission of the States of North Dakota and South Dakota into the Union, died in Los Angeles, Calif., April 19, 1941. He played an important part in the events leading up to the admission of these States into the Union.

Mr. Mathews was born in Potsdam, St. Lawrence County, N. Y., on June 4, 1852. He attended the common schools, Upper Iowa University, Fayette, Iowa, in 1874, and the law department of the University of Iowa, at Iowa City, in 1878. He was admitted to the bar in 1878 and commenced practice in Corning, Iowa, moved to Brookings, Brookings County, Dakota (now South Dakota), in 1879, and continued the practice of law. Mr. Mathews was prosecuting attorney of the fifth judicial circuit for the Territory of Dakota in 1884, a member of the Territorial council, and served as its president in 1887. As a Republican, he was elected a Delegate to the Fifty-first Congress and served from March 4, 1889, to November 2, 1889, when the Territory was admitted into the Union as the States of North Dakota and South Dakota. He was mayor of the city of Brookings, S. Dak., from 1897 to 1903, after which time he resumed the practice of law at Brookings, S. Dak. All those who were acquainted with him testify to the high character of his public service.

In connection with the service of Mr. Mathews as the last delegate from the Territory of Dakota, an interesting story is told. His term began March 4, 1889, the day that Benjamin Harrison, Republican, became President of the United States following the administration of Grover Cleveland, Democrat. In those days, that meant a great turnover of officeholders all along the line. And, Mr. Mathews, as the Republican from the Territory of Dakota had all of the patronage for the Territory of Dakota. Reports agree that he was besieged with persons seeking his endorsement for all the Federal positions in what soon was to comprise two States. On his endorsement hung appointments running from postmaster to United States marshal. Several land offices existed at that time, with several appointments in each.

It is to be remembered that in those days, Members and Delegates did not have a secretarial staff such as we have today. They were allowed only $5 a day for a session clerk, and the sessions did not begin with the Presidential inauguration. So, Mr. Mathews had to meet the extraordinary demands of patronage with his personal secretarial force in a day when the pay of a Delegate or Member was $5,000 per annum, and he served less than a year, as has been noted. It is not of record, however, that he complained on that score, and, as I have said, he retired to his home city of Brookings where he practiced law, served as mayor for several years, and finally retired to spend his last days in California, returning occasionally to visit friends in his home State of South Dakota.

The Great National Paradox—An Argument for the Referendum on Overseas Wars

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1941

Mr. LUDLOW. Mr. Speaker, I believe that all thinking persons must be deeply impressed by a very great paradox that exists in our national attitude toward the war that is raging overseas.

It is my considered opinion, based on wide contacts with national sentiment, that at least 98 percent of the people of America are firm and set in their determination that America shall keep out of these foreign conflicts and that only a meager 2 percent, or less, favor our participation.

The average American, representing, as I believe, at least 98 percent of his fellows, feels a sympathy for the British and would like to aid them, but not to the extent of endangering America. He thinks, as I do, that there is no need of our getting into the wars that are raging in Europe, Africa, and Asia, and that we would not if we would keep our heads, think of America first, and steer clear of foreign entanglements, as Washington and Jefferson advised us to do.

Yet with all of this vast body of public opinion insisting that we should build up our defenses at home and stay out of foreign wars which we had no part in starting, a large majority of our people are at this moment filled with fear that we will be dragged into war across the seas.

Those who believe in the infallibility of the Gallup poll will be interested to note that the Institute of Public Opinion has discovered the same identical paradoxical situation I have just outlined. According to the Gallup poll, 84 percent of the American people are against our participation in the war, but 82 percent—as of April 10–20—think we are going in.

All of which suggests that a review of the proposal for a referendum on foreign wars, which I first introduced in the Congress six and a half years ago, would be a contribution to sound thinking in these troubled times. Throughout the years I have steadfastly championed this proposal and I believe it is now more important than ever. We are in a momentous formative period in the crystallization of American policy and the fate not only of America but of the whole world, for weal or for woe, may depend largely on the outcome. Why should we not again take up for serious consideration the question as to whether the people should have a right to express themselves through a referendum on the greatest and most tragic question that can possibly affect them, their homes, and their loved ones? Under my resolution, a duplicate of which has been introduced in the Senate by Senator CAPPER, it is provided—

> Except in case of invasion by armed forces, actual or immediately threatened by an approaching military expedition, or attack upon the United States or its territorial possessions, or by any non-American nation against any country in the Western Hemisphere, the people shall have the sole power by a national referendum to declare war or to engage in warfare overseas. Congress, when it deems a national crisis to exist in conformance with this article, shall by concurrent resolution refer the question to the people.

It will be noted that under the resolution the referendum would apply only to proposals to send American boys into war overseas. If the United States or any other country in the Western Hemisphere is attacked or invaded there would be no referendum.

With all my heart I believe in democracy—the right of the people to rule—

and if this God-given right is vouchsafed to them, as I think it should be, it certainly should be theirs to decide the great and tragic question of reddening the soil of foreign countries with the blood of American boys, as well as the minor and inconsequential things of life. The citizen can now vote for constable, but he has no vote on war. How can I, a Member of Congress, say to my constituent, "You have sense enough and intelligence enough and information enough to vote for me for Congress, but you do not have sense enough and intelligence enough and information enough to vote on the question of sending your boy into the hell of a foreign war"?

I am not going to say that to any constituent of mine, because it would be a monstrous falsehood. Modern means of quick communication, the telegraph, the radio, the daily newspapers keep the people fully informed and they are amply competent to serve as a jury to decide whether our American soldiers shall be sent into foreign wars across the oceans.

I fervently hope that the time is not far distant when our statesmen in positions of power and responsibility will have a more kindly feeling for this great democratic principle of allowing the people who have to do the dying and the suffering and to bear the burdens and griefs of war, the right to decide whether our armed forces shall enter overseas conflicts. I firmly believe that if it had not been for the powerful pressure that beat down my resolution when it was before the House on January 10, 1938, it would now be a part of the Constitution, along with the Bill of Rights, and the great majority of the people whom the Gallup poll finds to be opposed to our participation in foreign wars would now have a chance to express themselves in a referendum which would be a binding decision.

At this time there is a sharp revival of interest in the referendum proposal and it is being debated in many circles and by many groups. It was the subject of discussion by the American Forum of the Air on April 6, when the merit of the proposal was presented by Representative WILLIAM B. BARRY, of New York, and Senator D. WORTH CLARK, of Idaho. By unanimous consent of the House I present for printing in the CONGRESSIONAL RECORD the address delivered by our able colleague Mr. BARRY on that occasion, as follows:

In recent years Congress has been bombarded with public-opinion polls by administration spokesmen, newspapers, radio commentators, and others, as evidence of the people's support or opposition to important legislation. These, especially the Gallup poll, exert great influence on congressional decisions, and yet a number of them, including the once-famous Literary Digest poll, have been proven to be grossly inaccurate. Wouldn't it be a national tragedy if the Gallup poll erroneously found that a majority of Americans wanted war, and the President and Congress, misled on the views of the people, plunged us into war? That could happen.

Why not, then, have an official referendum of public opinion on sending our men to fight on other continents? There would then be no room for mistake or fraud—and such decision would be that of the people.

Another compelling reason for support of this resolution is that historians generally agree that of the four foreign wars declared by Congress during our history, two—the Mexican and Spanish Wars—were brought about by Executive pressure on Congress rather than by demand of the people. During the Mexican War Lincoln was a Congressman and Grant an Army lieutenant. They both subsequently condemned it as a wicked war, unconstitutionally begun by the President.

Before President McKinley sought and obtained a declaration of war from Congress against Spain, the Spaniards had already surrendered to every American demand. McKinley, however, kept their surrender message a secret and led this Nation into an unnecessary war.

Historians differ on American sentiment before the last war. However, we know that Wilson was reelected on his record of having kept us out of war—only to lead us in 5 months later. After 26 days of war, Congress was compelled to adopt conscription when only 48,000 men volunteered. This, I believe, was indicative of the real sentiment of the American people toward war at that time. In 1937 the Gallup poll found that 64 percent of Americans believed that our entry into that war was a mistake.

During my time in Congress I have witnessed Executive pressure change large blocks of congressional votes. Two outstanding examples were the Ludlow referendum and repeal of the arms embargo. It is my conviction that a referendum by the people would stiffen congressional resistance to Executive persuasion.

Today, in spite of the President's pledge not to intervene in foreign disputes and not to send our boys into foreign wars, we are already in the war with everything but men. The warmongers are now crying for American sailors to convoy and die. Is it unreasonable, is it asking too much, to give those who will do the fighting and dying an opportunity to let their President and Congressmen know how they feel about it?

St. Lawrence Seaway No Defense

EXTENSION OF REMARKS

OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

EDITORIAL FROM ST. LOUIS GLOBE-DEMOCRAT OF APRIL 6, 1941

Mr. PLOESER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Globe-Democrat, Sunday, April 6, 1941:

[From the St. Louis Globe-Democrat of April 6, 1941]

ST. LAWRENCE SEAWAY NO DEFENSE

The administration's attempt to force congressional acceptance of an American-Canadian agreement on the St. Lawrence waterways project, is meeting with determined opposition which, we trust, will be sufficient to defeat it. It is virtually the same arrangement which was emphatically turned down by the Senate in 1934, and it has no more merit today than it did 7 years ago, despite its presentation by the President as vitally necessary to our national defense.

Much resentment is expressed in Congress and elsewhere because the President offers the measure as an agreement and not a treaty, although it is almost the identical document under consideration in 1934 as a treaty. However, a treaty requires a two-thirds vote of approval by the Senate; an agreement merely requires a majority vote of any quorum in both Houses of Congress. The latter, of course, is much easier to obtain.

The proposed treaty defines the "Great Lakes System" as comprising Lakes Superior, Michigan, Huron (including Georgian Bay), Erie, and Ontario, and the connecting waters, including Lake St. Clair. Residents of the Mississippi Valley, in particular, object to the inclusion of Lake Michigan. It is an all-American lake, no part of it lying in Canada. As long ago as 1812, under the Treaty of Ghent, complete American sovereignty over its waters was established and so remains today unless the present treaty (agreement) is ratified. Friendly as are our relations with Canada it is inconceivable that the Dominion Government should exercise authority in any degree over Lake Michigan, especially when its contemplated authority permits it to regulate water diversion for uses in this watershed. Nor is it understandable why such authority should be granted Canada when, under the treaty (agreement) the Dominion has the right to divert for its sole use all the water it needs for power or other uses through the Ottawa River, from Georgian Bay (Lake Huron) to Montreal. This is a diversion that could seriously affect the flow at Niagara Falls.

The weakest excuse is that that project should be pushed to completion now as a defense measure. Even the piecemeal dredging and installations at the International Rapids, suggested as the first work to be done, could not be completed within 3 years. The entire project, which comprehends a 27-foot channel from the eastern end of Lake Ontario to the Atlantic Ocean, could not be completed before 1947, possibly 1948. This may be long-range planning, but it has nothing to do with an immediate emergency which requires all the money and men and materials we can muster for more obvious necessities. It has been pointed out many times that the completed seaway could not be used by 95 percent of the passenger-cargo ships engaged in overseas trade, nor by 81 percent of the American cargo vessels or any of the tankers engaged in intercoastal trade. And it is well to remember that for 5 months out of every year the channel is frozen and all transportation is halted.

In its present form the treaty (agreement) is wholly unacceptable. It would saddle the entire country with a tremendous tax burden from which only a small area would receive any benefits at all. We do not need the seaway for power or defense or transportation. Congress will do well to disapprove now, just as it did in 1934.

Blitzing the People

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Tuesday, April 29, 1941

EDITORIAL FROM ST. LOUIS POST-DISPATCH

Mr. CLARK of Missouri. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial appearing in the St. Louis Post-Dispatch

of Friday, April 25, 1941, entitled "Blitzing the People."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the St. Louis Post-Dispatch of April 25, 1941]

BLITZING THE PEOPLE

The blitz is on. We don't mean Hitler's blitzkrieg in Europe. We mean the Roosevelt administration's blitz in the United States to produce a war fever among the people.

Yesterday no less than three members of the Cabinet made speeches on the subject of the war. Secretary of Agriculture Wickard said it was high time the people "got excited" about the critical state of world affairs. As though the American people were so dumb that they do not realize what is happening in Europe! What does Mr. Wickard mean about getting excited? Does he mean that they should lose their heads and plunge into a war which, as dispatches from London indicate, may already be approaching its end?

Secretary Knox said yesterday that the United States cannot permit its goods to be sunk in the Atlantic, thereby making a plea for convoys. And a plea for convoys is a plea for war. Only a few weeks ago the President said:

"Obviously if one nation convoys ships, either under its own flag or that of another, through a hostile zone on the doctrine of chance, there is pretty sure to be some shooting, and that comes awfully close to war. That is the last thing wanted; we must not do anything to compel shooting."

Yesterday, also, Secretary of State Hull said ways must be found to insure that aid to Britain reaches its destination in the shortest of time and in maximum of quantity. While shunning such crude Wickardisms as "let's get excited," the Secretary said: "Events have shown beyond possible question that the safety of this hemisphere and of this country calls for resistance wherever resistance will be most effective."

A fourth member of the President's official family, Vice President Wallace, two weeks ago said, "The United States now has her second opportunity to make the world safe for democracy," meaning, of course, that we should repeat our history of 1917–18. Following Wallace's speech and preceding those of Wickard, Knox, and Hull, we had the testimony of Secretary Stimson that the United States Army must be prepared to fight anywhere in the world. Secretary of Commerce Jesse Jones, a fifth member of the Cabinet, at the Associated Press convention, added his voice to the chorus. Secretary Ickes, a sixth member of the Cabinet, in a Chicago speech the other day, smeared citizens who are opposed to intervention. Sandwiched in these utterances were speeches of "Wild Bill" Donovan, who helped engineer the Yugoslav revolt; former Ambassador Bullitt, whose oratorical gifts have been drawn upon more than once to make belligerent speeches; and Paul McNutt, the Federal Security Administrator.

All this fits into a pattern. A rolling barrage of propaganda is being laid down to arouse the people out of what is called apathy, but which really is firm resistance to open participation in the war. The people, well-informed by press and radio, know what is going on in Europe. They are not poor, benighted heathens, but the most literate and intelligent population on earth. They know that Britain's downfall would be tragic, and would bring all sorts of desperate problems in its train. They want to help Britain in all possible ways—short of war.

The people also are for defense to the hilt. "Millions for defense," was the cry when our country was young. Today the cry is, "Billions for defense." The people are not asleep. They know the menace of Hitlerism just as the State Department does. The people of the United States will fight to the last man to save the soil of America. They have not been convinced that the way to do this is to enter the wars in Europe, in Africa, and in Asia.

While the Cabinet officials are trying to create a war spirit among the people, some of the columnists are pursuing a different line. They are urging the President to go farther and faster. Yesterday Dorothy Thompson said:

"Apparently, the President is waiting for 'public opinion' to indicate the line he should take. This kind of flirtation with the public can be fatal."

This is, indeed, impudent. Mr. Roosevelt is the most persuasive leader of public opinion this country has seen in generations, yet he must have people like the columnists to tell him how to do it. And one of the reasons the President is a persuasive leader is that he has a respect for public opinion. He knows it can be led just so far. He knows that this is still a democracy and that people cannot be seized by the nape of the neck and made to think what they do not want to think.

Yes; the barrage is on. It remains to be seen whether the people can be roused into war hysteria or whether, with all their sources of information about what is going on in this world, they will still permit the quiet voice of reason to counsel them. After all, it is they who will fight this war if it is to be fought; it is they who will pay for the war; it is their destiny that is at stake.

Whether or not we shall enter this war at the eleventh hour is the greatest decision the people have been called upon to make since the Civil War, not forgetting the first World War. We have confidence in their judgment, in that good old Yankee horse sense that has so often come to their rescue.

Our Infantry of the Air—The Civilian Air Reserve

EXTENSION OF REMARKS

OF

HON. JOSHUA L. JOHNS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

RADIO ADDRESS BY COL. JOSEPH E. MYERS

Mr. JOHNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Col. Joseph E. Myers, president of the Aviation Defense Association, of Washington, D. C., over WSUN, St. Petersburg, Fla.:

Friends of Preparedness, I want to thank WSUN for this opportunity of addressing you today on the subject of Aviation, and especially so because of the convention of the Florida Junior Chamber of Commerce in St. Petersburg.

To St. Petersburg belongs the credit of being the cradle of National Aviation Day in America. It is therefore quite fitting to give full credit to the young men of the Jaycee Club of this city for sponsoring our resolution which resulted in the passage of Senator PEPPER'S resolution establishing the annual observance of National Aviation Day in honor of Dr. Orville Wright's birth date on August 19.

We are now preparing for the third annual celebration of August 19 in the city of Washington and we hope that the Junior Chamber of Commerce of the State of Florida and all other patriotic organizations will pass resolutions for the observance of this historical date as well as the observance of December 17, Pan-American Aviation Day, which we also sponsor.

Our main objective is to create a state of air-mindedness and air appreciation throughout the nations in the Western Hemisphere in order to effect a unified pan-American command. To this end, the Boy Scouts of America, the Aircraft Owners and Pilots Association, and others are cooperating with us in our campaign for safe air travel.

It is necessary to support this objective, if we are to preserve our liberty and freedom from Nazi domination and despotism. It is up to you and me to talk and think America first in the air and on the land and sea.

On every hand one hears the question, How do the Germans do it? The answer must be sustained air superiority combined with that tenseness of purpose amounting to almost superhuman ability.

Loss of air control immediately spells disaster. Only last night I heard a Greek radio observer state that the Nazi dive bombers blew up one tank after another with what seemed to me to be almost incredible accuracy. I will leave it to your imagination as to what may happen to ships of war proceeding without air convoy.

If lack of time to prepare in the air results in the invasion of England and the capture of the Suez Canal, then war will begin between Europe, Asia, and Africa against the Americans, because the people of America and Britain will never surrender.

Hence the necessity of establishing a strong coalition between the democracies, the building of great international superhighways connecting strategic points, and the construction of underground air bases throughout the Americas.

April events in the Balkans and the sinking of the Italian Fleet in the Mediterranean prove beyond doubt that superiority in the air means victory on land and sea. In fact the future of civilization and the continuance of our American way of life now hang in the balance.

The die is cast and we must bend all our effort to win the war. For this reason our air force must be so powerful that it can protect our Navy and shipping 1,000 miles from our shores, and a civilian air reserve must be established to repel any invasion by land. This will require the immediate construction of many underground air bases and auxiliary flying fields.

In the first World War, airplanes were the eyes of the armies and navies; since then, they have acquired radio ears and they have been so effectively armed with machine guns, bombs, and cannon that they may well be termed the artillery and infantry of the air. They constitute the most destructive implements of war ever known to man. In a war of nerves and machines requiring highly technical skill it will become necessary to use thousands of civilian aviators and mechanics of experience and worth, as well as to create a state of air-appreciation and air-mindedness throughout the nations, in the Western Hemisphere; to this latter end, we ask every patriotic man and woman, boy and girl in the Americas, to join the air reserve.

The shortage of experienced pilots and mechanics has occurred in Europe. The bottleneck is here now. This demands the use of all experienced flyers who are unable to pass the high requirements of our regular air service.

Col. Roscoe Turner, our aeronautical adviser, estimates that there are now available about 30,000 private pilots in the United States, and that some 200,000 light planes can be built in about 18 months' time. Colonel

Turner also contends that due to the tremendous speeds developed in our fighting planes, maneuvers are exceedingly dangerous, and that this great speed reduces their efficiency when near the ground.

Placed under a unified pan-American air command, such an army of four or five hundred thousand trained private flyers cement the ties of friendship and understanding between the nations in the Western Hemisphere and solves the question of any enemy attempt of invasion by land or sea.

A maximum of defense with a minimum of expenditure would obtain, were such planes equipped with light armor, machine guns, and bombing racks which would enable them to give a good account of themselves and to secure the release of many fighting air units for other work. Swarms of these light planes could defeat any invasion by land and, best of all, they can be launched from numerous small air fields and water basins which would be totally inadequate for our high-powered Army and Navy aircraft.

There are some persons who would ground all private flyers during the present emergency. Such a move would be no less than a calamity. It would reduce our air power by hundreds of thousands of capable flyers, and it is contrary to the pre-war preparations of the Germans which gave them their present air superiority. Furthermore, in the event of peace, it would wreck civilian flying.

Among the reasons advanced by those who would wreck our civilian transport system is that the use of private flyers might increase sabotage and allow infiltration of subversive persons. There is no more reason to believe that sabotage or subversive elements will obtain in a Government-controlled Civilian Air Reserve than in our regular air service.

We advocate immediate War and Navy Department control of all civilian flyers in cooperation with the Governors of States, and we urge all private flyers, mechanics, ground-crew members, and others to register in the Civilian Air Reserve of the Aviation Defense Association, with a view of lending their support to H. R. 4670, by Representative JENNINGS RANDOLPH, of West Virginia, to provide private planes with war equipment and to subsidize their operators, to effect a unified pan-American air command.

Make the Americas first in the air and on the land and sea and insure our liberty through sustained air superiority. Leaders are wanted for squadrons of men, women, boys, and girls and for thousands of observers, private flyers, mechanics, etc.

Procrastination never won a war—register now in the Civilian Air Reserve for the cause of civilization and the battle of freedom.

Colonel Lindbergh and Defeatism

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

LETTER BY AMOS PINCHOT

Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written to the President of the United States by Mr. Amos Pinchot:

NEW YORK, *April 29, 1941.*

The Honorable FRANKLIN D. ROOSEVELT,
The White House, Washington, D. C.

MY DEAR MR. PRESIDENT: Because Col. Charles A. Lindbergh has made a frank, clear statement of what he believes to be Britain's chances in her war with Germany, you saw fit, at your press conference on Friday, April 25, to describe Colonel Lindbergh as a defeatist and a modern "Vallandigham." Vallandigham, as most people know, was a Representative from Ohio who was accused of treasonable utterances during the Civil War, convicted by a military court, and banished in 1863.

May I remind you, Mr. President, that some time ago you told your friend, Senator SHERIDAN DOWNEY, of California, that Hitler's power was so great that, in all probability, Germany would win the war. On June 13, 1940, after expressing regret that your administration had not heeded Colonel Lindbergh's advice to build a great fleet of military airplanes, Mr. DOWNEY addressed the Senate, as follows:

"I might say that the President of the United States stated to me—and it is no violation of ethics when I say it, because he proclaimed it in the press—that the military power of Germany was so great that the overwhelming odds were in favor of Germany winning this war."

If making a low appraisal of Britain's chances of victory makes one a defeatist and a Vallandigham, who was the defeatist then, who the Vallandigham? May I also remind you that members of your Cabinet and other White House spokesmen have repeatedly stated that this country would go down to defeat and its people to slavery in a war with the Axis Powers unless we are protected by the British Navy. Certainly Colonel Lindbergh has never said anything like that. On the contrary, he has consistently held that, if we would prepare ourselves properly, it would be as impossible for Hitler to invade America as for America to invade Germany or the rest of the European continent.

Speaking of defeatism, on Thursday, April 24, at the Publishers' dinner at the Waldorf-Astoria, your Secretary of the Navy, the Honorable Frank Knox, made a speech, a remarkable speech, which you endorsed next day. In that speech the Secretary said that, if we do not convoy war materials to England, so that the English may continue to protect us, the United States will assuredly be doomed. His exact words were as follows:

"We have declared that the aggressor nations must not be permitted to win. We have irrevocably committed ourselves to see that that is prevented. We have put all of our resources into the scales to bring defeat to those who would rule the world by force. We have acknowledged that our destiny, just as much as the destiny of the British Empire and the ultimate destiny of the conquered peoples of the Low Countries, of Scandinavia, of France, and of the Balkans, are at stake. Having gone thus far, we can only go on.

"Hitler cannot allow our war supplies and food to reach England—he will be defeated if they do. We cannot allow our goods to be sunk in the Atlantic—we shall be beaten if they do."

Did you ever hear Colonel LINDBERGH or Gen. Robert E. Wood, or any member of the America First Committee say anything as defeatist and old-womanish as that? Secretary Knox says we are sunk unless England holds our noses above water. That is a fine announcement for the head of the Navy to make to the world, and especially to the officers and enlisted men in the service. And it is a fine thing for the President of the United States, who is Commander in Chief of both the Army and the Navy, to endorse.

May I add that this dinner, at which the guest of honor, Secretary Knox, virtually declared war on one foreign nation, while he proclaimed our dependence on another, was also unusual in that it began by rising and singing—not the Star Spangled Banner, but God Save the King. And it may be said that your press conference next day was likewise unusual. For I believe it was the first time in American history that an American President has laid down the proposition that it is reprehensible, if not treasonable, for an American citizen to question another country's ability to defend itself, but praiseworthy to deny the ability of the United States.

Mr. President, at this juncture, when your administration is resorting to one device after another—patrols, convoying, and propagation of fear—to take this country into war—a war which you swore to avoid; a war which the people do not want and do not propose to have; a war for which our Military Establishment is sadly inadequate; a war from which the people of America can gain nothing but sorrow and disaster—it would seem that a little old-fashioned courage, common sense, and self-reliance might be in order.

Sincerely yours,

AMOS PINCHOT.

Corn and Wheat Quotas and Loans

EXTENSION OF REMARKS

OF

HON. GEORGE M. GRANT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

Mr. GRANT of Alabama. Mr. Speaker, Joint Resolution No. 149, which is now under consideration, relates to marketing quotas of certain agricultural commodities. This bill calls for a 75-percent parity.

I am sure that all of the Members of the House know the general definition of parity. If you were to ask me to give a definition of parity as related to agriculture, I would state that parity is justice. Farmers will not get rich by securing full parity, but they will be enabled to secure a decent living. Seventy-five percent parity asked under this bill will not give justice. It is 75 percent justice; however, it will be a great help to the farmers of the Nation.

During the past few months we have heard it said by some, "Now is the time to get so and so." Those interested in agriculture do not take that attitude. This fight for parity is no new thing. It has been going on for years by the friends of agriculture.

As has been correctly stated by the Honorable CLARENCE CANNON, of Missouri, chairman of the subcommittee on agricultural appropriations:

The appropriations to agriculture are not agricultural subsidies. They are consumption subsidies to prosperous industrialists who want cheap food in order to secure cheap labor for their factories and plants. It is those who are consuming food at less than the cost of production who are being subsidized rather than the farmer whose inadequate income is being scantily supplemented to barely keep his head above water while everybody else rides high.

Let us not continue to crucify agriculture upon the cross of false economy. You cannot have prosperity by one great element of our Nation and keep another under bondage. Give the farmer parity and it will be reflected in the pay rolls of industrial centers. The farmer desires a higher standard of living. Give him even a fair standard of living and he will spend all he makes for automobiles, trucks, tractors, radios, stoves, refrigerators, and hundreds of other manufactured articles. Today, in many places, farmers cannot buy even the necessities of life. He knows nothing of guaranteed wages and hours. His wages are small and his hours are long. Many have been forced to leave the farm because they could not eke out a living from the soil. Help us to prevent this.

I recall that during the last war there was a popular tune which ran something like this, How You Gonna Keep Them Down on the Farm After They've Seen Paree? They will not see Paris this time, but this problem of those leaving the farms is one which affects the industrial centers of this great Nation as much as it does the agricultural sections. After the present emergency many will be without jobs because there will necessarily have to be a reduction in the rate of production. What is going to become of these people? Many of them are today leaving the farm and their services are not required in the industrial centers. The passage of this bill will help to keep them on the farm. I want to see agriculture and labor join hands and march forward, yes, forward toward a great Nation. Let me appeal to you, my colleagues, not to forget the tiller of the soil and to give this bill your sympathetic consideration.

The Peace Within

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Tuesday, April 29, 1941

EDITORIAL FROM CHICAGO TRIBUNE

Mr. CLARK of Missouri. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Chicago Daily Tribune of Friday, April 25, 1941, entitled "The Peace Within," referring to the so-called Fight for Freedom Committee.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Chicago Daily Tribune of April 25, 1941]

THE PEACE WITHIN

The manifesto of the new war group known as the Fight for Freedom Committee contains the following statement: "Once we accept the fact we are at war—even though it be undeclared—we shall at least find a peace within ourselves which can never come as long as we seek safety at the cost of others' sacrifice."

Bishop Henry W. Hobson, of Cincinnati, is chairman of the organization. Eighty-three year old CARTER GLASS, of Virginia, has accepted an honorary chairmanship. The membership list as published contains the names of clergymen and college deans and presidents, some of them identified as to age by the word "emeritus." Mr. Warburg's name appears, and a lady editor has signed up for the peace within for herself and the war without for the young men.

Many of the members doubtless can find no inner peace in war except vicariously. They will not seek release from inner turmoil by stopping a bullet or a bomb fragment, although even for the most infirm of them some service might be found in bombed areas in carrying consolation if not stretchers. Some there must be among the seekers of release who could make their quest where danger would be a bright spearhead pointed at them. They could join up where the fighting is and earn for themselves the inner peace they wish to receive from other persons.

Some of the searchers might be advised to devote themselves to self-restraint, contemplation, and communion with the equities of other people. If nothing but the sight of embarking divisions in which they have no sacrificial stake will bring them solace, their spiritual unrest is an expensive commodity for the people who must relieve them.

The old men seek vicarious adventure, vicarious courage, and vicarious sacrifice. They have joined up for the club-window front.

Political Outlook of American Negro

EXTENSION OF REMARKS

OF

HON. C. WAYLAND BROOKS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, April 29, 1941

ARTICLE BY OSCAR DEPRIEST

Mr. BROOKS. Mr. President, I ask unanimous consent to insert in the Appendix an article entitled "From a Republican Viewpoint," by Oscar DePriest, former Congressman for the First District in Chicago.

Mr. DePriest expresses the political outlook of the American Negro as published in the Brown American for April. Mr. DePriest is a leader in the political and industrial life of his community, who speaks and writes with authority gained through a lifetime of useful service in connection with city, county, and Federal Governments.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Brown American of April 1941]

FROM A REPUBLICAN VIEWPOINT

A discussion of the political outlook of the American Negro is extremely difficult at this time. Fast-moving events in this rapidly changing, warring world blur the picture. Warmongers in our own America add to the difficulty as they seek to draw us actively into the conflict.

Taking present world conditions into consideration, it seems to me that a quick glance at the national administration now in power should first be discussed.

A review of the entire history of the New Deal Roosevelt administration shows from beginning to end an avid desire of the President to thrive upon "emergencies" and to acquire increased powers by throwing a pall of fear over and weakening the courage of the American people. In one breath the "yes men" of the administration and the President himself tell us that we are dreadfully behind in our own war equipment, that our program of national defense is essential for our own salvation. With the next breath they tell us that our safety is dependent upon our ability to furnish Britain with all she needs to make victory for the British morally certain.

Just recently debates in Congress have brought out on cross-examination that the New Dealers would go so far as to send our ships as convoy and would lend our fleet to the English Government. Obviously, these would be acts of war and America would be drawn into a flaming world battle. Again we would be forced to send our boys to defend democracy on foreign battlefields while every day we see democracy slipping through our fingers and perishing here at home.

Here in America, although we may be unjustly separate as to race, we are nevertheless a definite part of the national life. We do have some privileges. We do have an opportunity to fight for our rights and to keep up that fight until it reaches the highest tribunal. With the exception of the diabolical practices carried on in the Southern States, we enjoy the right and privilege of a free ballot. And there is no legal reason why we should not enjoy equal rights with American citizens everywhere. It is up to us to keep these legal rights and to make active use of them.

Here in America we have made many outstanding contributions to the society in which we live. For many years after our race had become free, it was said of us that we could not take on the white man's way of doing things. But through the years we have met our false accusers in the court of public opinion and shattered this argument. Many times opponents to our progress have laid down certain conditions for us to perform; conditions precedent, we were told, to our fuller rights. Our own American Government has on occasion challenged us, and in every instance we have met that challenge with full stewardship and unimpeachable loyalty. This has been proved in every war from the Revolution down to present times. The Negro American has willingly laid down his life because he believed in the integrity of the men who were responsible for the management of our Government; because he believed, like other racial extractions in America, that his country would see him and his posterity adequately rewarded for shouldering arms to protect it against aggressor nations.

Because of the many hatreds which I have seen grow out of the last World War; because of the many injustices and indignities which I have seen my own racial group suffer, largely because the leaders of our Government were moral cowards and did not possess sufficient courage to take a stand for right, I have always thought that America should sum up the cost many times here and sustain democracy at home before plunging this Nation into another foreign war for democracy.

Politically, the Negro has just begun to scratch the surface. As a free race we have been contending for representation in the affairs of America for just 76 years. And we have accomplished much in this comparatively short time. But we must not be lulled to sleep by basking in the warmth of past

achievements. I cannot help but remind the Negro youth that the same forces which sought to keep their forbears in slavery are still at work. These forces have followed many of our parents from the South; from the South where the Democratic Party still controls; from the South where by various practices, intelligent, industrious, and well-to-do members of our race are denied the privilege of voting for Members to the United States Congress, denied the right even to make-like-Democrats and vote the Democratic ticket, denied the right to see democracy really function, denied the right to vote for the county sheriffs who collect their taxes and who are responsible for the protection of their lives and properties.

These and many others are the reasons why I have often asked, "Can a Negro under the present circumstances conscientiously be a Democrat?"

Often I have been met by the answer, "Of course, you know the Democrats of the North are different." But this is not true. The truth is that the Democratic Party of the North is controlled by southern Democrats; this is especially true in national affairs. Most of the important committees in both the upper and lower houses of Congress have as their chairmen Senators and Congressmen from the democratically controlled Southern States.

In several of the Southern States, the only qualification for voting in the primaries is a poll-tax receipt. In virtually all of the Southern States the democratic organizations claim that they are comparable to private lodges and that they are judges as to the qualification of their membership. The Democratic central State committees manage and control the primary campaigns; campaigns which practically determine the election of Members to the United States Congress. The expenses of these white-man's primaries are borne by all the taxpayers. The county clerks and constabulary forces guard the election returns and preserve the ballot boxes intact in the county buildings. These are public elections—but they exclude the Negro. I am hoping that the day is not far distant when these and other questions will be raised before our United States Supreme Court.

I have not yet been able to find any legislation protecting the interest of the American Negro on the Federal statutes or statutes of the respective States which was placed there by the Democratic Party. Those of our group who insist upon being Democrats will never be able to justify their position until they are able to drive bargains—bargains that will redound to the credit and benefit of our race. The Democrats must be informed that they cannot lull us to sleep by putting their arms around our necks in the North and a rope around our necks in the South.

If the Negro is to advance and be able to compete in the American way, he must do so by electing to office men who will neither be ashamed nor afraid to lead our fight for representation in all branches of our Government; men who will be willing and able to open new doors of opportunity whether in national defense or in everyday life.

Discrimination on State and Government-controlled jobs, denial of the right to earn an honest living where properly qualified, is now a challenge to every officeholder from the President on down. Putting thumbs down on these cheap and un-American practices would be the first step toward true national unity. If America wants a strong and impregnable Nation, the place to begin is in the hearts of its constituents. Until the Negroes select leaders who will not put their selfishness above the interest of the race, we cannot expect to get very far in the affairs of America.

This Nation has become great essentially because of our two-party system, a system that makes for democracy. But America cannot continue to boast of democracy as long as one of its parties persists in disfranchising more than 8,000,000 Negroes in the Southern States. The Negro must fight with courage and fortitude if he wishes to solve the many grave problems which face him today—if he wishes to take his real place in a real democracy.

District of Columbia Central Library

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 29, 1941

EDITORIALS FROM THE WASHINGTON EVENING STAR AND THE WASHINGTON POST

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, three editorials regarding the proposed Central Library in the District of Columbia. Two of these editorials are from the Washington Evening Star, and one from the Washington Post.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of April 6, 1941]

CENTRAL LIBRARY THREATENED IN SEARCH FOR FUNDS

The rapid expansion of the Federal Government establishment, with its thousands of employees, has produced many acute problems which will require real money to meet, and the great difficulty is the finding of the money.

Federal workers have, in many instances, brought their families with them, and this has increased largely the burden of the public schools. New school buildings must be erected on sites yet to be purchased.

Large appropriations will be required, and even if the Overton formula is adopted and lived up to, more money must be found. The increase through the Overton plan would not produce enough to meet long-accumulated unmet needs, and Congress has so far found no solution to the local tax problem.

In their dilemma the District Commissioners have been looking for some place to tap for funds and have submitted four possibilities, as follows: (1) Passage of the Overton bill or some similar plan; (2) participation of the District in a Federal program for supplementing municipal facilities where defense efforts have overtaxed them; (3) postponement of repayment of P. W. A. and Capper-Cramton Act loans; (4) postponement of construction of the Central Library.

Pronounced opposition is shown in the press and in civic groups toward the fourth proposal of the Commissioners for the postponement of the erection of the Central Library. It is conceded that the need for additional school facilities is acute, but it must be remembered that the public-library system is an important part of the public-education system. The new Central Library is absolutely essential to the schools, even without this sudden required expansion, and its need will be greatly increased as proposed new schools are put in commission.

All of the neighborhoods, now without branch libraries, are waiting impatiently for the completion of the Central Library in order that an adequately equipped and staffed Central can service more branches. To delay construction of the Central building will delay the entire modest program of library extension.

Librarian Herbert is campaigning earnestly against any delay, and in this she is meeting a friendly attitude and promise of cooperation by the civic groups.

[From the Washington Post of March 31, 1941]

SCHOOLS AND LIBRARIES

When the District Commissioners listed postponement of the new central library as one way to get funds for direly needed school construction they caused some dismay among persons interested in the advancement of education. Such a transfer would be like taking off a sleeve to make a trouser leg. It should be said, however, that the Commissioners did not favor the step; they merely stated that the District had no suitable way to get funds.

As for the library, it is urgently needed, and has been for years. Dr. George F. Bowerman fought for it during the last 10 years he was librarian, and only this year his efforts were crowned with success through an item in the 1942 Budget. The site has been cleared and plans are well along, but the District now must hold up building until Congress assures an appropriation. In the meantime, the old library is so crowded that office personnel is housed in vestibules and on stairways.

There can be no doubt, however, that the added school funds are essential. The Commissioners lopped $5,000,000 from the school budget for 1942, but the tremendous influx of Government workers has forced them to ask $1,197,710 of it back. The money will have to come from somewhere, but not from the library fund. It is up to Congress to recognize its obligation and find the cash in some other way. When the House District Committee meets today to consider the Overton plan, which would bring the District an extra donation of over $3,000,000 on the theory that the Government should contribute in proportion to the land it takes up, the Members can at least make a fair beginning.

[From the Washington Evening Star of March 31, 1941]

THE LIBRARY NEED

When the District Commissioners, faced with the necessity of securing funds for an emergency school-building program, proposed as a fourth and last resort the deferment of construction work on the new public library, they pointed out that this procedure would have "the disadvantage of postponing an improvement already found necessary and appropriated for by Congress."

This is a conservative statement of the self-evident need for the new library facilities which have been authorized by Congress. While fully recognizing the necessity for providing new schools and new school equipment, the Board of Library Trustees, in expressing the "earnest hope" that these facilities could be had without postponing work on the new library, called attention at the same time to some of the more noteworthy shortcomings of the existing public-library facilities.

The present central library was built in 1902 to serve a population of less than 300,000, but today it is expected to meet the requirements of more than twice that many people. The book ordering, cataloging, and binding departments, for which new quarters had to be found 12 years ago, are now housed in two buildings, each more than a mile from the central library. This involves the annual transportation of many thou-

sands of books and considerable extra expense. The departments that remain in the old building, as pointed out by the board of trustees, are wholly inadequate to serve the more than 3,000 persons who use the halls and reading rooms daily. More than 120,000 circulating volumes are housed in stacks, which must be closed to the public and which are expensive to administer. Likewise, space for reading rooms, offices, and workrooms is either nonexistent or deplorably inadequate. The music division, for example, occupies a poorly lighted basement room, which was originally a public lavatory, and there are no reading rooms in numerous important fields.

These are but a few of the considerations which prompted Congress in 1938 to appropriate funds for the preparation of plans and specifications for the new building. The need which existed in 1938 is greater now, and it will be further increased if the necessary new schools for which the Commissioners seek funds should be built, since the schools make important demands on the facilities of the library.

My Answer to the United States Chamber of Commerce

EXTENSION OF REMARKS

OF

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

LETTER TO A. B. BARBER

Mr. ELLIS. Mr. Speaker, yesterday I received from Mr. A. B. Barber, manager, transportation and communication department, Chamber of Commerce of the United States of America, Washington, D. C., an invitation inviting me to attend a certain session of the annual convention of the United States Chamber of Commerce on the afternoon of April 30—to attend as an onlooker and not as a participant. It was very kind of the chamber to invite me down to hear a bill which I am sponsoring in the Congress condemned.

I quote here my letter of reply in full:

APRIL 28, 1941.

Mr. A. B. BARBER,
Manager, Transportation and Communication Department, Chamber of Commerce of the United States of America, Washington, D. C.

DEAR MR. BARBER: I appreciate your invitation to attend your conference meeting on transportation and defense to be held on April 30.

I note that in the printed program of the twenty-ninth annual meeting of the Chamber of Commerce of the United States you list as your first speaker for the afternoon meeting of April 30, Hon. Ralph L. Carr, Governor of Colorado, on the subject, Federal Encroachment Through Regional Authorities.

I also recall that some months ago the United States Chamber of Commerce voiced its opposition to the proposed Arkansas Valley Authority and other proposals endorsed by the President of the United States for development during the inevitable post-war crisis.

I also recall that some weeks ago Governor Carr, of Colorado, close personal friend of the utility magnate, Wendell Willkie, called a meeting of the Governors of several Western States for the purpose of condemning projects designed to benefit all the people such as the proposed A. V. A.

It is evident that the interests of the American people and that the voice of the local chambers of commerce throughout the United States are never heard or considered by the United States Chamber of Commerce. Tactics such as these belong not to the American way of life but to Adolf Hitler and Benito Mussolini. The United States Chamber of Commerce is neither of the people, by the people, nor for the people, but it is for those ultraselfish and unscrupulously greedy interests of the American economic royalty.

The dictators of the totalitarian countries hold out hope to the youth of those nations for a better day if they win and succeed in driving democracy from the earth. What are we holding out in the way of hope for the youth in these United States? What will be the fate of the American youth if Hitler wins? And what will be the fate of the American youth if Britain wins? In either case the picture is dark.

It was a policy of destruction and negation very similar to that of the United States Chamber of Commerce that gave to the world such men as Hitler. It is your policy today that is destroying America.

I say to you that we have got to offer hope and inspiration to the youth of this land and we have got to make democracy work.

The proposed Arkansas Valley Authority which you have placed Governor Carr on the program to condemn is one of the greatest projects yet conceived by man and will do more to preserve the democracy, in my opinion, than the United States Chamber of Commerce can do to destroy it.

It is sad commentary but it is true that the best evidence I know that anything is right is for it to be first condemned by the United States Chamber of Commerce.

I am thankful unto God that in this free country I can decline your invitation to be present on April 30, and that I can advise you that, in my humble opinion, if you and others like you, who are likewise blind to any vision of the future, do not change your tactics the day will come, if you prevail, that even you will be sorry the United States Chamber of Commerce ever existed.

Yours sincerely,

CLYDE T. ELLIS.

P. S.—What the United States Chamber of Commerce needs is somebody big enough to change its diapers until it grows up and catches up with the times.

C. T. E.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

RESOLUTION OF INDIANA STATE CHAMBER OF COMMERCE

Mr. GILLIE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include a copy of a resolution adopted by the Indiana State Chamber of Commerce in opposition to the proposed St. Lawrence seaway project:

Whereas the Indiana State Chamber of Commerce, as an organization representing approximately 35,000 individual business interests in the State of Indiana, has a deep concern in the questions involved in the proposed St. Lawrence seaway and power project, and its probable effect upon the welfare of the State and Nation; and

Whereas the Indiana State Chamber of Commerce has just conducted a referendum among its membership and found the sentiment overwhelmingly opposed to the prosecution of this project (91 percent opposed and 9 percent favored it): Therefore be it

Resolved, That the board of directors, for and on behalf of the Indiana State Chamber of Commerce, hereby expresses its disapproval of this proposal and most earnestly urges discontinuance of further consideration of its prosecution at this time for the following reasons, which represent some of the more potent arguments submitted by the membership, to wit:

1. Prosecution of the project at this time would prove a serious if not fatal obstacle in our present emergency of national-defense efforts by a futile diversion of essential manpower, material, and money—despite the claim of its proponents that it is necessary for that effort—in that:

(a) It would divert labor from direct defense and emergency-aid efforts, and there is now an alarming shortage of skilled labor.

(b) Technical and engineering skill is already at a premium and could not be diverted here except at the serious retarding of the armament-aid activities.

(c) All available materials are now desperately needed in defense-aid industries and any extra drain thereon, as required by this proposal, would be disastrous; and

(d) Another billion-dollar commitment, as would be necessary here, would divert much needed, and difficult to obtain, funds from the financing of the national-defense emergency—thus accentuating an extremely serious problem.

2. This diversion of the above essentials from our gigantic industrial and governmental efforts to meet the present emergency would be doubly serious since even its most optimistic proponents concede that it would require 5 years or more to produce even the first of the unproven benefits claimed.

3. From a long-range viewpoint the project also stands condemned in its inevitable placing of our national economy and standard of living in more direct and open competition with those of nations less favorably endowed. And there are no offsetting advantages from the standpoint of either exports or imports, because:

(a) Alleged more savings in transportation costs through the elimination of transshipment of exports would be an insignificant factor in enabling American products to compete with the low-cost foreign products in destitute Old World markets, which will be inevitable in the post-war period; and

(b) By thus opening the very interior of America to the importations from foreign countries, which due to war conditions are certain to be forced to produce goods at a starvation level, will prove disastrous to our price structures, depressing our standard of living, and threatening our national economy. This is obvious because most boats using this seaway to the extent it would be used would be tramp steamers which generally carry low-cost, destructively competitive products rather than the higher class importations ordinarily carried by the larger oceangoing ships; be it further

Resolved, That copies of this expression of view be appropriately conveyed to the President of the United States and to the Senators

and Representatives in Congress from the State of Indiana, and that the officers of the State chamber of commerce be authorized and directed to carry out this considered position by such other action and at such other times and places as may become appropriate.

Federal Reclamation Program

EXTENSION OF REMARKS

OF

HON. WALTER K. GRANGER

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

Mr. GRANGER. Mr. Speaker, I desire at this time to call attention to the Members of the House that we might expect some time, we hope in the near future, that the war emergency will be over, and when that time comes there will be need for employment for those who will be released from their employment in the present defense projects. Therefore, following out the President's proposal that wherever possible worth-while and needed enterprises be studied and their feasibility and public need be determined, I feel that such projects could be immediately commenced, thereby absorbing much of labor that will be made available by the discontinuance of the defense emergency projects.

With this thought in mind, I think there is no other governmental agency that can do more toward this than the Bureau of Reclamation under the Department of the Interior. I call to your attention the fact that in the Interior Department appropriation bill that will soon be up for consideration there is carried an item of $500,000, allocated to the Reclamation Bureau for making general surveys and investigations. Limiting the Bureau of Reclamation to $500,000 a year for advancing its inventory of western water resources and preparing information for the Congress does not seem to be good business. At least a million dollars should be provided for this purpose in order to secure the means for cooperation with the State and Federal agencies.

I make this statement from the fact that some of the appropriations carried in this bill are vital to the people of the district which I have the honor to represent. The vast majority of the people in the First Congressional District live in small communities, communities wherein there have been established fine schools, church facilities, recreation centers, and other things that go to make up a community life. These communities were established almost a hundred years ago and established in this manner for a particular reason. First, and foremost, they were established where culinary and irrigation water were accessible; and, second, they were banded together as a means of their own defense and security.

Utah, as the pioneer irrigation State of the Union, is water conscious. Approximately 80 percent of its crops are harvested from irrigated land, and the economy of the State as a whole is built on conservation and utilization of the meager water supplies that are or can be made available.

The agricultural census just completed shows the cropped land in Utah in 1939 was nearly 200,000 acres less than in 1929. In 1934, a year of serious drought, there was an even greater decrease. While the plowable pasture acreage shows some increase, the fact remains that Utah is endeavoring to support a population of 548,000 persons with less than 967,000 acres of cropland harvested.

On the basis of national requirements as reported by the Bureau of the Census, Utah should have from one and one-half to two million acres of land in the production of crops.

These figures are cited for two reasons:

First. To show that expansion of the Federal reclamation program is necessary to feed the increasing population of the West and does not add to the burdensome surpluses that are plaguing agriculture where wheat, corn, and cotton are the major crops. It should be noted that Utah's great need now is for supplemental water supplies to rehabilitate and maintain established communities.

Second. These reports clearly indicate that Utah requires projects that will anchor its families in their present locations, provide additional agricultural production, and utilize labor that otherwise would be engaged in less permanent construction activities.

I believe the record will show that Utah has been a consistent supporter of the Federal reclamation program in every State in the West. It took an active part in advancing the Colorado River Co. for an equitable division of the waters of the Colorado River between the States of the upper and lower basin. The State agricultural college has pioneered in teaching the farmers the value of water, which is the lifeblood of the State.

With all this interest in water and irrigation, the State has asked but little of the Federal Government. The pioneers who braved the deserts and mountains in reaching the valleys of Utah nearly a century ago built a civilization on irrigation and the systems they installed in the main were adaquate until the pressure of population, coupled with droughts, presented needs that the State and its own people cannot meet. Bear in mind the population of the State has increased nearly 100 percent in 40 years.

I direct your attention to the water conservation and utilization program. To the minds of a great many western people, the development of small projects under this program for the rehabilitation of established agricultural areas is about the most important expansion of Federal reclamation since the law was enacted in 1902. While Utah has had only one small project authorized under this program—the Newton undertaking in Cache County—there are 15 or 20 others in the State that can qualify. Certainly, if best results are to be secured, the appropriation of $3,500,000 of reimbursable funds proposed in the bill is inadequate. The States in the Great Plains need these projects and there are many localities in the intermountain region where the program can be used to advantage for rehabilitation and in the employment of W. P. A. labor and C. C. C. camps. At least $1,500,000 should be added to this proposed appropriation. I say this for the reason that my district, as I have said before, has 15 or 20 other small reservoir projects that can qualify under the provisions of this program, and the estimated cost of these projects themselves would amount to nearly three and a half million dollars.

The American Dictator Has Decided on Entering the European and Asiatic Wars

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

ARTICLE FROM THE CHRISTIAN SCIENCE MONITOR

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Christian Science Monitor of April 28, 1941:

[From the Christian Science Monitor of April 28, 1941]

THE PRESIDENT HAS DECIDED

AN INTIMATE MESSAGE FROM WASHINGTON

(By Roscoe Drummond)

By every act, word, and gesture the United States Government disclosed during the past week that it has made up its mind concerning the war. No President and no Cabinet have been faced with a harder decision nor a more momentous one. But there is full evidence that the decision has been taken and that it embraces these considered intentions:

That American naval power will be used just as far as it is necessary to insure the safe and speedy arrival of war supplies to British shores.

That the Government will augment its support of Britain even if it means increasing the risk of war. Germany may start the fighting any time she chooses.

That the administration will take the initiative to bring the United States fully into the war before it will accept a Nazi victory and, prepared to appeal to the country and Congress, the President and the Cabinet will urge the Nation to act quickly and preventively rather than wait to face the Nazis entrenched on every front.

These decisions have not been formally announced. The President will choose his own occasion and his own way to make his position thus clear; but they are implicit in the events of the last 7 days. That these decisions have now been taken is the inescapable addition of these events.

On Wednesday President Roosevelt conferred with Mayor Fiorello H. LaGuardia at the White House and that night the Chairman of the Joint Canadian-American Defense Board revealed that America's neutrality patrol was even then reaching 1,000 miles out into the Atlantic.

On Thursday President Roosevelt met with his inner "war cabinet," attended, as it is, by the Secretaries of State, War, Navy, and the Treasury; by Harry L. Hopkins as coordinator of the lend-lease program; and occasionally by military and naval technicians.

That evening Secretary Frank Knox, speaking before the American Newspaper Publishers Association and addressing the Nation by radio, declared:

"Having gone thus far, we can only go on.

"Hitler cannot allow our war supplies and sunk in the Atlantic—we shall be beaten if they do. We cannot allow our goods to be sunk in the Atlantic—we shall be beaten if they do. * * * We must see the job through."

This is unqualified and official determination that the program of lend-lease aid to Britain is not going to stop at the factory door; that that aid is going to be delivered, safely and speedily, one way or another.

At another point in his speech Secretary Knox said significantly:

"All this [aid to Britain, produced and delivered] is needed for our own safety and future security. This is our fight. * * *

"We can no longer occupy the immoral and craven position of asking others to make all the sacrifice for this victory which we recognize as so essential to us. Our manhood and our self-respect demand that we shall assume our part of the burden."

This is an official and powerful appeal to the American people to support a government convinced that it must assume a larger "part of the burden," that security cannot be had by merely cheering for the British.

On the same evening, but timed for a half hour later, so that his speech would not overlap, Secretary Cordell Hull took to the air to ask whether the United States is going to oppose the march of Nazi world domination in cooperation with Britain or wait until Britain may be defeated and then face the Axis, with most of the world subjugated, by itself. Choosing his words carefully, Mr Hull said:

"Some among us, doubtless with the best of intentions, still contend that our country need not resist until armed forces of an invader shall have crossed the boundary line of this hemisphere, including the United States, until the invading countries had acquired complete control of the other four continents and of the high seas, and thus had obtained every possible strategic advantage. * * * This is an utterly short-sighted and extremely dangerous view."

This is unqualified and official disclosure that the Government believes the Nation must be ready to enter the war fully rather than tolerate a Nazi victory, and that it will be prepared to take that initiative in the face of any visible prospect that Hitler cannot be defeated otherwise.

Finally, at his press conference on Friday, President Roosevelt himself broke a rather long period of silence on war policy and embraced as expressing precisely his own views every word uttered by his top-ranking Cabinet officers. It could hardly be otherwise, but Mr. Roosevelt made it official.

At the same time as the President was accepting the basis of the third objective of policy, mentioned above—the objective of preferring to fight rather than accept a Nazi conquest of four continents, he revealed further steps implementing the first two.

He quietly and quizzically dropped into the laps of the correspondents the information that the Nazis may even now be occupying, in part, the island of Greenland, the Danish possession over which the United States has now accepted a protectorate and whose inviolability the United States guarantees under the Monroe Doctrine. He announced that measures were already being taken to counteract this reported occupation.

The President also announced an indefinite extension of the American neutrality patrol, declaring that it would reach to the seven seas, if necessary, to keep war from the Western Hemisphere.

Last week the President's words and the President's acts were those of a man who has made up his mind, who has reached a solemn and solid decision.

The President Is Responsible—He Hides Behind the Lady's Skirts

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

EDITORIAL FROM THE SOMERSET (PA.) DAILY AMERICAN

Mr. HOFFMAN. Mr. Speaker, yesterday's editorial from the Somerset Daily American, of Somerset, Pa., is so accurate a description of the President's adroitness in escaping responsibility that it should be placed in the RECORD. Here it is:

[From the Somerset (Pa.) Daily American of April 28, 1941]

PERKINS

It takes a great deal more courage to tell a lady that she fails to measure up to the requirements of a situation than it takes to tell a man. But man or woman, Senator HARRY F. BYRD, of Virginia, has all that it takes to handle that sort of a delicate situation.

Before the adoption of the nineteenth amendment to the Constitution one heard a good deal about "equal rights." It had an alluring sound.

"Equal rights" entail equal obligations. That's where woman suffrage has failed.

Too many of the "equal rights" advocates seek to escape from equal obligations by way of their skirts.

One does not have to charge the Secretary of Labor with seeking to escape her obligations by way of her skirts. She belongs to an outfit that has perpetually sought to escape its obligations. Indeed, the obligations to measure up to which Senator BYRD says she has failed were imposed upon her by a President who imposed them upon her with the obvious purpose of using her skirts to escape his obligations.

Senator BYRD sent Miss Perkins a telegram April 21, calling upon her to certify the coal strike to the United States Mediation Board, asking for an immediate reply. Miss Perkins certified the strike to the Mediation Board at midnight of April 23.

Addressing the Senate Friday, Senator BYRD said:

"Certainly the bungling and lack of courage on the part of Miss Perkins has greatly aggravated the situation, and her failure to act with promptness and firmness at the beginning of the strike, handicaps greatly the efforts of the mediation board at this late hour, when only a few days stand between practically a complete stoppage of all industrial life in America by the inability of obtain coal supplies.

"It is commonly reported and generally believed that the failure of Miss Perkins to certify sooner this strike was because she did not desire to offend John L. Lewis, who has declared publicly that he would not permit the coal strike to be mediated by the National Mediation Board.

"Is John L. Lewis bigger than the Secretary of Labor? He may be, but he is not bigger than the Government of the United States in this hour of national peril. Before this emergency is over I predict that the American people will not tolerate any man or group of men, whether it be a powerful labor leader or a powerful industrial magnate, to stand as an obstacle to the essential work of our national preparedness. Unless these obstacles to our preparedness program are removed by those in authority, in some way, some how, the American people will do what is imperative under our democratic form of government to clear the path for some quick and expeditious preparedness as will best protect our country in this hour of national peril.

"Madam Perkins today, as Secretary of Labor, the only person having authority to certify strikes for action by the Mediation Board, with her inefficiency and lack of decision and firmness in dealing with this responsibility, has made herself one of the most serious bottlenecks in our national preparedness efforts.

"Today nothing would do more to restore the confidence of the people of America in the determination of this Nation to go forward quickly and effectively in a national program of preparedness than to replace Madam Perkins as Secretary of Labor with a more competent successor. It is reported that the resignation of Madam Perkins as Secretary of Labor is on the President's desk. If so, he should accept it immediately."

Senator BYRD's conclusions have the approval of all his fellow citizens who place the general welfare above private greed.

Secretary Perkins ought to be relieved of further responsibilities in an office to which she should never have been appointed and in the administration of which she has reflected no credit upon the President, who named her a member of his Cabinet, nor upon herself.

Confederate Memorial Day

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

EDITORIALS FROM THE PENSACOLA JOURNAL AND THE TALLAHASSEE DEMOCRAT

Mr. SIKES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials:

[From the Pensacola (Fla.) Journal of April 26, 1941]

CONFEDERATE MEMORIAL DAY

Today is Confederate Memorial Day. In times gone by, the Ladies Confederate Memorial Association supervised appropriate ceremonies at the monument to Confederate heroes which stands in Lee Square.

Now, most of these noble women who kept alive the traditions and the valor of the leaders of the South are gone to their reward. It would be well for others, their sons and daughters and grandchildren, to carry on in their stead and place lovely flowers about the monument which stands for the

bravery and self-sacrifice that went into the lost cause.

This Memorial Day, however, should be a time for reflection. We should not only recall the noble deeds of 1861–65, but we should be thankful that the United States through the years has grown in unity and in strength and that today it stands in the world as one of the last safeguards for democracy, a barrier to dictatorship and aggression.

We should not allow disunity again to rear its head. Now as never before must these States remain united, not to the abolition of freedom of thought and expression, but for the purposes of keeping those rights and liberties for ourselves and for other peoples who are being trampled under booted foot and crushed by the motorized guns of the aggressor.

Not only must the United States act in unison, but all of the republics of the hemisphere must work together to keep subversive doctrines, foreign agents, and the attacker from these continents.

The War between the States is in the dead past. We may remember with pride the acts of its glorious leaders. But we never again wish to see such strife in this Nation, for if we do it will be the beginning of the end of freedom and democracy, of life, liberty, and the pursuit of happiness, of the United States, and of the American way of life—of civilization itself.

[From the Tallahassee (Fla.) Democrat of April 25, 1941]

CONFEDERATE MEMORIAL DAY—ITS MEANING

Confederate Memorial Day will be observed tomorrow in response to custom and tradition.

This occasion is and has been one of great consequence in the South. Its meaning and importance are understood by all of southern blood, but are not easily explained. We do not so much deal with the Confederacy by intellectual as by emotional processes, and people of our section, voluble on many subjects, are not effectively articulate, as a rule, on this one matter.

But there is, nevertheless, a definite and precise meaning in the attitude of our people toward the Confederacy and the memorial day which helps to keep its memory fresh.

On Confederate Memorial Day we pay honor to the Confederate dead. In this all peoples everywhere may join. Without understanding of the objective for which they fought, without sympathy for the cause which was lost, anyone may respect the brave and the stalwart.

Courage and stamina are qualities which command respect everywhere. And the Confederate troops, outnumbered, poorly fed and clad, ill equipped with weapons and ammunition, held steadfast during many years of bitter hardship, to take their places beside the bravest of the immortal soldiers of history.

The little Confederate flags which tomorrow shall mark their graves are the badges of honor of brave men and true.

This is not all. To those who have grown up in the Confederate tradition, the day recalls an era, a way of life, and a philosophy which are no more but which shall never be forgotten.

The era was one in which the Southern States and southern statesmen were supreme in national counsels. Few, relatively, of southern families boasted mansions and households of hundreds of slaves, but all shared the prestige of the section which provided most of the early Presidents and a large number of the country's civilian and military leaders.

The way of life was that of free spirits. The great and the small were men to be reckoned with in those days, each an individualist, unregimented and unafraid, knowing such liberty as has not been enjoyed since in our land and as has not been known elsewhere in the period covered by written history.

The philosophy was that of Thomas Jefferson. Its cornerstone was the principle that that government is best which governs least.

The War between the States, we alone know, was the last stand of complete liberty for our people. It is a paradox that a people so free had not yet abolished slavery and an even more puzzling paradox that a war which, many came to believe in its later years, was being fought to set the slaves free, actually resulted in restricting the liberties of both white and black.

The quality which distinguishes the southerner is the desire to be let alone. Not all southerners possess this quality, and it is found elsewhere in this country and in others, but in the South it has been from the beginning the characteristic trait.

Our people fought to preserve the right to manage their own affairs, control their own destinies, hold governmental restraints and governmental paternalism to an absolute minimum. We know that was the lost cause, and it is because we know it that we experience that sadness on Confederate Memorial Day.

When the Stars and Bars are placed over the grave of a Confederate soldier we remember that under that sod is the body of a man in a gray uniform and beside him the cause for which he fought.

States Views to Madison County, Ind., Women's Republican Club

EXTENSION OF REMARKS

OF

HON. FOREST A. HARNESS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

ADDRESS OF HON. FOREST A. HARNESS, OF INDIANA

Mr. HARNESS. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following speech I made before the Madison County Women's Republican Club at Anderson, Ind., Monday, April 21:

I have been looking forward, since the recent reapportionment act made Madison County a part of the fifth district, to the opportunity which this meeting tonight affords me. First, as the Representative in Congress of the fifth district, I want to extend to you and to everyone in Madison County a sincere and cordial welcome into the family of counties which comprise what I very proudly assure you is one of the finest congressional districts in Indiana and in the entire United States.

Madison County folks will enjoy their membership in our district family, as I feel certain the people in the older parts of the district will enjoy having you with us. I know we are going to feel comfortable together right from the beginning because we start with so many important things in common. Madison is much the same sort of well-balanced county that is the average in the district. Your population is roughly half rural and small town, and half urban. In your economy industry and agriculture are in sound balance, and your industries are well diversified. The pattern is similar throughout the rest of the district.

As to the people, it seems enough to say that we are all Hoosiers in the fullest and best meaning of the term. We share hopes, aspirations, and viewpoints so nearly identical that I know you will move into the family circle without the slightest disturbance of routine.

I feel perfectly free, therefore, to urge you to make yourself at home and take a full share in the district councils and activities. Particularly do I want to invite you to call upon me and my office for any service or assistance I can render in Madison County. Don't feel that it is necessary to wait upon an official act or a formal date to call upon me in any matter in which I can be helpful.

Frankly, the offer to serve you is not entirely unselfish. I am anxious to meet and become acquainted with Madison County folks, and I know of no better way of accomplishing this than through the opportunities you may give me to serve you.

I expect to be a candidate for the office I now hold in the primaries and elections of 1942, and I think it is not too early to make that fact known generally among you. Because I expect to seek your support in the next election, I want you to know me and to understand my political philosophy just as early as possible. If you will indulge me for a few minutes, I would like to outline the creed on which I have twice been elected to this office, and by which I sincerely try to measure my service to the people of the Fifth District, and to the Nation.

I won't admit to classification by any of the common terms—"radical," "liberal," "conservative," or "reactionary." In the first place, I never have liked the idea of stamping individuals by these terms, because I never have found two persons whose definitions have been identical. And most particularly within the past 8 years have the terms become confused and misleading. I am a liberal, but in the original, and which I believe to be the true meaning of the term, rather than in the new application of the word as it has come to be used by the New Deal publicity writers. I am not the kind of liberal who believes in change for change's sake, or who makes a regular habit of shattering precedents without a thought to the consequences. I am the kind of liberal, rather, who instinctively fears the encroachment of government, and who wants so to curb it that it will always be the servant, rather than the master of the people.

At the same time there is much in my philosophy that is conservative, in the old and true meaning of that term. My conservatism springs from a deep respect and admiration for the Constitution, upon the framework of which the American Republic has been built. In my humble opinion, the American Constitution is literally a political and social miracle, unequalled anywhere in man's history. I am the kind of conservative who will fight, at all costs, to preserve this priceless heritage because I sincerely believe that within its form American progress, prosperity, and welfare are limited only by our own human limitations. I have no objection to a liberal interpretation of the provisions in the Constitution, for I believe that the founding fathers foresightedly planned to apply it broadly and flexibly enough to meet any conceivable condition. I do, however, protest with all my strength against any attempt to evade, to nullify, and to twist the spirit and provisions of the basic law because I believe that an effort to destroy the effectiveness of any part of it seriously threatens the entire foundation of our Government.

I am a rugged individualist in the sense that I believe in the dignity and the inviolable rights of the individual, including that supreme right or power of sovereignty. I believe that the State shall be the servant of the people, created by individuals voluntarily pooling just a little of their rights and privileges for the welfare of all. I believe this because government, no matter what the form, is sterile. It cannot produce or create

anything of itself. Government may be the means to organize, foster, and protect; or to coerce, confiscate, and destroy the creative capacity of a people. It may provide the wholesome atmosphere in which a people's creative energies are devoted to social, cultural, and material advancements; or it may be the instrument which strangles and enslaves these energies. But in no case and in no real sense is government of itself creative.

It naturally follows that I am vigorously opposed to much that has taken place in America in the past 8 years under the New Deal.

I am unalterably opposed to the disrespect and contempt for law, the courts, and the Constitution which have all too frequently cropped out in the administration's impatience when these bulwarks of the American way of life have stood in the way of dozens of untried success formulas and social prescriptions which the President became intrigued with from time to time.

I am definitely against the centralization of power and the growth of bureaucratic agencies by the score, which are definitely breaking down the doctrine of States' rights and steadily encroaching upon the sovereignty of the States and the individual.

I particularly object to the spreading philosophy that Santa Claus lives in Washington; that the virtues of thrift, energy, and self-reliance are old-fashioned and just a little bit indecent; and that the Federal Treasury somehow or other can make everybody comfortable, secure, and happy by magic. The illusion of security without effort or responsibility under a rich, wise, and generous Government is all the more dangerous because, for a time being at least, it can be made to seem plausible. I particularly deplore the specious arguments by which such large numbers of American people have been lulled into forgetting that this or any government can spend or give away nothing which it does not first collect in taxes, or for which it does not mortgage its people's future.

I have been completely in disagreement with the numerous major economic fallacies of this administration. To recall only a few of the most important, I have opposed all of these:

1. The amazing absurdity that millions of Americans were unemployed, ill-clothed, ill-fed, and ill-housed because America 10 years ago had reached full maturity, because it was becoming a static economy, and because we were cursed with a surplus of productive capacity, both in agriculture and industry. Also the equally absurd conclusion that the way to secure for our underprivileged one-third the "more abundant life" was to destroy our surpluses, along with a part of our national capacity to produce the abundance which marks the American standard of living.

2. The amazing fallacy that high prices make prosperity, which was largely responsible for the devaluation of our dollar and the sterilization of gold.

3. The deplorable mistreatment of American business, including restrictive and punitive taxation, destructive regulation, and direct Government competition, all accompanied by continuous prosecution and persecution in the courts of law and public opinion at the very time when widespread unemployment should have made it imperative that Government do everything reasonable to assist private enterprise to put men back to work.

4. The unfathomable inconsistency of working, on the one hand, to jack up all American wages and prices by every imaginable artificial means, but, at the same time, on the other hand, removing or reducing tariff barriers through a series of reciprocal trade treaties to allow factory products made at slave wages and agricultural commodities grown by peon labor to compete increasingly in American markets.

This is by no means a complete list of the points at which my own political creed is at variance with that of the administration. It is enough, however, to illustrate how completely I object to the trend of Government in recent years. There are, of course, accomplishments in the records of the past few years to which I can subscribe. Much of the social legislation has been desirable, if not absolutely necessary. In saying this, however, I ought to point out again that I am the kind of liberal who instinctively fears the encroachment of Government into any new field, and who regrets that our human imperfections made a large degree of regulation necessary in our increasingly complex civilization.

In this group of accomplishments are our efforts to legislate for the welfare of labor, our new means of regulating the investment and securities market, our acceptance of national responsibility for the relief of unfortunate citizens, our new machinery for extending credit to American home owners and farmers, etc.

None of these laws is so far adequate or satisfactory. In almost all of them the administration has been notoriously bad. In fact the President himself admitted this fact when he said at the close of the last campaign that he could have made a much stronger case against himself than had his opponents merely by attacking the administrative weaknesses of the New Deal. But incomplete as these laws are, and as deplorably as they have been administered, they are based upon principles which all reasonable persons accept as inevitable in our increasingly complex economy.

It may seem a waste of valuable time to review what, in light of present conditions, may seem to be past and temporarily unimportant history. I hope, however, that you don't feel that I am thinking and talking abstractions at a time when our own house is threatened by the fires which are destroying our neighbors. I hope you feel, as I do, that these are fundamental precepts to be cherished in every circumstance. To be honored the more faithfully, in fact, in times of adversity.

Transcending everything else in importance today, of course, is the grave international situation, our own hazardous relation to the wars now raging, and the status of our own war program.

Let me review my own position for you briefly as it relates to these grave questions. In the first place, I have vigorously and consistently opposed the steps by which the President has taken us this far into the war. I use the term "has taken," advisedly for, make no mistake about it—if there still is any doubt in your mind—we definitely and actively are participants. The famous phrase "steps short of war" no longer has validity or meaning. We can say now only "the steps short of actual hostilities," and hope, as we say it, that we may still avoid that final step.

I have, as I said, opposed the steps we have thus far taken, not because I am unsympathetic to the victims of aggression, or even because I am unwilling that we should offer every reasonable aid. I am even willing to agree with administration leaders and other proponents of all-out aid that the future of America will be much more difficult following total victory for Hitler than it will be if he and totalitarianism are destroyed.

To this end, I voted for the $7,000,000,000 appropriation by which we have implemented the Lend-Lease Act. I supported this appropriation not alone from sympathy for Britain, but for the better reasons that America has been committed to a definite new policy in its international relations. Wrong as I may think that policy to be, it was adopted by a large majority after extended discussion and debate which gave every viewpoint, and every interest was considered. Under those circumstances, I could not see how I could do less than support an adopted policy.

Furthermore, the President had pledged, as a condition of the new authority he sought, that this new policy would be used as a means to avoid war, rather than to enter it. Finally, I was guided by the fixed American habit of unity in our foreign relations. There can be no successful policy which will be respected by other nations unless there is solid support behind the President, who is our national agent in our relations with the rest of the world.

Nevertheless, I can't see any favorable conclusion of a policy that stops short of outright hostilities. There is increasing evidence that Britain, together with the feeble assistance she is able to recruit in Europe, will never be able to destroy the German war machine, even with the materials we can furnish when we are in full production. The question of getting those materials into hands that can use them effectively is right now critical, for Britain alone simply cannot prevent shipping losses which there is no hope of replacing. Because it is futile to invest our energies and resources in aid to Britain merely to offer them as a helpless sacrifice to the German submarine blockade of the Atlantic, we are simply going to be forced to the fateful decision of throwing our Navy into action, or of backing down on our proud pledge of total assistance to any country which can be induced to resist the Axis Powers. I repeat that that crisis is upon us right now, and we must face it—not 6 months or a year hence. Thus, even this soon after we declared ourselves actively for intervention and made our own President the Quartermaster General for all forces opposing the Axis Powers, we begin to face the terrible consequences.

It was for the reason that I foresaw that such crises would continually confront us that I opposed the passage of the lend-lease act. There is the further reason that I remembered Europe's history through the last 300 years and recalled that in that entire period there never has been a sound and lasting peace upon that continent. All of you are doubtless familiar with the general "balance-of-power" formula, by which intervals of peace have prevailed in Europe. This is simply the essence of power politics, in which one group of powers has been allied opposite another group of powers. When these main alliances have been reasonably in balance, and when each group has been deterred by fear of the consequences of attacking the other, there has been peace. When the balance has been destroyed for one reason or another, there has been war. And during all this period, Britain has masterfully maintained a position at the center of the teeter board, throwing its weight first one way and then the other, but always at a price, and to the ultimate advantage of the Empire.

This is not to criticize British diplomacy. It is merely to point out that this diplomacy is failing in this century to accomplish what it has always been able to do before, namely, maintain the European balance of power. British diplomacy, plus Allied arms, seemed at the point of defeat in the first World War when we interceded in what we mistakenly thought was a noble effort to save democracy and to end all wars; but what actually was nothing more than an act to restore Britain to her increasingly precarious position at the center of the teeter board. Now, just 20 years afterward, with all the disappointments and disillusionments of that first experience still fresh in our minds, we are again about to persuade ourselves that we should undertake another crusade—and for purposes just about as vague and idealistic. This time we shall undertake to establish the "four freedoms," deluding ourselves with the childish notion that any nation which allies itself with us is a democracy, or at least fighting for the democratic principles.

It may be to our advantage to enter the European wars again. It may be true that the tremendous advances in transportation and communication have dwarfed the world, or that our own rapid development as a nation has thrust us, regardless of our desire in the matter, into the position where we can no longer isolate ourselves from the world's troubles. I do not accept that proposition, but granting that it were so, I wish that we in America might grow up and get over the crusading spirit which makes us picture ourselves as the white plumed knight riding against the enemies of an innocent world.

If it is true that we must intercede in the troubles of the world, then it is high time that we drop our naive delusions and develop a tough, hard-boiled, realistic diplomacy that knows what it will mean to accept the responsibility for policing a troubled and recalcitrant world.

Our defense program is moving about as well as could be expected. There are heartbreaking delays and instances of confusion, indecision, and poor administration which are costing us terrifically in time and money. We can look back with regret that our armed forces have been so sadly neglected, especially within the past few years, during which the totalitarian menace was growing in such a manner that we could not possibly have missed its serious implications had we been willing to face it. We can regret the fact that the American industrial machine had gone through a protracted period of depression, attended by political and social reform which left it badly disorganized and unprepared for the tremendous demands which have suddenly been thrown upon it. It is too late for recriminations now, however, for all that is history and we are confronted with a tremendous job which must be done in record time.

It is a job which only the productive genius of the American industrial system could possibly accomplish, for we alone have what it takes to do it. We have the raw materials, the potential capacity, and the ability in proportions unimaginable anywhere else in the world. All that is lacking to date is the firm will and the unity of purpose that are the spark plugs of this American machine.

A last word about this firm will and unity of purpose. These last but most important requirements have not fully crystallized as yet, because the American mind is still confused. We want to aid Britain, but we are preponderantly against going to war to do it. We want to make our own defenses impregnable, but we have so fallen from our old national habits of thrift, energy, and initiative in recent years that our soft and flabby muscles groan at the sudden exertion we must undertake.

Because current labor troubles have held the spotlight and because labor generally has drawn severe criticism and is even threatened with drastic legislation, let me say just a word about that situation. There is nothing wrong in the rank and file of American labor. What is happening here is nothing but a symptom of the general condition of our national system. I don't condone jurisdictional strikes in defense industries or the grave mistakes that certain radical and selfish labor leadership has made. But I do insist that the real fault lies with the administration which has sadly misled labor, which has poorly administered labor laws, and which even now hesitates to demonstrate the firm leadership which will enable American labor to orient itself to the tremendous job it has to do. I insist that the average Indiana workman is just as patriotic and loyal and just as anxious to contribute his full share to this big job as any other citizen; and that he will contribute a full share to the job when he is given the leadership which will demand and inspire national unity.

The remaining job is to slough off our habits of softness and ease, to end our delusion of security through government, and to take up our belt, roll up our sleeves and go to work with less thought of profits, high wages, and easy working hours and more thought of national safety. When we do that, we again will show the world a miracle that could happen nowhere else in the world except in the American system of free enterprise, functioning in unison and harmony as only our own free people can function.

Irrigation

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

STATEMENT OF HON. CHARLES R. ROBERTSON, OF NORTH DAKOTA

Mr. ROBERTSON of North Dakota. Mr. Speaker, under leave to revise and extend my remarks in the RECORD today, I include the following statement which I made on the question of irrigation before the Committee on Appropriations under date of April 17:

I am glad of this opportunity to appear before the Committee on Appropriations in the hearing for the Department of the Interior.

The phase of this appropriation in which I am particularly concerned is that relating to the Bureau of Reclamation. My State of North Dakota is a part of the Great Plains area, which has in recent years been beset with many difficulties. In the two decades preceding the one dating from 1930-40, my State enjoyed tremendous development both in population and in its productivity. So remarkable was it in the production of fine quality No. 1 Northern wheat, that it was frequently referred to as the "bread basket of the Nation."

Beginning about the year 1934, and almost continuously thereafter, especially the central and western section of the State has been the victim of most unfortunate circumstances in the way of drought.

I am sure this committee is familiar with the problems that have existed in many sections of the Great Plains area. The State of North Dakota has had its rightful share of these difficulties. From the years 1930-40 North Dakota has had a net loss in population of nearly 54,000 people in its 52 counties. Many of these people who are leaving the State are doing so at approximately middle age, and I need not remind you that this is a difficult period in life to find a new place to take up your abode. In many cases they have gone into Western States, where their problem has been very difficult due to the entirely different methods of agriculture that prevail there. It is by all means their choice, if possible, to remain in the country which has so long been their home. The Western States on the Pacific coast well know of the effect of the migrations from the Dakotas and other Great Plains States on their own economy.

The harvested acreage in North Dakota has decreased by millions of acres in the past 10 years, due largely to drought. The accumulated deficiency in moisture of more than 20 inches in this great area is an unsurmountable obstacle to a permanent recovery through natural means. Our only hope to restore our water levels and to compensate in some measure for this deficiency in rainfall is through the establishment of irrigation and reclamation projects. This can be done conveniently along the streams that cross the State, and particularly in the wide, fertile bottoms of the great Missouri River, which flows almost diagonally across the State. As the result of these various problems, drought, and so forth, normal farm operations have been impossible. While the rural population has been tremendously reduced, the cities and towns, generally speaking, have grown considerably. This is due to the fact that many of these farmers in distress, who did not leave the State, have moved into the cities and towns, and have gone on Federal relief, and by so doing have tremendously accelerated the problem of relief to the National Government.

It is my wish, in appearing before this committee, that I may induce the Government to review the situation in the Great Plains, and particularly in the State of North Dakota, and attempt to bring about some means of permanent recovery, rather than to continue on a perpetual relief basis.

From 1933 to 1940 the Federal Government, through the W. P. A. and its predecessor agency, spent more than $92,000,000 for relief, and this figure does not take into consideration the matching funds supplied by the State, county, and local governments, nor does it include F. S. A. or F. C. A. funds allocated to the State.

Our farmers, because of the drought and the subsequent shortage of feed, were compelled to liquidate their livestock holdings. This occurred particularly in the years of 1934-36, when the drought was very devastating and quite unparalleled in the history of the State.

Until such time as they were compelled to liquidate their herds, the State of North Dakota had never become a perpetual burden on the Federal Treasury. They are now at the mercy of a ruinous one-crop agriculture. In order to stabilize this agricultural industry in the great west area, and to provide as much protection as possible against recurring droughts, steps must be taken by the Federal Government to utilize the water we have in our streams, and which is now almost entirely wasted.

Resulting from these distressing experiences, the viewpoint of our people has undergone a great change during the past decade, and today they are viewing their land and water use problem in a much broader light than they did prior to 1934. Our State legislature is aware of the great need for establishing irrigation projects, and has already gone a great way in making surveys and conducting educational campaigns. Today our people in the dry-land areas of North Dakota realize completely that they can rebuild a stable agriculture, if only insured of feed crop, and this is obtainable by the use of surplus water.

We are anxious to be practical about this problem. We are anxious to gain all assistance possible from the Federal Government through the Bureau of Reclamation in establishing these smaller irrigation projects, and it is for that reason that I urge this committee to recommend that the appropriation for water conservation and utilization projects in the Great Plains be increased from $3,500,000,000 to at least $5,000,000,000.

The development of the technique provided for in the Case-Wheeler Act enables North Dakota and other Great Plains States to accomplish irrigation with a minimum cost per acre-foot of water. The Bureau has conducted numerous investigations in western North Dakota; many of the projects are along the Missouri River, where an adequate water supply is available.

We are hopeful that out of the investigations thus far completed or in progress a

number of them will be approved and thus become eligible for financing through the Case-Wheeler program.

Another feature which should be taken into consideration is that the original Case-Wheeler program, and the appropriation for it, was intended specifically for use in the Great Plains area.

I understand that last year a portion of these funds was allocated to States outside the Great Plains area, and this work necessitated spreading existing appropriations far more thinly than would otherwise have been required.

It is my honest belief that if at least six or eight blocks of 5,000 to 8,000 acres in western North Dakota could be placed under water through the operations of the Case-Wheeler program, those areas would be assured of an annual feed production which would not only rehabilitate the livestock industry, but create a more stable income in other branches of agriculture.

With irrigation, farmers on the uplands would never need to go more than 100 miles to get feed supplies, whereas during drought years in the past they have had to transport feed from 400 to 600 miles. Such a program was thoroughly uneconomical, and as I have already mentioned, great portions of the herds were moved out of the State, and today have not been replaced.

At the present time North Dakota has only one major irrigation development, being financed by Federal funds, and even that is a small project in comparison with some of those in other States. This project is known as the Buford-Trenton development. It will rehabilitate around 265 families, and will stabilize winter feed for livestock on 300,000 acres of range land.

We need more of this type of project in my State, and throughout the entire Great Plains area, and it is my belief that under the provisions of the Case-Wheeler Act great strides can be taken in establishing such projects.

Because of the crying need for the establishment of these projects, I believe that the estimate of $500,000 for investigations of water resources in 17 Western States is entirely inadequate. We could spend that much in North Dakota alone, without wasting a single dollar. I believe that the appropriations for this purpose should be substantially increased. I recognize that your committee is concerned with the problem of reducing appropriations rather than increasing them. I cannot fail to point out to you that the Government has seen fit for a considerable number of years to continue the Great Plains, and particularly North Dakota, on a relief basis, and I see no possible way by which this can be discontinued, unless we can discover a plan of permanent rehabilitation.

To my mind there is no better way to solve the problem which confronts the Great Plains States than through a practical and well-coordinated program of irrigation; a program which would enable farm families to reestablish themselves on a self-sustaining basis, and thus eliminate the necessity of subsidizing them through ever-mounting relief grants which do nothing to achieve a fundamental solution. In the long run there is no question but what a few million dollars spent for irrigation projects in western North Dakota will be far more economical than continuation of the present dole, which is maintaining many of these people on a bare subsistence level.

When you consider that over the past several years the Federal Treasury has been spending between five and six thousand dollars per family through Work Projects Administration and agencies which preceded it, the advantage in speeding up a program whereby these people can help themselves should be readily apparent.

The long years of drought we have had throughout the Great Plains States clearly demonstrates that agriculture in this area cannot be permanently sustained or placed upon a stable basis without water conservation and irrigation. Our only salvation is to supplement that deficiency in rainfall by developing the water resources of our streams and rivers, waters which are not now being utilized, waters which are being drained from these dry-land areas only to augment the flood problems in the States below us.

I should like to include here a statement made by Mr. E. A. Willson, executive director of the State public welfare board, pertaining to the cost of public-assistance payments for the month of February alone.

FEBRUARY PUBLIC-ASSISTANCE PAYMENTS TOTAL $1,476,990

Public-assistance payments for North Dakota during February totaled $1,476,990, compared with $1,586,668 in February 1940, E. A. Willson, executive director of the State public welfare board, reported Wednesday.

The payments include those from Federal, State, and county governments for public relief and earnings of persons employed under Federal work programs, but do not include costs of administering the programs or costs of materials, equipment, and supplies used on work projects.

Aided 103,752 persons

Willson said it was estimated that February payments benefited 29,706 households, which included 103,752 persons, or 16.2 percent of the total State population.

"The economic record for North Dakota in 1940 was one of exceptional improvement," Willson declared. "Agricultural income in 1940 was better than in any year since 1929. Total agricultural income, plus Federal benefit payments, amounted to $156,647,000, as compared with $140,000,000 in 1939 and $102,000,000 in 1938."

Payments in February for direct relief amounted to $645,138, including $152,623 for old-age assistance, $76,332 for aid to dependent children, $4,942 for aid to the blind, $119,215 for general public relief, $27,165 for F. S. A. subsistence payments, and $264,861 of surplus commodities.

N. Y. A. students earn $26,756

Earnings of persons employed under Federal work programs in February totaled $831,832, distributed as follows: C. C. C. enrollees $157,410, N. Y. A. student work program earnings $26,756, N. Y. A. out-of-school work program earnings $45,133, W. P. A. earnings $586,429, and earnings on other Federal work projects $16,124.

Public-assistance payments in 1940 totaled $15,345,601, compared with $18,429,297 in 1939 and $24,407,882 in 1938.

May I say, with all possible emphasis, that the people of central and western North Dakota would not want to be on a permanent relief basis. They would not want to come in a continuous procession to the Federal Treasury for hand-outs. This area can never be rehabilitated and made a sustaining part of our national economy on a relief basis. What is needed is irrigation. Irrigation along the streams that will supplement the uplands and will insure these farm families against crop failures of all crops and which, even in the worst years, will at least provide them with enough food for their household use and to maintain their livestock. The people of North Dakota are concerned to get themselves off the relief load to go back upon the land and not remain as residents of the towns and cities supported by the Federal Treasury.

I further suggest to this committee that you give due consideration in this increased appropriation for the work of the Bureau of Reclamation to the fact that this Great Plains area has in no way thus far participated in the multi-billion-dollar defense spending program. They have no big factories and no big industrial developments. They have to depend almost entirely upon the soil for their living. Not only that, but because this defense spending has not, and will not, generally speaking, fit into these areas, the problem of relief and unemployment still remains. It seems to me, therefore, that a program of expanding irrigation development at this time constitutes a double-barrel attack on the problem which confronts the Great Plains, while on the other hand making possible a more stable and sustaining agriculture and taking up the slack of unemployment by giving work to those on relief, on worth-while projects which are ultimately paying for themselves.

I urge, gentlemen, that you view in all seriousness the great question that confronts this part of our Nation. It can be solved, and its road is open for solution through the Case-Wheeler Act, and such a program is truly an investment in the future, and by so doing it will help to restore what was once, and will be again, a great land and truly always a great people.

Parity for Butterfat

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

LETTER BY LOUIS J. HOUK

Mr. GILLIE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include a letter to the Secretary of Agriculture from Mr. Louis J. Houk, president of the Indiana Cooperative Milk Producers' Federation, complaining against the price at which the butterfat market has been pegged.

The letter follows:

APRIL 24, 1941.

HON. CLAUDE WICKARD,
Secretary of Agriculture,
United States of America,
Washington, D. C.

DEAR MR. WICKARD: In our meeting of the Indiana Cooperative Milk Producers' Federation, held at Purdue University, West La Fayette, Ind., Tuesday, April 22, 1941, there was much discussion on the relative value of butterfat when compared to the value placed on other commodities.

Butterfat has been pegged at 31 cents per pound. I note that the parity price of butterfat for the month of March was nearly 38 cents per pound. That means about a 7-cent difference. Farm labor is being depleted by the demands in other industries, and at the present time there is not sufficient qualified labor to take care of the needs on the farms. Labor for dairy farms is something that must be more than just ordinary labor. I would class it as technical labor. Not only is labor scarce but the prices are advancing to such an extent that, at the prices we receive for the dairy products, it is almost prohibitive at the present time.

Now, if all other commodities are going to be permitted to soar to higher planes, why should not dairy products be set on a higher basis. You are wanting to stimulate production in some of the commodities raised

on the farm and then at the same time hold the food values down to lower levels regardless of the prices we have to pay for the products we purchase. Now, all we are asking is a square deal. What we want is an agricultural dollar that is worth a hundred cents, in its relation to all other industry dollars.

Because of these facts and many others that might be mentioned, I feel that the price of 31 cents per pound on butterfat is too low, and that it cannot be justified; therefore, in the interests of good dairying, and to maintain a good supply of high quality milk, this price should be at least a price that would be parity as we look at it in the 1941 markets.

Hoping that you may give this matter some consideration, I beg to remain,

Yours respectfully,
LOUIS J. HOUK, *President*,
INDIANA COOPERATIVE MILK PRODUCERS' FEDERATION,
Fort Wayne, Ind.

Convoys—The Last Straw

EXTENSION OF REMARKS
OF
HON. GERALD W. LANDIS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

Mr. LANDIS. Mr. Speaker, convoys mean shooting and shooting means war. We hear on every side that war is inevitable, even we are at war, and there is nothing we can do about it. Until we are engaged in military action we must continue to hope that we can avoid the ultimate catastrophe. We stand on the brink of war. The shooting has not begun. America is on the verge of throwing our treasure and our blood into the European struggle, with the consequences that no one can foretell. On the decisions made by our people and their leaders may depend our national welfare for years to come.

The country wants to defend itself, aid Britain, and stay out of war. During the hearings and the debate on the lease-lend bill we were told it was a peace measure, a bill to keep this country out of war. Both the proponents and opponents of the bill believe that incidents which would certainly involve us in war could not occur if American vessels were kept out of the danger zones. American warships and planes manned and piloted by American boys will be needed to make convoys effective. With our Navy and air force in the war, our Army will not be far behind.

Would you be willing to risk the lives of 6,000,000 American boys and at least $200,000,000,000 in a struggle across the sea? Do you believe it would be easy to transport and land millions of American boys on unfriendly soil? Are we to rush arms and the cream of the American Navy, marines, Army, and air force every time Britain is in danger? What could America write into a peace treaty which would preserve peace and promote justice in Europe? Would we now be willing to maintain standing armies abroad and battleships in foreign ports to enforce a peace? Would you be willing to neglect our own defense for a fighting chance on foreign soil? If we go to war, what are we going to war for?

These are serious practical questions which are ignored by many people, but which mean much to the American mothers whose sons would become the bloody pawns of battle.

War, in reality, is the destroyer of life and property. War means black-outs, shrieking shells, and speeding bombing planes across the sky. Most of us remember the horrors of the last war and its aftermath; the dead upon the battlefields; the bitter tears of womanhood; disease, hospitals where armless, legless, and blinded men await eternity. We also recall the terrible depression, the insufferable burdens of costs, and the dislocations of everything that makes for normal happiness.

In 1917 we entered the World War to save this country for democracy. The United States received nothing from this war but a several-billion-dollar war debt, thousands of disabed young men, and shiploads of flag-draped coffins. Surely it has not come to the point where America must raise a crop of boys every 20 years to be slaughtered in Europe. We do not want to create a new generation of Gold Star Mothers.

Many have said it is impossible for Hitler to invade England. If this is true, we know it would be impossible for him to invade America. I do not believe he would have one chance in a million, in making a successful invasion of the United States, if we have the proper defense.

By making democracy work at home, we can best give service to the world, by protecting what we have o the continent on which it functions, we can do by our example of success that which our armies could not permanently achieve. Right ideals can move eastward from this continent to Europe as readily as wrong ideals can move westward from Europe over here. Let us give devotion to our right ideals at home.

Our destiny is to make America the home of democracy. We must keep America out of Europe and Europe out of America.

British Plots To Destroy American Nationality

EXTENSION OF REMARKS
OF
HON. GEORGE HOLDEN TINKHAM
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

ARTICLE FROM THE LONDON TIMES

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the London Times of April 3, 1941:

[From the London Times of April 3, 1941]

ANGLO-AMERICAN RELATIONS—SUGGESTIONS BY MEMBERS OF PARLIAMENT

Our parliamentary correspondent writes: "Mr. Craven-Ellis is to ask the Prime Minister in the House of Commons—

"Whether he wil' suggest to President Roosevelt that the United States of America and the British Commonwealth of Nations should jointly consider entering into a solemn act of union, which will provide for the United States of America and the British Commonwealth of Nations becoming one nation, with joint organs of foreign, financial, and economic policies, the citizens of the United States of America enjoying citizenship of the British Commonwealth of Nations, and every British subject enjoying citizenship of the United States of America; and providing further, for the admission into such union of other nations whose people are likewise desirous of strengthening the foundations of world society.'

"Mr. Mander has given notice to ask the Postmaster General:

" 'Whether he will consider the advisability of issuing an Anglo-American stamp, in association with the authorities of the United States of America, as a symbol of the unity of the two great Anglo-Saxon nations in the present struggle.' "

An American Peace Offensive

EXTENSION OF REMARKS
OF
HON. JOHN M. VORYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

ADDRESS BY HON. JOHN M. VORYS, OF OHIO

Mr. VORYS of Ohio. Mr. Speaker, last Friday and Saturday I was privileged to be a member of the Round Table at the annual spring conference at Williams College, Williamstown, Mass., during which we discussed many phases of the central topic, "America in a World at War." On Saturday night I gave an address in which I proposed "An American Peace Offensive Now." I recognized there, as I do now, that there are many difficulties in such a course, many questions involved, and that I do not know all the answers. This whole subject is one which is difficult to mention now without being misunderstood. I feel strongly, nevertheless, that we have an opportunity for peace action now that may never arise again, and I therefore give you, under leave to extend my remarks, the proposal I made at that conference, not as a final solution of the problem, but with the hope of stimulating discussion:

Any American who mentions the despised word, peace, in the spring of 1941 is supposed to apologize. It seems to me there are four good reasons for discussing America's peace aims now.

WHY DISCUSS PEACE NOW?

First. Congress has turned over to the President the power and the appropriations to participate in the war, and this participation is being conducted without taking Congress or the public into the Executive confidence and without any apparent desire for public discussion as to this participation. Therefore, since Congress and the public have nothing to do with the war, they might well spend their time now in a discussion of the next peace, for between censorship and hysteria the time for public discussion may be limited.

Second. After all, the reason we are going to fight is to get peace. Gen. William Tecumseh Sherman, a most efficient soldier who was born in the same town I was, said: "War's legitimate object is more perfect peace."

Third. This is a good time for us to talk peace. Anatol Muhlstein, in the April number of New Europe, says: "In order to have a general conception of what a pacified Europe should be, it will not be sufficient to consult in a hurry, between two plenary sessions, some prominent experts, brought together on the eve of the peace congress. This is a long-range work, a work of thought and scientific research which independent minds must undertake without delay."

Fourth. This is a good time to propose peace in Europe; before we start to fight. I believe that an American peace offensive now could be our most effective aid to Britain.

A. If Britain is losing, and must sue for peace soon, we can open negotiations far better than she can.

B. If, as seems more likely, a stalemate lies ahead, the peace talk might as well be started now as later.

C. If Britain is winning, then for reasons which Mr. Clarence Streit has mentioned and in order to preserve what former Ambassador Bullitt calls our "moral authority," we had better obtain some commitments while we are needed by one side and feared by the other.

In any case, since peace is inevitable, why not try to have it now, before we have started fighting, before entering the endless series of reprisals that make up modern war, before we enter the military way of life—for $43,000,000,000 worth of defense articles means more than spending money, it means a new way of life.

A PEACE OFFENSIVE NOW

Is there a chance for an American "peace offensive" at this time? Both Lindbergh and Dorothy Thompson, from whom I copied the phrase, have said so. President Wilson conducted a successful peace offensive in the last war. The question is now being discussed in Britain. For instance, in the April memorandum of the Imperial Policy Group, it is said:

"The Nazi leaders are doing their utmost to persuade the people that this is a life-and-death struggle for Germany, and some of our propagandists are assisting them. * * *

"There are those who believe that to offer Germany a generous peace on the condition that she discards her present policies and leaders would be to make another way of escape for a race the record of which is deplorable. There are others who feel that the war can only be brought to a decision if and when a majority, or at least a very formidable minority, of the German people can be enlisted on our side as virtual allies in the struggle against nazi-ism. These two points of view are vigorously held by two schools of thought. Sooner or later we shall have to come to a decision as to which policy we intend to follow. Until we do our propaganda can scarcely be intelligent and will certainly prove indecisive. Our choice, when it is made, will bear an extremely important relation to military strategy.

"If we decide that to offer tempting peace to the German people in order to induce them to throw off their present policies is impracticable, then we must not reckon upon the occurrence of any internal break-down until as the result of air bombardment, economic blockade, and successful military action on land Germany and her forces are so utterly crippled that there is no physical alternative to surrender. If we decide upon the other policy as an inducement to the German masses to assist us in our task, then we should propagate it with the utmost vigor in order to gain the maximum advantage."

THE CHANCES FOR PEACE NOW

There are many who say that peace talk with Germany now is impossible. Joseph Choate, when asked whether he could play the violin, said: "I don't know, I never tried."

No one can say that real peace talk with Germany is impossible because it has not been tried since the war began. So far Hitler has had all the psychological advantages that go with peace proposals. From such information as we can obtain, however, there would seem to be a good chance for an American peace offensive which is worth trying. We learn through many leaks in the censorship that the German people want peace. Germany has had enough aerial bombing, has lost enough men, to bring the glories of war home to the people. Among the German people are many who fear the dynamism of Hitler, who fear that each Nazi victory merely sets the stage for further fighting, further suffering. The German soldiers in the occupied countries are becoming restless. We hear on good authority that the possible entry of America into the war brings up ominous memories in Germany. We can start peace proposals better now than after we are in.

DEMOCRACY'S PEACE AIMS

What are our peace aims? The two great spokesmen for our side, President Roosevelt and Prime Minister Churchill, have been reticent and vague on this subject. President Roosevelt has promised everyone the four freedoms and self-determination. Mr. Churchill has said he favored a few "practical measures of reconstruction," but disliked all talk of a new order and wanted to preserve traditional England. Such a peace aim is unsatisfactory to Harold Laski, who says:

"No state in which there is mass unemployment, especially after an experience like war, can hope to remain a democracy. * * * What follows is the inescapable necessity for the State to control, in the name of the whole community, all those vested interests which * * * are indifferent either to the fact or the consequences of unemployment. * * * The movement of democratic forces now will not, as in the past, be prepared to halt at the frontiers of economic and social privilege."

The self-labeled 1941 Committee Commentary has suggested that Britain must "win the peace" as well as the war, and has suggested this program:

1. Organizing all opposition to the Nazis and Fascists.

2. Open declaration of Britain's war and peace aims.

3. Giving a concrete demonstration of what Britain is fighting for by starting to rebuild her social system at once.

Mr. J. B. Priestley has gotten into difficulties as a radio commentator because of his impatience to discuss peace aims.

The Malvern Conference of the Church of England stated a peace program which proposed "a cooperative commonwealth as a new order for Europe." In this country Mr. Willkie has spoken of preserving the American way, the British way, and the Chinese way. Senator WHEELER has made suggestions which have been "cussed" and discussed.

Vice President Wallace, making an unusual speech for a Vice President and doubtless with the approval of the administration has publicly suggested a Pax Democratica with a bill of rights and a bill of duties involving:

1. A crushing of Nazi ideology;

2. An international order sufficiently strong to prevent the rise of aggressor nations;

3. The defeated aggressor nations must have the opportunity to buy raw materials and sell manufactured goods without discrimination;

4. The peace must be such as to release private capital for the development of our hemisphere.

While statesmen and politicians are vague and brief as to peace, while editors and columnists who are so helpful in predigesting ideas for us are for the most part silent as to peace talk, the church people are talking peace. A number of conferences are being held to attempt to formulate into a workable program the Christian ideal of peace on earth among men of good will. Dr. E. Stanley Jones, a great Methodist missionary and world statesman in the realm of the spirit, has said that America's role in this crisis should not be that of intervention or arbitration, but of mediation, to produce a cooperative world centered around one idea—equality of opportunity. He suggests for discussion seven points:

1. We will undertake to give equality of opportunity to everyone within our own borders. Two classes are disinherited among us: those who haven't a white skin, and those who haven't wealth, inherited or acquired. We will wipe out those two disabilities by giving equal opportunity to all. Democracy means equality of opportunity—social and economic as well as political.

"2. We will undertake to give equality of opportunity to all who come to our shores. That would mean putting the Asiatic peoples on the same quota basis as the rest of the world, 2 percent of those in the 1890 census, which would mean only about 250 people from all Asia. This would take the sting out of our relationships with Japan.

"3. We will insist on the redistribution of the raw materials of the world to all on the basis of equality of opportunity.

"4. We will insist on the redistribution of the land opportunities of the world. Peace is precarious as long as 25 percent of the earth's surface is held by one nation, Great Britain. It would be a happier and more prosperous Britain if she would divide some of the land space of the world with the have-nots. To that many Britons themselves agree.

"5. We will insist that all subject nations or peoples be given a free, unhampered opportunity to choose their own destiny.

"6. We will agree to enter a Federal union, based on a limitation of national sovereignty, with all nations of good will, whatever their particular type of government.

"7. As evidence of our good faith we will cancel all debts owing to us. Further, we will place at the disposal of this Federal union the gold we have buried in our vaults, provided it is used for purposes of world reconstruction on the basis of need, apart from race or nationality."

THE WAR AND THE REVOLUTION

You have heard today a number of peace aims in addition to those I have just given you. They are all vague and various, as they must be on a vital question that has had so little attention. They have one thing in common—none of them describe a world, an America, such as we now know. They also reflect what every real student of this war knows—that a world revolution is going on as a part of, and cause of and result of this war. There is violent disagreement as to just what this revolution is. It is called a revolution against the west, against Roman law, Greek logic, Christian idealism, against democracy, against the "haves." Congressman JOHN RANKIN, a New Dealer who voted for the lend-lease bill, put it this way in the House debate: "There are at least two things in this

world that have come to an end—domination of the world by floating navies, domination of the financial world by the gold standard." A revolution against gold and naval power. James Brunham calls it the managerial revolution, a label approved by Stuart Chase, as something different from capitalism or socialism. I can think of no better quick description than this—a revolution against free capitalism. It is going on in every country, going on in the United States. We have seen evidence of it here in our meetings So far it is not our war but it's our revolution. If we could only understand it, and in some way think it out instead of fighting it out, as we did in the Protestant Revolution, the French Revolution, the industrial revolution we cculd make this a better country, a better world.

SUGGESTIONS FOR DISCUSSION

I have some suggestions for peace aims for America. Like the others, they are vague—a basis for discussion rather than a final set of demands:

1. We will preserve this country as a Republic and work out the internal effects of this world-wide movement on our system by peaceful, intelligent evolution—not by violent, blind revolution.

2. We will preserve our hemisphere intact against the military or political aggression of the world.

3. We recognize the right of similar areas to preserve themselves intact against our military or political aggression.

4. We believe that neighboring states must learn to live together peacefully in union, as we have. We will not approve of the domination of one race, or one nation, or one man in such an area. We are opposed to unions or axes based solely on color, language, race, or ideologies. We want a regime in Europe that is not a balance-of-power mosaic. We believe people who live near each other must unite in peace.

5. We believe in equality of opportunity for all nations in markets, raw materials, acquiring land, and emigration to all undeveloped land.

6. We believe in reciprocity of opportunity as to markets, materials, land, and emigration as between developed lands.

7. We will refrain from interference in the affairs of nations which do not interfere with our affairs.

8. We will do our part in maintaining world peace, order, and justice based on these principles; we will not enter any arrangement that inevitably involves an immediate war or violation of our Constitution.

9. We will participate in progressive disarmament.

THE PEACE OFFENSIVE

We shou'd immediately formulate our peace aims. We should debate among ourselves in this country the definite proposals we shall make for peace, so that we will not be merely begging for a peace conference, but will be making a real "peace offensive." We are neither appeasers nor defeatists. We would at the same time make it clear that we were not attempting to dictate, but were offering the friendly services of mediation.

We would offer the promise of food, money, and material as an inducement to make peace and keep the peace. We would threaten the use of tariffs and embargoes against those who fail to keep the peace. Whether I approve of it or not, the threat of war would be involved in the refusal to consider our proposal under present circumstances.

We would not have to rely on Hitler's word for the keeping of such a peace. Terms could be arranged for impounding arms, by both sides, joint or international control of strategic positions, conditions applicable to both sides, and that would involve no loss or injury to any nation intending to keep the peace, so that peace would depend upon more than Hitler's promise. If all the other terms were satisfactory, if both sides were subject to the same requirements for guaranteeing the peace and if Hitler alone refused these guaranties and insisted upon continuing the war, we would have found a way to separate the German people from their leader. In order to make such a peace offensive effective, however, it must be made intelligently and in good faith. I don't know whether it would work. The time to try it, however, is before we go in. We will never have such a chance again.

But some will say—this would be only a truce. I don't think so, but always before we have thought each war was the last war, and at the end that we were entering perpetual peace. Perhaps it would be wise for us to know this time that war would come again unless we waged peace as bravely and wisely as we wage war. Are we in danger of defeat in peace? Can't we make our American system work better than any other? Have we no faith in persuasion versus propaganda, Yankee ingenuity versus slave labor, Republican government versus any other kind, Christian love versus pagan hatred?

My countrymen, America hasn't led the world in war. I feel certain we could, but before we risk everything in trying it, let's risk nothing by trying to lead the world in peace—something in which we know we can lead the whole world. Friends, we have our faults and our frailties, but after all, in cold blood, the Nazis aren't the greatest nation on earth, Britain isn't the greatest nation on earth, we are the greatest nation on earth. We owe it to thousands abroad who are otherwise sure to die this year to give them the chance to live, in peace, before we send our thousands to die with them.

These Things Are Ours

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

ADDRESS BY HON. MATTHEW F. McGUIRE, ASSISTANT TO THE ATTORNEY GENERAL

Mr. LEAVY. Mr. Speaker, on Wednesday, April 16, 1941, at Parker House, in Boston, Mass., the Honorable Matthew F. McGuire, Assistant to the Attorney General, delivered a most able and thoughtful address that has a lesson of great value in it to all of us who are so deeply concerned with the trying period in which we are living.

Mr. McGuire spoke at the annual banquet of the Boston University Law School Association, and in his characteristically able manner he concisely and clearly points out the imminent danger to our way of life resulting from the rapidly spreading Hitler philosophy in other parts of the world, and particularly in Europe.

I am glad to have the privilege of making this a part of the CONGRESSIONAL RECORD.

The address follows:

There is a view in the city of Washington which to Americans should be one of the most inspiring in all the world. It runs, straight as the crow flies, for a distance of over 2 miles, beginning at the Capitol, down across a beautiful landscaped Mall, past the Washington Monument and the famous reflecting pool, to the Lincoln Memorial, thence across the Potomac to the storied heights of Arlington, with Lee's Mansion overlooking the river, to the rolling hills of Virginia beyond.

At the Capitol end, with the books of the law cradled in his arms and his juridical robes about him, stands Marshall, the soldier who fought with the men of Virginia in the great struggle that culminated in the achievement of our independence—Marshall, the jurist, who as a great Chief Justice welded the Colonies into the Federal Union.

At the other end, looking toward Marshall, sitting alone and in simple yet majestic state, is the solitary and melancholy figure of Lincoln, looking out not now upon the work of Marshall tumbled into ruin, or upon the smoke of battle rising out of the Shenandoah and over the hills of Arlington, nor upon States broken and dissevered about him, but upon a country united as never before, exceeding even his fondest dream, and risen to the heights of the heritage that is ours.

We as lawyers should be proud of that heritage, for while laymen contributed in an immeasurable degree to the achievement of our independence, it was lawyers who led the way, and the great names of the period read like a roster of the American bar.

Public life, then as now, seemed to be the lawyers' natural forum.

They took the democratic idea and convinced the American people of its inherent wisdom, translated it into objective reality, laying the foundation for the Declaration of Independence and the Constitution of the United States and of our American Commonwealth which was builded upon them.

They were the inheritors of those fundamental liberties which antedate the common law, which are written in the heart of every man by the Almighty Hand of the Great Law Giver.

They were the inheritors, too, of a common intellectual tradition and of a norm of private and public morality which despite the religious upheaval of the sixteenth century came down to them practically intact, so that when they said—as they did say—in our Declaration of Independence: "* * * All men are created free and equal and endowed by their Creator with certain inalienable rights * * *," they gave practical and concrete evidence of their belief in the overlordship of God and the spiritual kinship of man.

There were very few debunkers in those days. Men still clung to the fundamentals and the eternal verities, and although we may smile at the manners and customs of the period, there was a substance to it and a fiber in it that somehow today we sadly lack.

Out of these fundamental concepts have sprung those things which are ours: Freedom of assembly, freedom of speech, freedom of the press, and freedom of conscience—the right of every man to worship God according to the dictates of his own heart—those fundamental freedoms which we take for granted.

If the democratic idea is to survive and the constitutional government in America which has been predicated upon it is to be maintained, then our devotion to it must be something more than mere lip service or casual allusion.

For despite anything that we may have done or failed to do, we find it threatened today by forces more sinister in their objective than any in human history since the day when Charles Martel overcame the hosts of Mohammed upon the field of Chalons.

A peaceful country, we suddenly find ourselves compelled to create a large standing army and to train it with all the ability and all the power we possess, to double and even triple the size of our fleet, to turn great num-

bers of our people to the production of instruments of violence because there are those who threaten not only our peace, but our very way of life, who openly proclaim there is no God but Caesar, that the altar of the omnipotent state is the only shrine, before which every head must bow and every knee must bend.

This philosophy of force is the new alpha and omega and must be the first and last concern of men who too long have labored under the delusion that human liberty and the God-given rights that spring from it is the foundation stone of civil society.

This conflict is not a mere struggle of armaments. It is not the revolution of a free people to determine a change in their government. It is the spawn of that atheistic culture and philosophy that stems from Nitzsche, Marx, and Engel, the matriarch of all those other "isms" that have sprung from generations of irreligion, the repudiation of fundamentals, false liberalism, and the pursuit of the cult of pleasure that reduce men to automata, that explains history by economics—and wages this war, not against armies only but against our very concept of society, against women and children, destroys homes, separates mothers from fathers and children from both, and holds over all the stark terror of the concentration camp and a slavery more terrifying than the Siberia of the czars and the galleys and the salt mines of ancient Rome. Such—this so-called total war.

How can we then be indifferent to this thing which is happening in Europe. It isn't a question of liking the British Empire, or disliking it. It is a question of meeting a menace that defies all pattern. It has leapt all barriers, and like a tidal wave sweeps all before it.

Not so many years ago Europe seemed so far away. Within our lifetime the genius of the human mind has brought to us the knowledge of events as quickly as they have occurred, making them as near as though they happened at the doors. Giant clippers leave New York and in a few hours bring their shining hulls down upon the bay at Lisbon—distance no longer lends enchantment.

We cannot be indifferent any more than the people of this city and this Commonwealth could be indifferent to what happened at Lexington and Bunker Hill, or any more than the people of this country could be indifferent to what happened at Waterloo, although the knowledge of the event was not brought home to them until long after it occurred.

This America of ours—under the providence of God, for it cannot be explained in any other way—has been designed to be the one shining oasis in a desert of darkness; it has been the haven of those pilgrims of human liberty who came here from many lands and in many Mayflowers to achieve it.

Go to the graves at Plymouth—see the terrible harvest of that first winter here in the Old Bay Colony and you will get a slight picture of what the achievement of liberty meant in America.

Go over to Charlestown and see the shaft that marks the battlefield of Bunker Hill, and you will get some small idea of what the achievement of that liberty was to mean in blood—that you and I might enjoy it.

Go to Gettysburg and see what sacrifices were demanded of the generation that preserved it, and look about you on every side of this great country of ours, at its marvelous cities, its peaceful towns and villages, its rolling hills and fertile valleys, vibrating with the pulse and stuff of life, and you can see that it was not only blood but sweat that made America.

Nor do I need to remind you, whether your forebears came here in the first *Mayflower* or in the thousands of other *Mayflowers* which followed it, in the creaking barks and clippers of the forties with their dark and reeking holds, or in the steerage of those ships of the latter era, of what we owe them for their contribution in sweat and tears to the wonder that is America. These things are ours. We have known their cost; so, we should be neither Jew nor gentile, Irish or English, French, German, or Italian, or any other composite or amalgam, but Americans, and resolve that the hates and prejudices of the older world cannot abide in the new under the bright light of a new day and the flaming splendor of a new sun. What we need to do is to never forget that fact.

You can depend upon it, to paraphrase the words of the great Edmund Burke, that the lovers of freedom will be free. Have no doubt about that.

What we need, however, is to recapture some of the idealism, some of the practicality, and some of the spirit and the devotion of the founding fathers. What we need is to purge out the old leaven and to reaffirm our belief in the Fatherhood of God and in the fact that men exist, not for their stomachs or their purses, nor as the pawns of others, but for a destiny that is eternal, and that governments exist not as the instrument for the privilege of the few but for the greatest good of the many.

"Sursum corda"—"lift up your hearts"—should be our battle cry, while presenting the phalanx of a united democracy against those who hate the name and would root out and erase, if possible, the very word from the hearts and minds of men.

It will mean sacrifices, sacrifices upon the part of labor and upon the part of capital, upon the part of those in high places and low; it will mean longer working hours and heavier taxes, all a small part which we are asked to pay to preserve the liberty that we now enjoy and the philosophy and the way of living it has engendered.

To us as lawyers it is the call to a high emprise. To us as Americans, the call to a new crusade.

It means that this liberty of ours shall not be enshrined, as has been said, like the Roman gods of old, in cold and impersonal marble in some lone temple on some lone hill, but a living, vital, vibrant thing, sprung from the hand of the Author of all Good, and enshrined forever in our hearts and those of our children.

Relief for Polish Citizens Destitute in Siberia

EXTENSION OF REMARKS

OF

HON. ANTON F. MACIEJEWSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

Mr. MACIEJEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to take the opportunity to call the attention of the Members of the House to the deplorable plight of over one-half million Poles, many of them relatives of stanch American citizens, who, after the occupation of eastern Poland by the Soviet authorities, were deported to Siberia and practically exiled.

Like many other Members of the House, I have received numerous appeals suggesting that the Soviet authorities be requested to permit an official or private American mission to proceed to the Soviet Union to minister to the needs of these unfortunate peoples, who are suffering from lack of shelter, warm clothing, and food. In other words, unless immediate help is accorded them, they must die from exposure and starvation.

Knowing that the American democratic Government stands for humanity, I hope that prompt steps may be taken to effect a friendly arrangement with the Soviet authorities, as suggested, whereby relief from this country may be extended to those who are now destitute in the Soviet Union.

Henry Ford—By Labor Voted Labor's Friend—Those Who Would Destroy Him

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

RADIO ADDRESS BY GERALD L. K. SMITH

Mr. HOFFMAN. Mr. Speaker, the following is an address delivered by Gerald L. K. Smith over station WJR, Detroit, a few days ago:

Recently a stranger, an agitator, spoke in a Detroit high school auditorium, and referred to Mr. Henry Ford as Public Enemy No. 1. Ten thousand imps of hell have been turned loose by the destructive forces of our Nation in an attempt to discredit the man who has done more for Detroit and American industry than any living American. I have watched the newspapers this week as entire pages have been devoted to pictures of men who are using the bureaucratic, dictatorial powers of a Fascist regime as instruments with which to conspire against the good name of this pioneer, this man of vision, this creator of ideas, this one whose farsightedness reached out a hundred years ahead of us all to create 5,000,000 jobs and to establish a precedent of high wages for industrial labor.

I have studied the countenances of these men whose pictures appeared in the paper, as with smirking grins upon their faces they lie in wait for this great man, in the hope that they may be able to spring at him like a dog from the bush, like a serpent from the weeds and sink their poison fangs into the life of a man whose value to America can never be truly estimated.

These who lie in wait, these vultures, these buzzards, make up a motley crew of men who live by their wits as a substitute for honest and creative toil. They are politicians, conspirators, Communists, racketeers, parasites. With few exceptions they represent no constructive element in our community or in our national life. They combine with several elements who hate Henry Ford, who hate him because he is against foreign war, who hate him because of his industrial genius, who hate him because of jealousy, who hate him because he has dared to fight for the preservation of the independent and competitive enterprise which has made America.

And behind this hate, and cooperating with this hate, is one of the most ruthless combinations of conspiracies ever to be leveled against the welfare of one American. Perhaps not since Abraham Lincoln has one man been so universally persecuted by the forces of destruction and evil as has this prophet of true Americanism, Mr. Henry Ford.

We see the conspiracy of persecution, the conspiracy of revenge, the conspiracy of confiscation. Then there is the conspiracy of competition. Strange as it may seem, gigantic enterprises, operating in the same field of endeavor, who have hated Henry Ford for five decades because of his ability to keep his institutions free from the choking hand of Wall Street and international finance—because of this ability on his part, these corporate interests have developed an unholy mania, a jealousy, a contempt, bent upon his complete destruction.

Those who own these gigantic enterprises in competition are not citizens of Detroit, neither do they accept the responsibility of local citizenship. They represent cold-blooded, absentee, corporate ownership answerable to the ruthless banking interests of New York City, which symbolize the forces that have been set in motion to get us involved in this foreign war.

Unbelievable as it may seem, there are more than a few visible evidences of the fact that these jealous corporate competitors have been willing at times to appropriate for their own purpose these plots that have been hatched by these evil forces against this mighty man and the tremendous and constructive institutions which he personifies.

Now these politicians, these "reds," these loafers, these walking delegates, join together to create synthetic committee hearings in an attempt to establish in the minds of the American people the idea that Henry Ford is a criminal, while these who would destroy America sit in the seats of honor in Washington, Lansing, and Detroit. Who are some of these self-righteous reformers who pose as the apostles of progress while they would discredit Henry Ford and his enterprises?

Maurice Sugar, attorney, friend, and pal of practically every Communist and revolutionary who ever came to the city of Detroit, unable even in a trial which he himself instituted to prove that he was not a Communist.

John Anderson, the Communist, who virtually sits on top of a great section of the automotive industry tonight. Has he been called into any committee? He joins the chorus of hate in this conspiracy to brand great Americans as criminals.

Wyndham Mortimer, Communist organizer of all workers in the airplane industry. A self-righteous bureaucracy which seems to take particular delight in the persecution of Henry Ford seems not a bit excited over the fact that a disciple of Joseph Stalin sits in command over the workers who are building our defense airplanes tonight.

Edwin S. Smith, appointed by the President to the National Labor Relations Board, is branded by the congressional committee as an affiliate and member of pro-Communist "front" organizations. He is elevated to a position of high authority over industry and labor; he is looked upon as a progressive reformer, while he joins with this gang to brand our first citizen as a criminal.

Felix Frankfurter, the ruling spirit of the high court, the chief adviser of the President, the one who was given credit for writing House Resolution 1776, the former friend and defender of the anarchists, Sacco and Vanzetti, sits in judgment over men like Mr. Ford. But we are asked to brand such men as Henry Ford, who helped build the real America, as a criminal. Oh God, save America from this treason.

Sidney Hillman, former intimate of Nicolai Lenin, boasts of what he proposes to do with Henry Ford. Speaking with such a foreign accent that he can scarcely be understood, with a background of communistic agitation, this former Russian-born revolutionist now is thrust upon the American people by this Washington bureaucracy and joins his voice with this chorus of conspirators to brand this great American as a criminal.

We read long articles of the greatness of William Knudsen, the Danish immigrant who now is grateful for the opportunity that America gave him. Where did Mr. Knudsen get his first opportunity? What institution and organization gave him the vision and the training and the background necessary to catapult him into his phenomenal position of leadership? That opportunity was given to him by Mr. Henry Ford.

I hear smirking remarks from business executives in Detroit and elsewhere who seem to take evil delight in observing the work of these arch conspirators as they plot against this great man. Shame on such men. In many instances they themselves were made by Henry Ford. The very opportunities which they enjoy were set in motion by Mr. Ford and his kind.

God pity America when the Sidney Hillmans come to power and the Henry Fords are branded as criminals. God pity America when the Walter Reuthers, who were trained in Moscow in the science of revolutionary activity, ride about in specially chartered American military airplanes and are introduced by kowtowing bureaucrats as men with great ideas.

Walter Reuther, the originator of the sit-down strike, the revolutionary arm of the Communist Party, honored by the President, glorified by men in high authority, an alumnus of Lenin University, in Moscow. God pity an America that honors such men and would brand Henry Ford as a criminal.

This controversy is not a labor controversy. He was the first to pay a living wage to the industrial workers, and he was hated as much for that as anything he ever did. The question does not involve a relationship between Mr. Ford and the United States Government.

If Mr. Ford should be questioned, if Mr. Ford is to have contact with his Government, let him be treated as an American, by real Americans, instead of manhandled by this motley gang of "reds" and racketeers and Communists and saboteurs—these destroyers of America, these disciples of Stalin, these children of the devil who are poisoning our schools, poisoning our churches.

Yes; they condemn Mr. Ford, but with the same eloquence they condemn the holy church. Yes; they curse Mr. Ford, but with the same profanity they curse the name of Christ. They cursed him when he whipped Wall Street; they cursed him when he fought for peace before the last World War; they cursed him when he changed from model T to model A, and from model A to V–8; they cursed him when he increased the wages of his workers; they cursed him because it is the nature of vermin, it is the nature of evil forces to destroy and hurt and condemn the good, the high, and the noble, the prophetic, the creative.

I speak these words tonight through no desire to patronize a great man. The voice you hear tonight is as independent as truth itself. I owe no debt to Henry Ford. I have no obligation to fulfill. These cantankerous, repulsive, un-American agitators, these Communists, these racketeers, these rats, these reds, who conspire against the spirit of America and the spirit of progress and the spirit of individual enterprise and the spirit of the Constitution, gore me to the soul.

My defense of this great American tonight, this creative and progressive pioneer, this man whose name, along with Edison and Lincoln, will be engraved upon the pages of American history—I defend Henry Ford tonight not because he needs defense, not because he needs anything that I possess, but because America needs Henry Ford and other Henry Fords.

There are boys tonight in America, selling newspapers, plowing in fields, sweeping floors, who need to be told that the America that made Henry Ford is still here, who need to be told that the spirit of America will not permit these agitators and racketeers, these disciples of Stalin, these Fascist-minded bureaucrats to destroy that abundant ozone of opportunity which American youth deserves.

I use the name of Henry Ford not as the name of a man, but as the symbol of the American opportunity that was and the American opportunity, pray God, that should be kept alive for the generations yet unborn.

Labor and the Ford Strike

EXTENSION OF REMARKS

OF

HON. RUDOLPH G. TENEROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

Mr. TENEROWICZ. Mr. Speaker, recent strikes have been so magnified in the press, on the radio, and even in the Halls of Congress the impression has been conveyed that there exists a serious labor problem in this country. A biased and distorted picture has been presented in a manner obviously intended to prejudice the public. As a matter of fact, if existing laws pertaining to labor had been obeyed no strikes would have occurred.

Although hundreds of thousands of workers have been added to the pay rolls of industry due to the national-defense program, we have, actually fewer strikes. Man-days lost in 1940 were less than 25 percent of those lost in 1937 and approximately 33 percent of those lost in 1939. In this connection the United States Department of Labor issued the following statistics concerning strikes:

	Strikes
1937	4,740
1938	2,772
1939	2,613
1940	2,450

These authentic figures clearly indicate that the number of strikes is decreasing.

Recently Mr. Sidney Hillman, Associate Director General of the Office of Production Management, addressed the American Society of Newspaper Editors. I am taking the liberty of quoting some of the highlights of his address as follows:

I wonder how well known is the fact that most industrial disputes are settled without any stoppage. Every week hundreds of labor contracts expire and are renewed without evoking even a ripple.

In the strikes which have occurred, surely we have no right to place the blame upon labor without informing ourselves as to the underlying reasons. When large profits are reported in the press, labor justly feels it is entitled to some fair share of them. When labor is denied various rights guaranteed to it by law, labor cannot be expected to sit by without protest.

The great majority of American employers share with the great majority of American labor unions the credit for the unusually small number of strikes in the last year.

Even more important in this connection is the patriotism and vision of the leadership and the rank and file of organized labor. They have unstintingly given their support to the defense program.

In a thorough study of the country's strike situation the Twentieth Century Fund found the following reasons for our strikes: (1) Rise in the cost of living; (2) labor's desire to receive its just share in the face of industry's rising profits; (3) the contest between the C. I. O. and the A. F. of L., and (4) the production speed-up.

Now, a pertinent fact not generally known and a fact which the opponents of organized labor would have us remain unaware is that industry was on a veritable sit-down strike in 1940. Many large concerns refused to expand, sub-let contracts, and rejected, in many instances, Government contracts until the Government met their terms. They wanted no roof for their profits. This caused a delay of close to 9 months after which the Government finally capitulated. And yet some blame labor for retarding the defense program.

At this point I should like to quote Mr. Paul V. McNutt, Administrator of the Federal Security Agency. Recently he said that "A free labor movement protected by the law of the land would be more productive than slave labor." He further stated that 8,000,000 members of labor unions in the United States have about 15,000,000 dependents and they benefit some 40,000,000 other workers. This makes 63,000,000 (one-half of our total population) who would therefore be directly affected by the impact of any harsh law designed to deprive citizens of their natural rights or by the loss of any of the existing rights given to labor by law.

Congress has enacted three laws which are now in force and which are of vital importance not only to labor but also to industry. They are: (1) The National Labor Relations Act; (2) the Wages and Hours Act; and (3) the Walsh-Healey Act. Briefly, these laws specifically provide machinery for holding elections; restrain employers from adopting certain designated unfair labor practices which would interfere with the right of the workers to organize into unions of their own choice; permit collective bargaining; specify a minimum wage and time and one-half for overtime; and stipulate that on Government contracts in excess of $10,000 prevailing wages and time and one-half over 40 hours must be paid.

In this era of industrialization is it not better that labor and industry see eye to eye? There must be a correlation of operations between labor and industry if any degree of harmony and efficiency is to be achieved. Industry will be taxed, and so will the worker, in order to meet this gigantic defense program. There should be an equitable participation by labor in the profits of industry so that the laboring man can assume his share in the defense program and meet the rising cost of living. Too many of our industrial leaders seem to be motivated by a lust for efficiency and speed alone, oblivious to an appraisal of social factors. Domination of labor would appear to be the goal of many. I have reference here to those who have fought organized labor for years; concerns which have set up small empires in this social structure of ours. On the other hand, we have those who realize and appreciate the transition which is taking place in that structure. These latter concerns live up to the law, but their names do not appear in newspaper headlines. These concerns are beginning to show a deep and sincere understanding of the new relationship between labor and capital. Grievances, exactions, and adjustments are made so that ultimately mutual benefits to labor and industry alike will be realized.

Mr. Speaker, if the three laws to which I have referred were obeyed there would be no industrial strife. But when we have companies like the Bethlehem Corporation, the Allis-Chalmers Corporation, the Vultee Co. of California, the Harvester Co., and the Ford Motor Co. defying the law, discord and strained relations between industry and labor is inevitable. I mention these particularly because the newspapers have headlined the strikes in these companies for weeks.

Let us examine the record. Let us consider the profits of some of these corporations:

	Net profits
1. Bethlehem Steel Corporation	$50,000,000
2. Vultee Aircraft (opposed to an increase in wages above 50 cents an hour)	380,000
3. International Harvester	23,000,000
4. U. S. Shell Corporation	102,000,000
5. General Motors Corporation	195,000,000
6. General Electric	55,000,000
7. Du Pont Corporation	97,000,000

Figures show the net earnings of 175 concerns in the first quarter of 1941 up 16 percent. The following statistics show the earnings of certain groups compared as follows. (Associated Press compilation, April 26, 1941):

	1941	1940	Increase
			Percent
10 food	$16,295,000	$14,860,000	10
8 railroad	20,254,000	15,876,000	28
8 chemical	5,489,000	5,112,000	7
6 machinery	2,528,000	1,889,000	34
6 railway equipment	4,322,000	4,159,000	4
5 utility	10,401,000	9,685,000	7
79 miscellaneous	106,206,000	95,080,000	12

Note, if you will, the percentage of profit increase as far as food companies are concerned.

Notwithstanding these increases and existing laws protecting the rights of labor, we can attribute our recent strikes to a disregard of labor laws, together with industry's denial to labor of a just share of its rapidly increasing profits and the obvious rise in the cost of food as shown by the Associated Press compilation given above.

Labor has complied with all labor laws. In a recent letter received from Mr. R. J. Thomas, president of the United Automobile Workers of America, it was stated that their more than 700 collective-bargaining agreements invariably call for periods of notice and negotiation before strikes can be called. Labor has evidenced a sincere desire to cooperate, but have not some of the industrialists conveyed the impression that they are above the law? Some have refused to obey these acts, in some instances necessitating court action. The National Labor Relations Board has rendered decisions against many concerns, large and small, among them the Bethlehem Corporation and the Ford Motor Car Co.

In speaking of strikes, I would like to mention the recent one in the Ford Motor Car Co. at Dearborn, Mich. Thanks to the cool and level-headed leadership of the C. I. O., the State police, and the C. I. O. pickets at the gates, lives were saved and a race riot prevented. Much has been said in the press concerning this strike, but only one side of the story has been told. In order to have an unbiased picture of this dispute, allow me to present certain facts of which little or nothing has been said.

It has been said that the Ford Motor Car Co. fired eight union representatives. These key men in the collective bargaining apparatus set up by the United Auto Workers were dismissed April 1, 1941, because they had taken time from their jobs to present the grievances of fellow workers to management. Another reason given to some of the men was that the management did not recognize them as representatives of other workers. The press steel department represented by one of the discharged men stopped working because the men felt that collective bargaining was no longer possible with the discharge of their duly elected representative. I might add that for weeks previous to this date these men had been acting in their capacity as representatives of the workers. They had met consistently with management to discuss wages and working conditions in the shop and concessions were granted by both sides prior to the summary firing of these eight union representatives. These men were discharged without warning, because they were following a procedure which the company had tolerated or even encouraged on immediately preceding days.

On Tuesday evening, April 1, 1941, the union leadership contacted the Ford Motor Car Co., the sheriff of Wayne County, and Charles Dewey, Department of Labor Conciliator for the purpose of entering the plant to instruct the workers to continue working and to abandon stoppage of work. Their motive was to attempt to settle the controversy by peaceful negotiation, a clear indication that the union leaders did try to avert trouble. However, permission was refused union officials by representatives of the Ford Co. and their efforts failed through no fault of their own. Moreover, the union requested the company to continue the construction of the aircraft plant in the River Rouge properties during the subsequent strike. The union pledged that

the way was open at any time for a return to work of A. F. of L. building craftsmen who had been employed in that plant. This aircraft work was the only national-defense job of importance then carried on at River Rouge. The company refused to comply with the union's request and the work was therefore stopped at that plant for the duration of the strike.

Early Wednesday morning, April 2, a picket line was ordered at all Ford gates. The picket was comparatively peaceful considering the fact that approximately 85,000 men were striking. Some of the pickets were injured but this was due to conditions that were being fomented within the plant. Those inside were told that they would be molested upon leaving. Among these were some good and honest workers, but in the same group were some who were looking for trouble and creating it.

It has been stated that the damage done in the plant was in the tool and die department. This department worked through all of Tuesday and left the plant when official notice came to them of the strike. The men put their tools away, cleaned up the department, and walked out of the plant. At this point I would like to insert in the RECORD excerpts from two affidavits I have of men who worked in that department, showing that no damage was done to any machinery in their department when they left. I am withholding the names of these workers to avert possible reprisal:

From the time I started my shift to the completion of my shift I know that there was no damage done, and I was in a position to know whether or not there was any damage done to the machines in my department, which consists of the entire die room. In addition to this, my superintendent never complained of any damage right up to the time we left the building which was about 1 a. m. His jurisdiction extended over the entire building and it would seem reasonable that if the amount of damage claimed by the company actually existed, that as chairman of the building he would have taken it up with me.

I would also like to add that when I came back from union headquarters I had to walk through about half of the building. I can state definitely that if there was any damage done to any of the machines along the aisleway where I walked I would have noticed it immediately, because after being in the die work for so many years our eyes are trained to notice anything unusual, particularly about our own machines.

The foreman, Mr. Fuller, told us to go down and ring out our cards. On my way down I stopped at the heat-treat department and told the men the strike was officially on. They told me they couldn't leave the department since some of them would have to stay and take care of the ovens. We agreed to leave three or four men there, which we did.

All the way down to the time clock I saw very few men from other buildings in any part of the tool and die room, except in front of the superintendent's office. I didn't notice any damage to any of the machines, and I can state that I didn't see anybody going around trying to do any damage to any of the machines. When I reached the time clock it was out of order because it was an electric clock and there was no electric power.

I have another affidavit showing the use which was made of Army blitz-buggies by imported workers within the plant. These blitz-buggies, intended for the United States Army, were taken over by these people and driven recklessly throughout the grounds of the Ford Motor Co. Maintenance men who were sent into the plant at the suggestion of the union to keep up company equipment were attacked and many sent to the hospital.

It is miraculous that no lives were lost in this strike and in this connection I quote the following resolution adopted by the Council of the City of Dearborn, Mich.:

Whereas the city of Dearborn recently experienced a labor dispute and controversy resulting in a strike at the Ford Motor Co. in the course of which proponents of the various factions involved exhibited their sympathies by picketing and other public demonstrations, which, if uncontrolled, might easily have resulted in strife, bloodshed, and fundamental disturbance of the peace and good order of the citizens; and

Whereas all responsible representatives of the factions immediately concerned in said controversy were fully cognizant of the dangers inherent in the situation, wholeheartedly cooperated to restore peace and good order: Now therefore be it

Resolved, That Murray D. Van Wagoner, Governor of the State of Michigan, the Ford Motor Co., and the United Automobile Workers officials be and they are each respectfully lauded for their mutual cooperation and untiring efforts which resulted in prompt and speedy cessation of the dispute and controversy in an amiable manner to the ultimate benefit of the people of the city and the Nation at large.

Mr. Speaker, in conclusion may I say that I have known thousands of Ford workers personally. They constitute a hard-working and patriotic group of our citizenry.

In all sincerity I feel I should know something of the problems of the American worker and the struggles of organized labor to obtain better working conditions in order to insure a stabilized future for his family and himself. The great industrial cities of Detroit and Hamtramck are both represented in the First Congressional District of Michigan. Encompassed in Michigan's First are some of the mightiest industrial units on the face of the earth. A partial list embraces Plymouth, Dodge, Chrysler, and Chevrolet.

It is my sincere hope that strife between labor and industry will be terminated altogether. Progress along this line is already under way. The past 2 weeks have made that apparent. The National Defense Mediation Board, consisting of 12 men, which was set up recently, has rendered yeomen service. Five of the most annoying labor disputes have been settled by this Board.

We are a united nation, but can only remain so provided industry recognizes its responsibilities to labor in the degree that labor has already recognized its responsibilities to its country.

Membership in Communist, Nazi, or Fascist Organizations

EXTENSION OF REMARKS
OF
HON. LELAND M. FORD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

LETTERS BY HON. LELAND M. FORD, OF CALIFORNIA

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters written by me to the Attorney General in connection with two bills I have introduced:

HOUSE OF REPRESENTATIVES,
Washington, D. C., April 28, 1941.
The Honorable ROBERT H. JACKSON,
Attorney General of the United States, Department of Justice, Washington, D. C.

MY DEAR MR. ATTORNEY GENERAL: This will acknowledge receipt of copy of your letter of April 14, original of which was addressed to Chairman HATTON W. SUMNERS, of the House Judiciary Committee, on the subject of my bill, H. R. 1841, to make it a deportable offense for an alien to associate with Communist, Nazi, or Fascist groups.

I note you say that the phraseology is indefinite. I further note, however, that you do not offer any phraseology which you consider definite. This bill was offered in order that your Department might have the means and the power to deport the type of citizen mentioned in the bill. Your Department does not take any action, does not obtain any results, and you fall back and give as your excuse that you have not the legislation to cover. Now I am offering you the opportunity to get such legislation and will ask that you change this bill so that it will accomplish the purpose.

As far as I am personally concerned, I do not see that this bill is so indefinite in its phraseology. As a matter of fact, I think it is rather specific. You will have to admit that it is not any more indefinite than the terms "accessory" or "accomplice," as used in bills defining murder in this country. You will also have to admit our courts, for the past 150 years, have been able to construe and determine what the words "accessory" and "accomplice" to murder were and are.

I think, if you are going to do your full duty and are sincere, you will either accept this bill or make suggestions that will accomplish what you think to be more specific or definite phraseology.

Sincerely yours,

LELAND M. FORD.

HOUSE OF REPRESENTATIVES,
Washington, D. C., April 28, 1941.
The Honorable ROBERT H. JACKSON,
Attorney General of the United States, Department of Justice, Washington, D. C.

MY DEAR MR. ATTORNEY GENERAL: This will refer to your letter of April 4, original of which was addressed to the Honorable HATTON W. SUMNERS, chairman of the Committee on the Judiciary, and referred to my bill (H. R.

3455) to make membership in Communist, Nazi, and Fascist organizations unlawful.

I note, in the last paragraph of this letter, you say that this bill is a duplicate and therefore unnecessary. I cannot square this statement with the action of your Department, and that is, that you have consistently stated that you could not deport these people because, under the law, you had not the facilities. Now, when we furnish this bill to you, you say that it is unnecessary. It seems to me that you should either deport these people under the legislation we already have, or make suggestions as to what is actually needed so that you can deport these undesirable aliens.

Will you please give me a statement on the number of aliens you have deported for these reasons within the last year? I would also like to have a statement of the number of actions you have commenced against this type of person. An early reply will be greatly appreciated.

Very truly yours,

L. M. FORD.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

EDITORIAL FROM THE ROCK COUNTY HERALD, LUVERNE, MINN.

Mr. H. CARL ANDERSEN. Mr. Speaker, Mr. A. O. Moreaux, editor and publisher of the Rock County Herald, of Luverne, Minn., has for many years encouraged the development of waterways and has worked hard in the upbuilding of the great midwestern agricultural area.

"Mabe" Moreaux, in the following editorial, brings out the numerous advantages which would accrue to our Nation, both industry and the farmer, if the St. Lawrence seaway is developed. The Midwest was seriously damaged by the Panama Canal and, in Mr. Moreaux's opinion, the construction of the St. Lawrence seaway would offset this damage done to our section by the construction of the Canal.

As a student of this subject, Mr. Moreaux's opinion is well worth studying, and I hope that the Members of this House will take the necessary time to read the following editorial:

[From the Rock County Herald, Luverne, Minn.]

EARLY ACTION IMPERATIVE

President Roosevelt probably is well adviced concerning the delay in bringing the new St. Lawrence seaway agreement with Canada up for consideration by Congress, but in the absence of explanation this delay is disquieting to the millions of people in the Midwest who for so many years have been looking forward to consummation of this great project as a measure of relief from the transportation handicap under which the midcontinent has suffered since the opening of the Panama Canal. It is not Mr. Roosevelt's habit to permit proposals he submits to Congress to long lie dormant without pressing for action.

It is understandable that the President is sorely harassed by national and international problems incident to the European war, the increasing need of providing Great Britain with vastly more aid than has as yet been possible to give, and at the same time carry out the big armament and defense program so desperately needed in this country. But the St. Lawrence seaway and power projects are, as Mr. Roosevelt has so clearly stated, of great importance in our defense program, with time an important essence in their completion. Delay is therefore a cause of concern.

This concern, however, does not reflect any doubt of Mr. Roosevelt's sincerity in wishing to proceed with all possible speed in securing approval by Congress of the seaway agreement. But it does reflect a fear that he has found opposition to the agreement so strong in Congress that he considers it inadvisable to immediately press for action.

It is no secret that the opposition to the St. Lawrence project is better organized and more strongly entrenched than when the treaty was defeated in the Senate in 1934. The same selfish interests which opposed the treaty in 1934 are not only again active, but they have been active for over a year in perfecting organizations and amassing huge funds with which to fight the St. Lawrence development. In opposition to the navigation feature are all the shipping interests of the Atlantic seaboard, the Eastern railroads, the Mississippi Valley Association, the Great Lakes Carriers Association, and all other associations and organizations they have been able to influence to support them. Plus this is the opposition of the private electric utilities companies whose opposition is directed against the power development which is an important byproduct of the St. Lawrence development. Combined, these oppositions can wield a tremendous influence upon Congress, particularly in the House, by reason of the disproportionate representation held by the Eastern industrial States.

However, notwithstanding this most formidable array of opposition the case for the seaway is far from hopeless. The factual evidence of benefit to the midcontinent developed over the years by the Great Lakes-St. Lawrence Tidewater Association remains as irrefutable today as it was in 1934, when after prolonged hearings before the Senate Foreign Relations Committee the committee by an overwhelming vote approved the treaty for ratification.

Today, these irrefuted facts not only remain but have been corroborated and expanded by more than a year and a half of restudy conducted by a special commission created by President Roosevelt under the Department of Commerce. Plus this, the President has thrown the full weight of his influence back of the project and will make a last-ditch fight to secure congressional approval of the new agreement he has negotiated with Canada.

In demanding the seaway the Midwest is asking only for justice in the transportation handicap placed upon it in the opening of the Panama Canal. What this handicap means can be partially illustrated by the fact that the opening of the seaway will reduce transportation rates on dairy products from Minnesota and other northwest States to New York from $6 to $7 per ton, merchandise rates 50 percent, and grain rates 25 percent. To further illustrate the existing handicap is the fact that it now costs as much to ship, for instance, a case of canned corn from Racine, Wis., to New York as it does to ship a like case by boat from San Francisco to New York by way of the Panama Canal.

While the Midwest is predominantly agricultural, and the farmers will derive the greatest benefits from the opening of the St. Lawrence to ocean boats, comparable benefits will be enjoyed by industry and all commerce, for comparative savings in transportation costs will be reflected wherever water transportation is feasible. The development of the St. Lawrence will virtually mean the bringing of the Atlantic into the heart of the continent, giving the interior benefits of a sea base for transportation rates comparable to that enjoyed by the country's seaboards.

While Secretary of Commerce, Herbert Hoover headed a commission appointed by President Coolidge in 1926 to make an exhaustive investigation of the economic factors in the proposed St. Lawrence seaway. Upon completing this work with the aid of an able corps of engineers, economists, and transportation experts, Mr. Hoover reported that "the benefits to agriculture alone would annually exceed the cost of the project," and that the "benefits to industry would exceed the benefits to agriculture."

The fundamental economic conditions of the country have not changed. Transportation rates have been increased instead of lowered. The distances from the interior to the seaboards remain the same. The Midwest still continues to suffer from the transportation inequalities imposed by the Panama Canal. The only remedy for these inequalities lies in the development of the St. Lawrence seaway, whereby the interior of the continent may have not only an outlet for water-borne traffic to the markets of the world, but a waterway to the coastal ports of our own country.

Is the St. Lawrence Seaway Necessary to National Defense?

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

RESOLUTION ADOPTED BY EASTERN REGIONAL CONFERENCE OF THE GREAT LAKES-ST. LAWRENCE WATERWAY AND POWER PROJECT

Mr. VAN ZANDT. Mr. Speaker, despite undisputed evidence that the proposed St. Lawrence seaway is an economic monstrosity incapable of justification as a sound and practical project, the advocates of this so-called dream waterway continue to press their claims that it is a necessary adjunct to our national defense.

Every loyal American is eager to lend his undivided support to the program of national defense and is just as zealous in demanding that camouflaged projects be exposed in their true light as an effort to prey on the patriotic impulses of this great Nation.

The following resolution adopted at Philadelphia on April 15, 1941, by the Eastern Regional Conference of the Great Lakes-St. Lawrence Waterway and Power Project, reveals many true facts that should be carefully reviewed when considering the practical value of

the proposed St. Lawrence seaway project.

The resolution referred to is as follows:

Whereas there is now before the Congress of the United States an agreement negotiated by the accredited representatives of the Governments of the United States and the Dominion of Canada; and

Whereas the President of the United States has expressed his intention to request affirmative legislative action thereon; and

Whereas representatives of labor, industrial, transportation, civic, and commercial organizations situated in the Middle Atlantic States have this day assembled in the city of Philadelphia as the Eastern Regional Conference on the Great Lakes-St. Lawrence Waterway and Power Project to consider the various claims advanced in support of economic and defense advantages allegedly attainable by the proposed construction of hydro-power generating facilities in the International Rapids section, and a deep waterway to provide navigation channels with a least depth of 27 feet; and

Whereas we believe that this project, which has lacked economic justification through the years and is now urged as a defense measure, is contrary to the real and immediate needs of national defense: Now, therefore, be it

Resolved, It is the sense of this conference that the Congress should withhold approval of any legislation designed to effectuate the aforesaid agreement, it being our conviction that the proposed project would be inimical to the best interests of the peoples of the United States and Canada in that it would—

1. Deprive the United States and Canada of much-needed labor, funds, and vital materials essential to immediate defense requirements;

2. Require 4 years or more to complete the first stage of development to provide a limited amount of power, and a much longer time to complete the navigation features of the project;

3. Not provide for the construction and use of shipbuilding facilities on the Great Lakes within the time required to meet emergency needs as now foreseen;

4. Involve expenditure of large sums of money far in excess of any properly measured economies;

5. Destroy and divert large consumer markets for fuel, with attendant loss of employment in production and transportation industries;

6. If the amount of traffic claimed by proponents be developed, cause a surplus of transportation facilities during the open season of navigation but demand that existing transportation facilities be maintained at a high standard of efficiency to meet requirements during the closed season of navigation;

7. Remove incentive for the expansion of taxable utility and transportation agencies in vital industrial regions;

8. Invoke the aid of Federal subsidy to produce benefits which are now more quickly and advantageously being supplied through private initiative;

9. Divert a substantial volume of commerce from coastal harbors, reduce employment, restrict industrial development, and penalize the initiative and the large capital investments which produced the port facilities now serving the vast interior section of the Nation; and be it further

Resolved, That copies of this resolution be transmitted to the President of the United States, the Vice President of the United States, the Speaker of the House of Representatives, and to Members of the Congress, with the confident hope that this subject will be dealt with in the customary legislative manner by affording an opportunity to all interests to be heard.

OF

HON. JEANNETTE RANKIN

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

PETITION OF CITIZENS OF MISSOULA, MONT.

Miss RANKIN of Montana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following petition received by me recently, signed by 25 citizens of Missoula, Mont.:

MISSOULA, *April 15, 1941.*

Miss JEANNETTE RANKIN,
Washington, D. C.

MY DEAR MISS RANKIN: We, the citizens of Missoula, Mont., have the honor of writing you again—this time as we feel if we send out convoys with British supplies there will be danger of us getting into war.

And we are not in favor of our American boys going abroad and taking part in a foreign war.

Yours respectfully,

Mrs. Zay A. Morgan, 206 South Fifth Street E.; Dena Wing, 602 River Street; Mrs. L. D. Taylor, 614 Gerald Avenue; Mrs. Vinnie A. Burdick, 737 South Fifth Street W.; Mrs. Jennie Conwell, 745 South Fourth Street; W. F. Steinbach, 726 South Fourth W.; Mrs. A. E. Buker, 1424 Sherwood; Mrs. Tillie Minnerly, 442 Alder Street; Mrs. W. H. Beacone, 103 South Fifth E.; Mrs. C. M. Rasb, 212 West Spruce Street; Mrs. L. E. Nelson, 439 West Broadway; Ena Johnson, 1416 Cooper; Mrs. J. Jesmore, 339 North Avenue W.; Mrs. Mabel Zeh, 526 East Front; Lillian Rossbach, 1135 Cooper; Mrs. James A. Sage, 309 Pattee Street; Mrs. Margaret Burk, 528 East Front; Mrs. Olive Bomgardner, 311 North Pattee; Mrs. Cora M. Doll, 610 West Spruce Street; Mrs. T. C. Branson, 805 Rollins; Frank Gasperino, Rural Free Delivery No. 2; T. C. Branson, 805 Rollins, Missoula, Mont.; J. L. Condotta, St. Regis, Mont.; L. O. Amos, Northern Pacific Depot, Missoula, Mont.; Mrs. Sadie Moore, 827 South Fifth Street W.

It Is Later Than We Think

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1941

ADDRESS OF HON. LYNDON B. JOHNSON, OF TEXAS, BEFORE A JOINT SESSION OF THE LEGISLATURE OF THE STATE OF TEXAS

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by including a speech recently made by our outstanding colleague, the constructive gentleman from Texas, Mr. LYNDON B. JOHNSON. Mr. JOHNSON describes so graphically the challenge facing this country that I feel his speech should receive the attention of all thinking Americans:

Friends and fellow Texans, I am honored that you have given me the privilege of speaking to you. This capitol has been a part of my life. My father, Sam Johnson, served as a member of this legislature for many years, and my visits to the capitol during that time were the thrill of my boyhood days.

As a Texan, I am proud of the history of Texas. As an American, I am proud of the part Texas has played in the molding of the history of our great country.

This year, the celebration of San Jacinto Day has a special significance for it finds the world again in the midst of a struggle for independence. Democracy is undergoing its most bitter attack, and our own fate is undeniably a part of the fate of the world.

When one speaks today of the future of democracy, he must do so with thoughtful confidence. Americans have been taught by their fathers and their fathers' fathers to believe in democratic principles. So thoroughly have we learned this, it is impossible for most Americans to conceive of an America not free.

One cannot separate the thought of the future of democracy from the continuity of our own country as we know it. An American is not born of a certain blood or ancestry. Throughout the history of our country, there has predominated a common belief in the rights of man. A belief so strong it has welded together into one nation every nationality. This blending has not been a miracle. It is the inevitable result of men with common ideals finding a place where their ideals might have a chance to develop and to produce the Nation we all love.

WE MUST PULL TOGETHER

Our responsibility is for the future of democracy. Our ancestors have built a democratic country. We ourselves have proved it can work, and that it is the most logical and happy way of living. Has this been done in vain? Have we created a democracy to perish after so short a life? We hear from all sides that democracy is threatened. It is difficult not to believe this when all over the world men are killing men, destruction is on the march, and democracy has perished where once before it was growing and thriving.

I say we have not worked in vain; that democracy must not perish from the earth.

America has never before had such an opportunity to point to its own way of life as an example for the rest of the world. I believe the time is approaching for the birth of a democratic world—a world with common ideals—a world without barriers.

To achieve this there is work to be done. We will do it, for we are a nation of workers. There will be times when confusion between our different interests within our borders will seem insurmountable. We have so-called capital, we have labor, the farmer, the businessman—each with his problems. Each of us has his individual life he does not wish disturbed. All of these things are a part of a democratic government. All are minorities which go together to make a whole, and what the whole demands the parts must concede.

DEMOCRACY MUST ACT NOW

We are the children of a generation of men and women who worked, fought, and sacrificed for liberty, for freedom. We will do the same. We must work without consideration for individual gain at the moment, knowing, that as a reward for our labor, we and our children, and all of the people of the

world, will have a better life for centuries to come.

Nazi and Fascist principles have temporarily taken Europe and are spreading into the Balkans, Africa, Asia, and the Far East. Why? Because—and let's face facts—European democracy fell down on the job. Dictatorships are the consequence of the failure of democracy.

European democracies between 1930 and 1939 turned out some of the prettiest statements the world has ever heard. Free government became flowers and flapdoodle outside, but chaos within. With parties and cliques sacrificing national strength to gain minority advantage, governments were falling to pieces under their own noses, but the people didn't know it. France couldn't make up her mind. England clung to an outworn system. The little fellows watched the big fellows and followed suit to disaster upon disaster.

All the while crafty dictatorships were making plenty of hay, by unifying themselves from within. True, they accomplished unity with the sword, the torture chamber, and the concentration camp. But the point is they did it. Unemployment, economic and social bellyache kept European democracy in bed for years, an ice pack on its head and a roaring hang-over for company, but totalitarian states didn't go to bed. They weren't even sick. They confiscated all business, industry, and labor and with every last mother's son at work, they converted their resources, and everything else they could lay their hands on, into war machine. They permitted no unemployment. They tolerated no complaints from capital. They stifled any protests from labor. They made their farmers put up and shut up.

WE CAN MEET THE FASCIST CHALLENGE

We Americans don't like that sort of government. We wouldn't tolerate it. But that is the kind of government, that is the idea, the remaining democracies in the world must fight. If they refuse to fight that idea, and insist upon old-time remedies for new-time upheavals, the results may well be disastrous.

Certainly I am no defeatist. I just like to know the size of the fellow I have to whip, where he came from, what he thinks about, and how he slugs.

Well, what are we doing about it?

To begin with, 1,200,000 American boys are undergoing army training. By midsummer this number will be 1,500,000. On the sea and in the air, our naval forces number 230,000.

We must produce for them—rapidly and without delay—planes and tanks, battleships and bombers—better than any forces in the world possess. Not just as good, but much better.

Thousands of empty Texas acres are being used to train soldiers for our Army and pilots to control the air above us. Within the last year, in addition to our Army-consciousness, I have tried to make Texas Navy-conscious. On the Gulf coast millions are being spent for new shipyards. In Dallas a new Naval Reserve station is on the way. At Corpus Christi, the greatest naval flight-training base in America is today actually training pilots.

TEXAS YOUTH IS PREPARED

Here in our own University of Texas which we all love, instead of being a factory grinding out Communist comrades, we have a plant training 100 red-blooded Texas boys to command Navy ships on the water and in the air in our last stand for principles just as precious—just as dear as Houston and his 200 fought for at San Jacinto.

Over yonder this year, the Aggies of A. and M. are polishing 615 of the cream of our boyhood crop from every section of the State—from the plains to the Gulf they have come and under matchless leaders have prepared themselves as officers equipped to direct our armies in defending our soil. Our church schools, our teachers' colleges all are doing their part. To the chief executive and to you members of the house and senate who wisely have provided for this training program the Nation owes a debt.

We have all the resources, we have all the manpower, wealth, and education necessary to make our position impregnable if we forget personal gain and remember national safety.

The riflemen at San Jacinto didn't have much. They possessed scanty and inadequate supplies. They were few in numbers. They won because they used what they had of men and supplies a full thousand percent.

When we lose a minute, wrangling among ourselves, in disputes about who is going to do what, who is going to get what, we lose something all the gold at Fort Knox can't buy back. With every second wasted, we rush one step nearer the universal disaster.

If American democracy is to survive it can't do it on conversation. It can't survive on the glories of the past. No. If American democracy endures it will be because Americans want it to. Because they want it to so much they will offer their "blood and sweat and tears" to make it survive. Winston Churchill never spoke more magnificent words than these: "I bring you blood and sweat and tears."

At first the British Government did a lot of playing to the galleries, but when it went on a 24-hour schedule, applied its blood and sweat and tears, then it stemmed the tide a little. When democratic statesmen forgot what was best from their standpoint and considered what was best for democracy, men all over the world took hope. The boys at San Jacinto won in blood and sweat and tears. They talked and thought in rough, practical terms, not in gardenias. They wanted to survive, and so must we—to the point of personal sacrifice.

ALL GROUPS MUST SACRIFICE

I have been the friend of business and industry and a champion of our American system. But today we must say to American capital: "We know your prerogatives and have battled to protect them. Still there are privileges superior to yours and above those of any other minority in America. Your Government must call on you, and you must respond if you treasure your precious advantages."

I am a friend of the American laboring man, and in his behalf I have a written record. But to labor, organized or unorganized, I want to say this: We know your principles; we cherish and have fought for them. Still, there are interests superior to yours—those of your American Government. When you vote to strike you must think not only of your gain but of your duty to all of your fellow men. You must think of the threat your Government faces—what it needs in this hour is to have you and your precious privileges. If there be subversive influences anywhere around you, deal with them as all Texans deal with traitors.

AMERICA COMES FIRST

The security of the country is above that of any single group—labor, capital, the farmer, what have you? When, in the scramble to save yourselves individually all you minorities become willing to sacrifice the whole people for yourselves, you will jump through the trap of your own gallows.

We cannot be free men and at the same time disorganized, bull-headed, obstinate, selfish men.

Capital, labor, and the farmer must not make war among themselves. They must solve their differences with conferences, not tear gas and clubs. They tried fighting in France. Today France is in chains. They tried it in England. England has almost lost her life. They tried it in other democracies, and they are no longer on the map. Can we not profit by Europe's experiences?

Since we started spending billions of defense dollars, we have run into bottlenecks. A strike here has chopped a few days from plane production. A capitalist yonder struck on orders for British planes. The wrong on both sides has cost us more than we can afford.

The day any man, or any minority, poses as superior to America under the Constitution, that day the man or minority becomes your enemy and my enemy. The Constitution, which confers privileges, also imposes duties and obligations. Again, the units must rally to save the whole.

I regret I cannot tell you that we have done a perfect defense job. I cannot. We have been slow and have lost time. We have stopped to bicker among ourselves and to wrangle. We have thought too much of our own security and clique security when we ought to have been thinking of national security.

WE MUST PRODUCE MORE

Listen: From 1933 to 1939, Germany spent $90,000,000,000 getting ready for this war; America spent nine. In 1939 Germany invested another $36,000,000,000; America scraped up less than two billions. In 1940 and again in 1941 Germany invested another $60,000,000,000. In 1940 we set up $6,000,000,000 and only doubled it in 1941. The score: Germany, $230,000,000,000; America, $30,000,000,000. Germany's two hundred and thirty billions are in materials on the field. Some of America's paltry thirty billions is still on paper and on order.

Do you still think we have time to loaf, to argue, to waste time? No. It is later than we think.

For 8 years, under President Roosevelt, our Government, returning democracy to the people, has been building us from within. We have relieved the distress of our unemployed millions, sustained their health, morale, and skills. We have educated and trained our boys and girls through the N. Y. A. and the C. C. C. We have refinanced the debts on our homes and farms and brought interest rates down within the ability to pay. We have made real headway clearing our city and rural slums; we have made home ownership possible for the little fellow. We have conserved our natural resources, stopped the onrush of floods, and made waste waters generate electric power we need now for our farm homes and national defense. We have given our laborers jobs, supported business and industry in the construction of great public works. We have awakened to the farmers' many problems and made conscientious efforts to assist him back to a decent American living standard.

PUT EVERY MAN TO WORK

With such a foundation, we surely cannot be hopeless, even though we may find the road rough in spots.

Americans by voluntary methods can and will accomplish what the dictatorships have done with the lash.

Nothing so challenges the American spirit as tackling the biggest job on earth. That is what this is. Every American will become a statesman in such an emergency. He must avoid satisfaction with himself, for in satisfaction lies deterioration. Americans are stimulated by the big job—the Panama Canal. Boulder Dam, Grand Coulee, the lower Colorado River developments, the tallest building in the world, the mightiest battleship. So fortification of the greatest democracy makes all other projects seem trivial.

First, we must all get to work; second, we must all work longer and harder, no matter what our job may be. We must ferret out new ideas, create new processes, willingly drive last year's models—cheerfully tell manufacturers that American mothers want planes for their boys instead of pans for their kitchens.

We have the draft, which takes the cream of our crop for the Army and Navy. It puts these young men into uniform to defend us. We have laws permitting us to draft factories. Public opinion sets standards which capital, labor, and agriculture must meet, yet we are still plowing along under the one-horse, dollar-a-year-man system. Many of the men

in Washington now directing our defense are men who try to work for their companies 3 days a week and their Government the other 3.

Frequently they get their jobs mixed.

Why not immediately take a census of management in this country? The results will reveal where the executive brains and the executive leadership of America are located. With plenty of men already in the ranks of production and the materials for them to use, we find the Government short on big-management generals. We must have them, too, even if they must give up $50,000 a year for $5,000 a year salaries. Why not draft executive and management brains to prepare and produce the equipment the $21-a-month draftee must use and forget this dollar-a-year tommyrot? Would we send an army into the field under a dollar-a-year general who had to be home Mondays, Wednesdays, and Fridays? To ask that is to answer it.

ROOSEVELT IS A GREAT LEADER

America and the world are blessed today in that destiny has given us a great and mature man to lead us. President Roosevelt is a leader whose judgment has been found both wise and just. We can trust and follow him, for he embodies the spirit of love for fellow man in which democracy was born and with which it will carry forward to the future when peace comes after this trial is past. His is a difficult, a tremendous job. He does it with joy, in the knowledge that, working for the whole, the individual finds his own compensation.

I am proud that I enlisted in the cause and have worked with him since 1932. As a candidate for Congress there were no doubts about where I stood on the Roosevelt program. As a Member I have kept the faith, and as we approach the dark days ahead, I want my people to know I will devote to the future the same willingness to fight in the trenches as has characterized my actions in the past. I pledge you fear of political consequences will not silence me, and the lure of national spotlight will not entice me. In these critical hours Americans must support—not snipe at—the President.

I believe in America, in democracy, and in our Government from the President down to the lowliest servant of it. I believe in this Legislature and the Representatives of the State of Texas which our people have chosen to serve them. I believe also that in the soul of man lies the power to control the future, whether that soul be called in modern terms English, German, Italian, French, or Greek. I believe that all men in all places have a common idea which will rise when its bonds are stricken away. They all want to be free.

Even though there may be trying months to come, saddened perhaps by sorrow and sacrifice and tears, my hope and belief is that the same undying courage, the same love of freedom, the same unconquerable spirit which raised the flag of independence over Texas, one day will raise it over a democratic world.

The St. Lawrence Seaway

REMARKS

OF

HON. FRED J. DOUGLAS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1941

Mr. DOUGLAS. Mr. Speaker, on March 21, 1941, President Roosevelt announced to Congress that a new executive agreement had been negotiated with Canada for the construction of the St. Lawrence seaway. It should be borne in mind that this time an executive agreement was negotiated with Canada, and not a treaty. The reason for this is obvious. In 1934 the Senate of the United States refused to ratify a proposed treaty with Canada for the construction of the St. Lawrence seaway. This time our courageous President will take no chances on not being able to get a two-thirds majority in the Senate, as required by the Constitution. An executive agreement will do for his purposes. Thus he will have to get only a majority in both Houses of Congress to provide for the authorizations and appropriations to carry out the agreement. The difficulty of securing a two-thirds majority of the Senators to approve of the treaty is not a hazard that he dares to face.

Let us see what this project really amounts to. It would provide for construction of a 27-foot channel through the St. Lawrence River between Lake Ontario and Montreal. This would be effected through the construction of a dam that would raise the level of the water behind it approximately 80 feet, together with the necessary canals and locks around the several rapids in the river between the proposed dam and Montreal. In addition, the Welland Canal and the canal at Sault Ste. Marie would have to be deepened. The total direct costs of all of these works would be $405,137,000, of which the Canadian Government would pay $175,950,000 and the United States $229,183,000. Of the amount chargeable to the United States, $90,000,000 will be contributed by the New York State Power Authority.

But these figures do not in any way represent the total cost of the development. For at least 13 harbors on the United States side of the Great Lakes and 2 on the Canadian side would have to be deepened to allow 27-foot boats to enter. Interest on the investment during the period of construction at 3½ percent would have to be allowed. The figure of $405,137,000 does not include any allowance for contingent expenses. According to a thorough study prepared by the Niagara Frontier Planning Board—a public body authorized by the New York Legislature in 1925—the total direct cost of the project would be $655,000,000, of which $240,000,000 would be borne by Canada and $415,000,000 by the United States. Despite the fact that these are astronomical figures, this same impartial Government source asserts this is far from the whole picture. Supposedly the life of the project would be 50 years. Then interest would have to be paid on the bonds for that period and there would be the cost of operation and maintenance. When these items are taken into account the total cost of the project, including cost of construction, interest, and maintenance cost during its life, would be $1,220,000,000, of which $597,000,000 would be borne by Canada and $623,000,000 by the United States. To help indicate the tremendous cost of this project it should be remembered that the Panama Canal cost only $375,000,000.

Let us view the arguments for the construction of this project at the present time and analyze their validity. Although the project has been before the people of the United States in one form or another for more than 15 years, President Roosevelt now advances a new argument in favor of it. This argument is that the project is required for national defense. The primary reason why it is needed for national defense, it is alleged, is that we will require the electric power that will be generated for defense industries. But when does the agreement with Canada call for the completion of the power facilities? Why, the date is 1949, and, according to engineering estimates, the earliest date that it could reasonably be expected to be completed would be 1946 or 1947. Thus, on October 17, 1940, President Roosevelt said:

> The surveys of the Federal Power Commission and the National Power Policy Committee have convinced me that the development of the International Rapids section of the St. Lawrence River should be undertaken at the earliest possible date as a part of adequate provision to meet the continuing power requirements of the defense program in certain essential centers of war-material production in the Northeastern States.
>
> The potential power at this site is best adapted to meet the requirements of expansion in certain essential defense industries, including aluminum, magnesium, ferro-alloys, chemicals, etc. Actually, the Aluminum Co. of America has recently arranged for the import of 30,000 kilowatts of additional power from Canada to meet the pressing requirements of its existing plant located at the very site of the proposed St. Lawrence project and, I am reliably informed, is seeking additional supplies from across the border. Such imported supplies are, in effect, on an annual basis subject to being withdrawn if required by the Canadian power market.

Are we to conclude from this that the administration expects an unusually protracted war? Normally, it has been talking about a defense emergency lasting about 2 or 3 years at the most. But should we conclude now that it will last 8 years? On this basis either the defense argument is ill-founded or the administration has been grossly lacking in honesty in discussing the defense emergency with the American people.

An oft-repeated argument in favor of the construction of the St. Lawrence seaway is that it will result in tremendous savings of freight rates to the American people. Most of the estimates of savings resulting from reduced freight rates have been distinctly fallacious and misleading. One of the major reasons for this has been that they have not considered the effect upon the community as a whole of the construction of such an undertaking that would compete with all existing transportation facilities. They have not taken into account the cost to the public of each ton of freight transported through the seaway as a consequence of operating costs, interest, and amortization, nor have they included any allowance for the loss that would be suffered each year through the loss of freight on the part of railroads and other forms of inland transportation, including the New York State Barge Canal. When these are taken into consideration the alleged actual saving resulting from the construction of the seaway becomes in reality a loss to the national economy. The total savings in freight charges for

both exports and imports, according to the Niagara Frontier Planning Board, would be only $8,800,000. But in computing even this saving in reduced freight charges no account is taken of the cost to the public of the construction and maintenance of the seaway. But in addition to the alleged saving in freight charges there would be a number of very great additional costs to the community. We must take into account the loss of freight traffic on the American railroads, a loss of traffic on the New York State Barge Canal, and other inland waterways. The gross loss each year from this construction would be $51,000,000. When we deduct from this the $8,800,000 resulting from the decreased freight charges the net annual loss to the national economy, apart from the cost of operation and maintenance of the seaway, is $42,000,000.

To undertake a project that in the long run will cost well over $1,200,000,000 for the purpose of diverting the movement of freight from American railroads to foreign shipping seems most illogical. In the last 9 years vast sums of money have been loaned by the Federal Government to railroads in order to prevent them from going into bankruptcy, but at the same time the Federal Government would be jeopardizing the very security of these loans by constructing this project. The stockholders of the American railroads have in many instances received no dividends for years. This project would certainly insure that this course would be followed for years to come. It is generally believed by all competent students of transportation that what this country suffers from is not a dearth of transportation facilities on the eastern seaboard but rather from a great overdevelopment of such transportation facilities.

Supposedly the St. Lawrence seaway is to provide a 27-foot channel from the Great Lakes to the ocean. What ships will benefit from this? American ships with sufficiently small draft to ply the new canal constitute but 5 percent of the world's merchant shipping, whereas 30 percent of the total world's shipping is of shallow enough draft to use the waterway. Thus it would appear inevitable that most of the business of carrying goods to and from the lake ports would fall to foreign shipping, and American shipowners would receive practically no benefit from the projected undertaking. Thus, from the standpoint of transportation, there appear to be practically no arguments in favor of the seaway. In fact, all of the arguments that can be advanced are distinctly against it.

From the standpoint of the production of electric power, there is no more to be said for this project than there is on the transportation side. The total cost of the works chargeable for power production, or for power production and navigation jointly, is $269,000,000, of which the United States will bear $206,000,000 and Canada $63,000,000. It should be noted that the power produced at the project will be divided equally between the United States and Canada. The total amount of power produced on the project will be 1,642,000 kilowatts. Of this, the United States will get 821,000 kilowatts. Thus it would appear that since the Canadian cost of the power project will be $63,000,000 and the cost to the United States $206,000,000, the United States will be paying three times as much for each kilowatt of power produced as will Canada. The St. Lawrence Power Development Commission of the State of New York estimated that power facilities in the International Rapids section of the St. Lawrence could be developed at a total cost to Canada and New York State of $180,000,000, as against $269,000,000 chargeable to power under the proposed navigation and power development. The cost per kilowatt of installed generating capacity on the entire project would be $163. But since the United States is contributing a great deal more than Canada for its half of the total power produced, the cost per kilowatt of installed capacity on the 821,000 kilowatts the United States would receive would be over $250.

Let us see how this all compares with the cost of the steam generation of electric power. On July 9, 1940, the National Defense Advisory Commission testified before the deficiency committee of the House Appropriations Committee relative to the cost of construction of steam plants in the Tennessee Valley to supplement hydroelectric developments in that area. In the testimony of Mr. Dunn, consultant to the Defense Commission, it was stated that the cost per kilowatt of installed capacity of a modern steam plant is only $87.50, as compared with the figure above quoted of $163 per kilowatt of installed capacity on this entire project, or of $250 on the power to be received by the United States. Instead of a cost of $269,000,000 to build this project under the present plans, steam plants to produce an equivalent amount of power would cost but $143,675,000, or but 53.4 percent of the cost of this project chargeable to power. These figures, of course, are only the cost of installation of generating facilities. What would be the actual cost of such power wholesale in the areas of New York where it would likely be consumed? The cost of St. Lawrence power delivered wholesale in Buffalo would be 3.46 mills per kilowatt-hour, whereas the cost of producing power by steam generation at the same load factor in Buffalo is 3.4 mills. The cost of delivery of this power in New York City would be 4.91 mills, as against a cost of production in New York by steam plants of 4.5 mills. New York City, of course, would be the largest potential market for the consumption of this power, and the possibility of sending such power uninterruptedly to New York with present transmission equipment is exceedingly dubious. Consequently it appears that power produced by the generating stations to be located in the International Rapids section of the river could not be economically sold in the principal consuming markets in New York State. Thus it would appear that from the standpoint of power production the project cannot be justified.

From the review that has been presented it appears that this project cannot be justified on the ground that it is necessary for national defense, nor on the ground that it will produce great savings for transportation to the people of the United States, nor on the ground that it will produce electric power in an economical manner. Thus it must be concluded that there are no logical arguments that can be advanced to support this tremendous undertaking.

A Private's Letter

REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1941

Mr. KEOGH. Mr. Speaker, I received a very interesting letter, which I thought should be brought to the attention of the House. It is from a young neighbor and is addressed to my brother and to me. It is as follows:

APRIL 19, 1941.

DEAR GENE AND VINCENT: I thought that it was time that I should write to you and let you know how things are going in the training of our Army. This account is not by any means a professional one but merely a few things that I have observed. Firstly, the life isn't too bad at all. The housing conditions are as near perfect as anyone could expect, notwithstanding the fact that the barracks we are in were put up in record time. Every barracks has two floors, and each floor has about 30 men sleeping there. The cots issued are surprisingly comfortable, although there is no evidence of any Beautyrest mattresses. We have ample latrine facilities, with hot and cold showers. Everything about the barracks is kept neat and clean. Sanitary conditions are marvelous. The Government really outdid itself in the housing problem. I don't doubt that these barracks are of the type which will endure all the elements for quite a long time to come and will fulfill other purposes than mere dwellings for military men.

Next we have the food problem. I can honestly say again I was not only surprised but flabbergasted at the conditions. The food is good and simple; nothing extravagant but yet it is the type which is tasty and filling. It puts muscle where muscle should be and bone where bone should be. Potatoes are the cook's forte; beef stew his piece de resistance. We have plenty of solid bread, strong coffee, and peaches. There seems to me to be a very large waste, however. Each company has its own money with which to feed its men, and they use it up, come what may. If 2C pounds of potatoes, peas, turnips, etc., are not eaten, the uneaten portion is thrown away. Somehow I can't conciliate this with the need for new economy. Of course, this is a small item, but if every company in every regiment in every camp throughout the country follows the same procedure as we do, then there is a waste large enough to warrant a stoppage. As a final word on the food, I can say it is far more than in my most anxious, optimistic moments before I was inducted I ever hoped for. I am completely satisfied in an epicurian sort of a way.

I imagine what you would like to know more than anything else is the actual duty for military training itself. It is a distinct tribute to the Army officials when I say that their plans and schedules are held to strictly and are the type which gives a man unaccustomed to such work a good insight into what he might expect in time of war. You would

be astounded if you knew how close you can walk to a man in ambush without seeing him. An officer in the brushes not 20 yards from us. There were at least 30 men looking for him, taking one step at a time. I was about 2 yards from him before I spotted his pants legs. When we saw that demonstration every man started to get serious about the training. We are taught every trick of camouflage, ambush, and attack. When to show ourselves and how to show ourselves, how to shoot from behind trees, bushes, and from defiles and hills. The men realize that these instructions and advice are coming to us after a frightful tuition of human lives were lost and paid for to gain this knowledge. When we first arrive, if we were in actual combat, 100 men could have wiped out the 5,000 men just starting training. Today I doubt if an equal force could do the same damage. When our year's service is up every selective man leaving will, or should have, the necessary training to wage a successful warfare. The drilling of the men is monotonous and irritating, particularly under a hot sun, but yet somehow you don't mind when you realize you are a cog in a well-trained and well-drilled organization. I'd match my platoon with the plebe class at West Point, and there would not be much difference.

Gene and Vincent, I know this letter is not as personal as I would like it to be, but I thought a few words from one actually under the training for our defense would give you some insight into how things are going. I waited until last to register my complaint, which, although often joked about, is a genuine and universal one—the noncommissioned officers, corporals, etc.—bah! Nasty bunch if I ever met one, but yet they are the Army discipline. I heard about my brother Bill's good fortune and I want to add my appreciation to that I know my family feels. You know I am always at your service for anything I can do, which sometimes seems very insignificant to me.

Regards to your mother. Best of luck to you both.

Sincerely,

——— ———.

Kamo—Supertransmission R. E. A. Cooperative for Kansas, Arkansas, Missouri, and Oklahoma

EXTENSION OF REMARKS

OF

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1941

EDITORIAL BY C. F. BYRNS, EDITOR OF THE SOUTHWEST AMERICAN

Mr. ELLIS. Mr. Speaker, if we have the vision to make full use of the great resources at our command in these United States I think it may be truly said that the day of the pioneer has just begun.

Last week there was formed of 19 rural electrification cooperatives in the States of Kansas, Arkansas, Missouri, and Oklahoma—principally in the corners of those States that lie in the Grand River watershed—a huge supertransmission cooperative whose members will be the 19 co-ops and which will serve to bring to them the cheaper power being generated at the Grand River Dam.

This is a new step in the field of power in this age of electricity. It is a new step for the American people. It is a newly discovered means of delivering public power that is being produced in this country at a relatively low cost, to the people.

Herewith, I insert in full a most excellent editorial by Mr. C. F. Byrns, editor of the Southwest American, one of Arkansas' largest newspapers, which appeared last week:

[From the Southwest American]

Cheap power from Grand River Dam in northeast Oklahoma will be made available to 50,000 farmers in Arkansas, Oklahoma, Missouri, and Kansas if plans of Congressmen from the four States go well.

An immediate allotment of $50,000 from the Rural Electrification Administration and another $200,000 from defense funds will be sought immediately to finance initial construction of the heavy transmission lines from Grand River Dam to connect with 19 rural electric cooperatives in the four-State area.

A supercooperative known as Kamo was organized at a recent meeting in Vinita, Okla., attended by representatives of the Grand River Dam Authority and of local rural electric cooperatives.

Congressman CLYDE T. ELLIS, of Arkansas, and United States Senator JOSH LEE, of Oklahoma, are taking the lead in the plans.

A reduced wholesale rate for power purchased by the cooperatives is one objective of the plan. A gridwork of electric lines which will make Grand River power available to many more farmers in the four-State area is another. Eventually it is planned to tie in Grand River power with Norfolk Dam, on which construction recently started, in Baxter County, Ark.

The plan of Kamo calls for eventual construction of 800 miles of heavy transmission lines, costing about $2,000,000. An immediate allocation of $50,000 from the Rural Electrification Administration will practically exhaust that agency's funds for the present fiscal year. To push the project along, the Congressmen and Senators will ask the President to allocate $200,000 of defense funds to keep the work going until July 1, when R. E. A. will have additional money.

Congressman Ellis said in Washington the new supercooperative will buy power in large quantities from Grand River Dam authority for 4.5 mills a kilowatt, compared to the present average price of 12.5 mills a kilowatt. The saving to customers of the rural cooperatives he said will be half a cent a kilowatt.

This is a significant development, not alone for what it is in itself, but for what it indicates for the future. It is a logical step toward the final establishment of some such agency as is proposed in the Arkansas Valley Authority bill now pending in Congress—an agency created for the purpose of correlating all the power production, flood control, and navigation aids which are constructed, under construction and projected in the valleys of the Arkansas, the White, the Red, and the St. Francis Rivers.

Grand River Dam is on the most important tributary of the Arkansas in eastern Oklahoma. Norfolk Dam is on the White. Denison Dam, now under construction, is on the Red, on the southern border of Oklahoma. These three form a triangle which embraces much of eastern Oklahoma and northwest Arkansas.

Flood-control dams, some of them designed for eventual power production as well, are under construction at various points in the valleys of the four streams. Privately owned dams, usable in some degree for flood control, exist at various places. Altogether 37 flood-control works, many usable also as power producers, have been recommended by the United States engineers in the four river valleys.

The creation of a single authority with the power and the finance to construct what is needed and to operate all of them as parts of a whole is a logical and inevitable development.

St. Lawrence Seaway

REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1941

Mr. PITTENGER. Mr. Speaker, I wish to comment for just a moment on the project that will be before the Congress very shortly known as the Great Lakes-St. Lawrence deep waterway project. I do not suppose there is a more meritorious measure, or a measure that will mean more to the American people, than this project. There has been no project, however, about which more misleading propaganda has been circulated in America than this particular project. The lobbies are active and have been active for months. An educational program is needed if this sort of misleading and untrue propaganda is to be avoided.

A colleague asked me 2 or 3 weeks ago, "Tell me something about this project. They tell me you cannot get any power up there because most of the year the St. Lawrence is frozen over and the ice prevents the development of power."

Mr. Speaker, I have received a letter from the secretary of the Hydro-Electric Power Commission of Ontario giving the facts on that situation. The letter reads as follows:

THE HYDRO-ELECTRIC POWER
COMMISSION OF ONTARIO,
OFFICE OF THE SECRETARY,
Toronto, April 22, 1941.

Mr. W. A. PITTENGER,
Member of Congress,
House Office Building,
Washington, D. C.,
United States of America.

Re operation of power plants under winter conditions.

DEAR SIR: Your letter of April 10, inquiring as to the operation of our power plants under winter conditions, has been received. I note that statements have been made by those opposed to the St. Lawrence project that, on account of ice, power could not be generated on the St. Lawrence for several months during the year.

This Commission operates 44 hydroelectric plants varying in capacity from about 1,000 horsepower up to several hundred thousand horsepower, the total installed capacity of our plants being of the order of 1,800,000 horsepower. These are located all over Ontario and some are in the northern part of the Province, where low temperatures are experienced during protracted periods in each winter.

The records of the commission, extending now throughout a period of 30 years, show that, with one particular exception, none of the plants have been taken out of operation

on account of ice for any period exceeding more than a few hours, and these occurrences have been during the time when ice is first being formed in the rivers. The case mentioned had reference to one of the commission's plants in the Niagara River, and the shut-down was due to a heavy run of ice from Lake Erie which filled the gorge below the Falls where the plant is situated. The greater part of the generator room was filled with ice and the equipment was damaged; the necessary repairs required 2 or 3 months to complete. Had the plant been in any other situation—for example, above the Falls, as in the case of two other of the commission's plants, or farther downstream, as in the case of the largest plant operated by the commission—the only result would have been to reduce somewhat the output for a matter of a few days.

There are many hydroelectric plants operated throughout Canada at which low temperatures are encountered, and it is safe to say that it is very exceptional for any of them to be closed down on account of ice. Certainly, with the exception noted, no case is known where a plant has been closed down for a protracted period such as is mentioned in your letter.

I trust that this information will be of use to you.

Yours very truly,

OSBORNE MITCHELL,
Secretary.

The Colorado-Big Thompson Reclamation Project, When Completed, Will Stop Crop Losses Due to Water Shortages, Which Have Averaged Over $6,000,000 Annually for the Past 10 Years and Amounted to Over $12,000,000 for 1940

EXTENSION OF REMARKS
OF
HON. LAWRENCE LEWIS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1941

STATEMENT OF J. M. DILLE, SECRETARY-MANAGER OF NORTHERN COLORADO WATER CONSERVANCY DISTRICT

Mr. LEWIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by J. M. Dille, secretary-manager of Northern Colorado Water Conservancy District, the repayment agency for the Colorado-Big Thompson reclamation project:

I am secretary-manager of the Northern Colorado Water Conservancy District, the repayment agency of the Colorado-Big Thompson project. For 30 years I have owned and operated farms, and during that time served as manager of irrigation companies in this area.

I wish to speak on behalf of the 160,000 people in our district who are anxiously awaiting the completion of the project which was authorized for construction 4 years ago, and to urge that adequate funds be made available to complete the project as rapidly as possible. That district has an assessed valuation of $140,000,000, consists of 615,000 acres of irrigated land, and comprises one of the best developed agricultural areas in Colorado.

On previous occasions it has been shown that actual crop losses due to water shortages have averaged more than $6,000,000 annually for the past 10 years. Such losses for 1940 have been estimated at over $12,000,000, and the water prospects for 1941 indicate that another year of short crops is probable.

Water shortages are not uniform on the 8,000 farms in the district. While a few of these farms, comprising about 15 percent of the total, have water rights which are adequate even in short years, the major portion of the area bears the shortages in varying degrees, with the result that a large number of good farms have been abandoned, while the owners of many others are insolvent and in destitute circumstances but are trying to hold on until water from the project is made available.

While the population of our larger towns has increased somewhat in the past decade, the rural population has decreased on account of the large numbers who have been forced to give up on account of lack of water. I have personal contact with these conditions and know that the losses and distress are very real and very large. The Federal Government is affected by this situation. The Farm Security Administration reports that over 60 percent of the loans made by that agency last year were in default and that hundreds of farmers in the area are receiving subsistence grants. The Federal land bank, which has about $15,000,000 in farm loans in the district, has been forced to foreclose on many farms and is having difficulty with others. As an example of the situation, one irrigation system with which I am personally connected, had only 18 days' run of water last year. The 220 farmers under this ditch planted their crops, irrigated part of them once, and then had to watch them burn up and be left with little or no income for the season's work.

The losses which I have mentioned do not include those suffered by the business and industry in the district which is dependent upon the agriculture of the area. The latter probably exceed the losses in value of crops on the farm. These losses are reflected in an increasing degree in reduced buying power, delinquent tax collections, and in increased unemployment, relief loads, and assistance from Federal agencies. Actual sale value of all real property and particularly of farms has declined to an alarming degree in the past few years.

The additional 310,000 acre-feet of water, to be made available by the Colorado-Big Thompson project, will provide an adequate water supply and enable this territory to become prosperous and self-supporting.

The conservancy district which I represent, was organized in 1937 as the agency to contract with the United States for construction of the project, to secure repayment of the costs and to allot and distribute the water. A repayment contract with the Government was made in 1938. The entire cost of the project will be repaid by the water and power users. The district organized under a recent Colorado State law is unique in many respects. All real and personal property in the district is taxed to cover a part of the annual repayment charges to the Government. The balance of the cost, chargeable to irrigation, will be liquidated by water charges collected as taxes from municipalities and the individual farms to which water is allotted.

Since the cost of the water to the farmer is well within his ability to pay and with approximately $150,000 raised annually by the district through general taxation and with the power revenues which will be made available, this project is unquestionably sound and will repay every dollar advanced by the Government within the terms of the reclamation law.

Pensions and National Defense

EXTENSION OF REMARKS
OF
HON. WILLIAM H. LARRABEE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1941

Mr. LARRABEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to set forth in detail, my proposal that we consider the question of the serious importance of social security, or, if you please, domestic security, as an important factor in national defense.

At this time, as war clouds gather, there is grave danger that some of our greatest domestic needs may be obscured by the paramount problem of defense. If this happens, a loss in national morale is likely to follow.

With this thought in mind, I have submitted a proposal to the Congress, through the Ways and Means Committee, which, if adopted, would tend to encourage our people to a greater zeal for the maintenance of the democracy which we seek to defend, in that defense would be coupled with the abiding knowledge of security from want as well as from fear.

I have proposed that the Federal Government levy a 5-percent gross-profit tax, in lieu of other proposed defense taxes, 65 percent of the revenue from which would go to national defense and the remainder to extend the coverage of the Social Security Act to all citizens and to place social security entirely on a pay-as-you-go basis.

This proposal is in line with both the needs of the Nation for increased revenue for defense from sources which will not tend to stifle production or to discourage private enterprise and for improvement of our existing social-security structure.

My proposal was made simultaneous letters sent to President Roosevelt, Secretary of the Treasury Morgenthau, Chairman Robert L. Doughton of the Ways and Means Committee, and Congressman Jere Cooper, chairman of the Subcommittee on Taxation of the Ways and Means Committee. In my letter to Chairman DOUGHTON, I requested a hearing before the Ways and Means Committee on the proposal in conjunction with the tax hearings now being held by that committee.

In estimates submitted with the proposal I have figured the tax yield on the basis of a 5-percent gross-profit tax at $6,142,500,000 for defense and $3,247,500,000 for pensions. To arrive at the taxable gross profit I take the gross income of the Nation, estimated at $467,000,000,000, and subtract the cost of materials or property sold so as to reach a

"value added" basis of $247,000,000,000. From this I subtract $42,000,000,000 to cover a basic exemption of the first $80 per month—$960 per year—of gross income, leaving a taxable balance of $205,000,000,000, 5 percent of which would be $10,250,000,000. My plan would allow a further credit to employers and employees who now pay some form of Federal retirement taxes, amounting to $800,000,000. The estimated most of administration, including the collection of the tax and handling the entire general annuity system, is $60,000,000 per year, leaving a net tax yield of $9,490,000,000 according to best available figures.

These figures were compiled for me by Arthur L. Johnson, national executive and legislative secretary of the General Welfare Federation of America, who has spent the last 4 years in Washington on social-security and tax matters.

This tax base would be equitable, would not pyramid taxes, would never tax a loss, and would produce a stable revenue. At the hearings on social security held by the Ways and Means Committee 2 years ago the tax experts called by the committee recommended a similar tax base for general taxation purposes.

The cost of collecting the defense portion of the tax would be practicaliy nil if coupled with my proposal to amend the Social Security Act, so as to include all citizens within its terms, by means of a 2-percent annuity tax such as is proposed in my bill, H. R. 1410, known as the General Welfare Act or General Welfare Act amendments to the Social Security Act.

These proposals appear to meet the needs stressed in the President's message to the Congress on January 6, 1941, on the state of the Union, in which the President indicated quite plainly that extension of the Social Security Act coverage is an integral part of our national-defense program, and it appears this joint national defense-social security revenue program would eliminate necessity of overlapping of other taxes, the possible necessity for increases in and establishment of many so-called nuisance taxes, and simplify to a very large extent the problem of obtaining funds for defense with which the Congress is now wrestling, raising revenue for two major items of Federal expense "as painlessly as possible."

RELIEVES PROPERTY-TAX BURDENS

In addition to these advantages the enactment of this proposed program would also eliminate the necessity of heavy property taxes by local units of government and the States to finance their share of one-half the cost of the old-age pension benefits program, by establishing a reasonable direct Federal old-age pension system in lieu of the present Federal-State cooperative system, in which so many objectionable features, including heavy cost of administration, have been found.

I present herewith an estimate of the tax yield possible under such a program, which estimate was prepared for me after lengthy research by Mr. Johnson:

Estimate based on best available U. S. Government statistics for year 1939

Groups	Gross income	Cost of materials	Taxable balance
Manufacturing	$56,828,807,223	$32,118,242,488	$24,710,564,735
Retail sales	42,039,138,000	27,325,439,700	14,713,698,300
Wholesale sales	55,265,640,000	46,975,794,000	8,289,846,000
Real estate, including rentals	48,000,000,000	20,400,000,000	27,600,000,000
Construction	8,000,000,000	4,000,000,000	4,000,000,000
Service establishments	22,970,000,000	250,000,000	22,720,000,000
Agriculture	9,620,000,000	1,520,000,000	8,100,000,000
Forest products	100,000,000	65,000,000	35,000,000
Mining (except petroleum)	3,500,000,000	1,400,000,000	2,100,000,000
Petroleum	3,000,000,000	1,000,000,000	2,000,000,000
Fisheries	50,000,000	10,000,000	40,000,000
Electric light, power, and gas	3,000,000,000	400,000,000	2,600,000,000
Transportation	6,000,000,000		6,000,000,000
Communications	1,400,000,000		1,400,000,000
Finance	100,000,000,000	80,000,000,000	20,000,000,000
Wages and salaries	60,000,000,000		60,000,000,000
Interest and dividends	10,000,000,000		10,000,000,000
Inheritances	9,000,000,000		9,000,000,000
Miscellaneous	25,000,000,000	5,000,000,000	20,000,000,000
Tanneries	50,000,000	30,000,000	20,000,000
Gifts	4,000,000,000		4,000,000,000
Total	467,823,585,223	220,494,476,188	247,329,109,035

Exemption of first $80 per month ($960 per year) income	$42,329,109,035
Total taxable gross profit or "value added"	205,000,000,000
2 percent tax on this would bring in	4,100,000,000
Credit allowed employers and employees for Federal annuity taxes paid	800,000,000
Total tax yield	3,300,000,000
Estimated cost of administration (1⅔ percent, or $5,000,000 per month)	60,000,000
Net tax yield (per year)	3,240,000,000
Amount necessary to pay $30 per month to 9,000,000 annuitants (per year)	3,240,000,000
On national-defense basis	
An additional 3 percent tax on $205,000,000,000 would bring in	$6,150,000,000
65 percent of total 5 percent tax yield would bring for defense (per year)	6,142,500,000
Balance to go into General Annuity Reserve Fund to protect future payments	7,500,000

Mr. Speaker, in simple terms, my pension proposal consists of a blanketing in of all omitted groups and classes under title I of the Social Security Act for a flat $30 per month coverage, the groups now covered by title II of the act and by other forms of Federal annuities, such as civil-service and railroad annuities, being allowed to draw their annuities through the systems under which they paid and being given a credit, as against the general gross profit tax, for any retirement taxes paid.

MANY FAVOR PENSION PLAN

One hundred and forty Congressmen have signed a nonpartisan steering-committee resolution in support of the pension bill, H. R. 1410. Those Congressmen come from 36 States of the Union, 51 from the Central States, 36 from the Southern States, 29 from the Eastern States, and 24 from the Western States. There are 90 Democrats on the steering committee, 45 Republicans, 3 Progressives, 1 Farmer-Laborite, and 1 American Laborite. Nine solid State delegations have signed the resolution, 2 members of the Ways and Means Committee, 14 members of the Appropriation Committee, and 13 chairmen of the House committees.

This group is the largest ever gathered together on behalf of a general Federal pension, and their signing represents the greatest pension progress in the history of America. Those who have signed the resolution are:

Alabama: George M. Grant, Democrat, Second District; Luther Patrick, Democrat, Ninth District.

Arizona: John R. Murdock, Democrat, at large.

Arkansas: Clyde T. Ellis, Democrat, Third District; Fadjo Cravens, Democrat, Fourth District.

California: Harry R. Sheppard, Democrat, Nineteenth District; Charles Kramer, Democrat, Thirteenth District; Lee E. Geyer, Democrat, Seventeenth District; Jerry Voorhis, Democrat, Twelfth District; John H. Tolan, Democrat, Seventh District; Albert E. Carter, Republican, Sixth District; A. J. Elliott, Democrat, Tenth District; Ed. V. Izac, Democrat, Twentieth District; Carl Hinshaw, Republican, Eleventh District; Thomas F. Ford, Democrat, Fourteenth District; Harry L. Englebright, Republican, Second District.

Connecticut: William J. Fitzgerald, Democrat, Second District; James A. Shanley, Democrat, Third District; Le Roy D. Downs, Democrat, Fourth District; Lucien J. Maciora, Democrat, at large.

Delaware: Philip A. Traynor, Democrat, at large.

Florida: Joe Hendricks, Democrat, Fifth District; Lex Green, Democrat, Second District; Pat Cannon, Democrat, Third District.

Georgia: Albert Sidney Camp, Democrat, Fourth District; B. Frank Whelchel, Democrat, Ninth District.

Idaho: Compton I. White, Democrat, First District; Henry C. Dworshak, Republican, Second District.

Illinois: Anton J. Johnson, Republican, Fourteenth District; Robert B. Chip-

erfield, Republican, Fifteenth District; Noah M. Mason, Republican, Twelfth District; William G. Stratton, Republican, at large; J. V. Heidinger, Republican, Twenty-fourth District; Anton F. Maciejewski, Democrat, Sixth District.

Indiana: William H. Larrabee, Democrat, Eleventh District; Gerald W. Landis, Republican, Seventh District; Noble J. Johnson, Republican, Sixth District; Raymond S. Springer, Republican, Tenth District; George W. Gillie, Republican, Fourth District; Louis Ludlow, Democrat, Twelfth District; Earl Wilson, Republican, Ninth District; William T. Schulte, Democrat, First District.

Iowa: Ben F. Jensen, Republican, Sixth District; Vincent F. Harrington, Democrat, Ninth District.

Kansas: Thomas D. Winter, Republican, Third District; John M. Houston, Democrat, Fifth District; U. S. Guyer, Republican, Second District.

Louisiana: A. Leonard Allen, Democrat, Eighth District; Newt V. Mills, Democrat, Fifth District; James Domengeaux, Democrat, Third District; F. Edward Hébert, Democrat, First District; Vance Plauche, Democrat, Seventh District; Hale Boggs, Democrat, Second District; Jared Y. Sanders, Jr., Democrat, Sixth District; Overton Brooks, Democrat, Fourth District.

Massachusetts: Joseph E. Casey, Democrat, Third District; Thomas A. Flaherty, Democrat, Eleventh District; Pehr G. Holmes, Republican, Fourth District; Lawrence J. Connery, Democrat, Seventh District; Charles R. Clason, Republican, Second District.

Michigan: Rudolph G. Tenerowicz, Democrat, First District; Frank E. Hook, Democrat, Twelfth District; Paul W. Shafer, Republican, Third District; George D. O'Brien, Democrat, Thirteenth District; John Lesinski, Democrat, Sixteenth District.

Minnesota: H. Carl Andersen, Republican, Seventh District; Harold Knutson, Republican, Sixth District; Richard T. Buckler, Farmer-Labor, Ninth District; Melvin J. Maas, Republican, Fourth District; Richard P. Gale, Republican, Third District.

Mississippi: Ross A. Collins, Democrat, Fifth District.

Missouri: Dewey Short, Republican, Seventh District.

Montana: Jeannette Rankin, Republican, First District.

Nebraska: Carl T. Curtis, Republican, Fourth District; Karl Stefan, Republican, Third District.

Nevada: James G. Scrugham, Democrat, at large.

New Jersey: William H. Sutphin, Democrat, Third District; Elmer H. Wene, Democrat, Second District; Charles A. Wolverton, Republican, First District.

New York: Alfred F. Beiter, Democrat, Forty-first District; Vito Marcantonio, American Labor, Twentieth District; Edwin A. Hall, Republican, Thirty-fourth District.

Ohio: J. Harry McGregor, Republican, Seventeenth District; Harold K. Claypool, Democrat, Eleventh District; George H. Bender, Republican, at large; Clarence J. Brown, Republican, Seventh District; Michael J. Kirwan, Democrat, Nineteenth District; Dow W. Harter, Democrat, Fourteenth District; Stephen M. Young, Democrat, at large; A. D. Baumhart, Jr., Republican, Thirteenth District; Martin L. Sweeney, Democrat, Twentieth District.

Oklahoma: Wilburn Cartwright, Democrat, Third District; Jed Johnson, Democrat, Sixth District; Jack Nichols, Democrat, Second District; Will Rogers, Democrat, at large; Ross Rizley, Republican, Eighth District; Victor Wickersham, Democrat, Seventh District.

Oregon: Walter M. Pierce, Democrat, Seventh District; James W. Mott, Republican, First District; Homer D. Angell, Republican, Third District.

Pennsylvania: Ivor D. Fenton, Republican, Thirteenth District; Harry L. Haines, Democrat, Twenty-second District; Charles L. Gerlach, Republican, Ninth District; Samuel A. Weiss, Democrat, Thirty-first District; Charles I. Faddis, Democrat, Twenty-fifth District; Guy L. Moser, Democrat, Fourteenth District; Francis J. Myers, Democrat, Sixth District; James A. Wright Democrat, Thirty-fourth District; J. Buell Snyder, Democrat, Twenty-fourth District; Francis R. Smith, Democrat, Fifth District; Augustine B. Kelley, Democrat, Twenty-eighth District.

Rhode Island: John E. Fogarty, Democrat, Second District; Aime J. Forand, Democrat, First District.

South Carolina: Joseph R. Bryson, Democrat, Fourth District; John L. McMillan, Democrat, Sixth District; James P. Richards, Democrat, Fifth District; L. Mendel Rivers, Democrat, First District.

Tennessee: John Jennings, Jr., Republican, Second District; J. Percy Priest, Democrat, Fifth District; Clifford Davis, Democrat, Ninth District.

Texas: Nat Patton, Democrat, Seventh District.

Utah: J. W. Robinson, Democrat, Second District; Walter K. Granger, Democrat, First District;

Washington: Warren G. Magnuson, Democrat, First District; Charles H. Leavy, Democrat, Fifth District; Knute Hill, Democrat, Fourth District; John M. Coffee, Democrat, Sixth District; Martin F. Smith, Democrat, Third District, Henry M. Jackson, Democrat, Second District.

West Virginia: Robert L. Ramsay, Democrat, First District; John Kee, Democrat, Fifth District; Jennings Randolph, Democrat, Second District.

Wisconsin: Reid F. Murray, Republican, Seventh District; William H. Stevenson, Republican, Third District; Joshua L. Johns, Republican, Eighth District; Frank B. Keefe, Republican, Sixth District; B. J. Gehrmann, Progressive, Tenth District; Henry Sauthoff, Progressive, Second District; Merlin Hull, Progressive, Ninth District; Lewis D. Thill, Republican, Fifth District.

PAY-AS-YOU-GO AS AGAINST BORROWED PENSIONS

In order to show the inequalities which exist in our present pension system I am inserting here a chart of comparative benefits under the present law and as I propose to amend it. The Federal Government is now paying $20,000,000 per month to our needy aged as pensions to match State appropriations. The Federal portion is not financed in any way at all and the bill is all charged to posterity. In other words we are giving paupers' pensions to some grandparents of today but are asking their grandchildren to pay the bill plus interest on it until paid. This is not right, and I feel that we should place the whole system on a pay-as-you-go basis and grant an honorable, earned annuity to all over 60, for which all would pay during their producing years, either directly or indirectly, so as to provide, at the outset, the pensions set forth in the second portion of the following chart:

Chart of comparative benefits (Social Security Act—General Welfare Act)

Place	Now under Social Security Act [1]			Under General Welfare Act amendments		
Region and State	Number of recipients (over 65—now classed as paupers)	Monthly Federal payment (States add same amount)	Average Federal payment (States match this)	Estimated number of recipients (retired citizens over 60)	Estimated monthly payment from Federal Government at $30 to all	Estimated Federal-State total monthly payment to needy aged
Total (United States)	2,054,380	$20,686,092	$10.07	9,000,000	$270,000,000	$37
Region I:

THUMBNAIL ANALYSIS OF MEASURE

Mr. Speaker, for a concise thumbnail analysis of my measure, H. R. 1410, I offer the following schedule showing the salient features of the measure and its complete integration into our present social-security and pension structure. Full credit is given to all employers and employees who now pay some form of Federal tax for annuity purposes. This eliminates the possibility of double taxation and permits the workers in question to draw their annuities under the systems to which they have been contributing.

The measure represents a complete and fully worked-out attempt to solve our pressing pension problems, and even the smallest details have been taken care of. Funeral benefits are even provided for annuitants, a sound tax base has been worked out, and a flat guaranty below which annuities may not fall is established so as to make this measure the very best there is in the pension field. The analysis of the measure follows:

How to synchronize general and special pensions (through the General Welfare Act)
(H. R. 1410)

Descriptive items	General pensions (under General Welfare Act amendments to title I, Social Security Act)	Differential gear (the secret of it all)	Special pensions (under General Welfare Act amendments to title II of Social Security Act and other Federal statutes)
Guaranteed pension	$30 per month to all over 60		$30 per month to all over 60.
Augmented	May earn $15 per month		May earn $15 per month.
Supplemented	By States on basis of need		By States on basis of need.
Supporting tax	2 percent gross profit tax	Credit, under general pension tax, to employers and employees for all Federal retirement taxes paid.	2 percent gross pay-roll tax.
Tax deductions	$80 per month or $960 per year		None.
Additional tax	None		1 to 1½ percent (railroad and civil service).
Future tax	do		½ percent in 1946; ½ percent in 1949 (Social Security Act).
Additional benefits	do		Up to $55; survivorship (Social Security Act).
Ultimate goal	$60 at 60		$85 at 60.

UNITED STATES SUPREME COURT POINTS OUT THE WAY

Mr. Speaker, interesting to many are the words of our United States Supreme Court on the question as to whether a Federal pension is desirable. The language follows:

Congress did not improvise a judgment when it found that the award of old-age benefits would be conducive to the general welfare. * * * The plight of men and women at so low an age as 40 is hard, almost hopeless, when they are driven to seek reemployment. * * * Approximately 3 out of 4 persons 65 or over were probably dependent wholly or partially on others for support. * * * The problem is plainly national in area and dimensions. Moreover, the laws of the several States cannot deal with it effectively. * * * State and local governments are often lacking in the resources that are necessary to finance an adequate program of security for the aged. * * * Apart from the failure of resources, State and local governments are at times reluctant to increase so heavily the burden of taxation to be borne by their residents for fear of placing themselves in a position of economic disadvantage as compared with neighbors or competitors. * * * A system of old-age pensions has special dangers of its own, if put in force in one State and rejected in another. The existence of such a system is a bait to the needy and dependent elsewhere—encouraging them to migrate and seek a haven of repose. Only a power that is national can serve the interests of all. (*Helvering* v. *Davis*, 301 U. S. 619, May 1937, upholding the constitutionality of the Social Security Act.)

PRESIDENT EXPRESSES SIMILAR VIEWS

The President, of course, irrevocably tied up national pensions with defense in his address to Congress on January 6, 1941, on the state of the Union, in which he said:

The need for the moment is that our actions and our policy should be devoted primarily—almost exclusively—to meeting this foreign peril. For all our domestic problems are now a part of the great emergency.

As men do not live by bread alone, they do not fight by armaments alone. Those who man our defenses and those behind them who build our defenses must have the stamina and courage which comes from an unshakeable belief in the manner of life which they are defending. The mighty action which we are calling for cannot be based on a disregard of all things worth fighting for.

The Nation takes great satisfaction and much strength from the things which have been done to make its people conscious of their individual stake in the preservation of democratic life in America. Those things have toughened the fiber of our people, have renewed their faith and strengthened their devotion to the institutions we make ready to protect.

Certainly this is no time to stop thinking about the social and economic problems which are the root cause of the social revolution which is today a supreme factor in the world.

There is nothing mysterious about the foundations of a healthy and strong democracy. The basic things expected by our people of their political and economic systems are simple.

They are:

Equality of opportunity for youth and for others.

Jobs for those who can work.

Security for those who need it.

The ending of special privilege for the few.

The preservation of civil liberties for all.

The enjoyment of the fruits of scientific progress in a wider and constantly rising standard of living.

These are the simple and basic things that must never be lost sight of in the turmoil and unbelievable complexity of our modern world. The inner and abiding strength of our economic and political systems is dependent upon the degree to which they fulfill these expectations.

Many subjects connected with our social economy call for immediate improvement.

As examples:

We should bring more citizens under the coverage of old-age pensions and unemployment insurance.

We should widen the opportunity for adequate medical care.

We should plan a better system by which persons deserving or needing gainful employment may obtain it.

I have called for personal sacrifice. I am assured of the willingness of almost all Americans to respond to that call.

A part of the sacrifice means the payment of more money in taxes. In my Budget message I recommended that a greater portion of this great defense program be paid for from taxation than we are paying today. No persons should try, or be allowed, to get rich out of this program; and the principles of tax payments in accordance with ability to pay should be constantly before our eyes to guide our legislation.

If the Congress maintains these principles, the voters, putting patriotism ahead of pocketbooks, will give you their applause.

In the future days, which we seek to make secure, we look forward to a world founded upon four essential human freedoms.

The first is freedom of speech and expression—everywhere in the world.

The second is freedom of every person to worship God in his own way—everywhere in the world.

The third is freedom from want—which, translated into world terms, means economic understandings, which will secure to every nation a healthy peacetime life for its inhabitants—everywhere in the world.

The fourth is freedom from fear—which, translated into world terms, means a worldwide reduction of armaments to such a point and in such a thorough fashion that no nation will be in a position to commit an act of physical aggression against any neighbor—anywhere in the world.

That is no vision of a distant millennium. It is definite basis for a kind of world attainable in our own time and generation. That kind of world is the very antithesis of the so-called new order of tyranny which the dictators seek to create with the crash of a bomb.

To that new order we oppose the greater conception—the moral order. A good society is able to face schemes of world domination and foreign revolutions alike without fear.

Since the beginning of our American history we have been engaged in change—in a perpetual peaceful revolution—a revolution which goes on steadily, quietly adjusting itself to changing conditions—without the concentration camp or the quicklime in the ditch. The world order which we seek is the cooperation of free countries, working together in a friendly, civilized society.

This Nation has placed its destiny in the hands and heads and hearts of its millions of free men and women; and its faith in freedom under the guidance of God. Freedom means the supremacy of human rights everywhere. Our support goes to those who struggled to gain those rights or keep them. Our strength is in our unity of purpose.

To that high concept there can be no end save victory.

LEGISLATIVE BRANCH SHOULD ACT

Mr. Speaker, the executive and judicial branches of the Government having thus expressed their views, it remains for the legislative branch to act, as it alone can initiate the system necessary to give real economic security to all of our senior citizens in the sunset of life. I, therefore, beseech my colleagues to join the General Welfare Act steering committee and do their bit to help secure enactment of this soundly financed and reasonable old-age pension measure which is now pending before Congress. I commend it to you, my colleagues, for your very earnest consideration. Let us do something very definite toward enacting the measure at this session of Congress.

Our American Government—What Is It? How Does It Function?

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1941

Mr. PATMAN. Mr. Speaker, there is available through the folding room of the House of Representatives at this time 20 pamphlets on the subject, Our American Government—What is it? How does it function? This number of copies is only sufficient for a Member's own office use. The public will be permitted to purchase these documents through the Government Printing Office for 20 cents per copy postpaid.

It is House Document No. 152, Seventy-seventh Congress, first session, and contains 252 questions and answers relative to our National Government. The foreword in this document is as follows:

FOREWORD

September 12, 1940, I placed in the CONGRESSIONAL RECORD 138 questions and answers on Our National Government—What Is It? How Does It Function? These questions and answers were reprinted in pamphlet form and have been widely distributed by Members of Congress and others. This pamphlet has proven to be so popular that many people, including Members of Congress, professors, and teachers, have insisted that it be made a public document, in order that it may receive greater distribution.

Accordingly, the pamphlet has been revised to include 252 questions and answers for the purpose of embracing thoughts and suggestions that have been submitted. As a public document it may be purchased through the Superintendent of Documents, Government Printing Office, Washington, D. C., and each Member of Congress will be allowed a small quantity for his own use.

I desire to express my appreciation to the Legislative Reference Service of the Library of Congress for many helpful and valuable suggestions, which are contained in the revision, and for their work in editing and arranging the revised copy. The three charts, which are included, were prepared and furnished by the United States Information Service; other helpful service was given by this department in the revision.

WRIGHT PATMAN, M. C.

Mr. George W. Stimpson, former president of the National Press Club, Washington, D. C., a member of the Press Gallery in the House of Representatives, who is author of Popular Questions Answered, Nuggets of Knowledge, Things Worth Knowing, and Uncommon Knowledge, has been very helpful to me in this compilation.

The Director of the Legislative Reference Service of the Library of Congress, Dr. Ernest S. Griffith, examined the text of this document before it was printed and sent me the following letter:

THE LIBRARY OF CONGRESS,
Washington, April 17, 1941.

Hon. WRIGHT PATMAN,
United States House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: I have just completed my reading of your admirable document on Our National Government. You have been able to include in it an amazing amount of detail, and at the same time have made it an interesting and accurate study.

I am delighted that the Legislative Reference Service was privileged to have a part in its preparation.

Sincerely yours,

ERNEST S. GRIFFITH,
Director, Legislative Reference Service.

The document contains three charts, which graphically explain the Federal Government, the United States Senate, and the House of Representatives.

At the end of the document, there is a full and complete index.

The questions, which are answered, are as follows:

QUESTIONS

GENERAL

1. What is the difference between a pure or direct democracy, and a representative or indirect democracy?
2. What are the essentials of a republican form of government?
3. How does the National Government of the United States of America combine both democratic and republican principles of government?
4. What is the purpose of the National Government?
5. What is the meaning of "separation of powers"?
6. What is the "supreme law of the land"?
7. Was a new Constitution the expressed object of the Convention of 1787?
8. Where are the originals of the Constitution and the Declaration of Independence?
9. How may the Constitution be amended?
10. What is the Bill of Rights?
11. What is the "lame duck" amendment?
12. Why was a constitutional amendment necessary to change the date of the beginning of the terms of President, Vice President, and Members of Congress?

ELECTIONS

13. Were political parties contemplated under the Constitution?
14. What incident led directly to the formation of political parties?

14a. What were the first two major political parties?

15. What was the first method of Presidential nomination?
16. When did the system of national nominating conventions become established?

17. Is the President actually elected on election day (Tuesday after first Monday in November)?
18. If a Presidential nominee dies before the date of election, how is a successor chosen in his stead?
19. How are Senators and Representatives elected?
20. Why are Congressmen elected in the State of Maine in September instead of November?
21. Have United States Senators always been elected by the people?
22. Does Congress determine the boundaries of congressional districts?
23. Do all congressional districts have approximately the same population?
24. What is the population of the average congressional district?

LEGISLATIVE BRANCH IN GENERAL

25. What is the Congress?
26. Why is the Senate referred to as the "upper House" and the House of Representatives as the "lower House," and is one House actually lower than the other?
27. How long have we had a Congress?
28. What is the term of a Congress?
29. What is a session of Congress?
30. Is there a fixed limit to the length of a session?
31. What is the longest session of Congress on record?
32. Under what circumstances may the President call a special session of Congress?
33. In what circumstances may the President adjourn Congress?
34. When Congress is in session, at what hour do the two Houses meet?
35. How can anyone, within the Capitol, determine whether or not either House or Senate is in session?
36. How may a person, outside the Capitol Building, determine whether or not either House is in session?
37. What is a Congressman?
38. What is a Delegate, and a Commissioner?
39. How many Members are there in each House?
40. Has the House of Representatives always been composed of 435 Members?
41. How many Members has each State in the House and Senate?
42. How will the 1940 census affect the representation from the several States?
43. What oath is taken by Members of Congress?
44. What is the practice as to administration of the oath, when a Member's right to a seat is challenged?
45. What is the length of the term of office of Senators and Representatives?
46. In the event of the death or resignation of a United States Senator, how is the unexpired term filled?
47. In the event of the death or resignation of a Representative, how is the vacancy filled?
48. What are the qualifications of a Member of the Senate?
49. What are the qualifications of a Representative in Congress?
50. What are the salaries of the Representatives and Senators in Congress?
51. What allowances do they have to assist them in serving their constituents?
52. Do Representatives use all their $200 for supplies and stationery?
53. Why is 20 cents a mile allowed to Members for travel allowance instead of the 3 cents or less per mile charged by the railroad companies?
54. Do Members of Congress become wealthy by reason of their service?
55. What are the duties expected of a Member of Congress?
56. Are widows of Congressmen who die while in office compensated by Congress?
57. Where do Members of Congress reside in Washington?
58. Can Members of Congress be impeached?
59. Are eating places provided in the Capitol for Members and their guests?
60. Is smoking permitted in Congress?
61. Is there a bar in the Capitol?
62. Are the Members provided with offices in which to conduct their business?
63. How should one address a Member of Congress if he desires to communicate with him?
64. Who was the first woman elected to Congress?
65. Who was the first woman to serve in the Senate?
66. How many women are Members of Congress at this time?
67. What is the congressional courtesy rule regarding correspondence between one Member and a constituent of another Member?
68. Should one communicating with a Members of Congress send postage for reply?
69. Are visitors and representatives of the press allowed to listen in on the proceedings of Congress?
70. What are the duties of a page in the Senate, and do they differ from the duties of House pages?
71. How are pages dressed?
72. Suppose a Member desires to summon a page, how does he make his wishes known?
73. Do Senators have individual seats?
74. Do the Members of the House have individual seats?
75. How can a Member be reached over the telephone when the House is in session?
76. What is the well of the House?
77. What is the mace, and what is its importance?

CONGRESS—ORGANIZATION AND PROCEDURE

78. How are the activities of Congress controlled?
79. Who presides in the Senate?
80. Who presides in the House?
81. Who presides over the House when Congress first meets and before a Speaker is selected?
82. What are the duties of the Speaker of the House?
83. Who are the officers of the House?
84. What is a party leader?
85. Is the majority leader, in either branch of Congress, elected by the House or Senate?
86. What are the duties of the whips of the House?
87. What are the customary proceedings when the House meets?
88. How are the rules of procedure determined?
89. What is a "gentleman's agreement" in Congress?
90. What is the steering committee of the House of Representatives?
91. How can any citizen get his views considered by Congress?
92. What are the stages of a bill in the House?
93. How does a Senator introduce a bill?
94. How does a Member of the Senate obtain recognition from the President of the Senate, and how long may he speak?
95. How does a Member of the House of Representatives obtain recognition from the Speaker to address the House, and how long may be speak?
96. What is a quorum?
97. What is meant by senatorial courtesy?
98. Why are congressional standing committees necessary?
99. What are the names of the standing committees of the Senate?
100. What are the names of the standing committees of the House?
101. How are the members of the standing committees of the House selected?
102. What is meant by the "seniority rule"?
103. What arrangements are made for a meeting of a standing committee of the House?
104. Under what circumstances do House committees themselves originate bills?
105. Do the committees hold hearings on all bills referred to them?
106. Does the committee to which a bill is referred effectively control its disposition?
107. What is the first reading of a bill?
108. What is meant by the different calendars of the House?
109. What is the Committee of the Whole?
110. How are votes taken in the House?
111. How may a record vote be obtained in the House? In the Senate?
112. What is pairing?
113. What is the difference between a general pair and a live pair?
114. What is the previous question?
115. What are the functions of the House Rules Committee?
116. What business can be transacted by unanimous consent?
117. What is a filibuster?
118. What filibustering tactics are possible in the House?
119. What method does the Senate have for meeting a filibuster?
120. What is a conference committee?
121. What courses are open to the President when a bill is presented to him?
122. What is a veto?
123. What is a pocket veto?
124. Is there any restriction on what a President may veto? May he veto a declaration of war or a constitutional amendment?
125. Are many bills vetoed?
126. Are bills often passed over the President's veto?
127. Has President Roosevelt's veto been overridden in many instances?
128. What ceremony attends the signing of a bill by the President?
129. What becomes of the bill after it is signed?
130. When does a bill, introduced at the beginning of a Congress become dead and no longer open to consideration?
131. Why are most of the bills that become law in the name of a comparatively few Members of Congress?
132. Is legislation much influenced by oratory?
133. Are all of the laws of the United States published in one book? If so, how may it be obtained?
134. What is the difference between a bill and an act?
135. What is the difference between a resolution, a concurrent resolution, and a joint resolution?
136. What is the largest number of bills ever introduced in a single Congress?
137. How does the total of measures introduced in Congress compare with the number enacted?
138. Are all of the measures enacted by a Congress public laws?
139. What was the first act of Congress?
140. What was the first substantive act passed by Congress?
141. How many times has Congress declared war?
142. Why must tax bills originate in the House?
143. What are Executive orders?

EXECUTIVE BRANCH

144. What qualifications are prescribed for the President?
145. Is an Indian eligible to the Presidency?
146. What is the wording of the oath taken by the President?
147. How was the date determined for the beginning of the first President's term of office?
148. What is now the date for commencement of the President's term?
149. What President has served the shortest length of time?
150. When has the regular term of a President been less than 4 years?
151. How many Presidents have served two complete terms?

152. How many Presidents have died in office?
153. How many Presidents have been assassinated?
154. Has a President ever been impeached?
155. Has a President ever resigned from office?
156. Has any President been inaugurated more than twice?
157. What is the oldest Federal building in the Capital?
158. Have all of the Presidents and their families resided in the White House?
159. Has the White House ever been destroyed?
160. How many Presidents have died in the White House?
161. What provision is made in case of the death of a President in office, or his removal, resignation, or disability?
162. Why were the Secretaries of Agriculture, Commerce, and Labor omitted from the succession?
163. Who becomes President if a President-elect dies or is disqualified before the date fixed for the beginning of his term?
164. What is the present salary of the President?
165. What allowances does a President receive?
166. What official privileges, if any, are extended to an ex-President?
167. Has an ex-President ever served in Congress?
168. What ex-Presidents have held Federal office (other than as Members of Congress) after their Presidency?
169. Is Abraham Lincoln the only President to have been born in a log cabin?
170. Which Presidents were bachelors when elected?
171. Has a President ever been married in the White House?
172. Which Presidents were related?
173. How many Presidents were slave owners?
174. Has there ever been a President from a State west of the Mississippi?
175. Which President was drafted for military service?
176. Why is the President's wife called the First Lady?
177. What privileges or allowances have been granted to widows of Presidents?
178. Does the President ever appear personally before Congress to deliver his message?
179. What State has supplied the most Presidents?
180. How have personal characteristics of the Presidents been reflected in nicknames?
181. Does the President ever wear a uniform?
182. What President first had an automobile?
183. Who administers the oath to the Vice President?
184. When was the Vice Presidential oath administered outside the territorial limits of the United States?
185. What other official title does the Vice President bear?
186. Does the United States furnish an official residence for the use of the Vice President?
187. What salary does the Vice President receive?
188. Who was the first Vice President to sit regularly with the Cabinet?
189. What Vice President refused to sit with the Cabinet?
190. How many Vice Presidents have filled out a President's term?
191. Has a Vice President ever resigned?
192. What is the Cabinet?
193. What was the so-called Brain Trust during President Franklin D. Roosevelt's first term?
194. Has a member of the President's Cabinet ever held at the same time another important appointive office?

JUDICIARY

195. Does the Supreme Court owe its existence to Congress?
196. Has the Supreme Court always consisted of nine Justices?
197. What form of oath is taken by a member of the Supreme Court?
198. What oath do members of the bar of the Supreme Court take?
199. What salary do Justices of the Supreme Court receive?
200. Has the Supreme Court always met in Washington?
201. How long has the Supreme Court had a building of its own?
202. What cases may be brought originally in the Supreme Court?

THE CAPITAL, CAPITOL, ETC.

203. What technically constitutes the Capital of the United States?
204. Why is the building in which Congress meets spelled "Capitol" while the Federal District is the "Capital"?
205. Was the Capitol Building designed and built as a unit in its present form?
206. What is the front of the Capitol?
207. What change in exterior construction of the Capitol has been seriously proposed in late years?
208. Why does the United States flag fly over the Capitol in Washington at night?
209. Why was the White House placed a mile and a half from the Capitol?
210. Has the mansion where the President lives, at 1600 Pennsylvania Avenue, an official designation? And when and why was it so named?
211. Who was the architect of the White House?
212. Does the White House conform to any special type of architecture?
213. What is the difference between the White House and the Executive Offices?
214. How can it be determined whether or not the President is at the White House?
215. Has the District of Columbia always been its present size, geographically?
216. Are the boundaries of the District definitely fixed at present?
217. Is the city of Washington synonymous or coextensive with the District of Columbia?
218. When did the United States Government move to the District of Columbia, and from where?
219. Have the residents of the District of Columbia ever had a vote and an elected government?
220. Who now legislates for the District of Columbia?
221. Why are there no tall buildings in Washington?
222. Is Inauguration Day a national holiday?

STATES

223. How can a new State be created?
224. What is an enabling act?
225. Would it be possible for Texas to be divided into five States without the consent of Congress?
226. What guaranty does the Constitution carry with respect to the form of State government?

PATRIOTIC SYMBOLS: MISCELLANEOUS

227. Who has custody and use of the seal of the United States?
228. What is the flag?
229. How is the number of stars in the flag determined?
230. What is the "pledge to the flag," and when did its use become general?
231. What is the approved ceremony for use in schools when pledging allegiance to the flag?
232. What are some of the improper uses of the flag?
233. Why are flags flown at half staff?
234. What was the original name of our national anthem? When did it become our national anthem?
235. What response is necessary when the national anthem is played, on the part of military personnel and civilians?
236. Does the Government do its own printing?
237. Are the proceedings in Congress published and preserved?
238. How does the CONGRESSIONAL RECORD differ from the ordinary newspaper or magazine?
239. How may the CONGRESSIONAL RECORD be obtained?
240. How are Government documents available to the individual citizen?
241. What are some comprehensive and authoritative sources of information about the various governmental departments and agencies?
242. Does the Library of Congress contain a copy of every book printed in the United States?
243. To what extent does Congress foster and appropriate for education?
244. How many public employees are in the civil service in the several branches of the Government?
245. How many public employees in the several branches of the Government are not in the civil service?
246. Can a Member of Congress influence the rating and grades of applicants for civil-service positions?
247. When did the expression originate, that "To the victor belongs the spoils"?
248. How does the present immigration law restrict the formerly unlimited immigration?
249. Are persons of any particular race barred as such from acquiring United States citizenship?
250. What kind of an oath is an alien required to take before he becomes a naturalized citizen of the United States?
251. Is a soldier required to take an oath when he enlists in the Service?
252. What is the American's creed?

Oklahoma City Cooperates in Defense

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1941

Mr. MONRONEY. Mr. Speaker, I wish to call the attention of the House to the vote on the defense bond issue in Oklahoma City yesterday that passed by a ratio of 19 to 1.

In this way, Oklahoma City proves its gratitude for the location in the Middle West of two large defense projects, and will expend $982,000 of its own money to cooperate in this way.

The bond issue was occasioned through donation to the Federal Government of 960 acres of land for the new middle-western air depot at a cost of $255,000. In addition, a total of $527,000 was voted for a new municipal airport.

The new airport was required to handle commercial traffic because the existing municipal airport had been turned over to the Army as a military airport and used by a large bombardment squadron there. The old municipal airport represented an investment of city funds far in

excess of $1,500,000 and was leased without cost to the Federal Government for its use through this emergency.

In addition, the bonds voted provided for an extra $200,000 to make available when needed, additional land for the bombardment squadron located on the old airport. The money will be used to buy an additional 1,600 acres for expansion of these facilities.

I merely want to call the attention of the House to the fact that Oklahoma City and other cities of the Middle West are anxious and willing to do their part in assisting the defense program. They are willing to put up hard cash for land and other facilities needed by the Army.

We appreciate the fact that the city will benefit in many ways from these military expansions. We know that it is good business to spend some of our money to give land and cooperate with the Army in locations they place in our section.

But in this day, when so many communities are asking for vast Federal subsidies because defense plants or cantonments have been located in or near them, it should be a welcome relief to have the midwestern communities willing to carry a part of the load.

Because of this cooperation and this willingness to carry some of the defense burden, I sincerely hope that the Army officials and those in charge of our defense production will continue to decentralize as much as possible our defense plants. I hope they will locate more and more plants in the Middle West where they are not only safe from interruption by attack, but where the towns and cities are anxious to assume a part of the burden of the cost.

Regulation of Administrative Agencies

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1941

RESOLUTION BY THE KENTUCKY STATE BAR ASSOCIATION

Mr. WIGGLESWORTH. Mr. Speaker, having in mind the Logan-Walter bill, passed by Congress at the last session with a view to meeting the imperative demand for fair play by administrative agencies, and the veto of that measure by the President, I include, under leave to extend my remarks, the text of a resolution unanimously adopted by the Kentucky State Bar Association at its recent annual meeting, after adoption previously by the executive committee of the Louisville Bar Association.

The quotation under paragraph G is from Daniel Webster.

I am confident that the resolution reflects a very large preponderance of legal sentiment throughout the Nation.

The resolution follows:

Resolved by the executive committee of the Louisville Bar Association, That it approves in principle and recommends to the Congress and the Legislature of Kentucky the adoption of legislation designed to produce these results:

(a) As nearly as may be, to give notice to and permit participation by all interested parties in the making of administrative regulations governing the hearing and determination by administrative bodies of controversies;

(b) The segregation of investigating and prosecuting functions from judicial functions in administrative procedures;

(c) The independent selection of administrative hearing officers other than the heads of agencies, designed to secure their independence of judgment;

(d) The application by administrative agencies in hearings of the basic principles of evidence, and a recognition of the right of cross-examination in all such hearings;

(e) Adequate requirement of the making of findings of fact and conclusions of law and the statement of reasons for administrative decisions;

(f) Specific notice of hearings in all cases and an opportunity for the persons directly interested to be heard;

(g) In short, in administrative proceedings, a return to the fundamental conceptions of due process "which hears before it condemns, proceeds upon inquiry, and renders judgment only after trial"; and, finally,

(h) A definite broadening of the scope of judicial review of administrative decisions, to the end that the very foundations upon which our democratic structure has been erected may not be destroyed by the substitution of the rule of men for the rule of law. The performance of judicial functions and the holding of judicial office, in some way not to be defined, almost invariably produce an objective, dispassionate, impersonal approach, for which there is no substitute.

Resolved further, That a copy of this resolution be furnished to the commissioners of the Kentucky State Bar Association, to the Senators and Representatives from Kentucky, and to the chairman of the Judiciary Committee in the Senate and House of Representatives.

War for the United States Means Social Revolution, Economic Chaos, Dictatorship, and Communism

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1941

ARTICLE FROM THE NEW YORK TIMES

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times for April 27, 1941:

[From the New York Times of April 27, 1941]

FOSDICK WARNS UNITED STATES NOT TO ENTER WAR—SEES ONLY SOCIAL REVOLUTION, ECONOMIC CHAOS, DICTATORSHIP, AND COMMUNISM AS RESULT—SCORES DEMOCRACY PLEA—SAYS OF MAKING WORLD SAFE, "I CANNOT MAKE THAT DEVIL LOOK LIKE AN ANGEL"

The Reverend Dr. Harry Emerson Fosdick endorsed yesterday the stand of "millions of plain Americans who still are saying, 'Stay out of belligerent participation in this war'." He declared in his morning sermon at Riverside Church, Riverside Drive and One Hundred and Twenty-second Street, that if the United States entered the war, he could see in the end only "social revolution, economic chaos, dictatorship, and communism." Dr. Fosdick had this to say:

"The choices we now must make in national policy are difficult and hazardous. No one of us wants to do wrong. All of us are tempted to mistake some devil of a policy for a saving angel. We must be tolerant of deep differences of judgment and must respect the consciences of those with whom we cannot agree.

"But for myself I am convinced that the millions of plain Americans who still are saying, 'Stay out of belligerent participation in this war,' are right. Whatever else may be uncertain, this seems to me clear, that for us to plunge as belligerents into this war now would do three things:

"First, greatly expand the area of the war; second, incalculably extend the duration of the war; third, vastly increase the economic and moral havoc of the war. And out of a war so expanded in area, extended in time, and accentuated in destruction, I can see no ultimate victor except social revolution, economic chaos, dictatorship, and communism.

"For myself, I cannot idealize another war as a means to make the world safe for democracy. I cannot make that devil look like an angel."

Gen. William E. Mitchell

EXTENSION OF REMARKS

OF

HON. JAMES J. HEFFERNAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1941

LETTER FROM T. J. FARRELL, BROOKLYN, N. Y.

Mr. HEFFERNAN. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD and to include a letter from Mr. T. J. Farrell, of 70 Prospect Park West, Brooklyn, N. Y., relating to House Resolution No. 17, introduced by Representative MCCORMACK and covering the career of Gen. William E. Mitchell.

The Honorable JAMES J. HEFFERNAN,
Congress of the United States,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: I know that all air-minded Americans and veterans who served under him will deeply appreciate anything done to clear the record of Gen. William E. Mitchell.

Born in 1879, he attended Racine College and received his bachelor of arts degree from Columbia University. He later also graduated from the United States Army School of the Line and the Army Staff College.

He was the youngest officer of the United States Army to participate in the Spanish-American War and subsequently served during the Philippine Insurrection and the Mexican Punitive Expedition. From 1913 to 1916 he was a member of the Army General Staff and from March to September 1917 was aviation officer of the American Expeditionary Forces, being the first American officer under fire in the last World War. He

was the first flying officer of the United States Army to cross the lines (April 22, 1917).

He was Chief of the Air Service, Zone of Advance, until February 1918; of the First Army Corps to June 1918, and subsequently Commander of the Air Service of the A. E. F., participating in all the major operations and battles of our forces.

He returned to the United States in 1918 and served as director of military aeronautics and chief of training and operations until 1921, when he was appointed Assistant to the Chief of the United States Army Air Service, which post he held until his resignation from the service in 1926. He died in New York City, February 19, 1936.

General Mitchell was awarded the Distinguished Service Cross; the Distinguished Service Medal (United States); Commander of the Legion of Honor; Croix de Guerre with five palms (France); Commander of the Order of St. Mihiel and St. George (British); Commander of St. Maurice and St. Lazarus, Grand Officer of the Crown, Cross of Merit in War (Italy).

Lest we forget, it was General Mitchell who pioneered and advocated the tactical use of the airplane in warfare. The proof of his theories is the record of the tremendous power of the air force in the present war.

I wish to extend to you personally my own gratitude for your interest in House Resolution No. 17 as introduced by Representative McCORMACK, covering General Mitchell's record. I can also assure you that all World War aviators and Aviators' Post, No. 743, of the American Legion, as well as all Americans who love justice and fair play, join me in this wish.

Very truly yours,

THOMAS J. FARRELL,
Formerly Lieutenant Air Corps Reserve Military Aviator, United States Army.

President of United Office and Professional Workers of America Replies to Representative Dies

EXTENSION OF REMARKS
OF
HON. VITO MARCANTONIO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1941

LETTER AND TELEGRAM FROM LEWIS MERRILL, PRESIDENT OF THE ORGANIZATION

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and telegram:

UNITED OFFICE AND PROFESSIONAL WORKERS OF AMERICA,
New York, N. Y., April 4, 1941.

The Honorable VITO MARCANTONIO,
The House of Representatives,
Washington, D. C.

DEAR MR. MARCANTONIO: I am enclosing a copy of a telegram I sent to Representative DIES last week. He has not inserted this in the CONGRESSIONAL RECORD, and I wonder whether it is possible for you to have it inserted for me? I would like to have my denial appear there.

Sincerely yours,

LEWIS MERRILL,
President.

COPY OF TELEGRAM SENT TO REPRESENTATIVE MARTIN DIES ON MARCH 28, 1941

According to reports contained in the Baltimore Sun of March 27, 1941, you have again, in the face of my consistent denials, listed me as a Communist. I am not now nor have I been a member of the Communist Party. I do not know what sort of evidence has been adduced before your committee, but I do know that I have had no opportunity to appear before your committee nor have I ever had an opportunity to subject evidence before your committee to a critical examination. My communications to you have uniformly been unanswered.

My organization and myself are much too busy overcoming employer resistance to collective bargaining to be concerned with these matters. Communism is no issue in our union, and we do not intend to permit its introduction by the Dies committee. Our union is opposed to control by any minority group. Any attempt at such control would be met with prompt exercise of union discipline. The United Office and Professional Workers of America provides adequate forums for debate on policy, regular elections, and conventions, supervision over the acts of all of its officers, national and local. We cannot but conclude, therefore, that you are not concerned with the truth of your allegations but seize upon the flimsiest excuses to attack us and through us the C. I. O. of which we are a part.

I think in all fairness that this communication should be placed by you in the CONGRESSIONAL RECORD.

LEWIS MERRILL,
President, United Office and Professional Workers of America.

Federation of Architects, Engineers, Chemists, and Technicians

EXTENSION OF REMARKS
OF
HON. VITO MARCANTONIO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1941

LETTER FROM LEWIS ALAN BERNE, PRESIDENT OF FAECT

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

FEDERATION OF ARCHITECTS, ENGINEERS, CHEMISTS, AND TECHNICIANS,
New York City, April 23, 1941.

Hon. VITO MARCANTONIO,
House Office Building,
Washington, D. C.

HONORABLE SIR: I am impelled to communicate with you at this time because of the unfounded and unprincipled charges levelled against our international union by Congressman DIES in his speech before Congress recently. The statements and allegations made in that speech are so palpably unfounded and unsupported, that in all justice, the true facts should be known.

For several years now, Congressman DIES has periodically attacked our organization from the public platform, on the floor of Congress, and over radio networks, on the grounds that it was Communist dominated and controlled. During this period, I have repeatedly asked for the opportunity of appearing before the Congressional Committee on Un-American Activities for the purpose of exposing the character of these attacks and the nature of the evidence upon which they are allegedly based. To date I have never received any acknowledgment of my requests, nor have I been accorded the opportunity of submitting a statement.

At the outset, may I state that the FAECT is a bona fide economic organization of technical employees affiliated with the Congress of Industrial Organizations. Its program, policies, and objectives, are in accordance with the soundest principles of Americanism and democratic procedure. In the entire history of our union, not one single instance can be shown in which any of our activities and objectives were in opposition to the American form of government, subversive, or a danger to national defense.

On the contrary, our membership have for years given unselfishly of their time, energy, and genius to the advancement of our democracy, the improvement of professional ethics and standards. Those of our people employed in the Government service, have similarly a record of loyalty and unselfishness. Many of them have given up to 25 years of their lives to the Government service.

We have noted that whenever our organization was successfully conducting a campaign for improvements of the conditions of technicians, Congressman DIES never failed to come to the assistance of antilabor employers by releasing his unfounded charges. At present we are engaged in a strenuous campaign to oppose an attempt to freeze men to their jobs and their wages in the shipbuilding industry. We are also active in negotiating contracts in the aviation and automobile fields in New York, California, and Michigan. It is thus no coincidence that the attack comes at this time.

In his latest statement, Congressman DIES lists a series of names of persons allegedly officers and members of our union and allegedly either Communists or Communist-dominated. An indication of the reliability of his statements can be seen in the fact that 6 of the 18 mentioned have never been members of our organization. Several have been slandered for having contributed articles to Technical America, a monthly publication which we have not published for the past 2 years. These persons were never members of the FAECT. Mr. DIES has indicted our technical school, where we are teaching ship design and drafting courses in an effort to qualify men for this important industry. We undertook this only after the Navy Department itself refused our request to institute such courses in order to help improve the defenses of our Nation. He indicts one of our chapters for picketing a Federal agency in 1936. You, yourself, at that time, supported this struggle on the part of our chapter in Washington for the redress of grievances when no procedure was established at that time for such disputes. It is pertinent to state that we were victorious in that campaign, and many of our demands have now become common practice in the Government service.

Our program, history, and activities are a matter of public record. We can refer you to some of the country's outstanding technical publications, such as Engineer-News Record, Pencil Points, Architectural Record, Iron Age, Architectural Forum, and others, in which the work of our FAECT has been reported from time to time. Various municipal, State, and Federal agencies such as the President's Committee on Civil Service Improvement, Navy Department, United States Housing Authority, Civil Service Commission, New York City Board of Estimate, etc., have all been consistently informed about our activities and program. In several instances we have made acknowledged and outstanding contributions to the improvement of the work of these agencies.

Until May 1937 we were an unaffiliated national union, and upon that date were granted a charter as an international union by the

Congress of Industrial Organizations. We were formed in August 1933. The objects of the FAECT are clearly and unequivocally set forth in our constitution, and I quote a pertinent part therefrom:

"Article I, section 2.—Object: The object of the FAECT shall be to unite into one organization all employees doing work of a technical nature who are eligible for membership, in order—

(a) To maintain, protect, and advance the economic welfare of all technical employees.

(b) To extend the benefits of collective bargaining and to secure for technical employees means to establish peaceful relations with their employers.

(c) To maintain determined adherence to obligations and responsibilities under collective bargaining and wage agreements.

(d) To secure for members protection and full benefits of their patents and inventions.

(e) To secure legislation safeguarding the economic security and social welfare of the workers of America, to protect and extend democratic institutions and civil rights and liberties and thus to perpetuate the cherished traditions of this democracy.

(f) The FAECT in order to advance its legislative and economic activities, may cooperate with progressive groups in independent political action of labor.

Membership in the FAECT is open to all bona fide technical employees, and our constitution provides that "no person otherwise shall be barred from membership because of race, color, creed, nationality, sex, religious or political beliefs" (art. II, sec. 2). The union is a democratically administered organization in which all policy-making and administrative posts are filled through regular electoral process. The chapters are self-governing, locally administered bodies affiliated with the international union. National officers are elected at annual conventions. Delegates to annual conventions are elected by membership meetings of the individual chapters. Voting at national conventions is constitutionally restricted to regularly elected delegates. The convention elects a general executive board of 15 members, which is the highest body of the organization in the period between conventions. Thus you can see that our form of organization and activities are based upon the best traditions of American democracy.

May I submit that Congressman DIES has not only failed to introduce any bona fide supporting evidence to substantiate his charges against our organization, but has also never cited one case in which any activity or policy, or act, of our organization as a whole, can be honestly considered as subversive, un-American, and inimical to the principles laid down in the Constitution of the United States. In conclusion, may I say that the FAECT is an American organization dedicated to advancing and protecting our democratic institutions, to defending our Nation against attack from within and without, and to the creation of such conditions as will make it possible for us to continue our contributions to society and the people. We believe that our efforts to improve professional standards of technicians and our alliance with the labor movement, is our most effective contribution to this end.

The FAECT is opposed to, and will not sanction, control of our organization by any group of a political nature or otherwise, nor will we accept so-called domination by the Communist or any other party. At the same time we shall not be intimidated nor diverted from our noble purposes by unscrupulous attacks, demagogic statements, nor by so-called champions of Americanism, who, at the taxpayers' expense, commit those violations of Americanism which they were originally appointed to ferret out. I feel that this statement of facts should be known in all fairness to the patriotic and loyal group of men and women in our organization who have been so unjustly and maliciously slandered.

Respectfully yours,

LEWIS ALAN BERNE,
International President.

Harry J. Roy

EXTENSION OF REMARKS

OF

HON. A. LEONARD ALLEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1941

Mr. ALLEN of Louisiana. Mr. Speaker, Harry J. Roy, son of Mr. and Mrs. Maurice Roy, of Mansura, Avoyelles Parish, La., lost his life in the crash of a torpedo bomber on Wednesday, April 16, 1941, at San Diego, Calif. This young man was 24 years of age. He enlisted in the Navy 3 years ago. At the time of his death he was attached to the aircraft carrier *Enterprise*. The parents of this young man are splendid citizens. His father is a hard-working farmer.

Harry J. Roy was well and favorably known in Avoyelles Parish and was a fine, upstanding, and loyal son. His high patriotism was evidenced by his service to his country in which he made the supreme sacrifice.

Mr. Speaker, I extend to the father and mother and the two brothers and the sister of the deceased my sincere sympathy. While his family and friends will miss this fine son, they have the consolation that he gave his life in helping his Nation in this great emergency. He set an example of devotion to duty. Yes, we will miss his presence, but the heroism, loyalty, and devotion to duty which he exemplified will linger long in the minds of his family, friends, and all who knew him. All honor to his memory.

St. Lawrence Seaway, the Florida Ship Canal, and Certain Other Projects

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1941

EDITORIAL FROM MIAMI (FLA.) HERALD

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks, I include at this point copy of an editorial from the Miami Herald of April 14, 1941, in reference to the St. Lawrence seaway, the Florida ship canal and certain other projects, entitled "Political Juggling."

[From the Miami (Fla.) Herald of April 14, 1941]

POLITICAL JUGGLING

That Senatorial move to merge the St. Lawrence seaway with the Florida ship canal and certain western development projects in a $1,000,000,000 omnibus bill is an example of political juggling which should be emphatically condemned.

It is an admission by the proponents that some of the projects lack merit on their own account and could not be passed except as they are linked with others.

Each gigantic project of this type should be considered and acted upon separately. There can be no sound argument against that, and none would be presented. The suggestion must come from politicians who are sinking very low in their regard for public rights and the Treasury.

In view of the present emergency and huge debts, not a single measure should be passed unless it is absolutely essential. The Florida ship canal is a raid on the Treasury to benefit certain land owners in northern Florida. There is no other excuse or reason, and none with logic has been offered. It would threaten the welfare and production of southern Florida and it would serve no purpose. Yet, our Senators, supposed to represent the interests of the people, would dump this thing into the pot with other projects in the hope that the whole mess would be approved.

Democracy cannot be served nor can it survive if our Congressmen continue to operate on such a rotten basis.

Let Us Face the Truth

EXTENSION OF REMARKS

OF

HON. JOHN J. DELANEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1941

EDITORIAL FROM THE NEW YORK TIMES

Mr. DELANEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times for today:

[From the New York Times of April 30, 1941]

LET US FACE THE TRUTH

I

In New York Harbor, on an island close to the steamship lanes, stands the most famous statue in the world. It is not the most beautiful statue, but to many millions of passengers coming up the bay it has seemed to be. It stands for one of the dearest dreams in human history—liberty.

The millions who pursued that dream began to come before there was a statue to greet them. They came first when the shores were lined with solemn woods. They came in sailing ships when the voyage required 2 months or more. They came in crowded steamship steerage under hardships not much less. They came to Plymouth Rock and to Ellis Island.

They came for one reason, escape: escape from religious or political persecution, from caste systems, from overcrowding and from lack of opportunity. But the hope of leaving all of the Old World behind could not be realized. Their hearts and heads forbade it. Their roots in its culture ran too deep. And the sea itself grew ever narrower. Express

steamers began to cross it long ago in less than a week. Airplanes can span it now in less than a day. The wireless leaps it in less than a second. Emotion, ideas, even physical force can now move around the world more effectively than they could cross the tiniest country a century and a half ago.

There is no isolation. There are only lines of defense. Distance is vanishing. Strategy is everything. And strategy in this year of grace has become the art and science of survival; survival in the personal sense, survival of ideas, survival of culture and tradition, survival of a way of life.

II

Those who tell us now that the sea is still our certain bulwark, and that the tremendous forces sweeping the Old World threaten no danger to the New, give the lie to their own words in the precautions they would have us take.

To a man they favor an enormous strengthening of our defenses. Why? Against what danger would they have us arm if none exists? To what purpose would they have us spend these almost incredible billions upon billions for ships and planes, for tanks and guns, if there is no immediate threat to the security of the United States? Why are we training the youth of the country to bear arms? Under pressure of what fear are we racing against time to double and quadruple our industrial production?

No man in his senses will say that we are arming against Canada or our Latin-American neighbors to the south, against Britain or the captive states of Europe. We are arming solely for one reason. We are arming against Hitler's Germany—a great predatory power in alliance with Japan.

It has been said, times without number, that if Hitler cannot cross the English Channel he cannot cross 3,000 miles of sea. But there is only one reason why he has not crossed the English Channel. That is because 45,000,000 determined Britons in a heroic resistance have converted their island into an armed base from which proceeds a steady stream of sea and air power. As Secretary Hull has said, "It is not the water that bars the way. It is the resolute determination of British arms. Were the control of the seas by Britain lost, the Atlantic would no longer be an obstacle—rather, it would become a broad highway for a conqueror moving westward."

That conqueror does not need to attempt at once an invasion of continental United States in order to place this country in deadly danger. We shall be in deadly danger the moment British sea power fails; the moment the eastern gates of the Atlantic are open to the aggressor; the moment we are compelled to divide our one-ocean Navy between two oceans simultaneously.

The combined Axis fleets outmatch our own; they are superior in numbers to our fleet in every category of vessel, from warships and aircraft carriers to destroyers and submarines. The combined Axis air strength will be much greater than our own if Hitler strikes in time—and when has he failed to strike in time? The master of Europe will have at his command shipways that can outbuild us, the resources of 20 conquered nations to furnish his materials, the oil of the middle east to stoke his engines, the slave labor of a Continent—bound by no union rules, and not working on a 40-hour week—to turn out his production.

Grant Hitler the gigantic prestige of a victory over Britain, and who can doubt that the first result, on our side of the ocean, would be the prompt appearance of imitation Nazi regimes in a half dozen Latin-American nations, forced to be on the winning side, begging favors, clamoring for admission to the Axis? What shall we do then? Make war upon these neighbors; send armies to fight in the jungles of Central or South America; run the risk of outraging native sentiment and turning the whole continent against us? Or shall we sit tight while the area of Nazi influence draws ever closer to the Panama Canal and a spreading checkerboard of Nazi air fields provides ports of call for German planes that may choose to bomb our cities?

III

But even if Hitler gave us time, what kind of time would we have at our disposal?

There are moral and spiritual dangers for this country as well as physical dangers in a Hitler victory. There are dangers to the mind and heart as well as to the body and the land.

Victorious in Europe, dominating Africa and Asia through his Axis partners, Hitler could not afford to permit the United States to live an untroubled and successful life, even if he wished to. We are the arch enemy of all he stands for; the very citadel of that "plutodemocracy" which he hates and scorns. As long as liberty and freedom prevailed in the United States there would be a constant risk for Hitler that our ideas and our example might infect the conquered countries which he was bending to his will. In his own interest he would be forced to harry us at every turn.

Who can doubt that our lives would be poisoned every day by challenges and insults from Nazi politicians; that Nazi agents would stir up anti-American feeling in every country they controlled; that Nazi spies would overrun us here; that Hitler would produce a continual series of lightning diplomatic strokes—alliances and nonaggression pacts to break our will; in short, that a continuous war of nerves, if nothing worse, would be waged against us?

And who can doubt that, in response, we should have to turn our own nation into an armed camp, with all our traditional values of culture, education, social reform, democracy and liberty subordinated to the single, all-embracing aim of self-preservation? In this case we should indeed experience regimentation. Every item of foreign trade, every transaction in domestic commerce, every present prerogative of labor, every civil liberty we cherish, would necessarily be regulated in the interest of defense.

But the most tragic aspect of this attempt to survive, alone on our continent, is that it would amount at best merely to sustaining life in a charnelhouse. With Britain gone, with the bright lamp of English liberty extinguished, with all hope of resurrection denied to the little democracies that have contributed so generously to our civilization and our culture, with the hobnailed boots of an ignorant and obscene barbarism echoing in every capital from London to Athens, we should live in a new world, changed beyond all recognition.

In this downfall of democracy outside the United States there would come, for many of our own people, a loss of faith in our own democratic system. Our confidence would be undermined, our vision dimmed, our ranks divided. In a dark, uncertain world we should stand alone, deriving from no other country the sustaining strength of a common faith in our democratic institutions.

What would it profit us to achieve, at last, this perfect isolation?

IV

The Statue of Liberty in New York Harbor has looked down across the bay at many men who have crossed the ocean to find freedom. It stands now as a silent witness to the fact that we are already locked in mortal combat with the German system.

American courage and American idealism, together with the sound common sense of the American people, summon us to the defense both of our physical security and of those moral and spiritual values which alone make life worth living. This defense means many things. It means, in the first instance, a clear recognition that the most dangerous of all courses we could follow in this hour of decision is a policy of drift; of do-nothing while there is still time to act effectively; of letting hesitancy ripen into disagreement, and disagreement curdle into factions which will split the country.

It means strong leadership in Washington; a willingness to forego the methods of indirection and surprise and veiled hints and innuendo, and to state the plain facts of the situation boldly. It means leadership which is as generous as it is strong; leadership which is willing to forget old quarrels, ready to bring into positions of high power and into the innermost confidence of the Government the accredited spokesmen of the opposition party; leadership which is at last prepared to delegate all necessary authority to the engineers of American production.

It means a genuinely firm insistence that strikes or lockouts in defense industries will no longer be tolerated by public opinion. It means more immediate aid to the brave people who are now fighting in the front line of our defense. It means encouragement to American aviators who are ready to fly our own planes in the battle over Britain. It means a determination to see that our vital supplies reach England, under the protection of our own guns. Above all else, it means a decision to avoid the same mistake that the democracies have made over and over again—the mistake of too little and too late.

There is no escape in isolation. We have only two alternatives. We can surrender or we can do our part in holding the line. We can defend, with all the means in our power, the rights that are morally and legally ours. If we decide for the American tradition, for the preservation of all that we hold dear in the years that lie ahead, we shall take our place in the line and play our part in the defense of freedom.

Deportation of Harry Bridges

EXTENSION OF REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1941

EDITORIAL FROM THE SANTA MONICA EVENING OUTLOOK

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Santa Monica Evening Outlook of April 4, 1941:

[From the Santa Monica Evening Outlook of April 4, 1941]

THE TRICKING OF DEAN LANDIS

The revelation by Director Hoover of the F. B. I. that the whole Landis hearing of the charges against Harry Bridges was farcical because Mr. Landis was not given the power to take testimony under oath casts the most serious reflection on Secretary of Labor Perkins and her management of the Labor Department.

It is not new to learn that Madam Perkins is biased and partial or incompetent in the administration of the laws, but it does come as a surprise that a man of the high standing of Dean Landis should have been used deliberately as a decoy to protect Mr. Bridges against prosecution and deportation.

The manner in which Mr. Landis and the public were tricked, according to Director Hoover, was that Landis was appointed as a contract labor examiner and not as an immigration inspector. In the Immigration Service inspectors have power to administer oaths and to compel witnesses to give testimony under oath. Contract labor examiners have no such power. Mr. Landis did not know that he had been tricked and oaths were administered in the hearings he held, but as he had not the necessary authority to administer oaths, they were invalid. Witnesses could testify falsely and not be guilty of perjury.

It is obvious that somebody in the Labor Department was interested in making the Landis proceeding a farce. If it was not Madam Perkins, it was subordinates she trusted. In either event, she was responsible for making Mr. Landis ridiculous, for a large useless outlay of public money, and for protecting Harry Bridges against deportation.

A more convincing demonstration of Madam Perkins' incompetency or duplicity could hardly be asked. Her sympathy for the Communists is no longer doubtful. If she is not a Communist herself, she has lieutenants who at least are "fellow travelers"; otherwise the trick played on Dean Landis and the public would not have been possible.

And President Roosevelt continues this woman in her place of high responsibility.

The Lend-Lease Bill

EXTENSION OF REMARKS

OF

HON. EDWARD A. KELLY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

Mr. KELLY of Illinois. Mr. Speaker, under leave to extend my remarks regarding the passage of the lease-lend bill, being confined in the Naval Hospital during the discussion of this bill and receiving an abundance of mail for and against it, I deem it my duty to express my attitude in supporting my vote in its favor.

Mr. Speaker, I wish to quote an article that appeared in the Evening Star in Washington on January 20, 1941, by Joseph E. Davies, in which he said:

This year is probably one of the most fateful which our civilization has experienced. It is heartening, therefore, to find that in our country there is a national unity and singleness of purpose in which bespeaks the strength and morale power of our people and the vitality of America's love for freedom and liberty.

Despite the fact that the world is on fire, we have conducted and just finished a national election under the established and normal democratic processes of representative democracy. The culmination of this process is this inaugural, wherein a very great man is being inducted into office as President of our country.

That election was strongly, if not bitterly, contested. Yet upon one issue there was substantially no difference between the position of either candidates or the platforms of the two great political parties. Upon that issue, namely, the question of what constitutes the duty of America in this great war which is engulfing the world, there was practically intellectual unanimity and spiritual unity among the 130,000,000 of our citizens. It is deeply significant that this inauguration symbolizes that unity.

There can be no question but what the entire country is united on both the desirability and the necessity for complete national defense in a war-mad world. Moreover, there can be no doubt but what American men and women of all parties have been a unit in the feeling of a deep moral revulsion and horror against the wrong that has been done to the weak by the strong, as well as deep condemnation for the cruel injustice and tyranny which has been thrust upon weaker nations by aggressors who seek to impose their will upon the world.

In the great abundance of mail received in my office, by people sincere in their belief that the passage of H. R. 1776 would be a declaration of war, I do not question the sincerity of most of these people, but I do question their wisdom.

With the march of world events and with wars about us it has become more clear each day that this is the supreme and vital concern of our national life.

Today we have witnessed a vast campaign of misrepresentation of what this bill when passed by both bodies will do. Some maintain it will place us right into war. Some of this misrepresentation is based upon ignorance of not knowing the facts. Some is malicious and deliberate.

Many say that this will cloak the President with so much power that he practically will become a dictator. Some say it will deprive the Congress of its control over the public purse. That is not so.

The President as Commander in Chief of our armed forces has always had the power vested in him by the Constitution itself to preserve and defend the rights of its people, with Congress always maintaining the right to declare war.

It is charged by those who are vicious in their remarks, that the President will be a dictator and that Congress has completely abdicated its power and responsibility. That also is not true. On the contrary, Congress would be freely and intelligently manifesting its control over the purse.

Under the Constitution of the United States, only Congress can declare war. Neither this bill or any other bill can withdraw from Congress this sovereign power.

By direction of the Constitution of the United States the conduct of our foreign affairs is entrusted to the President, and we cannot deprive him of that responsibility.

What this bill actually does is imply a certain amount of confidence in the judgment and patriotism of the President, and at the recent election for this high office did not the people themselves declare that faith in the President?

Many people are naturally confused by statements they read, by radio addresses, and by agents of paid propagandists.

Back of the widespread American desire to help England today is a belief that such aid is more likely to keep war from the United States shores in the long run than it is to draw America in.

Probably the whole phenomenon of the American people's desire to help England win cannot be completely understood without taking this fact into consideration. Ever since the first shots were fired in Europe 19 months ago this question has underlain a great part of the debate in this country on lifting the arms embargo, exchanging destroyers for naval bases, and increasing the scale of United States help through the lend-lease plan.

In the survey of voters in all parts of the United States they were offered two opposite statements as to the probable results of American aid and were asked to choose between them. The statements were designed to reflect the arguments of the pro-aid and anti-aid groups, respectively.

Based upon the Gallup poll of February 2, 1941, 70 percent of those interviewed were of the opinion—

That sending war materials to England is helping to keep us out of war, stating in their belief that if Britain can keep Germany in check there is less chance that we will have to fight the Germans later on.

Twenty-three percent believed that sending war materials to England is bringing us closer to getting into war.

Seven percent were noncommittal. Upon the decision passed by Congress of this important question, only the future and constant changing of history can and will determine which course is the right one.

I know that the President is determined in keeping us out of war. I know that every Member of Congress is determined to keep us out of war.

I recall back in September of 1939, when Congress reconvened in a special session, to lift the arms embargo provision of the Neutrality Act, for the purpose of keeping us out of war. When in its regular session defeated this very purpose, by a group of men sincere in their belief that by not lifting the arms embargo it would keep us out of a war that was then imminent. But in the special session those who originally opposed this change, finally saw the light and changed their attitude and voted for the lifting of the arms embargo provision of the Neutrality Act. I recall very vividly the terrific confusion of the minds of people on that question—yes, the same isolationists spurred on by propaganda, many sincere and many influenced by agents of "fifth-columnist" activity, then expressed their opinions that to lift the arms embargo would be a step to war.

I remember very well a radio appeal to the mothers of America, by the Reverend Father Coughlin, demanding that they march on to the homes of their Representatives and demand that they and their families march with them in a peacetime demonstration in opposition to lifting the arms embargo, stating that by doing so would put us into the war all the way by Thursday next, which was the day Congress was to convene. He further stated that he, as a man of God, knew we were then three-quarters into the war, and that if the mothers of America did not take drastic action that we would be all the way into it by the end of the week; that was in the month of September 1939, and much to the false statement then of Father Coughlin, this

is 1941 and this Nation has managed to keep out of this terrible war, and with the help of God we will, unless of course we are attacked—then it is the duty of every American person to defend this Nation.

The Republican Party in many sections has practically excommunicated Wendell Willkie for the statements he has made, saying the President is right by asking the passage of the lend-lease bill. To my way of thinking Willkie has shown himself to the American people as a real American, placing the security of his country far ahead of political ambitions.

In these troublesome days it is not a question of politics—what one political party believes is the best course to follow. Only by unity of thought and action based upon the cooperation of all the people can America remain at peace.

Economy at the Expense of Agriculture

REMARKS
OF
HON. ROSS RIZLEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

Mr. RIZLEY. Mr. Speaker, I am sure every Member of the House fully realizes the present plight of agriculture in this country and has, as he should have, at least a desire to alleviate the condition of the American farmer. Yet, while strikes continue to harass and threaten the entire defense program, and while we are guaranteeing cost-plus to labor and industry, I notice, from the press reports and otherwise, that Secretary of the Treasury Morgenthau, in his endeavor to now start a much-belated program of economy, says that we must strike first at the American farmer, to make effective the so-called economy, by taking from him one-half of the billion dollars that he says must be taken from the Budget and to which he refers as nondefense items.

It is hardly conceivable to anyone who remembers anything about World War No. 1, that agriculture products should be classified by the distinguished Secretary of the Treasury, as nondefense items. It will be recalled by all who had any part in agricultural affairs during the conflict of 1917 and 1918, that within a few days after President Wilson's memorable address and message to the Congress, and the resultant declaration of war, there came the slogan, "Food will win the war!"

This was heard everywhere, and the whole country was placarded with huge billboards and other means of advertisement, heralding to the world that food and fiber was our first line of defense; and it is interesting to remember that then—as well as now—the allies, business, labor, and the consumer, wanted a low price fixed for agricultural commodities.

Today, as then, business and labor want increased prices for their goods and services—witness the strikes for higher wages, and the fast-rising cost of the things which business and industry have to sell—and yet, the farmer who must pay these increased prices for what he buys, and for the labor that he must employ, is told that he must not ask for parity, or near-parity, and that that part of the Budget which affects him is nondefense.

I say, Mr. Speaker, it is unwarranted and unfair, particularly in view of the ridiculously low prices the farmer is receiving for his products, when compared with labor and industry.

Today neither the press, the public, or anyone else seems to be concerned about the farmer's place in the national-defense program. We are building battleships, tanks, airplanes, bombers, and all other instruments of modern warfare to the tune of billions. In fact, the Congress has already authorized and appropriated thirty-two billions plus—five billions more than it cost us to fight the last World War, so far as dollars are concerned—for our defense program. Yet, as I say, no one semes to be concerned about the place the farmer is to have in that program.

I am afraid it is due to the fact that because of the huge so-called surpluses of wheat, cotton, and other farm commodities, everyone thinks America has an abundance of foodstuffs to feed the world indefinitely. But we must not forget that starvation has always been considered the most effective weapon used in war; and right now, as has always been the case in every war in the past, it is again being used. Literally hundreds of millions of people are suffering gnawing pangs of hunger and want.

We must remember that the condition of the American farmer is much different now than it was in 1917 and 1918, and I am afraid too many of us do not realize just what may be ahead. Were it not for the blockade against farm products, the hungry and naked millions of Europe and Asia would soon use up every surplus pound of food and fiber in this country. The blockade may continue, millions may starve to death; but sooner or later the cry of humanity will break the military blockades and public opinion will not allow the conquered nations of Europe to starve.

Yes; we are hearing a great deal about munitions, battleships, and airplanes, and I yield to no one in an earnest desire for a two-ocean navy and for the strengthening of our defense program where no aggressor nation or group of aggressor nations will dare to attack us, and am in full sympathy and accord with a program that will make the defense of this country impregnable.

But, after all, there will be no mass production unless there is plenty to eat. An army always "marches on its stomach," and our soldiers are fed even though citizens are in want.

I predict that if agriculture is not reckoned with in this huge defense program, more quickly than many of us now realize there will be concern about the farm problem, and there will be a rude awakening for those who think agriculture is not important in this program.

While today we seemingly have an abundance, yet how quickly this condition may change. One bad crop could absorb all of our so-called surpluses.

The world will never forget how the American farmer came to its rescue during the closing years of the last World War. Food was the crying demand, and the farmer produced it. With less help and equipment, he increased his production and answered every call of a hungry world. He did not strike and refuse to plant or harvest. He did not hoard his products and say, you must pay me unreasonable prices or I refuse to sell. He answered the appeal of patriotism, and he will do so again; but he is entitled to fair treatment.

Yes, Mr. Speaker, it is an old but nevertheless true saying that agriculture is the basis of all wealth and prosperity; and the farmer, like the bread he produces, is the staff of our national life. The place of agriculture in the social, economic, and political structure is so fundamental that from a standpoint of self-interest alone every class of citizen in the Nation should lend its active cooperation in effecting the rehabilitation of the industry; for no nation can be economically safe when an industry of such influence as agriculture is in an unhealthy state.

I hope this Congress, in its desire to strike from the Budget items which are not strictly defense items—and, goodness knows, there are millions of dollars which rightfully come under this classification, that could and should be stricken—will have the stamina and courage to stand foursquare for the American farmer.

Leadership

EXTENSION OF REMARKS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1941

EDITORIAL OF J. S. GRAY, EDITOR OF MONROE (MICH.) EVENING NEWS

Mr. MICHENER. Mr. Speaker, the matter of convoying lend-lease-give material to the Allies is a live question with the American people today. Mr. J. S. Gray, editor of the Monroe (Mich.) Evening News, along with Walter Lippmann and Wendell Willkie, has been an ardent supporter of the President's foreign policy during the present conflict in Europe. Mr. Gray is one of the leading editorial writers in Michigan, and while I have not at all times agreed with his philosophy in connection with the present World War, his editorials are always well worth reading. Therefore, pursuant to the permission granted to me, I include his editorial of April 28, 1941, which is as follows:

[From the Monroe (Mich.) Evening News of April 28, 1941]

LEADERSHIP

It seems incredible as well as unfortunate that Americans should have to listen in to a

broadcast from London to come to a full understanding of the policy to which their President has committed them. Yet it is very doubtful if very many of the millions of Americans who heard Winston Churchill over the air Sunday had had any such conception of American naval policy as he enunciated as a result of reading President Roosevel's cryptic definition of patrols and convoys last week.

Mr. Churchill said plainly and fearlessly that the new move by the President of the United States would enable the British Fleet to concern itself with protection of the Atlantic lifeline only in the eastern half of the ocean.

Mr. Roosevelt used circumlocution and every other rhetorical device to avoid telling the people the plain truth about the use of patrols to protect British shipping half way across the Atlantic.

Obviously the White House, which just recently chided the country for not taking the crisis abroad seriously enough, is not being as frank and plain spoken with a people not at war as Downing street is with a people whose backs are to the wall.

Walter Lippmann and Wendell Willkie, men who have stood behind the President squarely on his foreign policy, have now become outspokenly critical of his failure to assume the responsibility of leadership and tell the people frankly and plainly what it is necessary to do in order to maintain that policy. Their words are freighted with significance.

In refreshing contrast, Mr. Churchill told the people of the British Empire Sunday exactly what dangers confronted them, and from what direction they came. He minced no words in admitting defeats, and ventured no optimism in predicting victories. Such leadership inspires a democratic people by its very frankness, and instills confidence by its very candor.

Rome and Berlin recognized the significance of the President's definition of convoys and patrols; Winston Churchill understood what he meant perfectly. The American people, however, were seduced into thinking that our newest venture on the high seas is only an extension of Coast Guard activity beyond our shores.

It is time that the White House assumed the leadership without which the Nation cannot fulfill the serious obligations to which it has willingly committed itself. It is time that the President spoke frankly. It is time to abandon play on words and subterfuge when a change in policy or an extension of aid to Britain is undertaken. The people are ready to follow whatever course the Nation's leaders believe must be taken to protect our interests and defend democracy. But they must know what that course is and be prepared step by step as it is plotted. This is no time for subterfuge.

It is with the method by which the President chooses to extend our foreign policy, rather than with the policy itself, that we disagree. From the very beginning of this war the Evening News has stated its belief that the United States should boldly adopt every measure necessary or desirable in connection with its own self-interest. We believe that the protection of our shipping to Great Britain has become essential to our policy, and perhaps should have been undertaken long since.

We do believe that every one of these measures ought to be taken with the full understanding of the people under the clear leadership of the President. Such forthrightness is mandatory if we are to be a fully united people, and necessary if we are to effectuate these policies without a gradual involvement in the war lacking the essential mental preparation.

Free Postage for Soldiers

EXTENSION OF REMARKS

OF

HON. JAMES J. HEFFERNAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1941

EDITORIAL FROM THE BROOKLYN EAGLE

Mr. HEFFERNAN. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following editorial which appeared in the Brooklyn Eagle on April 28, 1941, dealing with free postage for soldiers, which I have previously advocated:

[From the Brooklyn Eagle of April 28, 1941]

FREE POSTAGE FOR SOLDIERS

The average man is no great shakes as a letter writer. Most parents can testify that absent sons don't write as often as they might and many a wife knows that she has to keep nagging at her husband to get him to write the letters he should.

Which is just another reason why the Government might well consider the proposal which Congressman JAMES J. HEFFERNAN, of Brooklyn, says he will press to provide men in the armed services with the franking privilege. On a pay of $21 a month, the matter of 3 cents postage for each letter becomes something to consider. A soldier or sailor who knows that he need only drop his envelope into the mail box is just that much more likely to write to the people at home. Anything the Government can do to encourage his writing letters is worth considering, if only for its effect on his morale and that of those he left behind.

Mayor Assails Grumbling in Defense Crisis

EXTENSION OF REMARKS

OF

HON. ANTON F. MACIEJEWSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1941

ARTICLE BY MAYOR EDWARD KELLY, OF CHICAGO

Mr. MACIEJEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mayor Edward Kelly, of Chicago, appearing in the Chicago Daily Times of Friday, April 25, 1941:

[From the Chicago Daily Times of April 25, 1941]

MAYOR ASSAILS GRUMBLING IN DEFENSE CRISIS

Mayor Edward J. Kelly, believing that the present crisis in Europe and its serious future consequences calls for a greater emphasis on the dangers that the American people face, today issued the following statement:

"A few days ago I discussed at length some of the problems of our national defense with a high-ranking British official who was a flying ace in the last war and is now actively engaged in purchasing equipment for England. He stated that he was in Paris 24 hours before it fell. The night clubs and amusement places were filled with hilarious crowds oblivious of the fate that awaited them. They had the Maginot-line complex that had lulled them into a false safety.

"Only after they were vanquished did they moan sadly: 'Why did they feed us such lies about our impregnable defense?'

"This same official also happened to be in Prague and Warsaw where the same conditions of gaiety and wishful thinking prevailed. He said that when Czechoslovakia and Poland fell so swiftly the people were liquidated into slavery and starvation overnight.

"'IT CAN'T HAPPEN HERE'

"There is an attitude among certain people in our Nation that the conflict in Europe is no concern of ours, and the only conclusion they draw from this holocaust of humanity abroad is that 'It can't happen here.' The bombings of European cities are far from us. We may not feel the impact directly of annihilation and destruction nor sense fully the tragedies that have been strewn in the wake of all this ruthless mechanized murder. But the fate of Europe can be the fate of America.

"If our Nation is forced to acquiesce in every economic policy that the dictators might see fit to impose on us once they control Europe and Asia, we will face an encirclement no different from other nations that went under. If we must match their slave labor with our skilled and higher-paid craftsmen, our markets and our standard of living will hit the toboggan.

"The alternatives to totalitarian tyranny are few: Resist or submit; defend what we have with all we have or starve with what they give when they want to give it.

"VICTIMS OF COMPLACENCY

"The propaganda of the peace lovers might desire to placate the dictators, but famine plays no favorites, and slavery has no royalty. The starving Frenchman today has no different destiny than the starving Pole. The poverty of one subdued nation is the same as any other.

"Peace-loving peoples may turn away from the storm clouds and try to keep facing the sun—but behind their backs with tanks and dive bombers is the onrush of forces that would crush everything we hold dear.

"Patriotism and prayers are not enough. Unless this country is strong enough in a military and economic way to stand its own ground and defy any power or combination of powers that despise our way of life, then we, too, can be the victims of complacency and delay that defeated other democracies.

"It is not hysteria to point out the dangers in front of us. It is not warmongering to plead for more unity and more action in developing our sinews of defense. The ranks of industry and labor must move shoulder to shoulder in this great defense effort. All our citizens must spend every waking hour in buttressing the national morale with something more than lip-service loyalty.

"STAKE IN DEMOCRACY

"Every citizen has a vital stake in this enterprise of safeguarding our democracy. Every American, regardless of class, creed, color, or party affiliations, should be a part of a solid unbroken line of support to the manufacturers of defense implements and supplies for England and the other democracies. Our Nation and our neighbors to the

north and south have no happy hide-out from the revolution that engulfs Europe and Asia and no permanent immunity from the economic muscle that spawns nothing but full concentration camps and empty churches and schools.

"If any Americans are worrying about the cost of safeguarding our democracy or the amount of profit to themselves, let them remember the wealthy and the royalty of other nations now enslaved. If they are thinking that the price of sustaining our way of life is pinching their pocketbooks, let them look into a future where markets are a myth and money is a memory from a past civilization.

"It's a question of confidence and courage the American way or starvation and moral degradation the totalitarian way.

"CHIDES 'GRUMBLING'

"Some of our people today are grumbling. Things are in 'tough shape'—but there will be a call for far greater sacrifices and far greater personal cooperation with our neighbors and with our Government if we would save for ourselves and for our children the liberty and equality and human justice that we value so much.

"A calm and unprejudiced comparison of our own conditions at their worst gives conclusive proof that we are far, far better off than is the richest man in Europe today. Looking into the gaunt and despairing faces we see pictured of the men, women, and children abroad—the homeless refugees denied their country and their God—should make us stop to realize how great are the blessings of this still thriving and still free democracy.

"The hand and heart of government here still thinks in terms of relieving unemployment—preventing starvation and disease, curing slum areas, creating better homes and better schools, advancing the spiritual as well as the economic opportunities of our people.

"Any sacrifice—any tax upon our pocketbooks, our patience, no matter how great it may seem to us now—is a cheap price to pay for the preservation of our system of government and our way of life."

We Are All Americans Together

EXTENSION OF REMARKS

OF

HON. JACK NICHOLS

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1941

Mr. NICHOLS. Mr. Speaker, our national-defense program, I believe, is getting along fairly well. I believe that our people are thoroughly aroused to the threat of danger to their liberty and are ready to do their part to so fortify our Nation that none will dare attack us.

In making these statements I discount the wild stories of carping critics and the apostles of despair. I believe we have a great leader in President Roosevelt. I believe we have great and capable men at the head of our Army and our Navy. I believe we have great designers and builders of airplanes, tanks, battleships, and all the other equipment needed in present-day warfare. And I believe we have a great people.

NOT TIME FOR WILD TALK

I do not think anybody is going to whip the good old United States of America. We are going to come out of this crisis all right. Of course, we may feel a little pain in the region of our pocketbook. And we may have to knock a few heads together to stop strikes and other such obstructions to the national will. But when the dust clears away I think that old Uncle Samuel will still be the toughest customer on the horizon.

I have not had much to say since we started our continuous session on national defense last year. You know I was a buck private in the World War and learned to do what I was told without doing very much talking. I do not think that this is the time for wild talk, and for one American to be challenging the patriotism of other Americans. I have tried to restrain some of my more impetuous colleagues—without much success, I must add.

I do not like to hear some of the speeches that are made on this floor. Some Members get up and attack unions, all unions, it seems to me, and fan the flames of trouble. Other Members get up and attack business management, and declare that the leaders of our industry and our geniuses of machinery are not doing their full duty. Some get up and declare the farmers are trying to profiteer on the rest of the people. Some say the President is sly and conniving and not to be trusted to carry out our foreign policy.

SELECTIVE SERVICE REVISION NEEDED

I have voted for most of the measures necessary for our defense program. I voted against loaning a half billion dollars to South American countries to further the good-neighbor policy since I do not think you can buy good will.

But I think that the time has come to plan a general revision of the heart of our defense program, the selective-service plan. I think that we ought to start changing this from an emergency program to a long-term program. We ought to plan on the induction of about a half-million youngsters into the Army each year for intensive training, and take these when they reach a certain age. I favor the age of 20 years to start their service. Then when they complete their year's service to the Army and the Nation they will arrive at the age to cast their first vote, and I am sure will be better citizens than they would be without this service.

But I believe now, as I believed when we had the Selective Service Act up for consideration last year, that the youngsters who are asked to give this year's service to the Nation are entitled to the aid and assistance of the Nation in building up their health. I think that the young man who is going into the Army at 20 should be first called out at 18 and given a thorough medical examination. If he needs dental treatment or minor operative care, this should be done at Government expense. It will help him both in civil life and in military life. He should again be called at 19 and examined and perhaps given additional medical treatment in order that he may be fit for service when he arrives at the age of 20.

In this manner the excessively high proportion of youngsters turned down as being unfit for duty will be drastically reduced. We will salvage at least half of them. And, given this expert treatment which will make them feel better every day of their lives, the young men will be grateful to their country and will be more ready to serve when called.

EVERYBODY HAS HIS PART

I favored a program of this kind when the Selective Service Act was brought up last year, but because of the urgency of the emergency I could see that it might be necessary to call out men up to the age of 35, temporarily. As soon as our Army leaders think we can, however, we should limit the selection of our youngsters in the manner I have outlined above, and also offer them this health program.

The American people are ready to pay taxes to support the defense program. The people, I believe, trust the leaders of our Nation to direct our efforts in the right channels. They know that we do not want to impose our wills upon any other people, but only to insure our own liberties and our right to work out our own destiny in our own way.

Congress is going to stay on the job until this crisis is over. Congress ought to stay on the job. My people back home don't expect to see me until the job is finished. I know that they are busy doing their jobs, too. I know that they are producing the things the Nation needs to the fullest of their ability. I know that those selected for service in the armed forces are going with good grace and with the blessing and support of the folks they leave behind them.

Let us, as good Americans, try and work out our differences without calling each other names. We are all in this thing together. Everybody cannot be the captain, but everyone should be expected to pull his weight.

Why Farmers Oppose Daylight Saving Time

EXTENSION OF REMARKS

OF

HON. JAMES W. WADSWORTH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1941

RADIO ADDRESS OF FRED BRENCKMAN, WASHINGTON REPRESENTATIVE OF THE NATIONAL GRANGE

Mr. WADSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by Fred Brenckman, Washington representative, the National Grange, over stations of the National Broadcasting Co., on the Grange Hour, from Washington, D. C., April 19, 1941:

Two bills have recently been introduced in Congress for the purpose of establishing

so-called daylight-saving time on a Nation-wide scale for approximately half the year as a permanent arrangement. One of these bills, H. R. 3789, was introduced by Congressman DONALD H. MCLEAN, of Elizabeth, N. J. The McLean bill would extend the daylight-saving period from the last Sunday of March to the last Sunday of October, a period of 7 months. Under the terms of the other bill, H. R. 4206, introduced by Congressman EUGENE J. KEOGH, of Brooklyn, N. Y., daylight-saving time would be observed from the last Sunday of April until the last Sunday of October each year, a period of 6 months.

The closer we come to active participation in the war as a belligerent, and we are coming closer every day, the more likely it is that a drive will be made for the enactment of daylight-saving legislation.

UNPOPULAR DURING WORLD WAR

It will be recalled that under the terms of a statute approved by President Wilson during the World War, the United States observed daylight-saving time during 1918 and 1919. After 2 years of experience with this innovation, Congress was deluged with protests against the continuance of daylight-saving time and many bills were introduced to repeal it. One of these bills was passed and was vetoed by President Wilson. On August 20, 1919, the bill was passed over his veto. The vote in the House was 223 to 101, while in the Senate it was 57 to 19.

After this emphatic expression of disapproval, it was generally taken for granted that no further efforts would be made for the reestablishment of daylight-saving time. So far as the farmers of the country were concerned, they were glad that this nuisance had been disposed of.

However, various large cities of the eastern section of the country proceeded to observe daylight-saving time on a local scale. In numerous instances, this forced nearby cities and towns to adopt the same standard of time under penalty of suffering many inconveniences and hardships. In my home State of Pennsylvania, Philadelphia was the first to consider the advisability of enacting an ordinance for daylight-saving time, but the city solicitor advised the council that it had no legal authority to enact such an ordinance, referring to the fact that a State law dating back to 1887 prescribed that the legal time of Pennsylvania should be in accord with the time fixed by Congress.

In an effort to overcome the difficulty, a bill was introduced in the legislature at Harrisburg, providing for daylight saving time during the summer months. After hearings and full debate, this bill was defeated in the house by a vote of approximately 5 to 1, showing conclusively that the sentiment of the State was predominantly in favor of the observance of standard time.

But while the legislature was still in session, the City Council of Pittsburgh passed what it was pleased to term a "recommendatory ordinance," suggesting that the clocks be turned ahead an hour on a given day, with the understanding that "fast time" should be observed during the summer months. Since this arrangement was contrary to the wishes of many of the workingmen of Pittsburgh and their families, an application for an injunction was made to restrain the city council from putting "outlaw" time into effect within the limits of the municipality.

The judge before whom these proceedings were brought betrayed a partisan attitude. In substance he said, "There is only one kind of legal time in Pennsylvania, and that is standard time. But there is nothing mandatory about the resolution passed by the city council. It is simply recommendatory, and what are you going to do about it?"

The trouble with the Pennsylvania standard time law was that it contained no penalty for violations. Following the lead of Pittsburgh, Philadelphia passed a "recommendatory ordinance," providing for daylight saving, and most of the cities and towns tributary to Philadelphia were virtually compelled to follow suit. In considering the validity of such "recommendatory ordinances" one may well ask by what right a city council undertakes to recommend a course of action that is contrary to the law of the State, even if the law does not provide any penalty for violations.

Daylight saving time has been a very controversial issue throughout the northeastern section of the country for a score of years, and the question has not been settled to the satisfaction of a large proportion of the population in that territory.

CLAIMS OF ADVOCATES CONSIDERED

The proponents of daylight-saving time assert that it will save fuel in industry by reducing the amount of coal consumed in artificial lighting; that it will improve the health of the people by giving them an extra hour of sunlight; that the number of accidents decrease as people work under natural light instead of electric lights, and that it will make an extra hour available for outdoor sports and other activities.

With most industries operating on a basic week of 40 hours, there does not seem to be much substance to the argument about saving fuel.

So far as accidents are concerned, it is a fact that it is not as well known as it should be that there are more accidents in agriculture than in any other industry. Unless we are to proceed on the assumption that it does not matter if the farmer and the members of his family are crippled or killed while working under artificial light, before daybreak or after dusk, this argument falls flat.

Daylight-saving time is by no means such a great boon to city people as its advocates would have us believe. In most parts of the country, during June, July, and August, we frequently have exceptionally warm weather for weeks at a time, and it is impossible to get refreshing sleep in small city houses until after midnight. Turning the clock ahead an hour does not cool the atmosphere. The result is that city people do not and cannot rest until the air is cooled off, and being obliged to rise an hour earlier, they are deprived of just so much sleep each night at a time when sleep is most needed to renew their strength and safeguard their health.

I know that many housewives are opposed to daylight-saving time. The wives of workingmen must get up an hour earlier in the morning to get breakfast for their husbands and prepare their children for school. When evening comes, it is a difficult matter to persuade the children to go to bed and sleep while it is still daylight.

HOW IT AFFECTS THE FARMER

The reason why farmers object to daylight-saving time is that they must work in harmony with natural law or they work to no purpose at all. Farmers who are engaged in dairying must always rise at an early hour to get their milking done. The dairyman who gets out of bed at 4 o'clock to milk his cows in the morning under standard time must necessarily rise at 3 o'clock under daylight-saving time. As any reasonable person should be willing to agree, that is an unearthly hour to ask anyone to get up.

Before hay or grain can be stowed away in the mow it is necessary to wait until it has been dried by the sun. Most of the summer showers come in the afternoon and evening, frequently making it necessary to wait until the ground has been dried the next morning before doing any cultivating or harrowing.

Farmers who employ hired help encounter many difficulties under daylight-saving time. As I have indicated, during the early morning hours conditions are frequently such that it is impossible to work to any advantage in the fields, and if the hired help wants to quit when the factory whistle in some nearby town blows, say at 4 or 5 o'clock in the afternoon, the predicament in which the farmer is placed may easily be imagined.

Only a small proportion of the people of the United States now live under daylight-saving time. The vast majority of the people, including practically all the farmers, together with many industrial workers and their wives, have no use for it. Under the circumstances, any attempt that may be made in Congress to pass a daylight-saving law will be sure to meet with strong and determined opposition.

A Call for American Manpower to Enter the Bloody Holocaust of War for British Purposes

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1941

ARTICLE FROM THE NEW YORK SUN

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Sun for April 26, 1941:

[From the New York Sun of April 26, 1941]

EXPECTS UNITED STATES IN WAR—SMUTS CALLS FULL AMERICAN AID NEEDED FOR VICTORY

CAPETOWN, April 26.—Prime Minister Smuts prophesied in a broadcast today that the United States would go all the way in war. He said that only through the United States full participation would a way to British victory be clear.

He said that he was looking forward to this development not only for the sake of victory, but also for peace that will follow. He added that he could not see a real peace without the United States participating.

WEST SOMERSET, ENGLAND, April 26.—Vernon Bartlett, a Member of Parliament, asserted today that he believed the United States would actually be fighting in the war very soon.

During the next few months, he said in a speech, Great Britain will have to do everything possible to avoid a knockout blow, "retreating from the enemy when necessary in order to keep him guessing until American support comes in an overwhelming flood."

War Propaganda and Charles A. Lindbergh

EXTENSION OF REMARKS

OF

HON. MARTIN L. SWEENEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1941

EDITORIAL FROM THE SPRINGFIELD (MASS.) FREE PRESS

Mr. SWEENEY. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include an editorial from the Springfield Free Press of Massachusetts, under date of April 26, 1941, entitled "Just as Belloc Said."

The quotation from the great English writer, which makes reference to the visit of the British King and Queen to the United States, was an uncanny prophecy, because of the fact it was made as far back as June 10, 1937. In advance of the royal visit, the House will recall a similar statement made by me on May 4, 1939, when I said:

Were the King and Queen to come here with a substantial payment on the war debt there would be a decent purpose in their visit; but, no, they come here as advance agents for Britain's next war.

Hats off to the British money lords and politicians. What a magnificent job of propagandizing us into World War No. 2 they have done to us gullible Yankees. Let it be recalled that the Minister of British propaganda in the last World War, the late Lord Northcliffe, once said of the people of the United States:

They act alike; they dress alike; they think alike; they are like a lot of sheep, easily led.

In the light of present British propaganda, which has brought us to the brink of the European war, we may well appear before the bar of public opinion and plead guilty to Northcliffe's indictment. Who has not witnessed the boldness of British propaganda in this country since the visit of the King and Queen. The present war was scarcely started when every conceivable agency was employed to hasten our entry into the war on the side of Great Britain; the subsidized motion picture, screen, the radio, the newspapers, magazines, the pulpit, and the stage, all utilized daily to create a preposterous but strange philosophy that one has to be pro-British to be a good American. So successful has been this propaganda that we now have an American gestapo; fingerprinting, wire tapping, labor baiting, censorship of the press, and name calling are the latest contributions to our national unity.

BLACK-OUTS

When a great American like Charles A. Lindbergh is called a copperhead by the President of the United States because he dared to exercise his constitutional right of free speech, it would seem we have lost our sense of balance and respect. No one should question the right of the President of the United States or any other individual to express his opinion on the war or any other issue. If the day comes—which God forbid!—when free speech is banished and men's motives are assailed because of their respective views on important public questions, then the end of our democracy is at hand.

The President, like every other individual, is human and no doubt regrets his public reference to Charles A. Lindbergh. It would be a fine thing for the cause of national unity if the President would reinstate Charles A. Lindbergh as colonel in the United States Army Air Corps Reserve and tender to him a public apology.

[From the Springfield (Mass.) Free Press of April 26, 1941]

JUST AS BELLOC SAID

Mr. Hilaire Belloc was well known 4 years ago for his American Letters, but he should be even better known on that score today. There is one letter in particular of which Americans now should take stock—the Last Letter from America, printed in G. K. Weekly of June 10, 1937. It is a letter of prophetic insight, a letter which was considered then an extreme of speculation but which now we can sadly recognize as all too true. Here is a part of it:

"It is probable, short of catastrophe, that there will be a State visit paid to the United States by some reigning monarch of England. He (or she) will make a triumphal tour, and the reliance we confidently place in America to come to our support against wicked men will be enormously increased. As it is, English propaganda already does almost what it likes with American opinion, and a royal progress of this kind would make our effect as permanent as such things ever are. * * * And if we have trouble with Ireland, the American press will denounce Ireland."
